John Murray, Albemarle Street.

LIBRARY EDITION OF BYRON.
2 vols. 8vo. beautifully printed, with a new and copious Index,
and a Portrait.

BYRON'S COMPLETE WORKS, with
the Notes, printed for the first time as a handsome
Library Book.
A very few Copies are printed on Quarto, to bind up with
Illustrations.
John Murray, Albemarle Street.

A new edition, illustrated with Portrait and Engravings,
post 8vo. 10s. 6d.

THE PILGRIM'S PROGRESS, with a
Life of John Bunyan.
By ROBERT SOUTHNEY, Esq. LL.D.
John Murray, Albemarle Street.

12mo. 2s. 6d.
A NEW GREEK GRAMMAR, for the
Use of Schools.

By the Rev. CHARLES WORDSWORTH, M.A.
Late Student and Tutor of Christ Church, Oxford; Second
Master of Winchester School.
John Murray, Albemarle Street.

Price 2s. 6d. 12mo. cloth.
STAMMERING PRACTICALLY CON-
SIDERED, with the Treatment in Detail.

By T. BARTLETT,
Assistant-Surgeon in the King's Own Eye Infirmary.

"After this opinion, we need hardly recommend this little
work to the parents of those who are suffering from this deplorable
defect of voice."—*Evening Chronicle*.

"His views are accurate, close, and full, and well sustained by
authorities and comparative observation."—*Atlas*.

London: Sherwood, Gilbert, and Piper.

Price 2s. 6d. cloth, gilt.
THE AUTHOR'S PRINTING AND PUBLISHING ASSISTANT, comprising Explanation of
the Frame of Printing, Calculations of Manuscripts, Orders of
Press, Type, Binding, Illustrations, Publishing, &c. with a
Description and Recommendation of the Typographical
Marks used in the Correction of the Press.

Sounders and Otley, Public Library, Cornhill Street.

Mr. Holder's Exposition of the New Testament.
In 1 large vol. 12mo. price 12s. in boards, the 2d edition, revised
and improved.

THE CHRISTIAN EXPOSITOR; or,
A Practical Guide to the Study of the New Testament.
Intended for the Use of general Readers.

By the Rev. GEORGE HOLDEN, M.A.

Though many Expositions of the Bible of great and deserved
celebrity exist in our language, a Commentary sufficiently clear
to be read by those who have not leisure to consult learned works,
yet sufficiently comprehensive to serve as a guide to the study of
the Sacred Scriptures, appears to be still wanting. To supply
this deficiency is the design of the present work, in which it has
been the aim and study of the author, in a condensed
form, such information as will enable the general reader to ascertain
the real meaning of the inspired writers.

Printed for J. G. and F. Kingston, St. Paul's Churchyard,
and Waterloo Place, Pall Mall.

Of whom may be had, by the same Author,
The Christian Expositor of the Old Testa-
ment. Price 10s. 6d.

MR. BENTLEY'S NEW PUBLICATIONS.

I.
MR. THEODORE HOOK'S NEW NOVEL,
BIRTHS, DEATHS, AND MARRIAGES.

3 vols. post 8vo. now ready.

II.
THE NAVAL HISTORY OF THE UNITED STATES.

By J. FENIMORE COOPER, Esq. Author of "The Pilot," "Red Rover," "Homeward Bound," &c.

2 vols. 8vo. with Plates. In the press.

III.
MR. G. P. R. JAMES'S NEW ROMANCE,
CHARLES TYRRELL.

Post 8vo. (On April 5.)

IV.
**THE CONCLUDING VOLUMES OF
MEMOIRS OF CHARLES MATHEWS, COMEDIAN.**

(Vols. III. and IV.) With numerous Illustrations. (Just ready.)

* A New Edition of Vols. I. and II. of this Work will be published on March 30.

V.
The Fourth Edition (just published) of
SAM SLICK'S SAYINGS AND DOINGS.

FIRST AND SECOND SERIES.

In 2 vols. post 8vo. with Plates, price 21s. Either Series may be had separately, in 1 vol. price 10s. 6d.

Also, by the same Author,

THE BUBBLES OF CANADA. Second Edition, 1 vol. 8vo. 12s.VI.
SECOND EDITION (now ready) of
OLIVER TWIST. BY CHARLES DICKENS, ESQ.

Author of "The Pickwick Papers." Complete in 3 vols. post 8vo. bound, with Twenty-four Illustrations by George Cruikshank, price 25s.

Publishing Monthly, price Half-a-Crown, illustrated by George Cruikshank,

BENTLEY'S MISCELLANY,

Edited by W. HARRISON AINSWORTH, Esq.

THE JANUARY, FEBRUARY, and MARCH Numbers (for the present Year) of this popular Periodical Work, being the First Three Numbers of the New Volume, contain the following among numerous other interesting Productions:—

JACK SHEPPARD,
By W. Harrison Ainsworth, Esq.
Author of "Rookwood," with Six Illustrations by George Cruikshank. Containing
Epoch the First, 1708. Chapter I. The Widow and her Child—II. The Old Mint—III. The Master of the Mint—IV. Jonathan Wild—V. The Denunciation—VI. The Storm—VII. Old London Bridge.
Epoch the Second, 1715. Chapter I. The Idle Apprentice—II. Thomas Darrell—III. The Jacobite—IV. The Carpenter's Wife—V. Hawk and Buzzard, and the following Songs: "Saint Giles's Bowl," "Newgate Stone," "Jolly Nose."
SHAKESPEARE PAPERS. By Dr. MAGINN.
Thoughts on Patrons, Puffs, and other Matters, in an Epistle from T. M. to S. R.

Visit to the Castle of Chillon—Rambles through Rome—The Armenians at Venice (with Anecdotes of Lord Byron). By the Author of "A Parisian Sabbath."

Anecdotes of Military Service, by Lieut.-Col. Cadell—A Visit to the Turk—Capture of the Pasha's Harem, &c.

Asleep among the Flowers. By J. Augustine Wade.

VINCENT EDEN, or the Oxonian. By "Quip."
The Freshman and his Friend Mr. John Raffleton—Mr. Tomes and his Studies—Learning (Greek) made Easy—The Barber's Boy and his Pupil—"Hints on (Oxford) Etiquette" and Dress.

A Lay of St. Gengulphus. By Thomas Ingoldby, Esq.

HANDY ANDY. By S. LOVER, Esq.
Author of "Bory O'More."

Handy's Escape from Dick the Devil—Flight and Fight in a Cabin—An Irish Haystack—Poeting in Ireland—Ludicrous Murder—Electioneering Tactics—Faddy's Opinion of Cobbett—New Method of Fishing, and its Laughable Results.

OLIVER TWIST. By CHARLES DICKENS, Esq. ("Bo.")
(Concluding Chapters.) With Three Illustrations by George Cruikshank.

Sketches of Andalusia—Seville Cathedral—Cordova—Remains of Moorish Greatness in Granada.

In addition to which will be found other Contributions by Charles Dickens, Esq.—J. A. Wade—Mrs. Torre Holme—William Jerdan, Esq.—"Dalton"—Samuel Lover, Esq.—Author of "The Bashful Irishman"—C. F. Hoffman, Esq. &c. &c.

THE APRIL NUMBER OF BENTLEY'S MISCELLANY WILL CONTAIN

I. The Continuation of JACK SHEPPARD, comprising Epoch II. 1715. Chapter V. Jack Sheppard's First Robbery—VII. Brother and Sister—VIII. Miching Malloche—IX. Consequences of the Theft—X. Mother and Son—XI. The Mohocks—XII. St. Giles's Round House. (This Romance will be completed during the present Year, in "Bentley's Miscellany.") II. A New Story, entitled COLIN CLINK, containing the Contentions, Loves, Hatreds, Jealousies, Hypocrisies, and Ups and Downs, incident to his Chequered Career. III. New Chapters of VINCENT EDEN, or the Oxonian, by "Quip." Contents: The Freshman's Introduction to Oxford Society—A College Symposium; Carlton's Song—Count Pichantrosch and Chevalier Liebitwitz—Raffleton's Song—Rev. Barnaby Birch's Sudden Appearance among the Revellers—Oxford by Moonlight—No Man a Hero in the Eyes of his Valet—Effects of Hard Drinking and Morning Cogitations; and many other original and interesting Articles by popular Writers, together with Three Illustrations by George Cruikshank.

RICHARD BENTLEY, NEW BURLINGTON STREET,
PUBLISHER IN ORDINARY TO HER MAJESTY.

REVIEW OF NEW BOOKS.

Births, Deaths, and Marriages. By the Author of "Sayings and Doings," "Jack Brag," &c. 3 vols. 12mo. London, 1839. Bentley.

A CAPITAL title, without any peculiar application; for such is the constitution of society, that every view of it must comprehend the three great events of life—births, marriages, and deaths—though our author has chosen to give the last precedence of the middle term. But, after all, a title-page is rather a publisher's than an author's affair; and as a rose by any other name would smell as sweet, so would a novel from Mr. Hook by any other name read quite as well. All his productions display the same intimate knowledge of "the world;" the same deep insight into character; the same power of portraying both; and the same ingenious but natural skill in tracing important effects to their minute causes, and abewing that the destinies of man and woman are shaped by the slightest, not by the most remarkable, circumstances. The latter, indeed, are but the fruits of the former, as the stately tree is the developement of the tiny seed that is thrown into the earth.

This is particularly the case in the volumes before us, where the partial concealment of matters which occurred in bygone times perverts the whole course of their existence to the principal personages, and leads, through a train of errors and unhappiness, to a *finale* which might have been—what we will not say, because we will not anticipate the *dénouement* and injure the interest of the tale.

Mortimer the hero, and Helen the heroine, are admirably drawn; the former the most original in conception, and finely brought out to the close. The two brothers, Jacob and John Batley, are also prominent in themselves, and contrasted with a masterly fidelity. The entire selfishness of the former, the wealthy Citizen, is supported not only by words but by traits of action which possess the true *vis comica*; and the off-handed temporising of the latter, the poor pensioned Official, shews the features of a portrait which it is impossible not to individualise. If we add to these a certain Countess St. Alme, a low tricky attorney, a colonel of fashionable ways and fashionable fortunes, a circle of West-Indians and some samples of the East, and a few *extras*, whom it is unnecessary for us to describe, though they all fill their places in the drama, we shall have indicated the Actors in *Births, Deaths, and Marriages*. As specimens, we cannot make a fitter choice than the annexed. The first is part of a dialogue between the Batleys, *frères*, touching a marriage of John's only daughter:—

"My dear brother," said Jack, "you speak of female affections as if they were as easily transferred as so much stock." "Stock, John!" said Jacob; "no, no: you don't catch me comparing the fly-away fancies of a giddy girl with the four per cents, or the three-and-a-half reduced." "But the sentiment, the feeling!" said John. "Sentiment! my eye!" said Jacob; "I don't understand what it means; I never knew what it was to be in love—never shall, now. I admit that I once took a fancy to a

widow at Wapping, in regard of sundry ships, Class A, lying in the London Docks, of which she was mistress; but I found it wasn't all clear and above-board; and that she had a nephew, and there was a will to be disputed; so I left the widow and the craft: but as for sentiment,—Lord bless your heart! she was old enough to be my grandmother, and so big that one of her own punchcoons would have made her a tight pair of stays." "That's it," said Jack; "you have never felt the sort of passion to which I refer, and, therefore, cannot appreciate its power." "I suppose I haven't!" said Jacob; "no matter; I shall never want for any body to love as long as I live—always sure, too, of what you call a return—I love myself. As I say, of all the houses in the street give me Number One—eh?—that's my maxim." "You say so," said John. "Never say what I don't mean," replied Jacob; "and another thing I never do—never try to jump higher than my legs will carry me: d'ye mark me, Jack? There isn't a man, woman, or child to whom I owe tenpence on my private account: I never drink my port till it's paid for:—no running over head and ears in debt, as you do, Jack:—however, as I've said a hundred times before, it's nothing to me." "Only, as a brother," said Jack, "you might perhaps take some interest." "Not I," said Jacob; "I never take any interest—except for my money:—and as for a brother, why, we are all brothers, if you come to that:—and hang me if I know one of the family, large as the world is, who would stoop to pick up a pin to save my life: I'm sure I wouldn't, to save any one of theirs." "But, surely," said Jack, "Helen deserves some of your affection: she is truly attached to you, and"—"Fudge, Jack!" said Jacob, rattling all the shillings in his breeches-pocket—"attached to me!—no, I'm not after her fashion—I don't live in 'the world'—hey? She may be attached to me as Peter Post-Obit in the play is attached to his friends, in the hopes of what she may catch at my death: but it won't do; I'm not to be had! No,—if she were a staid, sensible sort of body, and would marry Haddock, I should say something to her: but, no—the alderman, like myself, is not a man of 'the world'—not that I care three dumps for him, if you come to that." "Why," said Jack, "Helen's habits and manners are different from those of the alderman; and an accomplished girl!"—"Accomplished fiddle-stick!" said the merchant. "What are accomplishments? You over-educate your girls—teach them the learned languages—make them dance like figure-girls,—what d'ye call 'em there?—all up and down the sides of the stage at the playhouse, with a fringe to their stays which they call petticoats—make them play and sing till their hearts ache: and what for? to catch husbands: that's it, isn't it? And more fools they who are to be so trapped." "I don't see that," said Jack. "Accomplishments in which amateurs now excel the professors of twenty years since, are"—"Accomplishments!" said the merchant, "stuff! What are the accomplishments? all very fine as baits—lures—temptations: but once let the accomplished girl be married—see, then, what hap-

pens. The husband is gained; a family is coming; and she thinks just as much of twanging her harp, tinkling her guitar, rattling her piano-forte, or collywobbling with her voice, as she does of flying: it's all pretence—fighting under false colours. If Helen married Haddock"—"My dear Jacob," again interrupted Batley, junior—"And my dear Jack," said Jacob, "if you come to that. I say, even if she married this Mortimer, which, in course, she won't now, she would never sing or play afterwards; nor would he ask her. Every thing is very fine till you have got it. A singing wife is like a piping bullfinch; great fun for your friends,—deuced tiresome to yourself. Now, as I am all for myself, and nothing for my friends, I only speak as I think."

The extraordinary sketch of the attorney is capital:—

"Brimmer Brassey was a stirring person, and likely to make himself and his principal popular amongst the Radicals. He was always oversmartly dressed; his countenance was florid, edged with much black whisker; he wore his hat—a silk hat—on one side of his head; a coloured handkerchief round his neck; a chain, questionable as to metal, by way of guard to an equivocal watch, over a velvet waistcoat. He was well able to drink punch weak or strong, hot or cold, as the case might be, at any time, and in any quantity; smoked cigars if desired, and went the whole length of pipes if necessary; was upon intimate terms with several of the actors of the minor theatres; sang songs which were not in print; told anecdotes of men and things which astonished the natives; had a friend who benevolently lent money to anybody who wanted it, upon the least imaginable security; and, in fact, was the most accommodating person in his peculiar line of the profession to which he did not do too much honour. At Mudbury, he was all in all; the way he talked—the way he sang—the way he dressed—the way he drank—and the way he paid—were the theme of universal admiration; and, if the mere representative of the coming candidate did all this, what would the candidate himself do when he became the representative of them all?"

Of the fashionable colonel we must also give a touch:—

"Magnus, who (for often do friendships arise and subside between men, apparently from a love of opposition of temper and character) could not in the slightest degree assimilate with Mortimer on certain points—he who, with his iron nerves and immovable countenance, went straightforward through whatever he undertook with a resolution not to be daunted by circumstances, and a firmness which no minor consideration could shake, was perfectly at a loss to comprehend why the recollection of Lady Hillingdon, so intimately associated with Sadgrove, should, now that she was dead and gone, at all interfere with the enjoyment of new pleasures and new pursuits there, the *locale* being quite as agreeable as it was during her life-time, and affording, by the change of circumstances, every prospect of increased gaiety and cheerfulness. "My dear fellow," continued Magnus, "if your principle were to be acted upon, there is not an

heir in the empire who would rejoice in the death of his parent. The whole of our nobility, our monarchs themselves, are only tenants for life; and, if this repugnance to occupy the castles and palaces of their departed predecessors were to affect their minds, we should have all the châteaux and mansions in the empire shut up or converted into workhouses or county hospitals. The highest dignity of the nation, like the foggy sovereignty of the city of London, are all transferable. My Lord-Mayor Sniggs on the ninth of November steps into the state coach, out of which my Lord-Mayor Figgs stepped on the eighth, and finds himself bowed to by all the same people, sword-bearer, mace-bearer, train-bearer, liveried lacqueys, 'postilion and all,' who four and twenty hours before kotooted to the then lord mayor; the reign there is certainly short, but certain. In loftier circles the same things happen, and the same unconscious coach and horses, driven by the same coachman, and swarmed upon by hanging clusters of the same gilded footmen, draw through the thronged streets to-day, amidst the shouts and cheers of the people, the monarch who succeeds to him that 'died but yesterday,' and who in one week finds himself precisely in the place of the one 'just gone before,' inhabiting the same rooms, attended by the same servants, eating off the same plate, drinking the well-stored wine from the same cellar, and hearing the same strains of music which so recently another loved to listen to; dispensing honours which erst flowed from other hands, and receiving the sweet adulation which so shortly previous had greeted other ears. If recollections like yours were to interfere with this—'Ay, ay,' interrupted Mortimer again, 'all that is different; succeeding to the estates and houses of one's ancestors is quite another affair; custom makes that nothing; no more than a man's sitting in his church under his father's monument, and over his grave, with the full conviction that, when the time comes, his bones are to moulder beneath the crimson cushion on which he slumbers out the sermon. Sadgrove is different. It was to Sadgrove Amelia first came to me from her home. Solitary as was her after-life, she was the star that brightened its gloom. Charles,' said Mortimer, with a tremulous agitation which startled his friend, 'she lies buried there,—how can I bear to visit it with Helen?—poor girl, poor girl!—with such feelings ought I to marry her?' 'This is a burst of passion,' said Magnus, 'for which I confess I was not altogether prepared, Frank. If your feelings are really so strong upon this point, if I were you, I should most certainly not go to Sadgrove.'

As we begin, we shall conclude, with a piece of our favourite Jacob:—

"I should be very glad," said Batley, 'to dine with you anywhere, and upon any terms, but to-day, as I have already said, I have a few friends to dine with me.' 'Friends, have you?' said Jacob: 'small party, I take it. What was the man's name that lived in the tub, and walked about with a lantern to look for a man? If you lived in a tub, you might walk your legs off before you found a friend; but as you occupy a house, and keep a table that you can't afford, the smooth-faced hypocrites come at your call, and do you the honour to eat your victuals and drink your wine, and then go away and laugh at you. I suppose that tom-foolery is nearly now at an end; having married Helen, I conclude you will get rid of your house.' 'Why,' said Batley, junior, 'that would look strange. The world would wonder.' 'There you go again,' exclaimed Jacob. 'The

world!—why,'—'But,' said John Batley interrupting his brother, 'I have another object in view.' 'Oh!' said Jacob in a tone expressive of the utmost indifference upon any subject connected with his gay relative, who, strange to say, with all his knowledge of the world, never despaired of interesting the merchant in his affairs, and rarely did any thing without consulting him—'and what may that be—more wild geese, or more wild oats?' 'Neither,' said John; 'but the fact is'—'Ah!' said Jacob, 'that is what you generally begin with, before you bring out a bouncer. I know 'facts' are not always truths: but go on, because I have business of consequence to do, and—'

And the conversation ends with these appropriate remarks:—

"That John Batley should feel disposed to marry again does not seem so extraordinary. John had married young,—was a young father, and, as he truly said, the relative ages of himself and Helen had, in some degree, alleviated the grief which he felt for the loss of her mother, by placing her in the position of mistress of his house, at a somewhat premature age, perhaps,—but there she was,—and, as he vainly endeavoured to impress upon Jacob's mind,—there was female society; and John liked female society: he had been a sort of male coquette all his life, and loved dangling at fifty-four as much as he did when he was less than half that age; and it is astonishing (perhaps not, because the case is so common) that a habit of that sort does not wear off with time, as might be expected. The man of fifty-four flirts, and is not ill received; but he does not appreciate the mode of his reception; he does not feel himself much older than he was five-and-twenty years before; he scarcely sees an alteration in his own person; all that he wonders at is the extraordinary flippancy and forwardness of boys of five-and-twenty, forgetting that when he was of their age he considered an old fellow of fifty-four a 'regular nuisance.' Wonderful, however, have been the changes in society with the last half century: the march and influence of age have been neutralized to an extent which our grandfathers could not have believed, and certainly never anticipated. Fifty years ago, the idea of a man of sixty in a black neckcloth, with curls and trowsers, and a fancy waistcoat, with smethyst studs in his shirt-bosom, dancing quadrilles, never would have entered into the head of a human being. The dress might have been as gay, or gayer, but it would have been made up of pomatum and powder and a bag or a club, with shorts, and shoes and buckles. At one period, the pig-tail, which superseded the club-knob which had previously succeeded to the bag, would have been indispensable; nay, there are at this moment half a score matured gentlemen, who thirty years since sported tails, knobs, and pigs, with powder and pomatum; aforesaid, walking the assemblies of London in picturesque-coloured wigs, fancy waistcoats, and symmetrically cut pantaloons."

With these extracts, all from the first volume, the *Lit. Gaz.* and its readers must be content. The courtship scene, with which the second opens, is very farcical; and the change from the narrative to the epistolary style, in the third, hardly an improvement. This done, the descriptions to the last are replete with those high qualities in works of fiction, the possession of which we have ascribed to the author, and the curtain drops on a most affecting termination.

The Ballantyne Humbug Handled, in a Letter to Sir Adam Fergusson. By the Author of the "Memoirs of Sir Walter Scott." Pp. 122. 1839. Edinburgh, Cadell: London, Murray; Whittaker and Co.

MR. LOCKHART is too stout an adversary, and too "cunning of fence," not to have impressed those who attacked his work with the full conviction that they were assailing an "ugly customer," and one likely to give a Roland for an Oliver. They would hardly, we think, have ventured to impugn him, had they not felt bold in the truth and justice of their cause; but be that as it may, we have here their answer, and it is our business to bring it fairly before the umpire—public.

It is, as might be expected, a very clever pamphlet, and contains all the elements of pungent controversy—hard hitting, personalities, abuse, argument, satire, figures, irony, statements, assertions, conclusions—not merely defensive, but carrying the most offensive hostilities into the enemies' quarters. For ourselves, we find it difficult to express our sentiments, because our own knowledge and recollection of all parties and many circumstances, have such an influence upon our minds, that we cannot build our judgment upon the documents and reasoning adduced on either side in these publications; and yet we feel that we have no right to speak upon any other data. We thought James Ballantyne's vindication a triumphant one, and we still think his character, as an honest man, a faithful friend to Scott, and a very valuable assistant in his mighty labours, undamaged by Mr. Lockhart's expedition. If he had faults, and fell into errors, what man is free from the first, and not liable to the second? if he had an inaptitude for certain sorts of business, we can see in that no impeachment of his rectitude and attachment; and when we look at the question altogether, we cannot help asking ourselves, if the Ballantynes were so flagrantly worthless, how can we account for a person of Sir Walter Scott's extraordinary shrewdness and sagacity, being intimately connected with them through life, sticking to them under every turn and aspect of their mutual affairs, and being apparently tied to them by close and warm bonds of personal regard and friendship? This perplexes us; and when Mr. Lockhart proclaims John Ballantyne (p. 2) "as a friaky, tricky, little scapegrace," and James "as a well-meaning bore," but endeavouring afterwards to prove him also a very extravagant and dishonourable one, we cannot help wondering what sort of a man he could be who would jog through life, on the nearest and dearest terms, and in several partnerships, with individuals thus described by the author, who also at one period did not shun, if he did not court, their intimacy.

"You knew and loved Sir Walter from your boyish days; you have been long my friend; you knew the Ballantynes about as well as I did during their lifetime; you are esteemed a good analyser of evidence; and, notwithstanding all the sobering influences of years, you are still, I suppose, not unlikely to be diverted with the complete exposure of consummate impudence."

"In the case of these Ballantynes, the follies and absurdities which met every unflinched eye in their personal manners and habits, were too 'gross' to be susceptible of caricature. They know that you might as well talk of caricaturing Mathews in Jeremy Diddler, or Liston in Malvolio. They know that Bunbury, Gilray, and H. B. rolled into one, could never have caricatured either the pompous printer or the

frivolous auctioneer, of whom the one groaned, and the other chirped, when they gathered from Charles Mathews's exquisite mimicry, that their 'illustrious friend' had christened them respectively his *Aldiborontiphocosphernio*, and his *Rigdumfunnido*.

"Will any honest man stand by this obsequiousness of this company's affairs during the first two years? And, if not, who is to blame for the misrepresentation? Is it Sir Walter, the sufferer by the loss, the only mortgaged partner, but who had no knowledge of the details? or is it James, who continued to draw out of the concern largely, and who at least ought to have known, that according to the rules of trade these estimates were fallacious? or, finally, is it John, and John alone, who was certainly a sharp, clever fellow, and not likely, *primæ facie*, to be entirely incapable of distinguishing between a business gasping for existence, and one flourishing in the vigorous health of fifty per cent profits? One word more as to John's accounts. In my narrative, I stated that he owed his dexterity in the manipulation of figures to having passed part of his early career in London, under the roof of a banking-house. On this head, the 'Refutation' gives me a flat contradiction (p. 14). It would, I suppose, be considered as (in the words of Johnny's own old Scotch lady) 'no material to the story,' whether he had acquired his accomplishments in that way, or at a city banker's, or at Mr. Willis, the West-end tailor's. But I confess I was rash in asserting that he had been in a banking establishment at all; for I find, on examining my authority for the statement, that it was only his own word."

"Great, indeed, was Mr. John's faith in the credulity of his correspondent. Perhaps the most audacious specimen occurs in this last letter, where our gay fox-hunter (the true original of Jack Brag) assures Scott that he had, since the book-selling affair began, kept under the allowance to which the contract had restricted his personal drafts.

"I shall not inflict upon you proofs in detail of the less culpable sort of mismanagement which ran through all the period of James's stewardship. His letters are full of apologies for neglect, and promises of amendment; but he maintains a comfortable aspect, on the whole, and repeatedly disclaims 'despondency.' Scott, on his part, continued, as of old, too much occupied with his own romantic creations to have time for minute scrutiny of his commercial affairs—he continued to pardon, to trust, and to hope. 'No Despondency,' was the word.

"The company bills required to be increased, and no wonder. But there was 'no despondency,' and every thing was kept comfortable at Heriot Row. New furniture for the drawing-room; wine at sale after sale; a rocking-horse, and then a pony, for John; horses, mares, phaetons; subscriptions to public institutions; assessments redeemed, and money 'sent to Stillie for my call,' are items most characteristic of that rigid economy as to which, as well as in other matters, James Ballantyne 'kept his word but lamely.' Why do I trouble you, who knew his habits well, with all this detail? 'We must speak to these fellows by the card.' I shew you my proofs step by step as I advance. James was taking the company's funds in violation of the contract. These sums were obviously Sir Walter's; they were raised on his credit—he eventually paid them—and if they had not been so squandered, his debts would have been by so many thousands less. You will judge, therefore, whether the in-

crease of bills is more reasonably accounted for by the overdrawings of one partner to the extent of above 7000*l.* (with interest, 8000*l.* and more), or the non-application by the other partner of the sums stated in the *vidimus* to have been received by him, but which he never received, and which, to a considerable extent at least, consisted of a personal debt due to him by Mr. James Ballantyne.

"Doubt, if you can, that the Ballantyne businesses, under the mismanagement of these worthies, had engrossed a very large share of the hard-won fruits of Scott's genius and labour—genius and labour alike wonderful, but not so wonderful as the long-suffering forbearance, unwearied kindness, and inexhaustible charity of the man whom James Ballantyne's trustees, 'acting in concert with the family,' dare to represent as the greedy, rapacious plunderer of beings, who derived, in fact, from his overflowing bounty, from the dawn of their manhood downwards, every jot of credit or consideration they ever enjoyed, every gratification their luxurious appetites and ludicrous vanity ever received.

"There is no great difficulty in comprehending that James's personal debt, apart from that represented by company obligations, appeared small at the time of the catastrophe. It is, however, rather puzzling to understand how the pamphleteers, with the company books, and James's own 'cash-jottings' before them, could venture to say that at that epoch his personal debts did not exceed 100*l.* To be sure, he was very careful to give his wife 250*l.* on the very morning of the smash! But I abstain—"

Such are among the allegations of the author; and they are spiteful and bitter enough from the "abstaining" pen which sets out with professing to look at the "Refutation" with "the calmness of perfect contempt."

It is impossible for us to enter into the long accounts, and references to accounts, with which Mr. Lockhart supports his statements—on many points they appear to us to be strong; but *audi alteram partem*, in reply and explanation, must, for the present, be our motto. Mr. L. represents Sir Walter as originally wealthy, with a fortune of 10,000*l.*, derived from his father (a much larger sum than we could have imagined), and a considerable income from his legal appointments. The Ballantynes, on the contrary, poor, and involved in debt. Now, we do not believe that James Ballantyne left his native town, Kello, to commence printer in Edinburgh in a condition of pecuniary embarrassment; and, therefore, when we see that printing business, in its very earliest years, 1805, &c., dealing in accommodation bills, we are at a loss to gather the "input" of much capital on either hand. As Scott went on to publish his immortal works, for which he received very large sums of money, no doubt but they were swallowed up in the trading speculations, as well as in the acquisition and improvement of landed property. Of course he was able to lose much more than the Ballantynes, who (with the exception of the "Edinburgh Journal," James's private property) could have little or nothing but profits shared in common with him. But let justice be done alike to the dwarf and the giant. If one is ruined by the loss of five hundred pounds, it does not much mend his situation, that another with whom he is connected, is overwhelmed by the loss of fifty thousand. James Ballantyne's character is as dear to his children and friends as Sir Walter Scott's to his descendants; and, really, this pot-and-kettle dispute is to be

lamented by every admirer of either. Both book-selling and printing came out of the *mille* with detriment; but it seems unfair to charge James Ballantyne with gross neglect of the latter, because he more devotedly employed himself in preparing Sir Walter's numerous publications for the world. Mr. Lockhart undervalues this service; Sir Walter Scott did not.

We have not space to go into all the points discussed in this pamphlet, and shall conclude with only one observation. It was generally felt that the gravamen of the Ballantyne pamphlet, as it affected the memory of Sir Walter Scott, was the fact of his having entailed Abbotsford on his son the year before the failure, and thus removed answerable means for meeting the common difficulty. Upon this important topic it is but right to hear Mr. Lockhart:—

"First of all, let me ask any candid man who has followed me in my minute deduction of the position in which Scott and Ballantyne stood to each other as to money matters at every marking stage of their connexion,—and indeed throughout the whole course of it,—whether he is of opinion, that when the marriage of Captain Scott and your niece was on the tapis in the beginning of 1825, Sir Walter was bound to consult James Ballantyne about any thing he might please to do with respect to the settlement of his landed estate? The pamphleteers choose, you see, to suppress all allusion to the fact, that the settlement then made reserved to Sir Walter the right of borrowing 10,000*l.* on his lands, and that this sum was accordingly borrowed, and applied to the purposes of Ballantyne and Co. and Constable and Co., before the end of 1825—the loan being negotiated and the necessary instruments prepared by James Ballantyne's brother-in-law, Mr. George Hogarth, W. S. Besides this 10,000*l.* worth of land at Abbotsford, left free, Sir Walter had other property, both real and personal, which the marriage-settlement nowise affected, to an extent infinitely beyond any thing that could ever have been claimed from the real and personal estate of James Ballantyne—a freehold house, &c. in one of the best streets of Edinburgh—books, &c. in the country, worth at least 10,000*l.*—the copyrights of several important works, which works alone realised a very considerable dividend to the creditors within the first eighteen months of the trust—to say nothing of the power of securing large sums at any time in the shape of life assurance. Was it necessary that Sir Walter Scott, being thus situated as to real and personal property, and other resources equally available, should feel himself bound, in honour and honesty, to consult his debtor Ballantyne as to such arrangements as he did make in the view of his son's marriage? I apprehend no man of common sense will say that he was bound to do any such thing; and I am very sure no one can have read the Memoirs of his Life without believing, that when that settlement was made he considered himself to be in possession of resources independent of those which it affected, far more than sufficient to meet any demands that existed against him as the partner of Mr. Ballantyne. But whether he consulted Ballantyne on the business or not, that Ballantyne must have been perfectly cognizant of what Sir Walter then did, at the time when it was done, is a fact susceptible of most abundant proof."

Deerbrook: a Novel. By Harriet Martineau. 3 vols. 12mo. London, 1839. Moxon. MISS MARTINEAU dwells in a country town. There are a neighbouring squire, a reverend

rector, two partners in a large way of trade with their wives and families, two lady visitors from Birmingham, an accomplished surgeon-apothecary, haberdashers, and other little folks; strange to say, there is no lawyer; and never yet was there a perfect picture of the society and concerns of such a town without that functionary cutting a conspicuous figure in it. This sin of omission is so far fatal to truth and veri-similitude.

With regard to the portraits of individuals, the doings of society, and the exposition of moral principles which she means to enforce, we have no fault to find with our author. The painting is strongly coloured, and wants refinement; but still it is an able exhibition of human nature. It is, however, true that people do not generally let out so much in conversation as Miss M. finds necessary for her purpose. Speech is more employed to conceal than to reveal all the workings of the heart, the excitement of the passions, and the designs of the mind: there is a want of art, and especially as employed on fiction, in making persons declare too much of their feelings and purposes; and the genuine artist traces the events of life to more recondite and hidden causes, to trifles rather than to broad exposures.

With these abatements, *Deerbrook* is a clever work, though hardly to be called a novel. The examples of mothers upon their families, the effects of vulgar intrigue, the lessons how to bear plenty or poverty, and the opening of some of the well-springs which exist more or less in every mortal breast, are all deserving of much commendation. Of these, its peculiar and laudable qualities (being, as they are, illustrated at length, and throughout the whole narrative), it is out of our power to give an adequate idea; but we must select some passages as an example of the rest. The following dialogue with the accomplished surgeon, to whom we have alluded, contains just and original observations:—

“‘You are surprised,’ said he, ‘that I am come from a dying patient to play with the children in the fields. Come, acknowledge that this is in your minds.’ ‘If it is, it is an unreasonable thought,’ said Margaret. ‘You must see so many dying people, it would be hard that in every case you should be put out of the reach of pleasure.’ ‘Never mind the hardship, if it be fitting,’ said Hope: ‘hard or not hard, is it natural,—is it possible?’ ‘I suppose witnessing death so often does lessen the feelings about it,’ observed Hester; ‘yet I cannot fancy that one’s mind could be at liberty for small concerns immediately after leaving a house full of mourners, and the sight of one in pain. There must be something distasteful in every thing that meets one’s eyes,—in the sunshine itself.’ ‘True. That is the feeling in such cases; but such cases seldom occur. Yes: I mean what I say. Such cases are very rare. The dying person is commonly old, or so worn out by illness as to make death at last no evil. When the illness is shorter, it is usually found that a few hours in the sick-room do the work of months of common life in reconciling the minds of survivors.’ ‘I am sure that is true,’ observed Margaret. ‘It is so generally the case that I know no set of circumstances in which I should more confidently reckon on the calmness, forethought, and composure of the persons I have to deal with, than in the family of a dying person. The news comes suddenly to the neighbours: all the circumstances rush at once into their imaginations: all their recollections and feelings about the sufferer agitate

them in quick succession; and they naturally suppose the near friends must be more agitated, in proportion to their nearness.’ ‘The watchers, meanwhile,’ said Hester, ‘have had time in the long night to go over the past and the future, again and again; and by morning all seems so familiar, that they think they can never be surprised into grief again.’ ‘So familiar,’ said Mr. Hope, ‘that their minds are at liberty for the smallest particulars of their duty. I usually find them ready for the minutest directions I may have to give.’ ‘Yes: the time for surprise,—for consternation,—is long afterwards,’ said Hester, with some emotion. ‘When the whole has become settled and finished in other minds, the nearest mourners begin to wake up to their mourning.’ ‘And thus,’ said Margaret, ‘the strongest agitation is happily not witnessed.’ ‘Happily not,’ said Mr. Hope. ‘I doubt whether any body’s strongest agitations ever are witnessed. I doubt whether the sufferer himself is often aware of what are really his greatest sufferings; and he is so ashamed of them that he hides them from himself, when it is possible. I cannot but think that any grief which reveals itself is very endurable.’ ‘Is not that rather hard?’ asked Margaret. ‘How does it seem to you hard? Is it not merciful that we can keep our worst sorrows—that we are disposed, as it were, forced, to keep them from afflicting our friends?’ ‘But is it not saying that bereavement of friends is not the greatest of sorrows, while all seem to agree that it is?’ ‘Is it, generally speaking, the greatest of sorrows? I think not, for my own part. There are cases in which the loss is too heavy to bear being the subject of any speculation, almost of observation; for instance, when the happiest married people are separated, or when a first or only child dies: but I think there are many sorrows greater than a separation by death of those who have faith enough to live independently of each other, and mutual love enough to deserve, as they hope, to meet again hereafter. I assure you I have sometimes come away from houses unvisited, and unlikely to be visited by death, with a heart so heavy as I have rarely or never brought from a death-bed.’ ‘I should have thought that would be left for the rector to say,’ observed Hester. ‘I should have supposed you meant cases of guilt or remorse.’ ‘Cases of guilt or remorse,’ continued Mr. Hope, ‘and also of infirmity. People may say what they will, but I am persuaded that there is immeasurably more suffering endured, both in paroxysms and for a continuance, from infirmity, tendency to a particular fault, or the privation of a sense, than from the loss of any friend upon earth, except the very nearest and dearest; and even that case is no exception, when there is the faith of meeting again—which almost every mourner has, so natural and welcome as it is.’ ‘Do you tell your infirm friends the high opinion you have of their sufferings?’ asked Margaret. ‘Why, not exactly; that would not be the kindest thing to do: would it? What they want is, to have their trouble lightened to them, not made the worst of; lightened, not by using any deceit, of course, but by simply treating their case as a matter of fact.’ ‘Then surely you should make light of the case of the dying too: make light of it even to the survivors. Do you do this?’ ‘In one sense I do; in another sense, no one can do it. Not regarding death as a misfortune, I cannot affect to consider it so. Regarding the change of existence as a very serious one, I cannot, of course, make light of it.’ ‘That way of looking at it regards only

the dying person; you have not said how you speak of it to survivors.’ ‘As I speak of it to you now, or to myself when I see any one die; with the added consideration of what the survivors are about to lose. That is a large consideration certainly; but should not one give them credit for viewing death as it is, and for being willing to bear their own loss cheerfully, as they would desire to bear any other kind of loss? especially if, as they say, they believe it to be only for a time.’ ‘This is looking on the bright side,’ observed Hester, in a low voice; but she was overheard by Mr. Hope. ‘I trust you do not object to the bright side of things,’ said he, smiling, ‘as long as there is so much about us that is really very dark.’ ‘What can religion be for,’ said Margaret, ‘or reason, or philosophy, whichever name you may call your faith by, but to shew us the bright side of every thing—of death among the rest? I have often wondered why we seem to try to make the most of that evil (if evil it be), while we think it a duty to make the least of every other. I had some such feeling, I suppose, when I was surprised to hear that you had come hither straight from a death-bed; I do not wonder at all now.’

Without going into the story, the evils induced by bad feelings, and the revolution and poetical justice brought about by a fatal malady which ravages Deerbrook, we could afford no specimen more apt than the foregoing; and with it therefore we beg to recommend these volumes to our readers, for much good sense and much useful discrimination. There is nothing forced, and every person and occurrence seem real; and the faults we have found are rather imputed to it as belonging to the class Novel, than to any inherent demerit of its own as a lesson of life.

Insurrection of Poland in 1830-1; and the Russian Rule proceeding it since 1815. By S. B. Gnorowski. 8vo. pp. 415. London, 1839. Ridgway.

THE Poles, time immemorial, have been a dashing, in the upper ranks profligate, brave, reckless, intriguing, and gallant people. For love or war, treachery or patriotism, they have furnished models that would make Romance look like a cripple at invention. This volume is in perfect keeping with the national character. True courage and rhodomontade, illustrious suffering and Bobadil boasting, Spartan virtue and Punic faith, heroism and weakness, mingle in the most tangled yarn that ever unravelled round a portion of history.

We stumble at the very outset.

“Since the last partition of Poland in 1795, her independence has never been entirely annihilated. Until 1806 it survived in the legions of Dombrowski and Kniaziewicz, fighting for the French in Italy, Egypt, Germany, and St. Domingo, where no less than 30,000 Poles perished. To their valour Bonaparte bore witness, saying, that ‘they fought like devils;’ but when they demanded to share in the benefit secured by treaties, he only answered, ‘that the prayers of every friend of freedom were for the brave Poles, but that time and destiny alone could re-establish them.’ What he called destiny, they held to be the justice of their cause; and, confident in its ultimate success, fought on, to their war-cry, ‘Poland is not lost while we live.’”

Now it puzzles us to find out how the “independence of Poland” could be upheld by

* “The first line of a mazurka, composed for the legions, which subsequently became the most popular of their national airs.”

the slaughter of thousands of her people fighting as mercenaries, whether in Italy, Egypt, Germany, or St. Domingo; or how the loss of Poland could be averted by a line of poetry, contradicted by the fact of these brave men (not living or bleeding for their country, but) being slain in foreign wars.

The events of the partitions, treaties, &c. &c. which have affected Poland, are too well known to require being followed in our notice of this work, and we proceed to exemplify some of the author's figures of amplification and illustration. In 1828, it seems, an imperial ukase was issued, ordering all nobles (and the land swarmed with them) to prove the legitimacy of their rank, and the writer says—

"The consequence of this measure was, that most of the rich nobles were ruined, and the poor became serfs. The wholesale transportation of the nobility now carried on by Nicholas commenced at that epoch, and reduced not less than half a million of the bravest nation in the world to despair."

During the struggle in 1830-1, we are told:

"The national government took the soldiers' wives under its protection, and the diet voted ten millions of florins, to be distributed in money or land amongst the troops, after the campaign should be over; but they, when made acquainted with this liberal measure, feeling that their task was not yet accomplished, answered with sublime simplicity, 'Provide us with bread and brandy, and keep the money for more urgent purposes.'"

The following bit of a battle, and other morsels, are yet more in the King Cambyzes vein, and *Kicki* is a good name for it:—

"In the meantime, the cuirassiers had imprudently advanced to the second Polish line, but were effectually repulsed by a battalion, whilst Colonel Prondzynski poured on them a shower of Congreve rockets, and General Kicki attacked them with the second regiment of lancers, and two of the Zamoyiski squadrons. Assailed from every quarter, the flying cuirassiers met as they fled the division of Skrzynecki, and a carnage as great as that in the elder-wood took place. They would not yield, and all perished. The Polish artillery then advancing, poured a grape fire on the Russian battalions which were coming up, though too late, in support of the cuirassiers, and completed the discomfiture of Diebitch, whose men were now in full retreat. Skrzynecki, the hero of the day, at length confident of success, urged Prince Radziwill to renew the attack, more especially as Krukowiecki had just arrived at Praga with 15,000 fresh troops; but since the fall of Chlopicki, the prince was not to be persuaded to undertake any thing upon his own responsibility, and fearing also that the bridge across the Vistula might be broken down, he gave the word for retiring. Thus both armies drew off in opposite directions, as driven by some unseen influence from the spot of that day's butchery. Leaving Praga in flames, and three battalions to defend the fortified advanced post of the bridge, the remainder of the Polish army re-entered Warsaw in the night. To convey an idea of that day's conflict, it is enough to remark, that there was scarcely a general or staff-officer amongst them who had not his horse killed or wounded under him; two-thirds of the officers, and 8000 privates, were wounded, and 4000 killed. The Russians, according to their own statement, lost, during the three engagements on the 19th, 20th, and 26th, 30,000 killed and wounded. They suffered most on the last day, in their assaults

on the elder-wood, which has since been called 'the Forest of the Dead.'

"Had he (Dwernicki) marched from Borel into the middle of the country, he would have found thousands of willing hearts and hands, and his incomparable cavalry would have increased to 30,000 men, mounted on chargers, swift as the winds of the Ukraina steppes.

"The rush of the fugitives disordered the first squadron of Kolyszko's column, which fell back on the second, and thus successively all the seventeen were thrown into utter confusion. The venerable general tore his grey locks in despair, and other chiefs endeavoured, but without success, to rally their men. 'Shall it besaid that Polish nobles fled before the enemy?' thought the few (about fifty in number), who vainly opposed the fatal flight, and drawing themselves up at the entrance of Daszow, they awaited unmoved the advancing foe. They were a noble band. Their names are amongst the most illustrious in the heraldic annals of Poland. Possessed of many thousand miles of territory, lords over many thousand subjects, a single tomb may now contain these willing martyrs for the freedom and welfare of all. 'Forward,' they shouted, and fell like the thunder-bolt upon the hostile columns. Each was opposed to many, each dealt his deadly blows. They took the enemy's cannon, and killed hundreds of Russians. They were entirely surrounded, but, Decius-like, they hewed a passage with their swords, and effected their retreat. Awed by such valour, the Russians retired four miles from Daszow, yet General Rott afterwards reported that he had vanquished many thousands, and that, notwithstanding the desperate resistance, he had lost only 200 men. The insurgents lost only their single piece of cannon and six men killed.

"In the moment of perplexity, they intercepted a despatch from the Russian general Szczucki, by which they learned that he was advancing, with three squadrons and two cannon, to cut off their retreat. The letter was no sooner read, than the sound of artillery gave notice of his onset; but so sudden and vehement was their attack, that, before he could fire a second time, they had taken his guns, and put his cavalry to flight. This occurred at Obodno, the 19th of May, and on that day many were the Russian veterans who laid down their arms at sight of lances, waving the flags embroidered in secret by Polish ladies, and yet warm with their sighs and tears."

"The exertions of the Polish soldiers in this last encounter were extraordinary; one of them killed eleven Russians with his scythe, for which exploit Skrzynecki invested him on the spot with his own cross."

These quotations will shew how incompatible this narrative is with the sobriety of history; but we must make allowances for that excitement which inflames the bosoms of Polish exiles.

Before taking a glance at the totals, we will, by way of interlude, copy a few insulated paragraphs. Of Russia, internally, the author tells us:—

"The czars may in safety erect scaffolds for princes, or banish them to Siberia, but dare not take cognizance of the mal-administration of their officers, lest the very scarf with which they gird themselves should serve to teach them by what physiologic law mortals may perish in a critical moment. They know it; and in consonance with this unyielding law, Nicholas has issued a ukase, threatening equal punish-

ment to the briber and the bribed, in order at once to crush all prosecution of legal venality. The system is so familiar to the Russians, that they have embodied it in a kind of proverbial idyl:—'The buck robs the sallow—the wolf robs the buck—the shepherd robs the wolf—the landlord robs the shepherd—the attorney robs the landlord—the czar robs the attorney, and the devil himself robs the czar.'"

In Poland there is a district of an extraordinary description for the heart of Europe:—

"The Bialowie, forty miles in length and twenty-six in breadth, may be called a primitive forest. In this extensive tract there are said to be as yet unexplored. It is the only spot in Europe where the bison (*zubr*) is found, of which it is estimated there are here about eight hundred. In 1802, the Emperor Alexander issued a ukase, prohibiting any of these animals to be destroyed on pain of death."

The following views are new to us; and we know not whether they are authentic:—

"The retreat of the Polish army from Ostrolenka to Praga was equivalent to a defeat. Previous to the expedition against the guards, the Emperor Francis had conceived so favourable an opinion of the national prospects, that he had proffered his support, and even proposed to restore Galicia, on condition that the Polish crown should be bestowed on the Archduke Charles. But the unfortunate affair of Ostrolenka changed the views of Austria, who, considering the cause as now hopeless, at once broke off the negotiation. It is worthy of remark, that Austria had twice before, in 1809 and 1815, offered to restore her share of the spoils of Poland. A time may come when she may find it advisable, for her own sake, to carry the proposal into effect. All hope, too, from the Ottoman Porte, once the implacable enemy, but of late the sincere ally of Poland, faded at the same time. Fully appreciating the opportunity of escape from the insolent protection of the Russian, the sultan, on receiving assurances of the co-operation of the French, through their ambassador, General Guilleminot, had prepared for hostilities, although his army of the line had been reduced to 10,000 during the late unfortunate war. The ambassador had, however, exceeded his instructions, and was recalled in consequence by his government.

"The passage of the Vistula having been made a point of honour by either nation, Nicholas might now, without loss of dignity, make proposals for a reconciliation which would render him the dictator of Europe. The resources of the empire also being so exhausted that it was necessary to solicit aid from Prussia, he naturally dreaded the result of an unsuccessful battle on the left of the Vistula: besides which, the paramount obstacle to reconciliation no longer existed, the Grand Duke Constantine having died at Minak on the 13th of July, the day after a visit from Count Orloff, the harbinger of death, on his return from Berlin."

Orloff's visits are represented as always fatal; and it is insinuated that Diebitch was one of his victims; but it is not easy to pin our faith to all the author's stories; for example:—

"The following anecdote, given to the writer of these pages by a party concerned in it, may serve to illustrate the character of Nicholas. Whilst yet czar-witch, he had a pregnant bitch, one of whose puppies he had promised to Count A. P. (since dead), at that time grand master of the ceremonies at the court of St. Petersburg. The count happening to call

upon him on a winter's morning, found his imperial highness employed in throwing the puppies one by one upon the chimney fire, and burning them to death, out of pity to the poor animal which had given birth to six young ones. What were the pastimes of Nero in comparison with those of Nicholas? No doubt it is from similar motives of commiseration for Polish mothers that he destroys their children."

On a general view of the author's bulletins, it is first stated that the Russians, purposely exaggerating their force, represented it at 260,000 (page 227); but before he has done, M. Gnorowski calculates it himself at 420,000!! (page 411). And it requires that incredible number to substantiate his account of their losses, for within a few pages he slays 75,000, and takes prisoners, and puts *hors de combat*, as many more as swell the amount to 110,000 men! Sometimes they are on one point 60,000, and anon 141,000 strong (see pages 367 and 367), and, in short, in the war and by the cholera, above 220,000 men are disposed of.

That we doubt, is a pity; but we cannot help it. Our readers may believe if they like. We regret to see so much gasconade on so interesting a subject.

A Defence of the Stage, &c., &c. By J. W. Calcraft, Lessee and Manager of the Theatre Royal, Dublin. 8vo. pp. 176. Dublin, 1839. Milliken and Son.

A SERMON against the stage lately preached and published by the Rev. Dr. J. B. Bennett (Weeleyan), in Dublin, has called forth this defence of theatrical amusements from the manager of the Dublin theatre. Whether there exists any particular jealousy between the pulpit and the stage, we cannot tell,—we have seen very bad, as well as very good "tolerable and not to be endured," and very good, actors in both places—but there does seem to be a sort of feud, which ever and anon breaks out; and some preacher, more zealous than the rest, launches out his measureless anathemas against the drama and its professors, as a perfect hell and a set of devils to match. The salient points are seized, and every offence, mischief, vice, and crime, that can be traced to a play-house, is denounced as the offspring of the place, not the depravity of human nature, which, even in a church or conventicle, will lapse into sin. They excuse

"The sins they are inclined to,
By damning those they have no mind to;"

and in austerity towards the innocent recreation afforded by the well-regulated drama, find an apology for those pleasures which may be more congenial to their tastes, the ample dinner, the wine cup, and, it may be, the tea-cup and love-feast! Excitement is enjoyment, and we ought not, in common charity, to be too pharisaical as to its causes and modes.

We lately reviewed Dr. Styles, whom Dr. Bennett has followed; and need not again go into this puritanical controversy. Of what is bad in the drama we are not the defenders, but we greatly dislike the indiscriminating condemnation of what is good in it. Against its degradation and pollution for disgraceful purposes we have ever raised our voice; but that is the very reason we would stand by it in its improving and moral tendencies. So we would as regards the pulpit and religion,—reprove the mixture of the one, and the abuse of the other; in order to defend the one without intolerance, and the other without bigotry. It is not because there are errors in every thing human, that we are to impeach the whole system. The

priest and the performer are, after all, men of the same species; and the latter may be as beneficially employed in enforcing an ennobling principle, as the former in inculcating a point of doctrine. At any rate there should be no strife between the two; for, if properly conducted, the pulpit need not be ashamed of the stage as an ally in good works.

Before offering a few remarks on the body of Mr. Calcraft's volume, we would just notice a passage in his preface; where, illustrating the detrimental nature of literary controversy, he says:—

"Milton expressed no compunction for the death of Salmastius, nor has the 'Quarterly' recorded any penitence for the article that put an end to Keats."

With regard to the former we shall not question that the author of "Paradise Lost" slew his adversary with a quarte pamphlet; but with regard to the Quarterly reviewer, we may repeat that it would have been a work of supererogation in him to cry *pecorari* for a crime he did not commit. Poor Keats died of consumption, and not of an article in any review; though, like many other silly and unfounded bits of gossip, this charge has been repeated till it has obtained the currency of belief among those who know no better.

Previous to a searching examination of some of Dr. Bennett's garbled statements from Collier and other opponents of the stage, Mr. Calcraft thus speaks of his odious comparisons:—

"Can, then, the theatre with justice be condemned among the resorts of low sensuality, with which it has been so cruelly compared? The gaming table, the brothel, and the midnight tavern of the drunken reveller, are equally unmanicured by the magistrate and the philosopher. The one feeling the impossibility of rendering useful that which is essentially profligate, and the other, in the wildest dreams of Utopian enthusiasm, never contemplating the probability of reforming that which reason says should be abolished altogether. There are portions of life which men cannot and will not employ either in labour or in study. The mind and body both require refreshment, and that which Nature demands, Religion does not deny. Pindar says, 'rest and enjoyment are universal physicians'; and Aristotle observes, 'it is impossible for men to live in continual labour—repose and games must succeed to cares and watchings.' Our recreations should be moderate, not tardily prolonged, but dismissed in time, as the dogs of the Nile run whilst they sip its waters, lest the wary crocodile should entrap their negligence. In teaching the discipline of the human heart, we should avoid extremes as carefully as in restraining its indulgences. Dr. Johnson, a profound moralist and pious Christian, says, 'If one was to think continually of death, the business of life would stand still; I am no friend to making religion appear too hard. Many good people have done harm by giving too severe notions of it.' Sir Walter Scott, another eminent moral teacher, says, 'To those abstracted spirits, who feel or suppose themselves capable of remaining constantly involved in heavenly thoughts, any sublimary amusements may justly seem frivolous, but the mass of mankind are not so formed.' Giddy, thoughtless people, and there always have been, and in all probability always will be, a majority of such in the world, are more likely to be reclaimed by instruction mildly insinuated, than harshly commanded. The pride which recoils against authority, sometimes yields to persuasion, and in this

view, it is probable the stage may avail (I speak it reverently) where the pulpit fails. 'Omne tulit punctum qui miscuit utile dulci.' He carries every vote who combines the instructive with the agreeable. Surely this maxim of the Roman poet is not inconsistent with the higher sources from whence our own moral doctrines are derived. The theatre is a gentle monitor, and, as such, acceptable to the tastes of men; appealing to the reason, it is true, through the pleasant, but at the same time hazardous medium of the senses, and therefore liable to objection as easily pervertible to abuse; but the lesson is not the less efficacious if prudently administered, as the senses are the most powerful alembic through which knowledge can be instilled into the heart."

The rationality of this view is surely not incompatible with morality and religion; not so much so as dishonesty in reasoning, if we are forbidden to do evil that good may follow it. Yet we read:—

"Dr. Bennett says (page 14 of Sermon), 'The authority of Livy is sometimes adduced by the friends of the drama, to prove that it was originally introduced at Rome to pacify the gods, and avert a pestilence; but it should in candour be added to this statement, that he says, the remedy in this case was worse than the disease, and the atonement more infectious than the plague.' Which latter sentence he gives as a quotation from Livy, transcribing it on the faith of Collier. Now, there is no such passage in Livy, nor any remark of that historian which, by any possible interpretation, can be so defined. What he says on the subject is as follows: 'Inter allarum parva principia rerum, ludorum quoque prima erigo ponenda visa est: ut apparet, quam ab sano initio res in hanc vix opulentis regibus tolerabilem insaniam venerit.' Which stands thus in Baker's translation: 'Among the trifling beginnings of other matters, I thought it not amiss to give a view of the origin of theatrical exhibitions also, in order to shew, from a moderate setting out, to what an intolerable extravagance they have proceeded; such extravagance, indeed, as scarcely to be supported by opulent kingdoms.' Let impartial readers decide whether or not this is a fair mode of handling evidences."

And the author proceeds well with the general argument, as far as ancient authorities are concerned:—

"'Tully,' answering to Collier, 'cries out upon licentious plays and poems, as the bane of sobriety and wise thinking; and Plutarch says plays are dangerous to corrupt young people; and, therefore, stage poetry, when it grows too hardy and licentious, ought to be checked.' With both of these opinions we cordially agree, but Cicero, as is well known, was the friend of Rascius, and an admirer of his art; and Plutarch tells us, in another passage of the same part of his works, from whence Collier has quoted, that he thought plays useful to polish the manners and instil the principles of virtue. The entire tendency of the treatise, 'De Audiendis Poetis,' is to guide youth in the study of the poets, especially the dramatic ones, and to shew them where the abuses lie, and how they are balanced by the advantages. There is scarcely any author who quotes more constantly from the ancient dramatists than Plutarch, when enforcing his own moral sentences and instructions. Aristotle (who, according to Collier and his followers, is also an enemy to the stage) considered it of so much importance, that he laid down a very minute model for its formation and arrangement. 'Tragedy,' by his definition, is 'the imitation of an action

which, by means of terror and pity, refines and purifies in us all sorts of passion.' He also says, 'the force of music and action is very affecting; it commands the audience, and changes the passions to a resemblance of the matter before them.' 'So that,' adds Collier, 'when the representation is foul, the thoughts of the company must suffer.' This we readily admit; and by the same rule, when the representation is fair, the thoughts of the company must be elevated accordingly."

The summary of testimonies of more modern instances is not less curious; and, on the grounds we have stated for not again entering into the dispute, we will conclude with the following:—

"The number of churchmen who have written plays, or otherwise countenanced the stage by their writings and example, is extraordinary."

"The first regular comedy in English, 'Gammer Gurton's Needle,' was written by the Rev. J. Still, afterwards Bishop of Bath and Wells."

"Dr. John Bale, bishop of Ossory, called billous Bale, from the acrimony of his controversial writings, is the author of above twenty dramatic pieces, four of which were published. Dr. Nicholas Brady, the coadjutor of Tate (who was also a dramatist) in the version of the Psalms, is the author of a tragedy called 'The Rape, or the Innocent Impostors.' The Rev. Thomas Broughton, prebendary of Salisbury Cathedral, is the author of a tragedy, called 'Hercules.' The Rev. William Cartwright, who died in 1643, is the author of the 'Royal Slave,' 'The Lady Errant,' 'The Ordinary,' and 'The Siege.' He was an eminent preacher. The learned and pious Dr. Fell, bishop of Oxford, said of him, 'Cartwright was the utmost man could come to.' Dr. Samuel Coxall, archdeacon of Salop, is the author of the 'Fair Circassian.' Dr. John Dalton altered and adapted to the stage Milton's 'Comus.' Dr. Dodd, who, though his end was unfortunate, was an able divine and a religious man, wrote the oratorios of 'Ruth' and 'Balaam,' the tragedy of the 'Syracusan,' and edited the 'Beauties of Shakspeare,' with notes and annotations. Dr. Warburton, bishop of Gloucester, bestowed much time on an edition of Shakspeare, and in writing notes to his works. Dr. Percy, bishop of Dromore, wrote an essay on the English stage, and contributed many notes to the various editions of Shakspeare."

"The Rev. Thomas Goffe, who was esteemed as an excellent preacher, wrote the tragedies of the 'Raging Turk,' 'Orestes,' and the 'Courageous Turk,' and a tragi-comedy called the 'Careless Shepherdess.' He died in 1627. Dr. Zachary Grey wrote critical, historical, and explanatory Notes to Shakspeare. The Rev. John Upton, prebendary of Rochester, wrote critical observations on Shakspeare. The Rev. Stephen Gosson, who afterwards became a noted persecutor of the theatre, and wrote 'The School of Abuse,' an invective against poets and players, is the author of a tragedy called 'Catiline's Conspiracies,' the comedy of 'Captain Mario,' and a morality called 'Praise at Parting.' Dr. John Hackett, bishop of Lichfield and Coventry, is the author of 'Loyola,' a comedy acted before James the First. The Rev. Samuel Harding wrote the tragedy of 'Sicily and Naples, or the Fatal Union.' Dr. Peter Hansted, chaplain to the Earl of Northampton in the civil wars, wrote the comedies called 'Rival Friends,' and 'Senile Odium.' Dr. John Hoadly, prebendary of

Winchester, is supposed to have materially assisted his brother in the celebrated comedy of the 'Suspicious Husband,' and is the author of the following dramatic pieces—'The Contrast,' 'Jephtha,' 'Love's Revenge,' 'The Force of Truth,' and 'Phoebe,' and left several dramatic works in manuscript behind him. The Rev. John Home is the author of 'Douglas,' a play that will keep possession of the stage as long as any taste for true natural poetry remains; and also of 'Agis,' 'The Siege of Aquileia,' 'The Fatal Discovery,' 'Alonza,' and 'Alfred.' The rigid principles of the synod of Scotland were shocked at the idea of a member of the kirk becoming a dramatist; they, accordingly, in a public convocation, expelled him, and disqualified him from the ministry; in consequence of which he resigned a good living, and withdrew from the jurisdiction of the presbytery. The opinion of mankind has amply vindicated him, and condemned the harsh bigotry by which he suffered, and the late King George III., then Prince of Wales, afforded him a substantial recompense, in the form of a handsome pension, which placed him beyond the effects of further persecution. Dr. James Hurd is the author of 'Panthea,' and 'Sir T. More,' tragedies, and 'Cursory Remarks on the Arrangement of the Plays of Shakspeare.' The Rev. W. Mason, chaplain to the king, rector of Aston, and canon-residentiary of York, and prebendary of Driffield, is one of the authors entitled to the applause of the world, as well for the virtues of the heart, as the excellence of their writings. He is the author of the celebrated dramatic pieces, 'Caractacus' and 'Elfrida,' two tragedies still in MS., and finished a tragedy left by Whitehead, called 'Edipus.' The Rev. Dr. Brown is the author of the tragedies of 'Barbarossa' and 'Athalstan.'"

"The Rev. James Townley is the author of the popular farce of 'High Life below Stairs,' so often attributed to the pen of Garrick and many others. Dr. John Watson, bishop of Winchester in 1633, is the author of 'Absalom,' a tragedy in Latin. Dr. Welch, bishop of Derry in 1670, wrote two comedies, called 'Hermophus' (in Latin), and 'Love's Hospital.' Dr. Francis Wingham, archdeacon of York, is the author of a farce called 'Reform,' written in 1793. Dr. James Plumptre is the author of a comedy called the 'Coventry Act,' the tragedy of 'Osway,' 'Observations on Hamlet, with an Appendix,' and 'Four Sermons on Subjects relating to the Stage,' preached in St. Mary's Church, Cambridge. In these discourses Dr. Plumptre takes the middle course, and points out the distinction between the uses and abuses of the stage. He says, 'This powerful engine can be made to promote the cause of virtue and religion, and to become not only an innocent amusement, but a highly rational and pleasing source of instruction.' These discourses were written under the sanction of the Rev. Dr. Pearson, vice-chancellor of the University of

"Cowper, a pious, and in some respects severe Christian, in a letter to Dr. Hunter, speaking of the tragedy of 'Sir Thomas More,' says, 'I wish to know what you mean to do with 'Sir Thomas,' for though I expressed doubts about his theatrical possibilities, I think him a very respectable person, and, with some improvement, well worthy of being introduced to the public.'—*Hayley's Life of Cowper*, Letter cxcviii. See, also, 'The Task,' book vi. p. 284, in which he eulogises Garrick, and, in speaking of the Jubilee at Stratford, in 1769, in honour of Shakspeare, says—

"'Twas a hallowed throng; decorum reigned,
And mirth without offence. No few returned,
Doubtless much edified, and all refreshed."

It is evident from this, Cowper had no horror of the theatre; yet his character and conduct are often quoted by the most rigid."

Cambridge, to whom they are dedicated. The reader would do well to peruse them entire, and not draw his opinion of Dr. Plumptre's object, or the mode in which he enforces it, by the summary account included in Dr. Bennett's Appendix. The book is reasonable and moderate, and the notes abound with highly entertaining information. This production Dr. Bennett regards as 'a curiosity in theological literature.' It may be so. That a clergyman should say a word or two in defence of the stage, may appear to him curious, but I think I have shewn that at all events it is not singular. Dr. Edward Young, the author of 'Night Thoughts,' wrote the tragedies of the 'Revenge,' 'Busiris,' and 'The Brothers,' the last of which (a fact, I believe, not generally known) was written and acted for the express purpose of adding to the fund for the propagation of the gospel in foreign parts. In more modern times, the Rev. C. Matrin, who is remembered in this city as an eloquent preacher, is the author of the tragedies of 'Bertram,' 'Manuel,' 'Ferdolfo,' and 'Osmyn the Renegade.' The Rev. H. Millman is the author of 'Fazio,' which was eminently successful on the stage when produced at Covent Garden for Miss O'Neill, 'Belshazzar's Feast,' the 'Fall of Jerusalem,' and the 'Martyr of Antioch.' The Rev. C. Croly is the author of 'Catiline,' and a very successful comedy called 'Pride shall have a Fall.'"

Notes of a Wanderer, in Search of Health, through Italy, Egypt, Greece, Turkey, up the Danube, and down the Rhine. By W. F. Cumming, M.D., late Bengal Medical Establishment, &c. &c. 2 vols. 12mo. London, 1839. Saunders and Odey; Edinburgh, Blackwood.

DR. CUMMING'S peregrinations covered a vast extent of ground, and his diary is full of remarks which do credit to his good sense and acuteness. If we had not read many previous works describing the same countries, places, and topics, we should have enjoyed as much of pleasure as of information from his very agreeable and instructive volumes; and to those who are not in this (our unfortunate critical) predicament, we can cordially recommend them. As it is with ourselves we must dismiss them with a single extract on the transmission of correspondence with India. At Grand Cairo:

"The pacha arrived two days ago from the Delta. I saw him drive past the hotel in a carriage more like a London jarvie than a vehicle of state; it was drawn by six white horses, and preceded by a dozen outriders. He is a venerable-looking old man, with a long white beard. Dined yesterday with Mr. Waghorn, to meet Lord and Lady Brudenell. His lordship is on his way to Coesir via Thebes, where he hopes to embark on the H. Lindsay steam-boat early next month for Bombay. After dinner, we had a long and animated discussion on steam communication with India. Mr. Waghorn is a very singular character, and were his zeal and enthusiasm only tempered by a little more judgment and discretion, is precisely the man to be the successful apostle of a new system. Of iron frame and ceaseless activity of mind (the latter ever at high pressure), he spares neither time, labour, nor expense—hurrying night and day through sun, and sand, and bog—to forward and expedite his despatches. Although having no official situation under the Crown or the Company, he derives a handsome revenue from letters addressed to his especial care. Great Britain and British India are both much indebted to Waghorn,

for it cannot be denied that his zealous advocacy of the Red Sea route to Bombay has been mainly instrumental in rousing the attention of the Indian and home authorities to the subject. To the Company's officers travelling to and from Bombay, he is ever ready with his assistance and advice. Indeed, every English traveller in Egypt finds a willing counsellor in Waghorn. I speak from experience."

MISCELLANEOUS.

Robert Montgomery's Works. Vol. II. Woman. Glasgow, 1839. Symington.

THIS volume contains the poem of "Woman," being its third edition, and some miscellaneous pieces. Among them, the following is a sweet and touching specimen:—

"The hour is past, the pleasure o'er,
And dumb the harp and glee;
Young feet no longer trip the floor
Alive with melody!

Those fairy brows, those forms of love,
That wake the dreamer's sigh,
Like shapes who leave their bowers above
To charm a human eye:

All, all are gone! the lights have fled
From your deserted room;
Dim as a chamber of the dead,
And voiceless as the tomb!

And now I am alone again,
With feelings undefin'd;
A pilgrim in a world of pain,—
An unpartaken mind.

The silent walk, the sickly moon,
And melancholy sky,—
Yes, these will make me feel how soon
The hours of beauty fly!

Oh, pleasure! brief as bright thou art,
A momentary ray,—
A dream roll'd o'er a vacant heart,
To charm and die away!"

Mrs. Loudon's Ladies' Flower Garden. No. III. London, 1839. Smith.

EQUALLY beautiful with the preceding Nos., contains Clarkias and other rare and lovely flowers.

Lockhart's Memoirs of the Life of Sir Walter Scott. Second Edition, Vol. I. Edinburgh, Cadell; London, Murray; Whittaker and Co.

THIS volume contains nothing new except one or two notes, and the illustrations, which are very acceptable. The frontispiece is of "Old Beattie," an ancestor of the poet; and the vignette a very interesting likeness of himself, from a miniature taken at Bath, in 1777, when he was six years old. In this countenance the man is fairly shadowed forth by the child; and the ample brow is strikingly apparent.

The Scripture Gazetteer. 2 vols. 8vo., double columns. Pp. supra 1200. Edinburgh, 1839. The Edinburgh Printing and Publishing Company.

THE importance of a work of this kind need not be dwelt upon. The deep interest attached to every scene and event which it illustrates, is not confined even to the Christian world, but is universal. The Scripture geography of the Old and New Testament must be understood by all who desire to have a clear understanding of these Scriptures,—and belief itself must derive strength and confirmation by an attentive reference to histories and relations, which prove the certainties of the future, of revelation and prophecy, by shewing how the past has been fulfilled.

Of a work so well calculated to attain these important objects, all we shall say is, that it seems to emanate from Glasgow College, on which it reflects honour; and from its careful editing, appears to us (on turning to casual explanations on which to form our opinion) to deserve a large share of public patronage and encouragement.

Poor-Law Rhymes; or, Anti-Marcus, by S. W. Fullon, a Minor. 18mo. pp. 24. (London, Cousins.)—Horribly disfigured by the cuts, this effusion of a young and uneducated pen shews a right feeling for distress and wretchedness, which does credit to the writer's heart. The versification has many blemishes; but for a humble minor (such as here tries his lot), the following lines are not so unlike Crabbe as to be much contemned:—

"A month had pass'd away; and now, once more,
I stood the Union's black pich before;
But ere a timid summons I had rung,
The grated portal was wide open flung;
And forth these came four men in much-worn black,
Upon whose shoulders were two coffins borne—
Two coffins in their shape, yet made so slight,
They scarcely hid the ghastly dead from sight.
Oh, they were shells indeed!—transparent too.
For here and there a rusty nail peep'd through.
Nine shillings each the undertaker had—
'Twas dear enough for workmanship so bad;
At least, methinks, he might have sent a pall,
To cover shell, indecency, and all."

ARTS AND SCIENCES.

CURE OF STAMMERING.

It is nearly a year ago (see *Lit. Gazette* of 2d June, 1838), that we directed attention to what we had then seen cause to recommend as an extraordinary, though most simple process, by which a *Mr. Thomas Hunt* succeeded in removing impediments of speech, whether acquired or natural. As in all similar cases, we fully felt the responsibility of offering an opinion to the public; and the more so, from the consideration of the deep personal interest which must be attached to it by those in whom it might excite the hope of benefit. We stated, from actual observation, that *Mr. Hunt's* "operations were all the most simple and the most natural. When seen, one wondered they had not struck every body before. The disposition of the mouth,—the tongue, teeth, lips, larynx, palate, and a few rules for pronouncing various letters and words. These were all the magic he employed; and, within two days, a wild, gasping, and frightfully distorted stammerer, from infancy to twenty years of age, was taught to converse as calmly, and with as little grimace, as if he had never been afflicted." And we added, "If we had not seen this, we could not have believed it possible." Having thus committed ourselves, we cannot allow the subject to drop without stating how much gratification we have enjoyed from the results, both in our individual and public capacity. The private letters we have answered, by directing the writers to the gentleman in question, and the applications made to himself, in consequence of our notice, have all tended to one happy conclusion. The fervent thanks we have received from some for complete cures, and the grateful acknowledgments of every one who has tried *Mr. Hunt's* instructions for relief and comfort, are our pleasant reward for this volunteer service to the community. From men of all the three learned professions, and others in various walks of life, we have received the same testimonies as to the efficacy of the system, and the same expressions of regard, for having been the means of making it known to them. Under such circumstances it is our duty to mention these facts, and we perform it with unfeigned satisfaction.*

ROYAL GEOGRAPHICAL SOCIETY.

MARCH 25. *Mr. W. R. Hamilton*, President, in the chair.—Read extracts from the following papers. 1. 'A Letter from *Mr. J. C. Bowring* to *J. B. Pentland*, Esq., H.M. Consul-General, in Bolivia.'

* One remark had nearly escaped our remembrance. From *Mr. Hunt's* classical attainments (having taken university degrees), he is peculiarly eligible to convey his instructions to pupils at our public schools who may unfortunately need his assistance. Reading Latin and Greek with them we have observed to be of infinite benefit.

Cuzco, April 20th, 1838.

My dear Sir,—I have examined carefully the map of the Lake of Titicaca by *M. D'Orbigny*, to which you have directed my attention; and have been astonished to find that it is an exact copy of one which I made in 1833, and which I gave to that gentleman on his departure from Bolivia. I cannot express to you in too strong terms, therefore, my surprise, that *M. D'Orbigny* should have published in his own name, and as founded upon his observations, a work of mine; and you will greatly oblige me by stating to the Geographical Society of London, and to the Institute of France, under the patronage of which, I understand, *M. D'Orbigny's* travels were published, and thereby claiming for one of your countrymen the merit of having produced the first tolerable delineation of that extraordinary inland sea. Your own survey will already have rendered evident to you, that my map, which *M. D'Orbigny* calls his, although better than any that preceded it, is still very far from being correct. I can only answer for the small portion I had then visited, and which was confined to the South Gulf, the groups of islands of Aycachi, and of Titicaca, and the vicinity of the Strait of Tiquina; the N.W. part being founded upon a MS. map which I discovered in the collection of the *Marqués Pinedo*, and which I have since ascertained to be full of errors. In support of my reclamation, I may further state that I accompanied *M. D'Orbigny* in his only visit of a week to the Lake of Titicaca, and which was confined to a hasty excursion along a small part of its S.E. shores, between Tiayguanacu and Hachacache. On looking over the atlas of *M. D'Orbigny's* travels, I have observed several views of the extraordinary Peruvian ruins, which you know exist at Tiayguanacu, and in the islands of Titicaca and Coati, and which, although stated to have been made by *M. D'Orbigny*, are from my own pencil; especially those of the two latter localities, the birth-places of Peruvian civilization, and which *M. D'Orbigny* never visited.—I am, &c., J. C. BOWRING.

2. 'On the Geography of the Country around Cuzco,' by *Mr. Bowring*. After describing the present state of the city of Cuzco, and the remarkable remains of its former splendour, the author gives an account of the town of Urubamba, in the fertile valley of the Yucay, about twenty miles N.W. of the capital; and of the villages Ollantaytambo and Choquequen, noted for their remains of ancient architecture, and the former for a suspension-bridge of a double arch resting upon a pier of Cyclopean construction in the centre of the stream. *Mr. Bowring* also throws some light on the course of the rivers Yanatili and Ucayali; and, during a residence of some years in this part of America, he made himself master of the Quichua and other Indian languages; a subject which has been far too much neglected by our travellers in general.—*Mr. Pentland* then gave an outline of his travels in Peru and Bolivia during the last two years. Landing at Arica in August 1837, *Mr. Pentland* proceeded to La Paz, the then Bolivian seat of government, to which he had been appointed H.M. Consul-General. On his road he remained a short time at Tacna, a large town, fourteen leagues distant from the sea-port, and the residence of the principal foreign merchants. Having determined its position, he crossed the western Cordillera by the Guailillas pass, which he found to be 14,700 feet above the level of the sea. At this point, persons ascending from the low countries bordering upon the Pacific suffer

severely from the effects of a highly rarified atmosphere; and there are instances of individuals having died from this cause. Near to the Gualillas pass, Mr. Pentland examined a gigantic undertaking, planned and conducted by one of our countrymen, viz. a canal destined to carry the waters of a river now flowing in an opposite direction across a pass of the western Cordilleras into the valley of Tacna, for the purpose of irrigation. This work was planned by an Englishman named Scott, and undertaken chiefly by the British merchants at Tacna, affording another example of the enterprise of our countrymen in every land. Some idea may be formed of the magnitude of the work, when it is stated, that the point where the river Uchusuma enters the canal is 14,652 feet above the level of the sea; that the extent of it will be 40,000 yards before it reaches the culminating point of the Andes, over which it must pass; and that the whole of this work must be conducted in a country devoid of population and of the necessities of life, in consequence of its great elevation, which falls little short of that of the highest points of the Alps. As Mr. Pentland has promised to lay before the Society a detailed account of his geographical labours in Bolivia and Upper Peru, we shall confine our notice to some of his excursions. In the spring of 1838, he visited the western shore of the Great Lake of Titicaca, the ancient Peruvian province of Collao, the fertile valley of the Yucay, and fixed his residence for a short time at Cuzco, the ancient capital of the Incas. With the exception of Gen. Miller, it is believed that Messrs. Bowring and Pentland are the only persons who have visited Cuzco with a scientific object; indeed our information respecting it is very meagre. The position of the far-famed temple of the Sun, now the church of Santo Domingo, was found to be in $12^{\circ} 31' S. \text{ lat.}, 72^{\circ} 4' W. \text{ long.}$; and at an elevation of upwards of 11,000 feet above the sea. During his stay, Mr. Pentland found a plan of the ancient and modern city, and examined the many ruins of Peruvian architecture that still remain. Quitting Cuzco, he visited Ollantaytambo, and the N.W. extremity of the great eastern Cordillera, and observed a third instance of a river cutting through the Andes, where the Yucay passes from the basin of Urubamba into that of Santa Asia. During this journey, Mr. Pentland determined the position of nearly forty points, and by barometrical means their elevation above the sea, and fixed both the positions and elevations of every important point of the eastern Cordillera between the parallels of 16° and 13° south. He subsequently visited the east and N.E. shores of the Lake of Titicaca, which had never been examined by any scientific traveller, during which he completed his survey of that vast inland sea. On its eastern shores he found a large agricultural population, almost exclusively composed of Indians, who speak the Aymara language, and discovered extensive ruins of the ancient Peruvians, especially of sepulchral monuments, which would appear to indicate a much denser population in those countries than is now existing. In a third excursion into the valley of Sorata, said Mr. Pentland, I examined the course of the river Mizpi, where it cuts through the eastern Cordillera at the N.W. foot of the Nevado de Lachisani, and fixed the position of this curious break in the chain, and of the several villages of the provinces of Larecaja and Muñecas, one of which is remarkable from its being inhabited by a population of about 3000; the male part of which is exclusively

occupied as itinerant quacks and fortune-tellers, and who, leaving their country with a bag of simples, travel from one extreme of South America to the other. They may be met with in Chile, at Buenos Ayres, and in Bogotá, with their bag of medicines and charms. They amass, during their absence, considerable sums of money, which, on their return, are dissipated in drinking. In many of their habits they resemble our gipsies, and in physiognomy differ from the other Indians, and approach nearly that of the Jews. They speak a language peculiar to this limited population, and which is totally unknown to the Aymara Indians, in the midst of whose territory the hill upon which Curba stands is situated. This isolation of a separate race, for I consider the people of Curba entirely different from the other Indians of the province, not only occurs at Curba, as I visited another district in the same province of Muñecas, viz. Amarata, the inhabitants of which, scarcely amounting to 3000, speak a distinct language; I can only attribute this isolation of the Curbeños and Amarataños to those colonies founded by the Incas, by transporting whole nations from one part of their extensive empire to the other. During these various excursions, Mr. Pentland has determined the position and elevation of every point of the snowy range of the eastern Cordillera, and of the most remarkable peaks of the western, between 19° and 16° south lat. He has collected a considerable mass of drawings of the monuments of the ancient Peruvians, and, with the data obtained during his former mission to Bolivia, he expects to be able to lay before the Society a correct map of the mountain districts of Bolivia and Southern Peru, one of the most interesting regions of South America as connected with the history of the ancient Peruvians, and with the physical geography of the gigantic chain which extends from Cape Horn to Panamá. Among the donations on the table was a facsimile of a map, bearing the date of A.D. 1357, preserved in the library of San Lorenzo, at Florence, presented to the Society by Count Groberg of Hemad. Also, Mr. Bradshaw's recent map of railroads was exhibited, which, besides the roads, shews the sections of the various lines; some of which, as the Maclefield and Sheffield, and Stockton and Darlington, are remarkable, as the highest point of the former passes over an elevation of 760 feet above its termini, and 943 feet above the sea.

ROYAL INSTITUTION.

FRIDAY, 22d March.—Mr. Faraday, 'On Professor Airy's method of correcting the Compass in Iron Vessels;' the removal of an error so large, that it was feared it would be a prohibition to the employment of ships or steamers, so constructed, in other than coasting voyages, and even then in clear weather. Now, Mr. Faraday observed, perhaps from the ports of Great Britain one hundred go to sea, and iron ships are becoming more and more extensively used. They offer great advantages with regard to strength, shape, and stowage. When, some time ago, the Rainbow came round from Liverpool to London by compass (or rather without one, because it was discovered to be of no use), the needle, instead of pointing to the magnetic north and south, evinced strange vagaries. And when the captain was told, off the Isle of Wight, to steer E. by S. or he would be on shore, he could not tell where south was. The effect produced by moving a large plate of iron under a magnetic needle, illustrated this; and Mr. Faraday proceeded to explain the condition of the iron and of the needle. We will not,

however, follow him through his interesting descriptions and exhibitions; but pass on to the investigation conducted by Professor Airy, at Deptford, at the request of the government. Seven compasses, placed in various parts of an iron vessel, four on deck and three above, were closely observed and noted, and compared with the real position of the ship's head as she was warped round; all the bearings of the different positions were accurately taken, and the perfect expression of the error found. The investigation of the cause was then conducted. The magnetic force acting upon a needle, or magnetic intensity, is indicated by the number of vibrations the needle, drawn from the magnetic meridian, makes previously to settling to rest. This force, without the iron vessel, where the needle is affected by terrestrial magnetism alone, is constant: but within it varies with the altered position of the vessel, and to a great extent. By this inquiry the result was obtained with reference to the quantity of disturbing power, by induction, which belonged to the earth, and to what belonged to other causes. It was discovered that the far greater portion was due to permanent magnetism, not of one pointing north and south, but of several. Professor Airy was then able, by summing up the power, to ascertain the amount of the influence of the ship, a compound bulky magnet, to take off the extra power, and leave the needle affected only by the constant power of the earth. In this way the compass in iron is rendered even more correct than in wooden vessels. The influence of the ship in every position being ascertained, the power of the magnet to be brought to the vessel as the corrector, and placed in certain relation to the compass, was calculated and determined, and such corrector invariably compensated the error, or counteracted the disturbing force. Professor Airy has retained his formulae until he is more certain of effects. He is fully so with regard to the investigation and its application hitherto (its success in the Ironsides, which made a voyage to Pernambuco, and in the Rainbow, running between London and Antwerp, was particularly mentioned); but not sufficient proofs from numbers have been as yet obtained. The ship being a permanent magnet, is the cause of error; but the error of one may be doubled of another—one cannot be corrected by the other. Each ship is its own magnet, but how, is not known. Iron, placed in the line of the dip, by percussion is rendered a permanent magnet; a moderate blow, again, may destroy its magnetism, or a harder blow may reverse the power. So, in construction of iron vessels by blows, how many and opposite magnets may be produced! And thus, probably, is the permanent magnetism of iron ships obtained.

Mr. Faraday also pointed out and drew attention to specimens, of Messrs. Havell and Wilmore's application of Mr. Talbot's discovery.

LITERARY AND LEARNED.

ROYAL SOCIETY.

THURSDAY, March 21.—We have pleasure in giving an exact copy of Mr. Talbot's communication, read this evening, and entitled 'Notice respecting a new kind of Sensitive Paper.' The following method of preparing a sensitive paper, appears to me to present some advantages; at any rate, it is different from my former one, and I have therefore the honour of communicating it to the Society. Take good writing paper, and wash it over with nitrate of silver; then with bromide of potassium; and afterwards again

with nitrate of silver; drying it at the fire between each operation. This paper is very sensitive to the light of the clouds, and even to the feeblest daylight; but it is insensible to radiant heat, and therefore suffers no change from the warmth of the fire before which it is dried. It is of a pale yellow colour, and the light changes it to bluish green, olive green, and finally almost black. From want of an acknowledged unit of measure, it is difficult to define its *degree* of sensibility; but the following experiments made during the bad weather of last week, will serve as an approximation. At five P.M. in very cloudy weather, in London, this paper being placed in a camera obscura and directed towards a window, a picture of the window-bars was obtained in six minutes. Shortly after sunset, being then still darker, the paper exposed near a window changed its colour sensibly, in from twenty to thirty seconds. The memoir which I had the honour to present to the Society on the 31st of January, and which contained my first account of the art of photogenic drawing, was written in the course of a few days, and, therefore, necessarily less perfect than I could have wished. In re-examining it, although I do not find that anything has been erroneously stated, I perceive that there are some omissions arising from haste of composition. One of the things which I forgot to mention in it, is my method of imitating etchings on copperplate; and which, though not a real art of *photogenic engraving* (if I may assume such a process to exist), yet might easily be mistaken for it if not explained. This was among the first applications which I made of my principle, nearly five years ago, and is performed in the following manner: Take a sheet of glass and smear it over with a solution of resin in turpentine; when half dry, hold it over the smoke of a candle; the smoke will be absorbed by the resin, and although the glass will be darkened as usual, there will be a sort of glaze over the smoke which will prevent it from rubbing off. Of course, if any opaque varnish should be at hand, it will be simpler to use that. On this blackened surface, when not quite dry, let any design whatever be made with a needle's point, the lines of which will, of course, be transparent. When this is placed over a sheet of prepared paper, a very perfect copy is obtained; every line which the needle has traced being represented by a dark line upon the paper. In the autumn of 1834, being then at Geneva, I tried several *photogenic etchings* in this way, which were executed for me by a friend, as I am not myself skilled in drawing. Among other views was one of the city of Geneva itself, being the view, if I rightly recollect, which we saw from our windows. Another application of the same principle, is to make copies of any writing. This is so very easy, and each copy takes so short a time in making, that I think it may prove very useful to persons who wish to circulate a few copies among their friends of anything which they have written; more especially since, if they can draw, they may interperse their text with drawings, which shall have almost as good an effect as some engravings. The chief expense will be from the quantity of silver used, which is small; but no press being wanted, it cannot fail to be, on the whole, a very economical process.

ROYAL ASIATIC SOCIETY.

MARCH 16. Professor Wilson in the chair.—A paper, by Mr. Traill, was read, 'On the *Choorce* and *Phoolwa*, the solid oil of the *Bassia butyrosa*. This paper may be considered in

part a continuation of the papers read at the last meeting, on the Vegetable Tallow of Canara. The tree producing the chooree is not a native of the Almora Hills; but grows abundantly in the Phoor Khalee, province of Dohoe, where the oil is largely prepared as an article of commerce; and, being cheaper than ghee (clarified butter), is used to adulterate that substance. It is exported to Bellary and other parts of Rohilkund, partly in the original state, and partly as phoolwa, which is a mixture of the chooree with a sweet-scented oil. The author described the chooree, when genuine, as being well adapted for burning in lamps; and stated that he had for many years used it in preference to cocoa-nut oil for that purpose; but, as the natives usually mix the flour of Indian corn with the chooree, it was found necessary to purify it. At Birmaee, a maund of chooree may be purchased for eight rupees, or about 2½d. per pound. Mr. Traill concluded by stating, on the authority of Dr. Royle, that there was every probability that the *Bassia butyrosa* might be successfully cultivated in the plains of India (where its congeners, *Bassia latifolia*, or *Monhwa*, and *Bassia longifolia*, or *Ilupoi* tree, flourish so well), as a young chooree tree obtained from the hills, where it is indigenous, flourished for many years at Saharunpore. Mr. H. Newnham stated, that most of his knowledge of the properties and uses of the phoolwa was derived from Mr. R. Blake, a gentleman well known for his scientific attainments; and who for many years held the office of assay-master to the mint at Futtahgur. Since then, Mr. N. had seen it frequently employed as an external application; and had himself employed it successfully in cases of rheumatism, chronic pains, and stiffness of the joints. He considered it well worthy the attention of European surgeons, as a substitute for the unctuous substances in common use, and for which its valuable properties and unchangeable nature well adapted it. Mr. Solly described this substance as being a solid oil, similar to the vegetable tallow of the piney-tree, but containing more elain, or fluid oil, and hence well designated as a butter. He stated that it was solid at all ordinary temperatures; became soft and pasty at about 90° Fahrenheit; and required a heat of near 120° to melt it completely. He found a specimen of the phoolwa, a preparation of chooree and sweet-oil, which was brought over five years ago by Mr. Traill, to consist of sixty parts of solid oil, thirty-four of fluid-oil, and six parts of vegetable impurities. These latter, however, both from the smallness of the quantity, and their nature, appeared to be derived from the seeds, and not to be impurities intentionally introduced. A specimen of the chooree, which had been in this country upwards of thirteen years, and which was slightly altered by keeping, contained 82 per cent of solid oil. He found that by boiling a portion of this slightly altered substance in alcohol, the smell, and the pale-yellow colour which it had acquired through age, were removed; and it then appeared as a perfectly white substance, of a rather greater consistence than tallow, burning very well, and having a very beautiful appearance when cast in moulds. Hence, he had little doubt, it would prove a valuable addition to the solid oils already known in commerce.

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Entomological, 8 P.M.
Tuesday.—Linnæan, 8 P.M.; Horticultural, 3 P.M.; Electrical, 7 P.M.

Wednesday.—Society of Arts, 7½ P.M.; Artists' and Amateurs' Conversations, 8 P.M.

Thursday.—Zoological, 3 P.M.

Friday.—Botanical, 8 P.M.

Saturday.—Astiatric 2 P.M.; Guy's Hospital Physical Society, 8 P.M.

FINE ARTS.

THE PHOTOGENIC ART.

[THE intense and general interest which this subject continues to excite, renders us anxious to throw every new light upon it; and, as we were the first to make it publicly known, to supply every additional information, at home or abroad, which relates to the progress of so important a discovery. Under its proper head of the "ROYAL SOCIETY," will be found Mr. Talbot's Notice of a new kind of sensitive paper, and an account of other circumstances and experiments, in the same open and candid manner which has reflected so much honour on all that gentleman's statements. Referring to that paper, we have now to submit—]

*M. Arago's Remarks upon M. Bauer's Letter.**
(Translated from the "Comptes Rendus," page 361.)

M. Arago requests the favourable attention of the Academy to this communication, as to the preceding ones. Moreover, the terrible calamity of which M. Daguerre has been the victim, makes it a still more imperative duty to his friends, to cause complete justice to be rendered to him.

Who is the real inventor of the methods, the products of which have been so much admired? The question, as far as concerns Messrs. Niepce and Daguerre, has been settled long ago by a legal deed. Besides, the necessary facts will be found, if required, in the correspondence of our two countrymen. All that will be cleared up at the proper time (*éclairci en temps et lieu*) distinctly, without any possible *équivoque*. There remains the discussion which has already occupied us, and which has arisen between the philosophers of France and England. On this subject behold a new document which reaches us from Kew Green, near London.

[*M. Bauer's Letter is here succinctly given.*]

M. Bauer certainly goes too far, when he, who has seen nothing of M. Daguerre, adds, "these specimens (of M. Niepce, which he possesses) are quite as perfect as those productions of M. Daguerre described in the French newspapers of 1839." Moreover, there arises from the letter, so interesting and honourable (*loyale*) of M. Bauer, a new and incontestable proof of the great priority of our countrymen to the English philosophers; for, according to Mr. Talbot's own declaration, his first attempts were not before the year 1835.†

[We shall find no fault with M. Arago's nationality. We repeat, *palmam qui meruit ferat*; and, when the promised revelations are made, we shall be better able to form our opinion. In the meantime, we have much satisfaction in inserting the subjoined letter from Mr. Talbot.]

To the Editor of the *Literary Gazette*.

Dear Sir,—In the *Literary Gazette* of last Saturday there is a statement in which I cannot acquiesce: I therefore trust you will allow me to trespass a moment on your columns, and to explain my reasons for dissenting from it. It is stated that some gentlemen have made a

* Which originally appeared in the *Literary Gazette*, No. 1154.—Ed. L. G.

† M. Arago should be more correct in his quotations: at the very commencement of Mr. Talbot's memoir to the Royal Society, it is stated that he began to make these pictures in the spring of 1834. Moreover, M. Arago does not even allude to our countrymen, Wedgwood and Davy, who made a commencement of this art in 1802.—Ed. L. G.

considerable improvement upon my art of photogenic drawing, and, indeed, that this discovery was made by several persons simultaneously.

I fully expect that great improvements will hereafter be made, which I have never so much as thought of;—but this is not one of them: it is not different from my method, but is the same thing which I have executed long before.

I have no doubt whatever that the gentlemen who proposed it imagined it to be a new process hitherto overlooked; and, although this is a mistake, I should not have considered it worth while to say anything on the subject, if they had not gone so far as to apply for a patent; which, however, I understand, has been since abandoned. I greatly regret that they did not do me the honour to read my memoir on this subject, presented to the Royal Society on the 31st of January, which has been since printed and freely distributed, as well as reprinted in two periodical journals: in which, *Section 7* describes the photogenic pictures obtained by painting on glass, which, as I have there remarked, “resemble more than any others the productions of the artist’s pencil: and for such they have been generally mistaken;” because they give, not mere outlines only, but all the details of the figures perfectly well shaded.

And I also regret that they were not present when I first exhibited a collection of photogenic drawings to the Royal Society and the Royal Institution (January 25th and 31st); because one or two of these figures formed part of the series. Since that time I have made several more; and some of them certainly possess considerable effect, and would be no disgrace to the pencil of an amateur. Some of these paintings are grotesque subjects; others are more rational, and give a better idea of the capabilities of this branch of the art. I have the honour to enclose to you, as a little specimen, a figure of which I know not the subject, since I did not paint it on the glass myself; but it appears to me to represent *John Bull*, in an attitude of firm resolution—for instance, as if he expected foreign aggression, and was resolved to repel it. Well, sir, of this figure and others I have made many copies during the last two months, and given them away to my friends, and even sent some of them to Germany. These pictures are formed in the following way, which contains in itself both the principles which have been mistakenly, during the last week, advanced as new ones. They are painted on glass with transparent varnish of different colours, which, by the action of light, produce as many different shadowy tints upon the resulting image. The blue colour gives a dark shade; the yellow, red, &c. &c. various feebler ones. These variations produce an excellent effect, since every gradation of shade can be introduced at pleasure (which is one of the principles contended for as new); and the sharp black lines are given by the point of a needle cutting through the dark varnish (which is the other principle).

Need I say more? Nearly five years ago I made imitations of etchings, which were executed wholly in this manner, with a needle, upon glass. They differed indeed from those now produced by artists, as an inferior handwriting differs from a good one—in execution, but not in principle.

I will now change the subject to something more interesting to your readers, by presenting them with an extract from one of M. Biot’s letters to myself, in which that distinguished philosopher relates the experiments which he has made upon my new sensitive paper. I

will preface them by saying, that I have made some more of this paper lately, and noted its degree of sensibility more accurately, as follows, viz.:

Exposed to broad daylight (but not to sunshine), the time it took to receive a distinct impression from the light was repeatedly observed with a seconds’ watch, and found to be sometimes two seconds, sometimes three seconds. I have, therefore, great hopes that it will be found very useful for obtaining images with the camera obscura. I remain, dear sir, &c.

H. FOX TALBOT.

Extract of a Letter from M. Biot.

“Independently of its remarkable degree of sensitiveness, this paper presents other advantages to physical science, on account of the distinct shades of colour through which it successively passes. It is also very curious that a preparation which has been dried at the fire, and consequently entirely deprived of moisture, should be so mutable; although chemistry has already offered some rare examples of this.

“The interest with which I viewed this circumstance, engaged me to make some experiments upon your preparation, in order to vary its application to the researches in which I am occupied. First, I wished to know whether the change of colour was in any degree influenced by the paper itself. I therefore spread the substance on a piece of white unglazed porcelain (instead of paper), taking care to operate by night, and drying it each time at the fire, as you say. I thus obtained a dry solid coating upon the porcelain, which I shut up in a dark place until morning. In the morning I took it out and found it of a pale sulphur-yellow colour. I then presented it to the daylight at an open window looking north. The weather was then very cloudy; yet, no sooner had I so presented it, than already it was turned green, and soon afterwards it became nearly black. I then wished to know, whether the preparation would succeed equally well, if not dried at the fire. I therefore, in a darkened room, mixed the aqueous solution of bromide of potassium with that of nitrate of silver.

“A precipitate fell, which I spread on a porcelain plate and left it to dry in the dark. The next day I wrapped it in several folds of paper, and brought it into another room to shew it to a friend. But having taken off the covers, in a dark corner of the room, in order to exhibit the original colour (*pale lemon-yellow*), instantly we saw its tint become green; and I had hardly time to present it to a window opening to the north, before its colour had passed to dark olive-green, after which it almost immediately became almost black. I do not think it possible to find any substance more sensitive to light.”

(Since the foregoing have been printed, we have received the following from Mr. Havell; and, though at so late an hour as to preclude us from comparison or notation, we deem it our duty to lay it at once before our readers, and reserve any remarks that may be suggested by it for a future *Gazette*. Like Mr. Talbot, Mr. Havell frankly, and Englishman-like, describes the whole of his process, so that all the world may understand the principles, and begin similar experiments—they are altogether very important.)

To the Editor of the Literary Gazette.

Sir,—There having been various reports published of my discoveries in Photogenic Drawing, arising from the exhibition of my specimens at the Royal Institution on Friday last, 23d March, 1839, and again introduced at the Conversazione of the Royal Society, held at the mansion of the Marquess of Northampton,

on Saturday the 23d, all which reports are so vaguely and so unsatisfactorily stated, that I now beg leave to give a full account of the process by which the art of multiplying original designs or copies to any extent may be effected. I am, &c. WM. HAVELL.

March 26th, 1839.

24 Montague Street, Portman Square.

Mr. Fox Talbot’s “Account of the Art of Photogenic Drawing, or the Process by which Natural Objects may be made to delineate themselves without the aid of the Artist’s Pencil,” is exactly the reverse of my process.

My object is to delineate the work of the artist’s pencil by the Photogenic process, for the knowledge of which we are indebted to the frank disclosure of Mr. F. Talbot on the 23d February.

In consequence of this communication, my first attempt was a transfer of a powerful etching by Rembrandt, of an old man reading; and instead of a bright face with black hair, I had a black face with white hair, white eyes, white nostrils, white mouth, &c. &c.; and I soon discovered the impossibility of getting any resemblance to the power of the original by a second transfer. Still there was the power of the new delineation before me; and to remedy its defects I applied it to a new process altogether, to produce the true lights and shadows in their right places. A square of thin glass was placed over the well-known etching by Rembrandt, of “Faust conjuring Mephistophiles to appear in the form of a Bright Star.” I then painted on the high lights with thick white lead, mixed with copal varnish, and sugar of lead to make it dry quickly; for the half-tints I made the white less opaque with the varnish, and graduated the tints off into the glass for the deep shadows. I allowed this to dry, and the following day (February 27th) retouched the whole, by removing, with the point of a knife, the white ground to represent the dark etched lines of the original. The glass thus painted, when placed upon black paper, looked like a powerful mezzotinto engraving. I placed a sheet of prepared paper upon the painted surface; and, to make the contact perfect, put three layers of flannel at the back, and tied the whole down to a board. There happened to be a bright sun, and in ten minutes, the parts of the glass exposed had made a deep purplish black on the paper. On removing the glass, I had a tolerably good impression, but the half-tints had absorbed too much of the violet ray. I immediately painted the parts over with black on the other side of the glass, which answers to the practice of engravers in stopping out, when a plate is bitten in too fast by the acid. This may be wiped off, renewed, or suffered to remain, at pleasure.

There is no advantage in letting the glass remain too long in the light, as it deepens the middle tints, and does not blacken the shadows in the same proportion. The fixation with salt entirely failed; with the iodide of potassium succeeded very well. The effect of the drawing may be heightened at pleasure, by touching the lights with strong iodide of potassium, and the darks with a strong solution of the nitrate of silver dropped upon tin with a camel’s-hair pencil: this instantly turns black. With these the drawing may be invigorated; and the whole will resemble a mezzotint print, or a rich sepia drawing.

A black etching-ground readily suggested itself, it having been done many years ago; but I preferred a white ground made of white lead, sugar-of-lead, mixed with wax and copal

* Vide Proceedings of the Royal Society, March 31.

varnish; this may be laid on very thin, with a silk dabber, or thick by repeating the process; or the various opacities may be introduced, according to the subject and effect proposed.

Transfer the outline in soft pencil, by rubbing on the back of the paper, and proceed to etch with the etching-point—a knife, or any hard point, to make the bolder lines; thus, with the glass placed on black paper, the work will look like a spirited drawing with pen and ink; or, under the hands of the engraver, a highly-finished engraving. If the semi-opaque ground be preferred, various middle tints will readily be obtained; and by touching the high lights with opaque white, or with black at the back, a variety of effects may be produced, similar to the double lithography.

These processes may be applied to original designs, copies from paintings, portraits, figures, or landscapes; to circular letters; to the multiplying of manuscripts with illustrations, in any part of the page, &c., without the aid of engravers, printers, or presses, any number may be produced at the same moment of exposition to the light; every pane of glass in the windows of a house may be occupied, by having a back-board to fit the frames, and layers of flannel, or wadding, to make the contact perfect, and the house being darkened is the more favourable for the preparation of the paper, and fixation of the Photogenic drawings.

Its present difficulties and defects are, the paper requiring some niceties of manipulation, and only one side of the sheet can be occupied. All these will be vanquished, for we shall have paper made of a quality and size favourable to the reception of the process. At present I have found the bank-note post-paper the best. Probably it may be worth while to adhere two pages together, as the paper is very thin. Then there is the drawback of fixing, and drying, &c., and few of each subject can be done in the course of the day, unless there be duplicate glasses; yet as the preparation on the glasses never wears out, causes no dirt, may be altered, improved, and retouched at any time, and only requires the care not to break them, it may be the means of employing women and children. It will give rise to a new employment: to the artist, in making original designs on glass, as well as copies from pictures; it will be a source of amusement to the amateur; and an elegant employment for ladies, particularly to those who can paint or draw. It is perfectly available to those who wish to publish a limited number of illustrations, with manuscripts, where it would not be worth the expense of employing engraving or printing; but it is doubtful if it can ever be made to rival the beauty of the former, or the facility of the latter.

It will be an *Art per se*.

There are many other applications of this Photogenic process, provided any very transparent substance be made sensitive to the operation of light, such as horn, isinglass, or goldbeater's-skin; and that animal substance is very susceptible is proved by the blackened faces of those persons who are unfortunately obliged to resort to the use of lunar caustic, or nitrate of silver, for the cure of certain complaints.

This being accomplished, the transfer of prints, letterpress, or types, will be very easy. As this is the beginning of a new Art, applicable to so many important purposes, and so easy of access, it is earnestly requested the utmost publicity be given to any improvements that may be discovered, so as to prevent any attempt at securing a patent.

EXHIBITION AT THE LOUVRE: WORKS OF MODERN ARTISTS, 1839.

THE opening of the Exhibition at the Louvre is looked forward to by the artistical world of Paris with just as much anxiety every year as that of the National Gallery is in London; and, indeed, with rather a greater portion of the nervous hopes and misgivings that so sensibly affect the cultivators of the fine arts in any of their branches, since Paris possesses only this one annual exhibition, while London is rich in many. All the works that the jury of admission consider to be worthy of public notice are collected in the galleries and halls of that splendid palace, to be given simultaneously to the gaze of the wondering and admiring, or criticising and undiscerning, crowd; and oil painting, water colours, crayons, architecture, sculpture, porcelain painting, and engraving,—all are here assembled in an enormous mass, enough to daunt the courage of many a critic, who intuitively shrinks with alarm from the list of 2404 objects of art which the *lioret* of the Louvre for 1839 informs him he has to examine and to digest. However, be this as it may, it is always a great treat to wander through the endless suites of rooms and galleries that form the Royal Museum of Paris, whether amidst the rich and glowing tints of the Italian, the faithful delineations of the Flemish, the vigorous though strange ideas of the French, and the sombre and dignified canvasses of the Spanish schools, or as now amongst the fiery colours and bold outlines of the living artists of France. In either case, we find much to delight the eye and much to gratify the mind; our knowledge and our taste, as far as art is concerned, expand, and the labour of examination is well repaid. The British critic or artistical connoisseur who examines an European modern collection, and particularly a French one, must not be too *exigeant*—he must make allowances for the different circumstances under which the two schools (to compare at once those of France and his own country) are placed; he must take into account not only the traditions of art upon which those schools proceed, but also the social and political ideas of the two nations, by which the developments of art will be always so greatly modified; above all, he must not be too much prejudiced in favour of the colouring, the handling, or the designing of his own compatriots, as painters, sculptors, &c., but must be prepared to do justice to the excellences with which he may meet, even although they may have been produced by methods not in fashion on the northern side of the Channel. He is at all times justified in exercising his critical acumen *cum grano salis*; but we would prescribe to him not to be unprovided with the *gutta mellis*, if he would really wish to arrive at the truth, and to form a fair and impartial judgment.

The chief difference that strikes the most careless observer who has hitherto been accustomed only to the productions of the modern English school, is the great preponderance of historical subjects, and the comparatively small proportion of landscapes that he will find in a French exhibition-room. The difference arises altogether from the protection afforded in France by the government to art in general, and especially to this peculiar and highest branch of it. Few individuals ever order historical pictures from artists, nor can individual patronage, always more or less fluctuating, suffice for the formation of an historical school. The studies of the historical painter are more long, more arduous, and more expensive than those of the landscape or the portrait painter; and unless a numerous body of artists working in the same line, mutually emulating and encouraging each

other, and therefore all simultaneously improving, can be kept up for a long series of years in a country, there is no possibility of any thing like a great and lasting school of historical painting being ever possessed by it. Landscape painting, on the contrary, is one of those beautiful inspirations of nature that find something to work upon in almost any hand and eye that are sensible to impressions of imitative skill: the least protection sets it a-going; very gentle encouragement will keep it up; it may be cultivated by few, or by many, with almost equal success; and it will flourish, though the government should never hold out to it the steady influence of its patronage. The landscape painter has only to wander amid the mountains of Scotland, of Wales, or of Switzerland—he has only to gaze on the sunny plains of Italy, the forests of Germany, or the woodland scenes of England—to find a sure and willing preceptor in every changing view that attracts his eye. He for ever lives in the midst of his models, he is always in his universal *studio*: but not so the historical painter; to him long examination and imitation of the great masters of former days—study and practice in the capitals of art, Rome, Florence, &c.—deep and patient thought and imagination—all these are requisite for him if he will become a master in his own day. To nine-tenths of those who adopt the honourable profession of an artist, means for pursuing studies of this kind on a suitable scale are wanting; and unless powerful and *unvarying* patronage be held out to such a class of students in painting, it is needless to expect that they will be able to surmount the difficulties of their arduous career. France has not only a most efficient school of fine arts at home (the *Ecole Royale des Beaux Arts*), but has a long-established and flourishing academy at Rome. England has nothing of the kind; for its home establishments are *inefficient*, and its foreign ones *nil*: there are none. The French government makes the patronage of art, of all kinds, a serious affair of state; whereas it is about the very last thing that would ever be proposed by an English administration. We do not hesitate to record the fact, that, in historical painting, England stands exceedingly low in the unanimous opinion of all Europe; she is beaten by France, by Germany, by Italy, we might almost say, by Belgium. Not so in landscape painting; she there takes the lead, both in oil and water colours, and a lead *longo intervallo*; the cause of which is to be found in the greater sensibilities she possesses for objects of nature, and for rural life of whatever kind it may be.

As for portrait painting, it is altogether an affair of private patronage; no matter what the nation may be, and wherever the greatest proportion of encouragement has been given in a compound ratio of time and money, there the best school of portrait painters will be settled, if not produced:—hence, English portrait painters are superior to those of France. Animal painting hardly exists in France, not more than five or six artists practising it with success; and for this obvious reason, that on account of the political convulsions of that country, and the consequent impoverishment of the upper classes, all spirit of chivalrous amusement has long since fled the land. There are no noble patrons in France to foster and to form the genius of a Landseer or a Cooper; the chase is comparatively unknown, the wild animals are but little valued, and only an occasional representation of a horse and a few cows or sheep is to be found in the usual exhibitions. Still, as the country is getting more

and more quiet and more wealthy, taste is reviving in this branch of art, and symptoms of improvement are beginning to appear. In what our Gallic neighbours call *Tableaux de Genre*, the representation of modern social life in all its phases, the two schools of France and England are much more upon the footing of equal merit. The comparison, indeed, is not easy to be made; what is sorrowful or cheerful in England, may be regarded as exactly the contrary in France; and the visitor of the Louvre, who would view pictures of this kind while still full of his own English notions, would probably be disappointed, from having wrongly pitched his expectations. Our own belief is, that there is much more equality in this respect between the two schools than is sometimes admitted; and, to appeal to one of many proofs, we would mention the ready sale found by popular engravings of such subjects in the country of the rival school. French engravings take very well with the public in London, and English ones are much sought after in France. In miniature painting, we think that a similar equality subsists; but if there be a preference, it follows the rule of portrait painting, and the advantage will belong to England. As for flower painting, English artists are not worthy to grind up the colours and prepare the palettes for the French; and there is the truth.*

The greatest anomaly exists in the division of architecture; and here the comparative advantages of public and private patronage may be fairly studied. Government patronage is much greater, in this respect, in France than it is in England; the departmental and metropolitan authorities are always up to their ears in stone and mortar: in England, the Board of Works or the municipal corporations seldom get beyond a little red brick and a hod or two of plaster, stucco, and other elegant materials. In France, however, out of the metropolis, not ten capital mansions are built by private individuals in a year; in England, the aristocracy and the squirearchy strive who shall ruin themselves the soonest in architectural expenses. In the matter of public buildings, as is the legitimate inference to be drawn from this state of things, the French modern school of architecture is far beyond that of England. French architects erect edifices that English ones never dream of. In private rural buildings, in country mansions, in noble halls and castles, the glory of French architectural skill and taste is departed; all is in favour of England; but by a strange and, at first sight, unaccountable fatality, in commercial and in all civic or urban buildings, the advantage lies just the other way: there is no comparison between the new houses now erecting in Paris and those in London. The fact is, that French architects here bring the good effects of government patronage to bear; their taste is so well formed, and they possess so much traditional wealth as a body, that they build well; and the civic house, approximating as it does in some degree to a municipal building, is erected with something of the same kind of taste, and with a corresponding degree of grandeur. Again, in England, we know not how to account for it, but architects have got only two ideas in their heads, Gothic and Grecian. The moment a building is to have the pointed arch excluded from it, away the architect goes into the bald and insipid platitudes of the Doric; or some, more daring, into the Ionic. There are very few architects in England that would have the spirit to attempt the erection of a Roman

building, still fewer a Palladian. French architects, on the other hand, have now done with the Greek; they had such a dose of pseudo-Greek in the time of Napoleon, that the taste for it will never revive in France for a century to come. Roman, too, is not quite so much a favourite as it might and ought to be. The Palladian, and the style of the *Rennaissance des Arts*, and the *Flamboyant Gothic*, are all the mode; and in these they certainly excel. We do not say that it is not equally a fault to neglect the study of any particular style—the Greek for instance—as it is to carry it into practice in season and out of season; but the fact is positive, that for all the purposes of comfort combined with elegance, and of grandeur consistent with much ornamentation, there are no styles like the Palladian and the *Rennaissance*, or its equivalent, our own Elizabethan [Tudor], so well adapted to the exigencies of a northern or western climate. If to this we add the accidental good fortune of the French architects, in having such abundant supplies of the finest calcareous freestone throughout most parts of France to work upon, and especially those of Paris, who have got their quarries, so to speak, in the cellars of every house they erect, we ought not to be surprised if, in very many of the subdivisions of architectural art, the French school surpasses the English. What, however, more immediately concerns us is this, that the Exhibitions at the Louvre are always exceedingly poor in architectural drawings, whereas the Exhibition-rooms in London are drugged with them. We confess ourselves unable to account for this circumstance: we believe that good general taste in the way of architecture prevails among the French, though it is confined to few persons: we know that French architects are most exquisite and scientific draughtsmen: why, therefore, they do not exhibit we cannot understand. The fact is an anomaly; but it is true. Out of the 2404 articles classed in the catalogue of the Exhibition of the Louvre for this year, only seventeen come under the head of architecture! An English architect will shudder at this enormity; and yet architects swarm in France, and find the profession sufficiently lucrative notwithstanding.

Sculpture is in rather an anomalous condition in France as compared with that of England; but the comparison will hardly yet admit of being drawn. The modern French school is a much younger one than the English; it is not so traditionally rich, nor does it boast, neither can it, of such great names. Still it is in a very promising state of progress; and, within the last few years, since government has done much to patronise it, many works of first-rate excellence have proceeded from it. In England it depends altogether on private patronage; but, since the French sculptural students at Rome are now doing great things, it may be fairly expected, ere long, to run its British rival rather close.

In our next, we will walk through the Louvre with our readers.

SUFFOLK STREET GALLERY.

New brooms make clean work of it; and so it is likely to be with this Exhibition, into the management of which, we are informed, five young Brooms have been incorporated. And, from all we can learn, they have made a tolerably successful sweep out of the friends and patrons of the Society. By means of a policeman at the bottom of the stairs, a peremptorily instructed cheque-taker half-way, a servant in dashing livery at the top, and an impertinent

director, or secretary, within the bar, they insulted and turned away from their doors, on Saturday, noblemen and opulent bankers distinguished for their encouragement of the arts, and, in particular, the very obnoxious classes of persons connected with the Press and the Publishing trade. We had the good fortune to be admitted by ticket, and on Monday, being a pay-day, had a similar favour shewn to us for a shilling. All we have to say of the Gallery is, that it contains a few good pictures, and many of little value; and all we shall add respecting the new Councillors is, that it would be a sagacious thing in the old ones, and in every person interested in the prosperity of the Association, to take care that, though they foolishly injure themselves, they should not be allowed to injure their fellow-artists, and destroy the Institution.

As a *pendant*, we have to report the answer given to a gentleman connected with a public journal, and repeated, at his request, by the controlling official above alluded to: "We were determined," quoth he, "to have the private view *respectable*, and therefore cut off (or restricted) the admissions to the press and the publishers." *Bravo! bravo!* The sublimity of management.

VARIETIES.

Artists' General Benevolent Fund.—The anniversary, on Saturday, was more numerously attended than we have seen it for years past, about 160 sitting down to dinner. Sir Edmund Filmer, M.P. was in the chair,* and around him were Mr. Hope, M.P., Mr. Scrope, Sir M. A. Shee, Sir D. Wilkie, Mr. Phillips, Mr. Collins, Mr. Dickens, and other gentlemen distinguished in literature and the arts. The above (with the exception of Mr. Phillips) addressed the company on various occasions and with excellent effect. The subscription amounted to nearly 500*l*. The musical department was charmingly filled by Broadhurst, Hobbs, C. Taylor, and others; and the whole entertainment went off as the friends of this valuable charity could wish.

Royal Society.—The president, the Marquess of Northampton, gave, on Saturday, his second evening entertainment to the scientific world, which was numerously and brilliantly attended.

Booksellers' Provident Institution.—The members held their second annual general meeting on Thursday, the 14th inst. at the Albion Tavern, Aldergate Street; Cosmo Orme, Esq. President. The usual reports were submitted to the meeting; and it appeared by the auditors' report of the state of the funds, that nearly 8000*l*. had already been subscribed. It is hardly necessary to say, that this announcement gave great satisfaction to the large body of members present. Several votes of thanks were then passed to the president, treasurer, and other gentlemen, who had gratuitously lent their aid in furthering the objects of the Institution. We understand the directors and other officers of the Society have, with a liberality worthy of the body to which they belong, presented Mr. Meyrick, the honorary secretary, with a silver tea and coffee service, as a token of their approbation of the services rendered by him to the Institution.

Another Cold Con.—Why is the House of Commons like a cold in the head? Because, sometimes the *ayes* have it, and sometimes the *noes*.

* In our last, announcing this meeting, with a wish to promote its interests, we fell into a mistake in stating that the Duke of Cambridge was to preside. H. R. H. has promised his royal presence at the other fund, "The Artists' Benevolent Fund," and we (as too frequently happens from the similarity of names) confounded them.

* We have, nevertheless, some very admirable productions in this line.—*Ed. L. G.*

On hearing it said, in a tone of Derision, "Talbot's Process!"—Pooh!"

Ye scoffers and ye sceptics all,
Where any thing is mystical
I'm doubly sure of ye.
By light these wonders are created—
Then think how I am situated
When you make light of me.

LITERARY NOVELTIES.

In the Press.

The Inaugural Addresses of the Lord Rectors of the University of Glasgow, containing those of Lord Jeffrey, Sir James Mackintosh, Lord Brougham, Mr. Thomas Campbell, the Marquess of Lansdowne, Lord Cockburn, Lord Stanley, and Sir Robert Peel, with an historical account of the University.

A Society for the Encouragement of Literature is projected by means of prizes for the best literary productions on given subjects, including musical compositions, according to the plan. It is proposed that all competitors be members of the society, by contributing a certain annual sum, which shall entitle him or her to the following advantages:—1st. The privilege of competing for all prizes. 2d. To copies of the annual reports. 3d. To admission to the annual meeting for the distribution of prizes. 4th. To vote for the adjudicators. 5th. To admission to the reading-room, where all works should lay for at least four months after adjudication, unless they are taken to be printed, in which case a printed copy should be laid on the table as early as possible. A smaller subscription to entitle the subscriber to all the advantages, except that of competing for prizes.

LIST OF NEW BOOKS.

Mountain, 8vo. 5s. 6d.—Fisher's Illustrations of the Waterley Novels, fcap. 30s.—Ædipus Tyrannus of Sophocles, by the Rev. J. Prendergast, 8vo. 6s.

TO CORRESPONDENTS.

Our readers will, we hope, find in the very interesting statements respecting the *New Photogenic Art*, with which our present No. is enriched, a sufficient apology for some postponed reviews and the report of the Geological Society.

The managers of the Suffolk Street Gallery having luckily left us a vacant space under our head of Fine Arts, we have had great pleasure in filling it up by a notice of the opening of the grand exhibition at the Louvre, to which we think we may advantageously request the attention of the artists and lovers of the arts in England.

ERRATA.—In our report of the Royal Asiatic Society, March 16, page 170, col. 1, for "Lhotzky," read "Lhotaky;" and for "Ascensis," read "Ascensio."

ADVERTISEMENTS,

Connected with Literature and the Arts.

Master of Winchester College.
John Murray, Albemarle Street.

NEW WORKS.
Splendidly illustrated, under the Superintendence of
MR. CHARLES HEATH.
LILLA; or, the Siege of Granada: and
Calderon the Courtier. By Sir L. Butler, Bart. With
Fifteen Plates and Portrait of the Author, after Chalmers. Royal
8vo. price 1l. 11s. 6d.; Proof Plates, 1l. 15s. 6d.
"An admirable tale, in which variety of impassioned incident,
great variety of picturesque feeling, and a series of sudden and
strong dramatic movements, sustain a lively interest from the
opening to the close."—*Examiner*.

THE PIRATE and THREE CUTTERS.
By Captain Murray. With Twenty Plates by Stanfield,
and a Portrait of the Author. Royal 8vo. price 1l. 11s. 6d.;
Proof Plates, 1l. 15s. 6d.
"Captain Murray never produced any thing better than 'The
Pirate.'"—*Metropolitan*.

A BOOK OF THE PASSIONS. By G. P. R.
James, Esq. With Sixteen Plates, after eminent Artists.
Royal 8vo. price 1l. 11s. 6d.; Proof Plates, 1l. 15s. 6d.
"The beauty of the tales with which Mr. James has filled this
volume, like the beauty of the engravings which adorn it, seems
equally to defy any attempt of ours to do them justice by our re-
port."—*Literary Gazette*.
London: Longman, Orme, and Co.

In post 8vo. price 12s. cloth,
THE NATURAL HISTORY OF THE
SPERM WHALE, and a Sketch of a South Sea Whaling
Voyage.
By THOMAS BEALE.
This is the only work on a subject of much national impor-
tance, and the only account of whaling as practised in the South
Sea.
"Contains a vast variety of curious facts, the result of practical
experience scientifically digested."—*Atlantic Journal*, Dec.
John Van Voorst, J. Paternoster Row.

In royal 8vo.

REVIEW OF NEW BOOKS.

The Parliaments and Councils of England, chronologically arranged, from the Reign of William I. to the Revolution in 1688. Dedicated, by permission, to Her Majesty. 8vo. pp. 603. London, 1839. Murray.

"It was (truly, and only too moderately, says our author) a saying of Socrates, that though no man undertakes a trade which he has not learned, in that of government, the hardest of all trades, every one considers himself sufficiently qualified by the gifts which he has received from nature. It is no less true, in our own days, that, though in all other sciences and in every mechanical art, a long experience and much industry are considered necessary for the attainment of a moderate degree of excellence, in the difficult science of legislation, these means are not unfrequently neglected in the pursuit of the same end. Hence it happens that many incompetent persons, fancying themselves endowed with talents, which instinctively fit them for immediate action, enter with confidence upon the business of legislation; and that others, under the impulse of caprice or prepossession, exercise the responsible function of determining by their votes, the merits of those who are to be the framers of constitutional enactments. To this unfavourable combination of circumstances may be traced numberless errors, which have proved the abundant source of national misfortunes. If, however, these observations are generally true and important, it must also be acknowledged that, in no period of our history, have intelligence and correct information been more necessary than in the days in which we live. At no previous moment has the want of preparatory acquirements been more calculated to produce extensive mischief, than under the changes which have been recently introduced in the political relations of the people. By the extension of their privileges, they have been compelled suddenly to decide upon measures which vary intimately affect their own welfare, and the common prosperity of the empire. They have been called upon to express their sentiments on public affairs, and, by their conduct, to determine the most influential consequences. It can scarcely excite surprise, that under these newly acquired powers, and labouring under some degree of unavoidable ignorance as to the nature of that constitution, which they are bound to protect and support, they should sometimes commit errors of speculation and practice: or that, in the selection of those who are to represent their unrestrained feelings and opinions, they should sometimes be disposed to seek, as the only security for the discharge of complicated and momentous duties, the pledge given to a particular party to pursue, at all events, a prescribed line of conduct, whether consistent or otherwise with the permanent and enduring interests of the commonwealth.

* * * * * That the parliamentary history of England is, at present, a sealed book to the community of these kingdoms, will not be disputed by those who, in the search after precise constitutional information, have had occasion to refer to the voluminous collections of the original records, or to those of the contemporary his-

torians, the only sources from which authentic materials for such an inquiry can safely be derived. The opportunity of consulting these documents is extremely rare, and many advantages must concur to render such an opportunity available. Beyond the metropolis, few public or private libraries contain a series so extensive and costly; and presuming that a facility of reference does exist, our researches can only be prosecuted under an unlimited command of leisure, and by the application of an unremitting industry and attention. To these impediments may be added, in many instances, a disregard of the pecuniary sacrifice which must attend the possession of many indispensable, but highly expensive volumes. A brief review of the authorities to which a reference must be made by those who would obtain accurate parliamentary data, will shew that the difficulties are not exaggerated, under which investigations of this nature must now be conducted. Such a summary will tend, also, to remove any wonder, that error should often occupy the place of correct knowledge; that assumptions at variance with the facts of history should sometimes be adopted as undoubted truths; and that conclusions not sanctioned by a correct and comprehensive view of historical relations, should be maintained as legitimate and applicable rules of political conduct."

The author, Mr. C. H. Parry, then refers to the authorised sources of constitutional information—original records—contemporary historians—collections from these sources—and separate treatises, manuscript or otherwise, of authority on these subjects; and describes the nature and extent of his labours in fixing dates and reconciling adverse statements. After all, he says,

"It will readily be admitted that the following pages contain many errors of omission as well as of commission. Among the former may, perhaps, be placed the want of an accurate list of the lord chancellors. Such a list is, however, still a desideratum in our historical literature."

And well may we, from this circumstance alone, surmise how full of imperfections the most careful and industrious compilation must of necessity be; but still acknowledge the very great obligation which the public owes to Mr. Parry for this most comprehensive and useful work.

An introduction gives a summary of British History as regards the legislative assemblies of the kingdom from the earliest period; and then follows the chronological digest, which is, indeed, an invaluable political repertory, and at the same time full of very curious anecdotes and entertaining information. *Es. gr.*

"1331. *Henry III.* A.R. 15.—Feb. 9. The statute of Ireland is made, commanding that the customs of England be proclaimed and strictly kept and observed in that country."

"1332. *Edward III.* A.R. 6.—March 16. Two proclamations are made against any man wearing a coat of mail, or carrying weapons offensive or defensive in London, Westminster, or the suburbs, and against children or others playing any games (bars or pulling off hats) in the Palace at Westminster, during the sitting of parliament."

"1340. A.R. 13.—On Saturday, the 19th February, the Commons offer an aid of 30,000 sacks of wool, on certain conditions."

"1361. *Richard II.* A.R. 5.—Nov. 3. The Commons retire to their accustomed place, the Chapter House of the Ab-

bey, and on Monday, 18, present M. Richard deWaldgrave, Knight, their speaker; whom, desiring to be excused (first time) and discharged from the office, the king requires upon his allegiance to stand, 'as being chosen by his companions.' Upon which he makes the usual protestation."

"1399. *Henry IV.* A.R. 1.—Oct. 14. The late king is adjudged to perpetual imprisonment; to which judgment, the Commons request not to be considered parties, as such judgments belong solely to the King and Lords."

"It is answered, 'that the Commons are petitioners and demanders, and that the king and lords, of all time, had had, and ought to have, of right, the judgments in parliament; save that in a statute to be made, or in grants and subsidies, or for the common profit of the realm, the king will have their advice and assent; and this order shall be holden and kept in all time to come.'"

"1402. A.R. 4.—Oct. 10. (Tuesday.) The Commons request to have four bishops, four earls, and four barons, to assist them in their consultations; which the king grants, with this protestation, 'that the same, as against form and custom, is done out of favour and not out of duty;' which especial favour the Commons acknowledge."

"1404. A.R. 5.—Jan. 14. Among many other matters in this parliament, the Sheriff of Rutland having returned one who was not chosen for the shire, he is commanded to amend the return; and further, is committed to the Fleet, and to fine and ransom, at the king's pleasure."

"1529. *Henry VIII.* A.R. 21.—Nov. 3. Sir Thomas More, lord chancellor, opens the session. Addressing the Commons, he says, 'That because they were a great number, and could not speak all at one time—[they sometimes do so now!]—the king's pleasure was, that they should resort to their own house, and there amongst themselves, according to ancient custom, choose an able person to be their common mouth and speaker, &c.'"

The corporation of London was little better used in those days than in these:—

"1542. A.R. 33.—April 1. A member of the House of Commons having been arrested for debt, whilst the House was sitting, the king not only permits the Commons to release him, but punishes the offenders. The two sheriffs of London are committed to the Tower, one of the bailiffs to a place called 'Little Ease,' and the rest to Newgate."

"1554. Mary. A.R. 1.—April 6. Mr. Beaumont, a member of the House of Commons, having served a subpoena on the Earl of Huntingdon in parliament time, April 17, the lords send some of the judges to the lower house with the subpoena, and pray the order of the house for that offence. After debate, it is resolved, that eight members of that house shall declare to the lords, 'That they take the executing this writ to be no breach of privilege.'"

"1555. A.R. 2 and 3.—Nov. 30. A member of the Commons having been bound in recognizance in the Star Chamber, to appear before the council within twelve days after the end of parliament, the Commons declare to the Lords that their privilege is broken. On a conference, the chief justices, master of the rolls, and sergeants, clearly affirm that the recognizance is no breach of privilege."

"1559. A.R. 5 and 6.—Nov. 17. (Thursday.) The lord chancellor, sending for the Commons, announces the death of the queen, this day. They are to resort to the palace, where the Lords will come and cause proclamation to be made of Lady Elizabeth, as queen."

"1559. *Elizabeth.* A.R. 1.—Feb. 24 (Friday). A member of the Commons having come to the house being outlawed, and having defrauded several persons under colour of privilege, after examination by a committee, the question is put, 'Whether he shall have privilege or not?' It is carried, by 112 against 107, that he shall still continue a member."

* * * * * "Rep. I. 333. 'From all these proceedings, it seems that the principles on which the assembly of the Lords and Commons in parliament had been constituted, had not then been very clearly settled. The Commons had concurred in the judgment of deposition, of which that of imprisonment was not a legal consequence. As a mere ordinance of policy, it ought to have been an act of the whole parliament. However, this disclaimer, and the proceedings upon it, may be considered as finally settling that the characters of the two houses, though forming with the king one assembly in parliament, were perfectly distinct; and particularly that grants of aids to the crown should proceed from the Commons. The previous grant was expressly made 'by assent of the Lords.' The constitution of the parliament at this time was so far considered as different from that of the common council of the realm, for assessing aids and scutages provided by the charter of John; in which no distinction appears to have prevailed."

Bribery in the fine old times of good Queen Bess:—

"1571. A.R. 13.—May 10. Thomas Long, 'a very simple man, and unfit to serve,' is questioned how he came to be elected. He confesses that he gave the Mayor of Westbury another four pounds for his place in parliament. They are ordered to repay this sum, to appear to answer such things as should be objected against them in that house, and a fine of twenty pounds is to be assessed on the corporation and inhabitants of Westbury, for their scandalous attempt."

A royal snubbing against long harangues: what would royalty have said for the debate on the corn laws?—

"May 29. The queen addresses the houses, telling the Commons 'She utterly disallows and condemns those for their audacious, arrogant, and presumptuous folly, who, by superfluous speeches, spend much time in meddling with matters, neither pertaining to them nor within the capacity of their understanding.' After speeches from the speaker and lord keeper, she gives her assent to the bills, and parliament is dissolved."

Parliamentary manners, &c. —

"1601. A.R. 43.—Nov. 7. A committee on the subsidy sits.—Sir Walter Raleigh speaking low, Sir Edward Hobby says, 'We cannot hear you; speak out. You should speak standing, that so the house may hear you better.'—Sir Walter Raleigh: 'Being a committee, he might speak either sitting or standing;' and so he repeats his speech.—Mr. Secretary Cecil: 'Because it is an argument of more reverence, I choose to speak standing.'"

"Nov. 9. The subject of the supply is again debated.—Serjeant Heyle: 'Mr. Speaker, I marvel much that the house will stand upon granting a subsidy, or the time of payment, when all we have is her majesty's; and the may lawfully, at his pleasure, take it from us. Yea, she hath as much right to all our lands and goods, as to any residue of her crown.' All the house hems, and laugh, and talk. 'Well, all your hemming shall not put me out of countenance.'—Mr. Speaker: 'It is a great disorder that this should be used; for it is the ancient use for every man to be silent when any one speaketh; and he that is speaking should be suffered to deliver his mind without interruption.'—The serjeant proceeds; but as the house hems again, he is obliged to sit down."

"1604. James I. A.R. 2.—March 26. A member makes a motion in the Commons against hissing, to the interruption and hinderance of the speech of any man in the house, a thing derogatory from the dignity, not becoming the gravity, and as much crossing and abating the honour and privileges of the house as any other abuse whatsoever. The motion is well approved."

"May 19. In the Commons, Sir William Paddy, entering into a long speech, 'de meris die, et de solis die,' is interrupted, and a rule is made, 'If any man speak not to the matter in question, the Speaker is to moderate.'"

A well-expressed opinion on governing by "the masses":—

"1606. A.R. 4. Scotie 30.—May 26. In the Commons, a speaker affirms, that 'A multitude must be on,—on with reason or without reason,—in parliament or out of parliament.'"

"1607. A.R. 4. Scotie 40.—March 12. The horse of a burgess having been taken by a post-office servant, to run post, such servant is committed to the serjeant's ward during pleasure."

"1614. A.R. 12. Scotie 47.—May 26. In a 'Dispute,' Sir Edward Sande says, 'To go immediately to the king, wrongeth the liberties of the upper house. The liberties of parliament are three; of election in this house, of freedom from arrest, and speech. Words of treason, or matter of felony, have no protection here, but are punishable by the king. Words of scandal, or which may make addition between the two houses, are punishable here.' This is proved (1) by the usage of both houses; (2) as prejudicial to the liberties of this house, (3) as this house can challenge no liberty further than the lords; where most honour is, most liberty, &c."

"1631. A.R. 16. Scotie 54.—Feb. 16. A 'jarr' having taken place between the Earl of Berkshire and the Lord Scrope, and the former having 'pushed or thrust the latter forcibly in the house against the dignity of it,' he is called to the bar of the lords' house, censured, on his knees, by the lord chancellor, and committed to the Fleet. He is afterwards (Feb. 17), on motion of Lord Scrope, enlarged, and delivers a submission in writing; and, on his reconciliation with Lord Scrope, is discharged."

"March 5. Sir Edward Coke. The statute Magna Charta, 29 p.p., was confirmed thirty-two times. None to be imprisoned, &c. It was called Magna Charta, not for the largeness, but for the weight. All the old writers call it the Charter of Liberties."

"March 9. Mr. Mallory will spare none, though they sit in chairs. Mr. Speaker came out of the chair, that consent of the house.—Sir R. Philipps admonisheth the Speaker, that sometime he neglected his duty to the house, in intruding or deferring the question.—Mr. Nevill must a little reflect upon Mr. Speaker, that he hath made plausible motions abortive.—Sir H. Manners: Mr. Speaker is but a servant to the house, not a master, nor a master's mate.—Sir H. Withington: Mr. Speaker is the fault of all their faults, by preventing them with rising.—Sir W.

Herbert: He was required to sit still. He must respect the meanness, as well as those about the chair."

The church in danger: deans and chapters before Sydney Smith was born:—

"1641. Charles I. A.R. 17.—June 15. The Commons resolve, 'That all deans, deans and chapters, archdeacons, prebendaries, chanters, canons, petty canons and their officers, shall be utterly abolished, &c.' Resolved, That the funds taken by this bill shall be employed to the advancement of learning and piety, &c., and that a competent maintenance shall be made to the several persons concerned, if such appear not peccant and delinquents, to this house. Sir Benjamin Rudyard, speaking against the bill, says, 'One thing doth exceedingly trouble me, that so many do now believe, against the wisdom of all ages, that there can be no reformation without destruction; as if every sick body must be knocked on the head, as past hope of cure. Bishops have governed the church for 1200 years without interruption; and no man will say but that God hath saved souls in all those times, under their government. Let them be reduced according to the usage of ancient churches in the best times. I love not those that hate to be reformed; and do therefore think them worthy of the more strict, the more close reformation. If either in bishoprics or cathedral churches there be too much, some may be pared off, to relieve them that have too little; if yet more may be spared, it may be employed to the setting up of a preaching ministry, through the whole kingdom. Until this be done, although we are Christians, we are not a Christian state. There are places in England which are not in Christendom, the people are so ignorant, they live so without God in the world; for which, parliaments are to answer both to God and man. Let us beware that we do not look with a worldly, carnal, evil eye upon church lands. Church lands will still be fittest to maintain church men, by a proportionable and orderly distribution. We are very strict and curious to uphold our own property; and there is great reason for it. Are the clergy only, a sort of men who have no property at all in what is called theirs? I am sure they are Englishmen, they are subjects. The next way to bring in barbarism, is to make the clergy an unlearned contemptible vocation, not to be desired but by the basest of the people. Where, then, shall we find men able to convince an adversary? A clergyman ought to have a far greater proportion to live upon than any other man of an equal condition. He is not bred to multiply three-pences. It becomes him not to live mechanically and sordidly. He must be given to hospitality. I do myself know a clergyman, no dignitary, whose books have cost him 1000*l.*, which, when he dies, may be worth, to his wife and children, about 200*l.* For my part, I think nothing too much, nothing too good, for a good minister, a good clergyman. They ought least to want, who best know how to abound. Burning and shining lights do well deserve to be set in good candlesticks. I am as much for reformation, for purging and maintaining religion, as any man; but I profess I am not for innovation, demolition, nor abolition.'"

"July 12. Thomas Payne, an attorney, who told the Earl of Thanet 'It was false and a lie,' is committed to the custody of the gentleman usher, &c."

The press. How utterly is all changed now, both as regards newspaper reporting and the publications by the house itself, or with its sanction:—

"1642. A.R. 18.—The Commons send for many printers, as delinquents, for printing certain proceedings in parliament.—They resolve upon a statute, 'That no person soever shall print or sell any act or passage of this house, under the name of a diurnal, or otherwise, without particular license of the house, shall be reported a high contemner and breaker of the privileges of parliament, and be punished accordingly.'"

"April 11. Report is made in the Commons on an order to prevent the multitude of poor coming over from Ireland."

"Oct. 14. Mr. Hughes, parson of Shepton, having said, 'There are younger brothers, who, if the king will give them pillage, will make the round-headed rogues shake, and that it was fit the king should have some of the traitorous rogues,' is committed to New Prison, Middlesex, during pleasure."

The church again:—

"1643. A.R. 19.—May 27. Resolved, An ordinance for borrowing the plate in all cathedrals, superstitiously used upon their altars."

"Aug. 9. A petition for peace is presented to the Commons, from 'many civilly disposed women of the cities of London, Westminster, &c.' About 5000 females attend, and are not dispersed without bloodshed."

"Dec. 9. It is resolved, That the house shall meet every morning at 9, and that absent members shall pay 1*l.* Dec. 11. Ordered, A committee to consider what is to be done for the estate of Mr. Pym, deceased, and to prepare a monument at the charge of the Commons. His body to be interred in Westminster Abbey, without charge for breaking the ground, and Mr. Speaker and the whole house to attend."

"Dec. 15. The Commons resolve to appoint a grand committee to set an excise upon flesh."

"1644.—Jan. 1. Resolved, An excise to be put on flesh, salt, and poultry; wares upon every rabbit, &c.; upon a dozen pigeons, &c."

Encore the church:—

"A.R. 30.—April 34. Ordered, The mitre and crozier staff found in St. Paul's church to be forthwith sold, and the brass and iron in Henry VIII's chapel."

"April 25. Ordered, Books to the value of 160*l.* to be delivered to Mr. Peters, out of the particular and private study of the Archbishop of Canterbury."

And the head of the church:—

"1645.—Jan. 7. The king grants a pardon to the archbishop of Canterbury, but nothing is ordered thereupon. The lords, considering the great places the archbishop hath been in, incline that he may have that favour shewed as to have his head struck off, and not be hanged, and they make an ordinance accordingly."

Pay of members, &c.:—

"A.R. 31.—May 14. On a report from the 'committee to supply the necessities of members,' it is agreed, That they shall receive 4*l.* weekly a-piece."

"Nov. 27. The Commons order, That Mr. Nicholas, a member, who had the chamber of Mr. George Beare conferred on him, shall have the books and manuscripts likewise."

"1646.—Jan. 9. 'The lady, Marchioness of Winchester, restrained by the Committee of Examinations,' is ordered to be delivered to the Gentleman Usher of the Black Rod."

"Jan. 15. The Marchioness of Winchester, in the Tower, 'having nothing to feed him, but what his keeper voluntarily gives him,' is, by the Lords, recommended to the House of Commons for an allowance out of his own estate, 'that he may not starve.'"

"A.R. 32.—Dec. 18. The Earl of Worcester being dead, and there being no means to inter his body, the Lords recommend to the Commons that some means may be found by which his funeral, the charges of his imprisonment, and the fees due to Black Rod, may be paid out of his estate."

"1649. Charles II. A.R. 1.—The peers present in January averaged only four. The highest and lowest numbers of earls and barons were four and one, and five and one. No viscount was present. The only divisions in the Commons are 31-18; 33-19; 25-18. It is to be remarked, that, during this month, the name of the King is not mentioned in the journals of Lords or Commons, except that the latter order, 'that Dr. Juxon has leave to continue with the King in private, under the same restraint that the King is.'"

"Commonwealth.—March 7. The Countess of Holland and 'divers other countesses and ladies' attend with petitions in favour of their husbands, Earl of Warwick, Lord Goring, James, Duke of Hamilton, under name of Earl of Cambridge, Lord Capell, and Sir J. Owen, condemned to die."

"1657. Cromwell. Charles II. A.R. 2.—May 12. Report is made of his highness's final answer, 'That he cannot undertake the government with the title of king.' May 19. Resolved, by fifty-three against fifty, that lord protector shall be the title, &c. May 30. 'The first day upon the new footing of the constitution.' Mr. Speaker: 'I move, that for the gravity of the house, you, being as a court of justice, would not talk to one another, nor move out of your seats, nor stay in the gallery, in regard the house is thin.'"

"May 29. Mr. Rampfield observing the Speaker speaking to the clerk, moves that it was usual with him to do so while men were speaking, but it was against the orders of the house. Mr. Speaker excuses himself, but could not come off very well. 'He only spoke to be informed about the order of proceedings.'"

"June 8. The house having waited half an hour for the minister, and none coming, the Speaker was going to proceed without prayer. Mr. Rampfield.—This is the first precedent that ever the house went to business without prayer. The house staid awhile, but at length proceeded without prayer."

Ireland devouring England:—

"June 10. Mr. West, on a debate concerning assessing Ireland, says, I have read of *Filix devoravit Matrem*. I wish it may not be so in Ireland."

Long prayers:—

"1658.—Jan. 27. The house keeps a day of public humiliation. The exercises begin at 10 o'clock, and hold till half-past 5."

Curious computation of the influence Scotch and Irish members would have by their votes in the House of Commons; and curiously applicable to the present time:—

"1659. Richard Cromwell. Charles II. A.R. 11.—March 9. A debate commences touching the right of sitting of the Scotch and Irish members. Sir H. Vane.—A greater impression never was by a single person upon a parliament, to put sixty votes upon you. By this means, it shall be brought upon you inensibly to vote by Scotch and Irish members, who will enforce all your votes hereafter. Mr. Knightly.—The union with Ireland must be preserved. This has been one occasion of the great tumults in Ireland that we have not till now taken them into our legislation. Mr. Hewley.—We are now all one body: Irish are natives here, and have all one soul. It is not prudent or safe to turn them out of the house."

"March 21. The debate is resumed on the Scotch and Irish members. Mr. Annesley.—'This house has all

* See the approaching debate appointed for the 16th.

being imposed upon acts of parliament; as interest of non-residency. If the union were not to the interest of England, I should be the first to withdraw." Mr. Boscawen.—"The union was made but by the fig-end of the long parliament. Scotland will not think themselves obliged to keep that union, longer than till they can break it." Colonel West.—"As not one native may be here, then sixty (thirty for Ireland and thirty for Scotland), are the quorum; and it may happen that it will be in their power to impose laws upon us."

"March 23. The debate on Ireland is resumed. Major Ashton.—I am a member for Ireland. The members that come in for that place serve no more for Ireland than for England. Ireland was anciently a province. Henry II. went thither, and they made a resignation of their power to him, by confirmation of the pope. He granted it to his son John, but so: 'ut non separaret ab Angli.' King John went into Ireland, and ordained by act of parliament that Ireland should be governed by all the laws of England. 10 Hen. VII. came in the Statute of Poynings, which made the statute laws also the same in Ireland, only they had parliaments, as being most fit for that nation. In a parliament held that year at Drogheda, it is enacted that all statutes made in England, &c. from henceforth be deemed effectual in law, and be accepted, used, and executed, within this land of Ireland, in all points. I think it best that they should have parliaments of their own, for the very reason, that votes may not be imposed upon you here. Mr. Gwyn.—It were better for England and Ireland that they have parliaments of their own. Mr. Thomas.—How does it consist with our privilege to admit strangers? Mr. Annesley.—England is in the danger of thirty members from Ireland; but if thirty from Scotland should join there, much mischief might ensue."

"1661. Charles II. A. R. 12.—"The Lords agree as to a thanksgiving for God's great mercy in delivering the nation out of their long 'thraldom, confusion, and misery.'"
"His majesty avows and declares, 'that the horrid murder of his royal father, was not the act of the parliament or people of England, but of a very wretched and very little company of miscreants in this kingdom.' The Commons declare the humble and thankful sense this house hath of his majesty's justice and favour in making this just defence for the parliament and people of England."

The church restored :—

"1661. A. R. 12.—November 20. (Wednesday.) The bishops attend for the first time. The archbishop of York and twenty-two bishops are present. They are added to the committee."

"1691. A. R. 33.—The king attends in the House of Lords, and commands the lord chancellor to dissolve the parliament. 'As we are not likely to have a good end, when the divisions at the beginning are such.'"

"1693. James II. A. R. 1.—Nov. 18. The king answers the Commons, 'That he did not expect such an address, &c.' On the motion to take into consideration his majesty's gracious answer, John Cooke, Esq., stands up and says, 'We are Englishmen, and ought not to be frightened out of our duty by a few high words.' Upon which he is committed to the Tower. Nov. 20.—The king is present (for the last time), and prorogues the parliament to the 10th of February."

"1698. The Interregnum.—December 26. (Wednesday.) The assembly convened by his Royal Highness, William Henry, Prince of Orange, meets in the Commons' House, Westminster. Henry Powle, Esq., is called to the chair, having on his left hand, Paul Jordrell, Esq., clerk to the House of Commons, and Samuel Gillham, Esq., assistant clerk. About 160 are present. On the question being moved, 'What authority they had to assemble?' it is agreed, 'That the request of his highness, the prince, is a sufficient warrant.' Resolved, nem. con., That thanks be given to his highness for coming into this kingdom. Resolved, nem. con., That his highness be desired to take upon him the administration of public affairs, both civil and military; and the disposal of the public revenues, for the preservation of religion, rights, laws, liberties, and the peace of the nation."

With this we conclude, and think our readers will agree with us in acknowledging the interest and importance that attach to such remarkable illustrations of parliamentary usages and constitutional history.

Cheveley; or, the Man of Honour. By Lady Lytton Bulwer. 3 vols. 12mo. London, 1839. Bull.

ONE of the strongest impressions with which we have risen from the perusal of this publication is that, without good hearts and good tempers, the possession of beauty, wit, accomplishments, talents, or genius, may be a curse, not a blessing, to man or woman.

So much pains have been taken beforehand, through the medium of the press, to intimate to the public that there was much of personality in these volumes, that it would have

been folly in us not to confess cognizance of the melancholy fact, even if the hardly concealed names of some of the parties did not too plainly prove it to be the case. On general principles we have always condemned this practice; and, with sorrow we say it, there is nothing in this particular instance which does not heighten the offence and aggravate the antisocial evil.

To us it is the saddest of spectacles to see such a book with such a name to it; but we do not believe it is all the production of that once most kind, happy, and charming of persons. It is bad enough to have contributed to and sanctioned it. For deeply mistaken is that Woman, be she ever so injured, ever so exasperated, who can be persuaded that it is a proper or justifiable way to redress her wrongs and revenge her grievances by forgetting the lady, the friend, the wife, and the mother, and making her domestic squabbles or family afflictions the theme for every idle and worthless gossip tongue.

But the mischief does not stop here. The palpable exposures to which we have alluded are not like those which unfortunately come out in courts of law, when unhappy marriages have unhappy consequences or terminations. In these affairs the common love of scandal is only gratified by the attempts on either side to establish the truth of certain painful or disgraceful allegations. They are not mixed up with caricature, exaggeration, and fiction, till it is impossible to say where the truth (if there be any) ends and the falsehood begins. There are the complaints and the proofs—not the complaints, taking possibly the slightest possible grounds on which to build the superstructure of spiteful colouring and bitter misrepresentation. Thus, for example, in *Cheveley*, the heroine herself, a married woman, is painted as corporeally true to her husband (it must be allowed), but passionately in love with another man, and carrying on a sentimental and religious intercourse with him of the most reprehensible and criminal kind.

"The night was soft and balmy in the extreme, and the moon shone as brightly as any that had ever lit that Adrian sea; over and about fairy sounds floated on the air; of soft mandolins and softer voices, which, in their turn, were echoed by the ripple of the oars in the silver waters of those genius-haunted waves. 'I never see the sea by moonlight,' said Julia to Mowbray, as they sat together at the head of the gondola, 'without wishing I was Urdine, that I might plunge in, and see all the bright treasures beneath.' 'What an exquisite tale that is!' replied he. 'Yes; and if she was supernatural, Huldbrand was, at least, a true man, because a false one,' replied Julia, with a smile that was not seen, and a sigh that was heard, and felt too, at least by Mowbray. 'I fear,' said he, 'that his character is, indeed, but too true to nature; but the beauty of the story consists in the beauty of the allegory; for, surely,' he continued, in his lowest and most musical voice, as the gondola stopped at the steps of the Silver Lion—'surely, you must admit, that we never have a soul—at least, that we never feel that we have one, till we love.' 'I admit,' said Julia, trembling violently as she leant on his arm to ascend the steps—'I admit, that we are never in danger of losing it till we love.'"

Now this Julia, the wife of another, and the mother of his child, is drawn as a model of virtue; whilst a French governess, with less of sentiment, or rather with sentiment of another sort, and who suits her actions to her words, is

portrayed as a vile wanton. Alas, how much worse is she who falls altogether than she who prostitutes her whole mind, and heart, and soul? It is to have a fatal notion of moral duties to treat them after this fashion.

But we were only quoting this passage to shew how little the prurient curiosity, excited by the puffs of this work, is likely to be gratified, if it consults these pages with the idea of meeting with the disclosure of strange and wicked doings. No; we have clever irony and ridicule applied to every subject. Satire is the forte of the writer; and whether it is a picture of conjugal tyranny and domestic dissension—personal portraiture—descriptions of manners—or tracing motives—the same spirit runs wildly through the whole, and the sacrifice of every thing to satirical effect, or to the worse feeling of vengeance, is so apparent, that there is no point at which belief can stick, or credibility begin to be attached.

Such being the nature of this publication, rather than a betrayal of every social and sacred duty, those who may be led to read it for the sake of slander will be disappointed. References to Pythagoras, Plato, Epictetus, &c., and long and learned quotations from Claudian, Pliny, Horace, &c., discover a masculine hand, and happily enable us to acquit the gifted lady, whose name is (where it should never have been) on the title-page, of the contrivance and execution of (we trust) the most odious portions. We fear she has suffered, and we inquire not whether that suffering might not have been mitigated or avoided by different conduct; but that suffering engenders our pity; and it is from our "heart of hearts," we deplore her having sought counsel from her angry passions, and been so ill-advised as to throw herself into the clutches of reckless and unprincipled people, to be made their tool. It seems to efface the bright, the beautiful, the spiritual, and the enchanting, from our memory; and to replace them by—what we cannot utter.

We select a few brief sentences to shew how the work is written :—

"Certainly, the French have more sentiment and less feeling than any people in the world :—had Tullia been a Frenchwoman, she might equally have driven over the dead body of her father; but then, what an elegy she would have written upon the event! and with what tears would she have read it out to a sympathising and admiring audience!"

One of the love palliatives is thus given :—
"Once, and only once, she asked herself if she did not like him too much; but she blushed crimson at the thought, and seemed to think the prudery of her imagination had insulted the purity of her heart by the question."

The Press.—"Oh! what an odious monster is an unprincipled press-gang—writing, telling, and propagating lies, from morning till night. Smiling in the face, and stabbing in the back! Of all reptiles, scribbling underlings are the vilest. Who from parasitical maggots, gloating on the meats of the rich man's table, turn into literary panders to the rich man's vices, whether printed or acted; who spit their anonymous venom with impunity at the weak or the injured; and while, serpentine-like, they entangle their victim in their slimy coils, feel safe themselves from attack, from the conviction that none care to encounter the pestilence of their breath."

We have only further to notice that terrible havoc is made with the printing of the French and Latin; of which the liveliest example is the following version of *Nolo episcopari*,

"Nolo episco peri."

Bibliographical Essay on the Collection of Voyages and Travels. Edited and published by Levinus Hulsius and his successors, at Nuremberg and Francfort, from Anno 1598 to 1660. By A. Asher. London and Berlin, 1839. Small 4to. pp. 118.

ONLY a few copies of this volume have been printed; and it is curious in itself. Nuremberg, the cradle of the mighty giant—Printing, witnessed some of the earliest efforts of the infant Hercules; and the productions of the press of Hulsius were not the least prominent of them.

"If it cannot be denied (says our author) that the literary productions of any given period mark the state and progress of the human mind, and thus become the standard whereby to judge the nations of ancient and modern times, it must be of interest to trace the *march of book-selling* as that link between the public and the author, whose study it is to test the wants and desires of the one, in order to stimulate the abilities and exertions of the other, and thus to give birth to such works as most readily will repay the labour and capital of the 'dealer in mental food.' It is this consideration which has induced the author of the present Essay, himself one of the bibliopolic fraternity, to examine the publications of Levinus Hulse, or Hulsius, a man whose services to literature, both as an author and a publisher, deserve to be more known than they at present are. Although I propose to enumerate all the works published by him, it is his 'Collection of Voyages and Travels' that has attracted my particular study; and this Essay, of which one hundred and twenty numbered copies only are printed, has been published in the present quarto form, in order to match with the 'Collection' alluded to, and which it is intended to illustrate, and to introduce to the notice of the literary and curious."

This explains the nature of the design; and the following remarks describe the character of Hulse's labours:—

"Of all the authentic collections of early voyages and travels, which furnish the materials for universal history, none deserves more to be better known and appreciated than that published by Levinus Hulsius. It is mentioned as rare and valuable by Haller, Meusel, and Freytag; but the attention of the curious was not directed to the examination of its contents before the year 1802, when Camus, by an order of the French Institute, published his well-known *Mémoire de De Bry*."

Our author contends that Hulse's *Collection* is superior to De Bry's, famous as are the latter; and then, giving us a brief "Life" of this ancient and learned publisher, sets to work with his proposed task. Of the interesting manner in which it is executed, the following trio of examples will be sufficient testimony. The first is on the earliest attempts of the Dutch to discover a North-East Passage.*

"Two expensive expeditions having thus terminated in disappointment, the states-general felt no longer disposed to prosecute the discovery of a north-eastern passage. Yet, unwilling to relinquish the hope, and aware of the benefits that must accrue to the state from fostering a maritime spirit in the people, they issued a proclamation, offering a certain reward to such persons as should accomplish a voyage

to China by the desired route. The merchants of Amsterdam were thus encouraged to fit out two ships, the command of which they entrusted to the experienced pilot Barentz. He sailed at an earlier period than on his preceding voyage, and by the 1st of June had reached so high a latitude, that he had no night. On the 9th he arrived at Bear (afterwards called Cherry) Island; where the Dutch killed a bear, whose skin measured twelve feet in length. Ten days afterwards, they discovered land to the eastward, and found, by observations, they were in latitude 80° 11'. This is, unquestionably, the first discovery of Spitzbergen. The Dutch were surprised to find that this northern land was covered with good herbage, and supplied with herds of deer, while Nova Zembla, four degrees to the south, was a bleak and barren desert. Here also they found a multitude of red geese, such as visit some parts of Holland in the winter; but of which, as our author says, 'it was never known till this time where they hatched their eggs; so that some men have taken upon them to write, that they sit upon trees in Scotland, that hang over the water, and such eggs as fall from them down into the water, become young geese, and swim thereout of the water; but those that fall upon the land burst in sunder and are lost.' Thus the fable of the barnacles was supposed to be for the first time experimentally refuted. From Spitzbergen the two ships steered south-west till they arrived at Bear Island; and here they agreed to part company, Jan Cornelis wishing to examine the east coast of Spitzbergen, while Barentz hoped to find the passage to the eastward in a lower parallel. He steered, accordingly, for Nova Zembla, where, by the first week in August, he had reached the latitude 77°. But strong winds from the east opposing his progress, he was obliged to make fast the ship to an immense iceberg, which soon after burst into innumerable fragments, with a sudden explosion. Being forced to return, they reached, with difficulty, Icehaven, in latitude 73° 50', on the 26th; and here the ice which had beset them in the voyage immediately closed them up. The unhappy crew, now reduced to seventeen persons, found themselves under the necessity of passing the winter in this dreary and inhospitable spot. Luckily for them the driftwood on the shore was sufficiently abundant to supply them with fuel, and with the materials for a house. They calmly prepared to meet the difficulties of their situation; and the journal of their sufferings is rendered doubly interesting by their patience and resignation. It is difficult to conceive, and impossible to describe in adequate language, the feelings of men thus doomed to an abode of darkness, desolation, and intense cold, where bears and foxes are the only inhabitants of the forlorn scene. On the 4th of November, the last rays of the sun forsook them, and the cold increased until it became almost too intense for endurance. Their wine and beer were frozen and deprived of their strength. By means of great fires, of applying heated stones to their feet, and wrapping themselves in double fox-skin coats, they were just able to keep themselves from being frozen. But in searching for drift-wood, they were obliged to endure acute pain, and to brave imminent danger. They were also frequently attacked by bears, which fearlessly assaulted their wooden hut; but they found means to kill some of those animals, the fat of which they used for their lamps. It is remarkable that, when the sun disappeared, the bears also took their departure, and then the white foxes came in great numbers. These

animals, which served at once for food and clothing, were easily taken by traps set on the roof of the house. When the 19th of December arrived, these unhappy men derived comfort from the consideration that the season of darkness had half expired; and that, with the return of the sun, they would find new resources and means of preservation. Their spirits were not so far sunk as to prevent them from celebrating Twelfth-eve, with an extra allowance of wine, and with games. The gunner was made king of Nova Zembla, 'which is at least two hundred miles long, and lyeth between two seas.' At length, the joyful moment arrived. On the 27th of January, the entire disc of the sun was visible above the horizon, to the surprise of Barentz, who did not expect its appearance for fourteen days to come. But the calculation of Barentz was undoubtedly erroneous; while, on the other hand, the narrative cannot be easily explained, for, under ordinary circumstances of refraction, the appearance of the sun would seem to have been premature by seven or eight days. The appearance of the northern limb of the sun above the horizon on the 24th of January, in latitude 76° N., supposes a refraction of nearly three degrees. With the light of the sun, the bears also returned. The weather grew more boisterous and inclement, so that it was June before they could set about repairing their two boats; for the ship was too much injured by the ice to be again refitted by their feeble exertions. On the 13th of that month, they prepared to quit their wretched abode; but Barentz first drew up in writing, and left in the wooden hut, a list of their names, with an account of their misfortunes, and a description of what had befallen them while residing here. They then left Ice Haven in two small boats. But Barentz, enfeebled by sickness and anxiety, was unable to profit from the gleam of hope which now broke in upon them. He died on the 26th, to the great affliction of the crew, who placed unbounded confidence in his skill and experience. There are many instances on record, of long voyages performed through the ocean in open boats, but, perhaps, there is not one of so extraordinary a character as the present, in which two small boats ventured to cross the frozen ocean, more than eleven hundred miles, continually threatened by masses of floating ice, liable to the attack of bears, and exposed, for upwards of forty days, to the extremities of cold, famine, sickness, and fatigue. At length, the exhausted crews arrived at Cola, where they found three Dutch ships; in which they embarked and reached the Maes in safety, in October 1597. The account of these three voyages appears to have created a general sensation throughout Europe. It was first published in Dutch in 1598, and was translated *the same year* into Latin, twice into German, and into French. All these editions were frequently reprinted."

Our next relates to a voyage to the Gold Coast, and is introduced by some general observations:—

"This part of our collection refers to the conquests of the Dutch on the Gold Coast of Guinea: and the following extracts may serve as an introduction to the history of those enterprises which gave rise to the formation of the Dutch East India Company. One Bernard Ericks (or Erikson), of Medenblick, having been taken at sea by the Portuguese, and carried to the Princes Islands in the Bight of Guinea, heard there of the rich trade they drove on the Gold Coast. Being afterwards set at liberty, and returning to Holland, he offered

* "Dritte Theil, etc. i.e. Third part, true Relation of the three unheard-of curious Navigations made by the Dutch and Zealand vessels towards the North, in three succeeding years, viz. A.C. 1594, 1595, 1596, etc. etc. Translated from the Dutch into High-German, by Levinus Hulsius. Nuremberg, 1602. Vignette: a vessel surrounded by ice."

his service to some merchants for a Guinea voyage, who accordingly furnished him with a ship and a proper cargo. Ericks performed the voyage successfully in 1595, running along the whole Gold Coast, where he settled a good correspondence with the blacks for carrying on a further trade. These people, finding his goods much better and cheaper than they used to have from the Portuguese, and being disgusted at the violence and oppression of their tyrannical government, encouraged Erikson. The Portuguese, on the other hand, endeavoured to incense the natives against the Dutch, representing them as traitors and rebels to their king; and telling the negroes they came not so much for the sake of trade, as to spy the country and reduce them to slavery. They also strove, by presents and bribes, to corrupt the negroes to destroy these new comers, who traded with them, or to betray them into their hands. The governor of La Mina offered a reward of a hundred florins for every ship they could surprise or take from the Dutch; who by these arts lost the good opinion of the natives, till they recovered it again by the frequency of their visits. If you will believe the Portuguese authors, the Dutch treated the blacks even worse than themselves had done. Vasconcelos says that the rebels (meaning the Dutch) gained more upon the blacks by drunkenness, giving them wine and strong liquors, than by force of arms, and instructing them as ministers of the devil in their wickedness. But that their dissolute lives and manners, joined to the advantages which the Portuguese of Mina, though inferior in number, had gained over them in some encounters, had rendered them as contemptible among the blacks for their cowardice as want of virtue. That, however, the blacks being a barbarous people, susceptible of the first impressions, readily enough swallowed Calvin's poison, as well as took off the merchandise; which the Dutch, taking the advantage of the Portuguese indolence, sold along the coast, where they had, by such means, become absolute pirates. That they held, without any other right but force, the fort at Boutroë, four leagues from that at Axim; also the settlements of Kora, Koromantin, and Aldea del Tuerto, at Kommendo. That they peacefully enjoyed the commerce of Mina itself, where they purchased above two millions of gold yearly, and exported all that could be furnished there by the Fazzars, and other inland nations. That the quantity of merchandise brought by the Dutch, and their cheapness, had made the barbarians the more greedy of them; although the author says that persons of honour and quality had assured him that they would willingly pay double for Portuguese goods, as suspecting the Dutch to be of less value, buying them only for want of better. The Portuguese at La Mina, finding the Dutch trade on the coast increase, to their great loss, still endeavoured to excite the natives against them. In 1599, five Dutchmen, going in a canoe to Mowri, were by a calm detained at sea near the Castle of La Mina; which the governor observing, sent some negroes, who fell upon them, and wounding them, carried them ashore, where they cut off their heads, which they presented to the governor, and afterwards converted the skulls into drinking-cups. The governor set their broken limbs on the castle walls, to terrify the Dutch. They tried all clandestine ways to hurt the Dutch, whom they mortally hated. But about this time, for want of supplies from Lisbon, and by the decay of their trade, they were grown so weak, that they were glad to lie still in their fortresses,

for fear the natives, to whom they were become odious, should seize and deliver them up to the Dutch. In effect, this same year, the Kommendo and Fetu blacks, animated by the Dutch, who supplied them with arms and other necessities, rose against the Portuguese. These had above three hundred men killed in that war. The Dutch, who till then had found much difficulty to make settlements on the Gold Coast, notwithstanding their being countenanced by the blacks, resolved now to erect some forts on the coast of Benin and Angola. Then practising underhand with several of the kings, he of Sabow gave them leave to build a fort at Mowri, three leagues east from Cabo Corso, which they finished in the year 1624, and gave the command of it to Adrian Jacobs, at the time when the crown of Portugal was at war with the Dutch, but possessed by Philip the Fourth, king of Spain."

Our last is to a different part of the world. "*William Schouten's Expedition to the Pacific*. — Die sechtzehende Schifffahrt, i. e. the sixteenth voyage journal, or description of the wonderful voyage of William Schouten, of Holland, in the years 1615, 16, and 17, wherein he discovered a new thoroughfare near Magellan's Strait into the South Sea, which hitherto had been unknown, etc. etc. Illustrated by many maps and plates. Francfort sumptibus Hulsianis, 1619 (no other edition known). Frontispiece, two Americans. Preface, 4 pages. Text, pp. 7-90. 9 maps and plates. Of the plates, some represent incidents and views similar to those of De Bry; but instead of four maps, with which the present voyage is illustrated, De Bry has only two. Hulsius's account of this 'Navigation,' one of the most consequential of the seventeenth century, is of extreme interest. It will be seen by the extract quoted below, that two accounts of this expedition were published, shortly after the completion of the voyage, by the respective friends of Schouten and Lemaire, the two navigators, which differ in many instances. De Bry's and Hulsius's versions of these Dutch accounts appeared both in 1619, but they translated from the two differing originals; in consequence of which, these translations present the curious with all the facts as stated on both sides. Our version, however, is beyond comparison superior to its competitor ('Grandes Voyages XI.'). as it renders all those passages correctly which in De Bry have become quite unintelligible (see 'Camus Mémoire,' pp. 148-153). Thus, for instance, De Bry, in the very beginning of the book, states, under the 12th of July, 'saw some wildernesses,' into which absurd error he was probably led by the circumstance that the islands were called, as stated by Hulsius, p. 8, the Salvages (two small desert isles, S.S.E. of Madeira), taking Salvages for Sauvages! And this proof of the ignorance of the editor of De Bry's translation is certainly sufficient to uphold the opinion stated in the introduction of this memoir, that our collection is not alone much more correct, but is in fact indispensably necessary to those 'amateurs' who have purchased De Bry, not alone as a curious, but also as a useful book."

The whole of the volume is full of statements of this kind. Need we repeat that it affords a very curious and interesting view of the earliest European navigation and foreign discoveries?

The Phantom Ship. By Capt. Marryat, R.N., author of "Peter Simple," "Jacob Faithful," &c. 3 vols. London. Colburn.

THE vigour and power of Capt. Marryat's pen are so well known by his former works, and,

even in the present instance, have been so forcibly indicated by the appearance of nearly half of *The Phantom Ship* in the popular pages of the "New Monthly Magazine," that it is altogether unnecessary for us to say more than that the whole has thus appeared. These "whole" constitutes one of his best stories, combining the supernatural in an admirable manner with the sea and seamanship so peculiarly the writer's own domain. The exhibition of religious persecutions, too, is affecting and tragically wrought into the narrative, and a deep interest is kept up to the very last scene on board the *Phantom Ship*.

That we may not interfere with that interest we shall content ourselves with a preceding specimen, where the fated vessel speaks the homeward bound, in which the hero, Philip, and his incorporeal companion, Schriften, are passengers.

"A bank of clouds rose up from the eastward, with a rapidity that, to the seaman's eyes, was unnatural, and it soon covered the whole firmament; the sun was obscured, and all was one deep and unnatural gloom; the wind subsided, and the ocean was hushed. It was not exactly dark, but the heavens were covered with one red haze, which gave an appearance as if the world was in a state of conflagration. In the cabin the increased darkness was first observed by Philip, who went on deck; he was followed by the captain and passengers, who were in a state of amazement. It was unnatural and incomprehensible. 'Now, holy Virgin, protect us! what can this be?' exclaimed the captain in a fright. 'Holy Saint Antonio, protect us — but this is awful!' 'There! there!' shouted the sailors, pointing to the beam of the vessel. Every eye looked over the gunnel to witness what had occasioned such exclamations. Philip, Schriften, and the captain, were side by side. On the beam of the ship, not more than two cables' length distant, they beheld, slowly rising out of the water, the tapering mast-head and spars of another vessel. She rose, and rose gradually; her topmasts and topsail yards, with the sails set, next made their appearance; higher and higher she rose up from the element. Her lower masts and rigging, and, lastly, her hull shewed itself above the surface. Still she rose up till her ports, with her guns, and at last the whole of her floatage was above water; and there she remained close to them, with her main-yard squared, and hove-to. 'Holy Virgin!' exclaimed the captain, breathless; 'I have known ships to go down, but never to come up before. Now will I give one thousand candles, of ten ounces each, to the shrine of the Virgin to save us in this trouble. One thousand wax candles! Hear me, blessed Lady; ten ounces each. Gentlemen,' cried the captain to the passengers, who stood aghast — 'why don't you promise? — promise, I say; promise, at all events.' 'The Phantom Ship — the Flying Dutchman!' shrieked Schriften; 'I told you so, Philip Vanderdecken; there is your father — He! he!' Philip's eyes had remained fixed on the vessel; he perceived that they were lowering down a boat from her quarter. 'It is possible,' thought he, 'I shall now be permitted!' and Philip put his hand into his bosom, and grasped the relic. The gloom now increased, so that the strange vessel's hull could but just be discovered through the murky atmosphere. The seamen and passengers threw themselves down on their knees, and invoked their saints. The captain ran down for a candle, to light before the image of St. Antonio, which he took out of its shrine, and kissed with much apparent affection and devo-

tion, and then replaced. Shortly afterwards the splash of oars was heard alongside, and a voice calling out, 'I say, my good people, give us a rope from forward.' No one answered, or complied with the request. Schriften only went up to the captain, and told him, that if they offered to send letters they must not be received, or the vessel would be doomed, and all would perish. A man now made his appearance from over the gunnel, at the gangway. 'You might as well have let me had a side rope, my hearties,' said he, as he stepped on deck; 'where is the captain?' 'Here,' replied the captain, trembling from head to foot. The man who accosted him appeared a weather-beaten seaman, dressed in a fur cap and canvass petticoats; he held some letters in his hand. 'What do you want?' at last screamed the captain. 'Yes—what do you want?' continued Schriften, 'He! he!' 'What, you here, pilot?' observed the man; 'well—I thought you had gone to Davy's locker, long enough ago.' 'He! he!' replied Schriften, turning away. 'Why, the fact is, captain, we have had very foul weather, and we wish to send letters home: I do believe that we shall never get round this Cape.' 'I can't take them,' cried the captain. 'Can't take them! Well, it's very odd, but every ship refuses to take our letters. It's very unkind: seamen should have a feeling for brother seamen, especially in distress. God knows, we wish to see our wives and families again; and it would be a matter of comfort to them if they only could hear from us.' 'I cannot take your letters; the saints preserve us!' replied the captain. 'We have been a long while out,' said the seaman, shaking his head. 'How long?' inquired the captain, not knowing what to say. 'We can't tell; our almanack was blown overboard, and we have lost our reckoning. We never have our latitude exact now, for we cannot tell the sun's declination for the right day.' 'Let me see your letters,' said Philip, advancing, and taking them out of the seaman's hands. 'They must not be touched!' screamed Schriften. 'Out, monster!' replied Philip; 'who dares interfere with me?' 'Doomed, doomed!' shrieked Schriften, running up and down the deck, and then breaking into a wild fit of laughter. 'Touch not the letters,' said the captain, trembling as if in an ague fit. Philip made no reply, but held his hand out for the letters. 'Here is one from our second mate, to his wife at Amsterdam, who lives on Waser Quay.' 'Waser Quay has long been gone, my good friend; there is now a large dock for ships where it once was,' replied Philip. 'Impossible!' replied the man; 'here is another from the boatswain to his father, who lives in the old market-place.' 'The old market-place has long been pulled down, and there now stands a church upon the spot.' 'Impossible!' replied the seaman; 'here is another from myself to my sweetheart, Vrow Ketter—with money to buy her a new brooch.' Philip shook his head. 'I remember seeing an old lady of that name buried some thirty years ago.' 'Impossible! I left her young and blooming. Here's one for the house of Stultz and Co., to whom the ship belongs.' 'There's no such house now,' replied Philip; 'but I have heard, that many years ago there was a firm of that name.' 'Impossible! you must be laughing at me. Here is a letter from our captain to his son——' 'Give it me,' cried Philip, seizing the letter; he was about to break the seal, when Schriften snatched it out of his hand, and threw it over the lee gunnel. 'That's a scurvy trick for an old shipmate,' observed the seaman.

Schriften made no reply, but catching up the other letters which Philip had laid down on the capstan, he hurled them after the first. The strange seaman shed tears, and walked again to the side: 'It is very hard—very unkind,' observed he, as he descended; 'the time may come when you may wish that your family should know your situation;' so saying, he disappeared; in a few seconds was heard the sound of the oars, retreating from the ship. 'Holy St. Antonio!' exclaimed the captain, 'I am lost in wonder and fright. Steward, bring me up the arrack.' The steward ran down for the bottle; being as much alarmed as his captain, he helped himself before he brought it up to his commander. 'Now,' said the captain, after keeping his mouth for two minutes to the bottle, and draining it to the bottom, 'what is to be done next?' 'I'll tell you,' said Schriften, going up to him. 'That man there has a charm hung round his neck; take it from him and throw it overboard, and your ship will be saved; if not, it will be lost, with every soul on board.' 'Yes, yes, it's all right, depend upon it,' cried the sailors. 'Fools,' replied Philip, 'do you believe that wretch? Did you not hear the man who came on board recognize him, and call him shipmate? He is the party whose presence on board will prove so unfortunate.' 'Yes, yes,' cried the sailors, 'it's all right, the man did call him shipmate.' 'I tell you it's all wrong,' cried Schriften; 'that is the man, let him give up the charm.' 'Yes, yes, let him give up the charm,' cried the sailors, and they rushed upon Philip. Philip started back to where the captain stood. 'Madmen, know ye them what ye are about? It is the holy cross that I wear round my neck. Throw it overboard if you dare, and your souls are lost for ever;' and Philip took the relic from his bosom and shewed it to the captain. 'No, no, men,' exclaimed the captain, who was now more settled in his nerves, 'that won't do—the saints protect us.' The seamen, however, became clamorous; one portion were for throwing Schriften overboard, the other for throwing Philip; at last, the point was decided by the captain, who directed the small skiff, hanging astern, to be lowered down, and ordered both Philip and Schriften to get into it. The seamen approved of this arrangement, as it satisfied both parties. Philip made no objection; Schriften screamed and fought, but he was tossed into the boat. There he remained trembling in the stern sheets, while Philip, who had seized the sculls, pulled away from the vessel in the direction of the Phantom Ship."

MISCELLANEOUS.

Influences of the Corn-Laws, as affecting all Classes of the Community, and particularly the Landed Interests. By James Wilson, Esq. 8vo. pp. 135. London, 1839. Longman and Co.

OUR readers would not thank us to go into a discussion of the corn-laws, which have been thrashed out, winnowed, and sifted, in every organ of public opinion for months, till it seems impossible to say any thing new on the subject. All we shall note, therefore, is, that Mr. Wilson, after a laborious inquiry, and supporting himself on 'parliamentary returns,' takes a somewhat original view of the question (or rather of half of it, for he leaves the manufacturing effects undiscussed); and contends that a repeal would benefit the landed and agricultural interests, and through them every class of the community and the nation at large. One sug-

gestion appears to be of practical value, viz. the appointment of a Government Institution, for the purpose of collecting and furnishing, periodically, all the statistical facts connected with agricultural pursuits, similar to those which the custom-house documents furnish to the mercantile classes.

Pocket Biblical Dictionary. By D. Davidson, author of "The Pocket Commentary," &c. 1839. Edinburgh, Thornton and Collie, &c.; and London, Dublin, Glasgow, Aberdeen, Manchester.

A VERY useful little dictionary condensed from Calmet, Brown, Clarke, and later travellers and authors.

School Botany, &c. &c. By J. Lindley, F.R.S. &c. &c. Pp. 118. London, 1839. Longman and Co.

AN explanation according to the classification of De Candolle, and intended as a guide to students in botany. Dr. Lindley is a high authority on the subject: perhaps a little too technical and learned for beginners, but for those more advanced, nothing could be better.

The Sorrows of Deafness, by G. H. Beaumont. Pp. 31. (London, Saunders and Otley).—Mr. Beaumont seems to feel very acutely the inconveniences and evils attendant on deafness, and he describes them in a touching manner. We should be deaf to his representations, did we not say that his little brochure is an interesting picture of this affliction.

The First Book of Modern Geography, &c., by the Rev. Alex. Stewart. 8vo. pp. 92. (Edinburgh, Thornton and Collie, J. Brydone; London, Whittaker and Co.).—The minister of Douglas is already known as the author of several useful elementary books; and this is an addition to the number.

Considerations on the State of the Nation. Pp. 71.—A pamphlet without an author's or a publisher's name, in which the writer, 'good easy man,' because his grandfather was Scotch, his grandmother Irish, his father English, and his mother of the family of a French refugee, fancies he can persuade all the population of England, Scotland, and Ireland, to agree to one religious faith, and one mode of religious worship!!! Having arranged this business to his own satisfaction, he proceeds to settle every other national, international, political, economical, moral, statistical, fiscal, military, naval, educational, and general question (including a few in the fine arts), upon the clearest principles of the college of Utopia. The superintendence of the whole plan he would assign to a strong coalition ministry, with the Dukes of Cambridge and Wellington at its head. Such an administration, we agree, might accomplish much good for the country; but we doubt much that it could carry into effect the ideas of our cosmopolite projector.

A Letter to Dr. Birkbeck, on the Arts forming a Basis of our National Education, and a Means of Employment to an Increasing Population, by R. T. Stothard, F.R.S., elect. &c. Pp. 30. (London, Hookham).—An earnest appeal in favour of the arts, mechanics, &c. as essential parts of general education.

Political Medicine, &c., by Dr. H. Maunsell. Pp. 45. (Dublin, J. Porter, Fanning and Co.; London, Henshaw).—In this discourse Dr. Maunsell very ably handles the subjects of good distempers, quarantines, hygienic inquiries, and other matters, to which the science of medicine may be considered to be politically applied.

Myself, Morland, the Would-be Traveller. Pp. 190. (London, Houlston and Co.).—Some amusing accounts of animals of various kinds, instructive for juvenile readers.

The Devoted One, and other Poems, by Dugald Moore. Pp. 244. (Glasgow, J. Murray; London, Baily and Co.; Edinburgh, Black).—Mr. Dugald Moore is a persevering poet; but we fear he will never add much to the fame of the name. This drama, and a number of minor pieces, are not of a character to claim much praise.

The Bouquet, &c., by a Florist. Pp. 102. (London, Simpkin and Marshall).—A little treatise describing the pretty plants which flourish in rooms, and telling our fair florists how to manage them, so as to keep them in health and preserve their beauty.

The Author's Assistant. Pp. 60. (London, Saunders and Otley).—The Author's Assistant. We looked at the title, and exclaimed, "How benevolent!" No race of people need assistance more; and we shall be glad to see what means are devised to help them. On turning to the book, however, we discovered that it was only one of instruction how to correct their work, and make calculations with respect to paper, printing, and other requisites in printing and publishing.

The London and Birmingham Railway, &c., by Thomas Roscoe and Peter Leconte. Pp. 195. (London, Tilt).—This is a very pretty volume, abounding with woodcuts, and with an excellent map. As no travellers by the "road" can know any thing about the country through which they are gliding, it is very well to have a guide to tell you what are upon your right hand and your left if you could see them.

An *Introductory Lecture on the Study of English Law*, by P. Stafford Carey, M.A. Professor of English Law, Pp. 66. (London, Taylor and Walton.)—A very able lecture delivered at University College in December last. The general ideas are valuable and comprehensive.

Scriptural Hymns by the Rev. Dr. Doddridge, by his Great-Grandson, J. Doddridge Humphreys, Esq. Pp. 316. (London, Darton and Clark.)—Some new hymns, not before printed, are added to this edition, which we doubt not will add to the great popularity the collection has always enjoyed.

ARTS AND SCIENCES.

ELECTRICAL SOCIETY.

TUESDAY, 2d April.—Read a communication from Mr. Martyn Roberts, descriptive 'Of a Galvanic Battery,' lately perfected by him, 'which promises to be of essential service to Electrical Science.' It consists of a wooden box, divided into cells, like the trough for Wollaston's battery. The plates (copper and zinc) are circular disks, in metallic connexion, fitted on a wooden axle, and immersed in dilute acid only one-half, or to their centres. Between the copper and zinc plate, in each cell, is stretched a strip of flannel, or cloth, from one end of the box to the other, and lightly rubbing on both plates, to the axle of which a handle is fixed, to turn them slowly round. In this way the cloth rubber removes the coating of oxide from the zinc—the precipitated metal on the copper plate, and also the hydrogen gas attached to that plate. Mr. Roberts found the production of gas four times as rapid when the plates were turned, than when not. This arises from the constant clean surface of the plates, and from the great galvanic energy acquired by the plates being exposed to the air in their revolution (one-half of the surface being always so exposed). A comparison of the expense of the exciting fluid, with that necessary for Daniell's battery, was greatly in favour of Mr. Roberts's arrangement. The results of the decomposing power, &c., of the two batteries consuming the given exciting fluid, were not, however, given.—Read also, 'Arguments in Favour of Homogeneous Repulsion,' by Mr. C. V. Walker. The arguments, and close and clear investigations, were pursued in relation to all the phenomena of electricity, being contained in two propositions: "electricity attracts matter," "electricity repels electricity." With these, in order to explain the mutual repulsion of two negatively electrized bodies, some have been induced to unite a third, viz. "matter repels matter." This third proposition Mr. Walker did not admit; he conceived matter to be so inert, that but for some cause, extraneous to itself, were any portion placed in any spot in the universe, in that spot would it remain for ever motionless and changeless; and he doubted not that future inquiries will enable us to conclude, that this inertia of matter, in its fullest and most extended sense, pervades the universe; and that all the varied changes of place in the planetary system, and all the admirable mechanism which regulates the whole, owe their existence to the electric fluid alone—to that fluid which seems to him, as far as we yet know, to be repulsive of its own particles, and attractive of all else. With this view, on this basis, and in the true spirit of generalization—tracing all the phenomena of nature as dependent on the fewest causes, and detecting in these few the perfection of simplicity indissolubly engrafted on the grandeur of design—were the arguments followed out. They embraced the phenomena of bodies positively and negatively electrized. For the details we refer our readers to the Society's Journal; our space, limited always, but especially at this busy season of the year, will not permit our doing them justice.

B. B. CABELL, Esq. in the chair.—Balance in favour of Society at last settlement, 810*l*. 12*s*. 6*d*. The refreshment-room in the gardens has just been let at a rent of 360*l*. per annum; the first year paid in advance. Amongst the donations was a curious specimen of the flying opossum, presented by Lady Maria Stanley. Upwards of 6000 persons visited the gardens and museum in March. The secretary read a list of members of the council whose removal was recommended; viz. Sir J. Boileau, Bart., the Bishop of Norwich, Prof. Owen, Mr. Brown, and Col. Sykes. The names on the balloting list, proposed by the Council, were, the Right Hon. T. F. Lewis, Messrs. Darwin, Ogilvy, Wishaw, and Yarrell, and Sir G. Clerk, Bart. in the room of B. Hawes, Esq. M.P., who has resigned.

LITERARY AND LEARNED.

UNIVERSITY INTELLIGENCE.

Oxford, March 23d.—The last day of term, the following degrees were conferred:—
Masters of Arts.—Rev. W. Smith, Christ Church; C. Badham, Wadham College; J. Butler, All Souls' College.

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Geographical, 8 P.M.; Statistical, 8 P.M.; United Service Institution, 9 P.M.; British Architects, 8 P.M.
Tuesday.—Royal Medical and Chirurgical, 8½ P.M.; Zoological, 8½ P.M.; Society of Arts, 8 P.M.
Wednesday.—Society of Arts, 7½ P.M.; Geological, 8½ P.M.; London Institution, 7 P.M.; Medico-Botanical, 8 P.M.; Graphic, 8 P.M.; Literary Fund, 8 P.M.
Thursday.—Royal Society, 8½ P.M.; Antiquaries, 8 P.M.; Royal Society of Literature, 8 P.M.
Friday.—Astronomical, 8 P.M.; Royal Institution, 8½ P.M.

FINE ARTS.

THE PHOTOGENIC ART.

23 Polygon, Clarendon Square, April 2, 1839.
SIR,—The interest which you have taken in the subject of heliographic and photogenic drawing, and in the question of priority of invention, not only between France and England, but among ourselves, induces me to offer to your attention what I certainly claim to have been with me an original invention, whatever unpublished priority may be claimed by Mr. Fox Talbot. I herewith send you two specimens of works which I have executed, without the slightest idea that any one before me had ever thought of the process by which I produced them.† If it be a subject of reproach that a man, having made a discovery which he believes to be valuable, attempts to secure a personal benefit by a patent, it will apply to hundreds of inventions for which patents have been obtained. I did, certainly, with two other artists, attempt to secure one for the particular application of this new art; and I believe that it would have been tenable, but for some melancholy circumstances which led to the disclosure, and its abandonment. Our object was to have united with us as many artists as a patent would allow, viz. twelve. Self-protection prompted this,—for the new art, as it was spoken of, threatened us with the loss of our occupation. 'Tis sufficient that it was neither a selfish nor an unworthy procedure by which twelve artists might have been saved from the ruin, if the threatened power of the new art could have been realized; and they surely would have been justified in seeking to protect themselves. The charge comes with an ill grace from one who, by his own shewing, has kept from the world for five years a discovery which has made such progress in other

hands in five weeks! Why Mr. Talbot should have felt sore, and jealous of the improvements and discoveries which they have made upon his invention, in consequence of his disclosures, I cannot understand, and still less his seeming to claim all that others do: what he did disclose was only an amusement—a plaything. Others, and among them Mr. Havell and myself, have endeavoured to found upon it an art; and I have produced some specimens which encourage me to believe it will become an important one; but what we have done was nowhere disclosed or claimed by Mr. Talbot until after ours were produced. He says now, that he produced such effects through glass five years before. I believe sincerely what he, as a gentleman, states to be true; but as neither Mr. Havell nor I had any means during Mr. Talbot's five years' silence, or from his recent disclosures to the Royal Society, or in your journal, after Daguerre's announcement, of knowing that he had ever produced such effects as we have by etching and painting upon glass (clearly not Mr. Havell's process, who painted on the glass with opaque white the same effect which the action of the light produced upon the paper), or that he etched on glass, even as an amateur, effects like those which I have made in the specimens I now send to you; upon what grounds, then, does Mr. Talbot deny that these are our inventions? Read his letters, and see that, though he may have fancied a process by which Mr. Havell's invention or mine may have been produced, he gave no publicity to such thoughts before ours were produced; nor can any evidence be brought to prove that Mr. Havell's process or mine was derived from him. The inventions were our own, and we first disclosed their processes; he as a painter, I as an engraver. I am sorry for the soreness Mr. Talbot has shewn, for I feel under great obligations to him for what he did disclose. No doubt now remains that his process and Daguerre's, or, rather, Niepce's, are essentially different: I own, however, most willingly, that my invention, and I am sure that of Mr. Havell's also, are entirely due to the publicity he gave to his improvements upon Wedgwood's and Davy's researches, and his discovery of fixing the designs. His claim for England, as he believed that his process was similar to, and preceded Daguerre's, certainly led to every subsequent improvement here; for, if Mr. Talbot had not shewn what he could do, and how he did it, neither my productions nor Mr. Havell's could ever have been heard of. If he claims, however, all that the new art has produced, or may produce in other hands, which he did not publish before, nor claim until afterwards, he will find others beside me to refuse his claims. With this statement, I claim the invention as original with me of etching such a design upon glass as I have now the pleasure of sending to you.—I am, &c.

J. T. WILMORE.

CORONATION OF QUEEN VICTORIA.

Painted by E. T. Parris.

WHEN we heard that Mr. Parris had undertaken to paint a picture of the late coronation, we felt persuaded that it was just the kind of subject to which the peculiar talents and qualifications of that able and tasteful artist were calculated to do justice. The result has proved that our anticipation was well founded. Those who were not present at the impressive ceremony, the most important and interesting act of which this fine work represents, can have but an imperfect idea of the fidelity of the performance, although they cannot fail to remark the grandeur and brilliance of its effect. The

* Correspondence of this interesting kind we readily insert without remark.—Ed. L. G.
† They are exquisitely beautiful.—Ed. L. G.

congregation of all that is illustrious, dignified, elegant, and lovely in the land, in the richest possible dresses—many of them in the superbly ornamented robes belonging to the high offices, the duties of which they were, on that auspicious day, called upon to discharge—surrounding, and gazing upon, the fair and youthful descendant of a long line of monarchs, about to take upon herself the awful responsibility of presiding over the destinies of a mighty empire—the crowd of excited and attentive spectators, native and foreign (the latter glittering with the decorations of their respective countries), in the numerous and spacious galleries—the magnificent and venerable edifice, with its long and lofty vista of pillars, and arches, and windows, through which the sunlight streams, communicating a mellow warmth of colour to every thing that it touches—altogether, afforded an opportunity for the exercise and triumph of his pencil, of which Mr. Parris has most happily availed himself. From many of the noble actors and actresses in the regal drama, he subsequently obtained sittings; and of the others, he resorted to various modes of obtaining sketches, which materially assisted him; and enabled him, without impairing what ought to be the general character of an historical composition, to impart sufficient individuality to the principal personages present.

The picture was on private view, for the first three days of this week, at Mr. Parris's residence, in Grafton Street, previously to its being sent to Mr. Moon, for whom it was executed; and who, of course, intends to have it immediately engraved.*

ANCIENT PUBLIC BUILDINGS.

THE ancient public buildings of a nation are among its most important memorials, as is sufficiently manifested by the interest attached to the vast ruins of Egypt, and the elaborate works of ancient Greece and Rome. These are not merely objects of curiosity and study to the architect and antiquary, but are visited with avidity by all classes of travellers; and their historical and national peculiarities are matters of interesting discussion amongst scholars and the well-informed classes of all countries. If Great Britain, and the other northern parts of Europe, do not offer to the traveller buildings of equal interest, or of similar classical associations, it must be evident that they contain others equally valuable to the man of science and to the general historian. The *splendid cathedrals and monastic churches* of the middle ages, are unparalleled by any of the pagan edifices of more ancient times, in their scientific principles; in their endless novelty of design; in their picturesque and artistic combinations. Even these are, however, old, and, like those of more remote eras, are fast decaying;—are successively crumbling beneath the slow, but certain operations of time, and the more rapid spoiliations of man. The French government, with a wise and noble patriotism, has recently appointed a committee to investigate and report on the present state and former characteristics of the antiquities of their nation; and have also appropriated an annual sum of money to preserve and repair them. This is an example to be imitated; and we are much gratified to learn that some members of our own legislature are at length roused to a due sense of the value and interest attached to our *native antiquities*; and that parliamentary

* On Thursday, we were happy to see, the Queen herself gave Mr. Parris a sitting in order to finish her likeness. Her Majesty and the court expressed great admiration of the picture.—*Ed. L. G.*

measures are about to be adopted to inquire into their condition. Although too late to recover what is lost, there is great scope to save much that remains; to check the progress of a ruin which reflects on our character as a nation, and ranks us with the barbarians of an uncivilized community.

HENRY P. BONE, ESQ.

WITH political offices the *Literary Gazette* has nothing to do. Who the Queen may think fit to select as her first lord of the treasury, or chancellor of the exchequer, is, happily, no concern of ours. But it is not so with the arts; and it is, therefore, with great satisfaction we announce, that her Majesty has been graciously pleased to appoint Henry P. Bone, Esq., son of the late Henry Bone, Esq., R.A., her enamel painter. Our notices of the exhibitions have frequently brought Mr. Bone favourably before our readers. To still greater skill and power in the mechanical department of his difficult art than were possessed even by his late worthy father, he adds original talents, which the enameller, who generally contents himself with copying the works of others, can seldom boast. To say nothing of his historical compositions in oil, Mr. Bone's miniature portraits, in enamel, painted at once from the life, are eminently beautiful; and the circumstance, that they are as imperishable as they are admirable, necessarily enhances their value. We congratulate Mr. Bone on the honour he has received; and we trust the Royal Academy will not be slow in following up the mark of royal approbation, which has thus been bestowed on an able artist and a most deserving man.

EXHIBITION AT THE LOUVRE: WORKS OF MODERN ARTISTS, 1839.

[Second notice.]

Or the artists who have exhibited this year, we will select, as one of the first in name, in talent, in a rich store of grand and magnificent works already executed, Horace Vernet, and with him we will begin our notice of the historical painters. Indeed, in his own peculiar line, as a painter of battles, he has no rival—*facile princeps*; and he stands alone, far above the artists of any other country in Europe. His *magnum opus*, which was exhibited two years ago, "The Battle of Fontenoy," now at Versailles, is a picture the *pendant* to which it is hardly given to any one artist to produce, even during a long professional life; but though we have nothing of this kind in the present *salon*, we find the story of the taking of Constantina depicted on three immense canvasses, with all the force and all the success for which Vernet is so justly celebrated. The subject was much against him as a colourist, and there was every chance of his failing to please the multitude in this respect. The wintry aspect even of an African climate, the uniform gray coat and red trousers of the French army, the absence of all military pomp and ornament resulting from the severe operations of the siege, were circumstances enough to dishearten any painter. Vernet, however, with the instinct of a great mind, determined to make his picture historically true, and, by giving a military strictness to his compositions, to add to them that value of nature and faithful delineation which would fit them for being appreciated in after-times. This is what he has done; but he has thrown into the pictures the whole force of which he is master; and the grouping, the individual designing, and the general idea of each picture, are all that can be wished, or all that can be

expected from the nature of the subject. In one picture he represents the Duke de Nemours heading a battalion of the African foreign legion in repelling an attack of the besieged Arabs in a sortie against the heights of Coudiat Aty, held by the French. The Arabs are just seen coming up the steep hill side, and the French troops are making a dash over a low stone wall and a bank. The Duke de Nemours "points out the path to glory"—a little too tamely, perhaps (but the compliment of the king's favourite artist is excusable), while old Damremont stands coolly behind to see the youthful and ardent spirits of the legion pay off the Arabs in their own coin. By the side of this, is the attack on Constantina, at the moment when Marshal Valée has given the order to leave the trenches, and the first column, under Colonel de Lamoricière, one of the most gallant spirits of France, is rushing at the breach. The spectator stands in the inclosure of the breaching battery, and has a fine view of the picturesque town and the mountains beyond. On the left are the troops all in motion: in the middle, the Duke de Nemours, as honorary commandant of the trenches, repeating the marshal's order: a little further to the right, the marshal and his staff; quite to the right, the second column waiting to be ordered on; and the last gun launching its thunder against Constantina. The exquisite manner in which the severity of design consonant with military operations is modified by the poetic imagination of the artist, gives great value to this immense composition, which occupies a canvas 30 feet by 20. Some of the figures in this picture are as fine studies as ever proceeded from the vigorous hand of this master; and whenever the work comes to be engraved, it will be highly valued by the public. Nearly all the faces are portraits—and good ones too. The third picture is the second column, with the brave but unfortunate Colonel Combe at the head, just mounting the breach, while the remains of the first column are forcing their way into the narrow streets of the town. Here full scope is given to the artist for a glorious display of his powers in drawing the human figure in every possible variety of attitude; and a more successfully executed task we have never seen performed. The whole composition is full of motion and spirit; not merely the enthusiasm of the soldiers, but even their awkwardness, as they clamber up the ruinous ascent, is most admirably represented. The whole story is told so well and so truly, that the spectator feels animated with something like a longing to have been in this dread *mêlée* while contemplating the inanimate canvass. Once more, we repeat, the monotony of the colouring is a great drawback upon these pictures; and, to tell the truth, they have been painted far too hastily, their united surfaces, covering about 1200 square feet, having been entirely painted within eight months: they would stand another year's work in the atelier; but if regarded for the difficulties of the subject, and the masterly design and handling shown in them, they cannot but be highly appreciated by all who are practically acquainted with art. Horace Vernet's handling is of the most vigorous and broadest kind in his large *toiles*; and of the most exquisite Flemish delicacy and finish in his cabinet compositions. Of these latter he has three in the *salon*, all of which have been engraved. One, a small episode of the storming of Constantina; another, Abraham driving out Hagar; and a third, a Lion Hunt: all of them gems of very high price.

The warlike propensities of French lingers

have been well-nigh exhausted by the orders for Versailles, executed within the last few years; and we find only one or two other large battles (one of them by Alaux, a very rising artist) in this year's *salon*—battles, that is to say, which are worthy of being looked at.

In a totally different style, but one which is equally entitled to the appellation of the heroic, is Ary Scheffer, the most imaginative and the most poetic of any painter that France has yet produced. Five exquisite works of this great master—for such he will undoubtedly be considered in future times—are placed all in contact with each other in the Long Gallery of the Louvre. In one, the largest of the set, he has chosen for his subject the well-known story of Faust and Margaret, just at the moment when the young student first beholds the fair and simple girl coming out of church. She herself is dressed with beautiful plainness, and bears that exquisite female face which Raphael alone knew how to render. Behind her are seen, emerging from the church porch, a group of staid and dignified German burghers, clad with the stiff costume of the times, while Faust and Mephistophiles occupy a prominent place in the right hand corner of the piece. The colouring is full of harmony and solidity, highly scientific, though a little too much indebted for effect to its glazings; and the design is all that is most masterly. It will be engraved to a certainty, and would be cheap at 500*l*. On either side are two pictures, each representing Mignon in the beautiful ballad of Goëthe: one, Mignon regretting her country, a melancholy child on a wide desolate heath, and a flight of birds winging their way to her beloved fatherland: the other, Mignon thinking of Heaven, a radiant and exalted being lost in meditation, "her rapt thoughts mingling with the skies," clad all in white, and on the projecting edge of a lofty edifice. The Duke of Orleans possesses both these pictures; and all the Germans in Paris are dying with envy at the thoughts of it. A fourth picture is the King of Thule, from Goëthe, "mingling his tears with his drink;" a most elaborate study of a venerable gray-bearded man, sitting at a table, his attendant standing behind, and drinking from a gold goblet. This picture is as highly finished as any that Morales ever executed, while at the same time it possesses more vigour of touch than that master usually possessed. The colouring is very rich and sufficiently transparent; the *chiaro oscuro* is strong; the tints broad; and the effect would be quite perfect, were it not that some evil genius had persuaded this great artist to encase it in a coat of varnish as thick as a decent plate of glass, which greatly deteriorates both its value and its tone. This latter fault M. Scheffer has fortunately avoided in his fifth production, Christ in the Garden of Gethsemane, supported by an Angel. You see nothing more than two three-quarter figures, but such figures,—so exquisitely beautiful in all their details; the one so overwhelmed with the sorrows of a whole world, of the universe; the other with the patience of adoration, and the full expression of sympathetic grief checked by awe,—that you may linger and study this fine picture for hours. Christ is clad in brown, the angel in white; and the harmonious effect produced by these colours, relieved by the carnations, and the golden radiance that plays around the heads, are both original and worthy of imitation. The picture is rather thinly painted, but in handling is, we think, better than any of the others: it is liable, perhaps, to the charge of too much and

too indiscriminate glazing; and the whole practice of the master may be fully learnt from it. Had Scheffer never painted any thing else, these fine pictures would have by themselves carried him to the head of his profession. He is a young man still, and is not yet at the end of his career of improvement. Like Horace Vernet, he stands alone in France, and has no rival in England.

We have no contributions this year from Paul Delaroche, the other great chief of the historical school, and a very giant with his brush and palette. Steuben, who prides himself on his brilliant colouring, and who delights in gold and crimson, to say nothing of "purple and fine linen," has sent a beautiful Esmeralda, the representation of the ideal heroine of Victor Hugo's dramatic novel "Notre Dame." The fair Bohemian, almost without drapery, is sitting on the rude couch which poor Quasimodo has made for her in a recess of the *combles* of the venerable cathedral, and is there playing with her goat whiter only than herself. The Hunchback is seen in one corner, unperceived by Esmeralda, on his knees, and lost in silent admiration. The light and shade and colouring of this picture (magnificently framed, by the way, à l'*ogive*) are as forcible and rich, without being too meretriciously gaudy, as Steuben has been able to make them; but he cannot manage the working of his flesh tints like Scheffer,—he wants the science of that master-hand; his touch on the carnations is woolly, which he mistakes for softness; and he paints far too thinly, without at the same time effecting, what is the only excuse for thin handling, transparency. We may mention at once that Dubufe, who goes down at Paris as the prince of portrait painters,—with the vulgar, that is to say,—but who is in reality a very indifferent hand at the thing, is a close imitator of Steuben in his manner of handling the flesh tints: he, however, is not merely woolly, but cottony in his work. He has not contributed any thing this year, but has announced, rather ostentatiously, in the papers, that his atelier will remain open to the public during the exhibition,—a gratuitous piece of French coxcombry.

Several others of the best painters of the modern French historical school have treated the public shabbily this year; Gallait, Brune, Delacroix, Tigoux, have either sent nothing or have sent only minor works, sketches, &c. Tony Johannot, a man of immense talent, has given a little sketch from Walter Scott's "Monastery," the Death of Avenel—a gem by the way, and a Battle of Rosebecque, A.D. 1382, in a style with which we have become well-nigh surfeited at Versailles. All these ideal battles signify absolutely nothing; a reproach that attaches itself to, at least, half of Louis Philippe's new picture-shop.

In a style half-way between the historic and the cabinet, we have Jacquand, one of the most exquisite painters, *selon nous*, that can be met with. His figures are generally from a fifth to a sixth of the natural size, and upon a picture some five or six feet by three or four, he puts all the labour of a Wilkie, and all the conscientious detail of a Roberts. His subjects are always ideal, always melancholy; but he tells the stories which he chooses so tenderly, so naturally, and so plainly, that every body is captivated by him, and he is transferred from the exhibition-room to the print-shop sooner almost than any body else. This year he has given Louis XI. finding his queen teaching the dauphin to read;—a rich Gothic chamber well filled with stately furniture, hung in parts with

costly tapestry;—the suspicious king coming briskly through a doorway, the queen half in tears and full of beauty, and her boy frightened and irresolute at her side,—such are the details. It is very sober and very scientific, both in colouring and composition, with plenty of light and shade; forcible in the handling, though finished like a miniature; with rather too much varnish, and little or no attempt at transparency; but, on the whole, a good picture, that is worthy of a place in any modern gallery.

ORIGINAL POETRY. THE SLUMBER OF DEATH.

PEACEFUL and fair is the smiling repose
That the breast-cradled slumber of infancy knows;
Sound is the rest of the weary and worn,
Whose feet have been gall'd with the dust and the thorn.
Sweet is the sleep on the eyelids of youth
When they dream of the world as all pleasure and truth;
Yet child, pilgrim, and youth shall awaken again
To the journeys of toil and the trials of pain.
But, oh! there's a fast and a visionless sleep,
The calm and the stirless, the long and the deep;
'Tis the sleep that is soundest and sweetest of all,
[the pall.]
When our couch is the bier and our night-robe
No voice of the foe or the friend shall impart
The proud flush to the cheek or warm throb to the heart;
The lips of the dearest may seek for the breath,
But their kiss cannot rouse the cold stillness of death.
'Tis a long, 'tis a last, 'tis a beautiful rest,
When all sorrow has passed from the brow and the breast;
And the lone spirit truly and wisely may crave
The sleep that is dreamless—the sleep of the grave.
ELIZA COOK.

ADDRESS

On opening the Lyceum, written by Mr. Beasley, and spoken with great netteté and effect by Mrs. Stirling.

"The first of April! Well, how very queer!
Of all the days throughout the running year,
Our new lessee upon that one should fix,
Which law and custom set aside for tricks:
And one might think it by the bills to-night,
Which says, 'All in the Dark' shall see the light.
But this I promise—if you come to view,
He never will make 'April fools' of you.

Yet, from great fears he cannot be exempt,
When he considers this—his bold attempt,
With country hands to work a town-built ship
Through all the dangers of a season's trip.
But still reflect—though strangers form our band,
They still are natives of our native land.
And if the sick, upon their health intent,
To gain new strength are to the country sent,—
Why should not those whom provinces renown,
Infuse fresh vigour in a sickly town?
Besides he got, to meet theatrical strife,
A London pilot, aided by his wife:
It might be better too, for all your houses,
If wives could still be manag'd by their spouses.

Perhaps, good folk, you'll deem it strange that one,
Who late proclaim'd her Drama's days were done,
In mimic scene again should court the praise
Which form'd her best delight of other days.
Let woman's folly, madness, or caprice,
Rise to your minds, and bid your wonder cease;
And never for one moment deem it strange
That woman claims her privilege to change.
For my return—if you should ask the cause—
Oh! 'twas my yearning for your kind applause;
For still I own, with gratitude and pleasure,
Your handy-work produced my greatest treasure!

So much for self—and now for our lessee.
On you he trusts, 'To be, or not to be':
That is the question, a Village Hamlet asks.
To answer it well must be your generous tasks.
To-night no foreign singers strain their throats,
And change for English gold their foreign notes:

English people, and caused, it is supposed, the contagious spread of popery throughout the kingdom. None of these matters, however, are touched upon by Miss Costello, who has confined herself to the love affairs of the heroine previous to her marriage. I am not acquainted with the manners of the times of which it gives so characteristic and entertaining a picture, and I think *Mr. Worley* a stick. *Lord John Hervey*, by Mr. Shaw (from Bath), was soporific and amusing enough, for persons who like such things; and as much may be said for Mr. Addison (from Newcastle), who played the antiquated part of the *Marquess of Cleveland*. *Armand*, by Mr. H. Bedford, was too bulky, and old, and badly for a favourite French lover, though he sings, like his brother Paul, and has a sweet voice. *Bella*, Mrs. B. Penley, sang prettily, but did not look pretty; and *Mrs. Prudhoe*, enacted by Mrs. Darley (from Bath), indicated a good cast for old maids, and such other useless characters. The pieces were well received. *Dark Eve*, which followed, is too improbable even for farce; but, with great compression, some of the scenes would be laughable enough. Altogether these country people, including one Corrie, who plays clownish, when they have got more accustomed to each other, and familiar with the stage and the audience, will do well enough for Cockney play-goers. The scenery and other appurtenances reflect credit on the manager's liberality and taste. There was some "Grand Romantic Romance" after I left; for I dislike all kinds of romancing, and was engaged elsewhere.

The *Strand* also opened this evening, but I did not go till Tuesday. All the pieces were new; only Mrs. Waylett made her first appearance after an absence of four years. *A Lesson for Gentlemen* is lively; and the *King's Gardener* would not be much, except for the acting of Hammond. I speak humanely in these remarks, and not monkeyishly. In the *Four Sisters*, I was told by a neighbour, who kept humming to himself nearly the whole evening, that Mrs. Waylett had lost much of her voice; all I could reply to which was, that I had not fondled it. The last thing was *Popularity*, in which Mrs. Selby, who can't sing, was made to sing—Miss Daly was pretty and clever—Mr. Hammond a capital *Momus*, and Mr. Attwood as capital a *Puff*. *Winter* was nothing; no more was the *Ghost of Shakspeare*. But the *Ghost of old Richardson the Showman*, by Mr. A. Richardson, was dressed to perfection, and made me grin very much. *Bayadères*, Jim Crows, &c. were good; and a *débutant*, Mr. J. Bings, in *Guillaume Tell*, from Paris and Doory Lane, sang nicely, and seemed a clever person. *Mons. le Singe* (I now speak monkeyly), by Mr. Burton, was execrable. He had evidently formed himself on Mons. Jacob; and, of all villainies upon the stage, I hate imitations which are so like the originals. A number of funny parodies by Moncrieff made the folks about me laugh; but I got tired, and hope, if ever I go again, that the manager will curtail this too long and consequently tedious *feu d'esprit*.

A Market—Of this theatre I have not a favourable word to say. I never was so utterly disappointed. There is a *White Horse of the Peppers*, without a horse of any colour; and only a bearish laugh all round the house. There

is an *Irish Lion*, without a lion of any sort, and instead of the unequalled Van Amburgh, only a stupid chap of the name of Power. About this Power a great fuss seems to be made, and his name is printed on the bills posted about town in letters as long as I am. This is all nonsense: he cannot play Irish characters at all. I have never been in Ireland, to be sure, and would not know a Tipperary brogue from a Wicklow one; but I read the "Times" and "Standard" every day, and can form a right idea of the true Irish character. Dark, scowling, midnight, moody, assassins—hang-dog, perjured ruffians—brooding over evil—conspiring in mystery and silence—never enjoying the mirthful laugh—starving, weeping, wailing, murmuring;—such are the Irish; and what does this infamously bad actor, Power, make them? Laughing, joking, merry, devil-may-care, dancing, kissing, romping, frolicking, and rollicking fellows; who seem to live but for the present moment, put off want till to-morrow, and misery for ever; and, in brief, Paddy-Whack in the most provoking and insufferable style. Never was there a greater mistake in dramatic performance. Among the company are others not much better than he—such as Webster, Buckstone, O. Smith, Strickland, Wrench, Mrs. Glover and Fitzwilliam, Miss Taylor, &c. &c., none of whom gave me the slightest pleasure. By the by, there is a curious improvement in the orchestra, which rises between the acts, and gives the music with more pleasing effect.

The *Olympic*, also very bad. One Farren performed an old gentleman, called *Isaac Walton*, who is fond of fishing and walking about in the fields. A younger *Plebeian* from the Temple (Vining) goes about with another long fishing-rod; and Mrs. Vestris, in the disguise of a *Milkmaid*, sings two such songs. Mr. C. Dance is the author of this piece, but the scenery seemed to me to be too like the country which I drove through last Sunday on a visit to Tottenham and Hornsey. Another novelty, by one Planché, is called *The Garrick Fever* (after, as I understand, a club of that name; into which I am proposed to be admitted as a foreign honorary member during my residence in London); it is vilely supported by a little actor called Keeley, whom I detest for more reasons than one, and some of them personal and private to myself. [See my observations on the Surrey, for I am candid—a quality you cannot comprehend in a dramatic critic.] The audience laughed a good deal: I noticed nothing to laugh at.

Uproar House.—On Thursday, Persiani walked in her sleep, and was much applauded. The rest were quite asleep, and could not hear how much they were hissed for being unable to sing. It is supposed that there may be a few good subscription nights before the end of the season; and the English subscribers are easily satisfied. When I lived in Paris, we, of the musical and fashionable world, would not stand one night of nothingness, far less half a season. But, la! with all your John Bull pretences, you don't really care for music; and two months of it absolutely good would bore you to death.

Common Garden.—I have already mentioned several of the worst actors I ever witnessed; but of all the bad, keep me from Macready, who is the worst of the worst. In *Richelieu* he put me in mind of my friend the Abbé De l'Épée, with whom I was intimate both before and after he was made Archbishop of Paris; only he gave way occasionally to unseemly fits of senile passion and out-of-place jests, quite unbecoming his high station in the church. An aged man

with a young soul!—was there ever such a monstrous conjunction? and yet this was what he made of the part; and, consequently, the more perfectly he succeeded, the more he filled my judicious mind with contempt for his utter misconception. If he be one of your brag performers, Heaven send me back again to Rio Janeiro without seeing another. *Lodoiska*, a revival, requires no comment. Persons who are fond of sweet music, fine scenery, and complete dressing of the stage, may like it if they please; but, to my taste, the only particle of it deserving of approbation is embodied in the shape of a Mr. Harley, whose appearance, looks, and activity, delighted me. As for Macready, I would advise him to study for a month or two under Mr. Horan H. Schreyer. If his instructions and cane (applied as to the Grand Mandrill, Jacob, and the rest) do not make an actor of him, nothing can. The close of *Lodoiska* is a poor mimicry of the grand tableau of the taking of Kokomurium by Carlo, Dancos, Caesar, Domino, and their troops, at the St. Jameses.

I have now, Sir, given you, as far as my own observation allows, a fair and impartial account of these holiday amusements. There are other places of resort, I am told, but I have not been able to visit them. *Sadler's Wells* is reported to be going on famously; and somewhere about the east parts of the town, where the Jews, and butchers, and weavers live, there are several splendid theatres: but as there are no animals among them, it is not worth while to go so far.

As acting is entirely an imitative art, and as Monkeys are confessedly the best mimics in creation, it need not be insisted upon that they must not only be the best models for actors in the world, but the best judges and the best critics. I accordingly flatter myself that the recent introduction of so many *Simia Rosii* will produce an important effect in improving your Dramatic School; and, further, teach your newspaper critics the true style and method of criticism. I have the honour to be, Sir, with profound respect, your obedient and faithful,

JACKO.

Opera Concert Room.—On Monday, the first of the Societa Armonica Concerts was held, and, notwithstanding the many attractions elsewhere, the room was well filled. The best series of concerts last season were those of the Societa Armonica—the selection of music was choice, and the greatest instrumental and vocal performers, English and foreign, in turn appeared. The concert on Monday gave good promise. The lady vocalists were all English. Miss F. Wyndham, who was twice encoored, Miss Woodyatt, and Mrs. A. Toolmin, all sweet singers. Signors Giubelei, F. Lablache, Brizzi, and A. Ginbalei, also contributed their share to the evening's amusement. Mr. J. B. Chatterton played a fantasia on the harp in a masterly style, though, perhaps, dwelling rather too slightly on the promised airs from "Norma" and "Sonnambula." Mori gave a new air, with variations (Mayeder), on the violin, in his best manner. Owing possibly to the absence of many long instrumental pieces, the audience seemed as unwearied at the finale as at the commencement of the concert.

VARIETIES.

Harbours of Refuge.—We have seen in several journals a discussion of this subject, and suggestions and plans for the construction of safety harbours, by Mr. W. Tait, Civil Engineer, which, in a maritime and commercial country like ours, seem eminently deserving of

of the Church, with whom she flirted. It was also the Venetian not the Venetian virus (venereously stated to be the *Feticon*) which she brought to England; which, of course, could have nothing to do with the "spread of popery."—Ed. L. G.

consideration. Mr. Tait contests the prevalent doctrine of the utility and necessity of back-water; or, at any rate, that it ought to preserve as small an angle as possible with the tidal current. With regard to the deposit of shingle (nearly all along our coast), he proposes an isolated harbour to receive it, and in no case to oppose its progress. The scouring system he points out to be quite inefficient, as is shewn at Dover; and maintains that, on his own principles, several places not far from that port might be converted into excellent harbours. As we are not judges of this matter, we must be content to make it public; and need not add, how desirable it is to adopt any project by which so vast a value of life and property, as is annually wrecked on the coasts of England, might be saved.

Ireland.—Mrs. S. C. Hall, whose previous Stories, whether addressed to the improvement of Irish social life, especially among the middle and lower orders, or to education and the instruction of youth generally, we have often had occasion to notice in terms of warm approbation, has, we observe, commenced a new series, addressed to the former purpose, in a manner which does equal honour to her talents and her patriotic feelings. The labours of Miss Hamilton in Scotland, and Miss Edgeworth in Ireland, cannot be forgotten; and Mrs. Hall, with a yet more direct and express design, has set herself to follow their excellent example, by producing a number of Tales, the object of which shall be to point out the imperfections in the Irish character, and errors in the business of life, which are as fatal to prosperity and happiness, as even grave vices and crimes. As a vehicle, she has chosen "Chambers' Edinburgh Journal," one of our most widely circulated, cheapest, and best periodicals; and if, by this means, she secures access to the hovels and cabins of Ireland, the benefit to the community may be very great. The two stories already published point out the evils of too early marriages, and the very general Irish habit of postponing matters, nor taking Time by the forelock. They are characteristic and pertinent.

Photogeny.—The "Leipsic Gazette" mentions experiments by Messrs. Steinheil and Kobel, at Munich, on the new art. They seem to be trying the several manners we have described in the *Literary Gazette*, and to prefer the English.

No. 1. of the Magazine of Science begins judiciously with a description of the camera obscura, now rendered unusually interesting from its connexion with the new art—photogenic art. The other papers, though brief, are appropriate and useful.

Miss Galbraith's Morning Concerts at the Egyptian Hall, with a lady-band of guitarists, are quite novel in effect. The weather, however, has been sadly hostile to all public resorts during the week.

The Ceylon Herald.—In September, we observe, a new journal under this title has succeeded the "Ceylon Chronicle," out of which we have frequently enriched our pages with curiously literary and scientific matters. From what we see of the early Nos. of "The Herald," it bids fair to excel its predecessor; and we shall confidently look to it for many additions to our *selecta* of Oriental research, discovery, and learning. We rejoice to find the eastern world acquiring more and more the regards of the British public, from the mind of which distance seemed almost to have banished this most important quarter of the earth, whether viewed as belonging to ancient times or to colonial possession. Two centuries and a half

ago, the "Indies" were more the objects of European speculation and enterprize than they have been in our day; till the present aspect of affairs and the labours of the Asiatic Society appear once again to raise them to their just and inappreciable value.

Gothic Architecture.—We are glad to see that a Society for promoting the study of Gothic Architecture (by far the most picturesque and fitting for our country and climate) has been formed at Oxford. At the first meeting:—

"It was determined to hire a room, to be fitted up with casts and models, arranged chronologically, which will form an architectural museum for the use of students, and which the more advanced student may find it convenient to refer to occasionally, as well as the mere tyro. It was also determined to form an architectural library, to be used as a lending library among the members, on the same plan as a book club."

And a number of books were bought as a foundation. At the second meeting in the room (hired, as before agreed on, near Lincoln College),

"The Rev. the Master of University College, one of the vice-presidents, in the chair.—As this was the first general meeting since the society has been established, the chairman opened the proceedings by an appropriate speech on the general objects proposed, and the usefulness of such a society, especially in this place, where so many young men are preparing for holy orders who ought to consider some knowledge of Gothic Architecture as an essential part of their education. A paper on the 'Domestic Architecture of the Middle Ages' was then read by the Rev. Edward Bigge, of Merton College, from notes furnished by William Twopeny, Esq., abounding with valuable information, and furnishing many useful hints to those who wish to pursue this interesting branch of inquiry. A number of drawings, illustrating the subject, were handed round, and the table was covered with books."

The Publishing and Bookselling Trade.—It is stated, in a letter from Leipsic, that the principal booksellers in that town, Berlin, Frankfurt, and other great marts in Prussia, Hanover, &c., &c., had proposed to invite a convocation of their order from every country in Europe (why not America also, where the work of cheap reprinting is carried on upon so extensive a scale?), to discuss the best means of putting a stop to the injurious and dishonest practice of piracy, which so generally prevails, and devise a system of mutual intercourse for the benefit of "the Trade," and we trust, of the producers and authors also.

Dr. Löwe.—Trieste, February 20, 1839, Dr. Löwe from Prussia, the well-known orientalist and librarian to His Royal Highness the Duke of Sussex, is at present at Smyrna. After passing several years in Syria and Egypt, he lately went to Constantinople, where he wrote a grammar and a dictionary of the Circassian dialect, to which little attention has hitherto been paid, and added to the knowledge of twenty-four languages, most of which he speaks and writes with facility, that of Turkish. Dr. Löwe encountered remarkable adventures during the last insurrection of the Druses. At Japhet, he was most cruelly treated by those mountaineers. They plundered his house, robbed him of every penny he possessed, and what must have most cruelly afflicted him, barbarously tore to pieces fifteen MSS., and the drawings which he had made in Egypt, Nubia, and Syria. While in Nubia he composed a grammar of the Nubian language. He intends now to go by way of Athens to Naples, to see the Egyptian museum in that city, and then to Rome, to continue his learned researches in the Vatican.

St. Petersburg, 23d February.

Geology: Erratic Block.—In a late sitting of our Academy, Mr. Bair read a paper, from which I extract the most interesting particulars respecting an occurrence highly interesting to the naturalist and the geologist:—"In the year before last I communicated to

the Academy an account of two large blocks which, in the course of this century, had changed their position on the coast of Finland. During a short journey which I made in Finland last summer, I convinced myself, by ocular inspection, that such translocations are by no means uncommon there. A block of granite, of enormous size, has been brought by the ice across the sea to the island of Hochland, and lies now between two villages on the east coast of that island. Its length may be about twelve feet, and its height above six feet. I was not able to measure it more accurately, having no instruments with me when I drove by, but I believe I do not exaggerate in estimating this block at nearly one-third of the size of the piece of rock on which the statue of Peter the Great stands. According to this estimate, that block may weigh nearly a million pounds. The inhabitants of Hochland unanimously affirm that it is a new stone, which was never observed on the island till the spring of 1838, and that it was certainly brought over from Finland by the ice. If it had been only moved from one part of the coast of Hochland to another, the inhabitants would, undoubtedly, know it, as they surely distinguish all the larger blocks lying on the coast of their little island. I do not know whether any of them saw the ice which brought the block. Probably not; for there are no inhabitants on the bay in which it stranded. It is well known that large blocks of rock are sometimes seen on the fields of ice in the polar regions; and translocation is not incredible or improbable even in our latitudes, when we remember the severity of the winter of 1837-1838. The gulf of Finland was frozen over in its whole breadth for two months together. In such a time, the ice becomes very thick, and if the field of ice which encompassed a large block returns a considerable extent before it is stranded, it may carry the largest block to the greatest distance that it can go without melting. * * * The ancient inhabitants were not surprised at the arrival of this block, but at its size. They affirm that small blocks come and go every year. This assertion appears at once to be well founded to those who have visited Finland, where the traveller everywhere sees evident traces of antediluvian movements—where he sees on its coast and on the islands, all the greater and smaller promontories covered with very diversified boulders, which very often are not in motion. The entire attention of the traveller is here fixed on the innumerable and prodigious boulders, and their occasionally strange positions. At all events, the removal of so large a block as that here spoken of, across a gulf in our latitudes, deserves to be recorded. The notion which formerly had its advocates, that projectile forces may dislodge the blocks of granite, is by no means supported by the manner in which they lie in Finland.

Edinburgh University Magazine, No. 1.—A new Monthly started in the Modern Athens, the poetry in which we think rather oddly constructed; but some of the papers are of a fair quality, and the general aspect literary and pleasing.

The Literary World, No. 1.—We like the appearance and spirit of our new 8vo. contemporary vastly. The monument to Sir W. Scott, at Edinburgh, is a very interesting engraving; and the literary contents are various, pleasant, and intelligent.

W. Ainsworth, Esq.—The latest accounts from Mr. Ainsworth, now engaged in so interesting a course of travel, are dated Angora, 20th December. Our valued friend was then in

excellent health and spirits, and every thing had gone on prosperously and harmoniously with him and his companions in their arduous undertaking.

H. B. Caricatures.—H. B. this week runs upon all-fours. Nos. 581 to 584. The first is H. B. discovered; but this H. B. is Henry Brougham, who is in his studio, painting a bad likeness of Lord Ebrington, and boasting to his colour-grinder, Lord Lyndhurst, who calls it too flattering, that he does not think him so bad a subject. A finished sketch of O'Connell, with a long serpent-tail, is lying in the corner. The next is full of figures, and entitled "A Leaf out of 'Nicholas Nickleby,'" with slight variations." The part of Old Crummles is admirably acted by O'Connell, who is hugging Lord Normanby; whilst Lord Morpeth is suffering an equal embrace from Morgan O'Connell. Lord Ebrington is deeply affected at the sight, and the mob are shouting around. 583 is "Dentatus." Lord Normanby in noble conflict with a host of assailants, including Lords Roden, Charleville, Wellington, &c. Brougham on an eminence behind hurling a rock upon his devoted head; Lord Glenelg, with broken sword, disabled on the ground. The last is Carlo-w setting Bruen at the top of the "pole,"—a laughable graphic pun on the recent election. Hume and O'Connell are bounding on the dog of the latter, Gisborne, against Bruen (represented as Bruin at the top of a pole). The whole are very clever—some of the likenesses rather careless, and well maintain the spirit of this political history.

Old Proverb disproved.—"There is nothing new under the sun;" quite a mistake—the Sun having turned artist, and produced landscapes, figures, and other specimens of photogeny. Why, even this last word is new; and we should like to see any photogenist, or heliographist, or Daguerreotypist deny it in the face of day!

Curiosities of Literature, No. 1.—To captains of vessels and others. To be sold, a real tortoiseshell tom-cat, one year old. It is the greatest curiosity ever known. To be seen, &c. For further particulars, apply by letter (post-paid) to Mr. Hooper, &c. &c. —*Times*, March 27, 1839. Query—Whether a real cat or real tortoiseshell?

No. II.—It is now the fashion, in the catalogues of second-hand books, to tempt purchasers by brief notices of such works as are more particularly curious. In one just published we read the following strange announcements:—No. 110: "Burr's History of Tunbridge Wells," 8vo. 1776, 3s. "A work often quoted. Grammont, in his *Memoirs*, quotes it (a publication of 1776!!) as authority for the visits of Charles II."

Ellopad.—A new carriage, with three wheels, which, by working as if you were on a treadmill, carries you along at twenty or thirty miles an hour!—Go it, Ned!

Going right a-head.—Going slick a-head we surely are. Only a fortnight since, we announced the discovery of an art to render persons invisible. This week the *Eccaleobion* is exhibited, in which life is produced by machinery, accom-

panied by the development of all the phenomena of animal life!! It is a variation of the old process of hatching eggs by heat.

Natural History Pun; Reptilia.—Mr. H—, observing L— using his apparatus for hearing with its flexible tube and mouth-piece a yard long from the pipe in his ear, said, "I cannot bear the sight of these instruments, they look so like serpents." "Yes, they do (observed J—), and of the species called the deaf-add-er."

Con.—Why is a dandy pickpocket like a heavy sea? Because he is a dangerous well.

A Blow and a Word.

A fierce dispute 'tween Tom and Joe
Was finished by a knock-down blow.
"By Jove," howled Tom, somewhat more mystical,
"I did not think him so *so-fistic-al*."

Archais.

In this deep and rocky cell,
Sportive Echo loves to dwell.
Shepherds here, in harmless play,
Cheer their weary hours away.
If you choose her skill to try,
Word for word she will reply.
Whoso'er the sounds that fall,
A speaking image of them all.
Tell her aught you think upon—
There—she answers—now begone!

LITERARY NOVELTIES.

LIST OF NEW BOOKS.

Dictionary of Commerce and Commercial Navigation, by J. R. McCulloch, Esq., with a new Supplement brought down to December 1838, 80s.—Gleanings for Youth, with Sabbath Readings, f.c.p. 5s. 6d.—The Cambridge University Calendar, 1839, 12mo. 6s.—The Age of Chivalry, and other Poems, by A. Macleod, 12mo. 5s.—Employment of the Labouring Classes in Ireland, by J. H. Lynch, Esq., M.P. 8vo. 6s.—Lord Brougham's Historical Sketches of Statesmen of the Time of George III., 1st Series, royal 8vo. 9s.—The Literary Character, by J. D'Israeli, 5th edit. f.c.p. 9s.—The Life of Gibbon, with Selections from his Correspondence, by the Rev. H. H. Milman, 8vo. 9s.—Transactions of the Meteorological Society, Vol. I. royal 8vo. 2s. 2s.—Little Derwent's Breakfast, a Poem, by a Lady, f.c.p. 2s.—Impey's Stamp Act, 4th edition, 12mo. 7s. 6d.—Profession and Practice, by the Rev. Hugh White, f.c.p. 5s. 6d.—The Phantom Ship, by Capt. Marryat, R.N., 3 vols. post 8vo. 1l. 11s. 6d.—Charles Tyrrel, by G. P. R. James, Esq. post 8vo. 2s.—Short Treatise on Typhus Fever, by G. L. Rouppel, M.D. 8vo. 8s.—The Saviour's Right to Divine Worship, by W. Urwick, D.D. post 8vo. 8s. 6d.—J. Wilson's Introduction to the Natural History of Birds, 4to. 12s. (From the "Encyclopædia Britannica.")—Odious Comparisons; or, the Compromise in England, by J. R. Best, Esq. 3 vols. post 8vo. 3l.—Introduction to Chemical Philosophy, by J. F. Daniell, 8vo. 16s.

TO CORRESPONDENTS.

Our correspondent, or rather our dramatic critic of this holiday week, will, we trust, not be mistaken for a matter-of-fact writer. His praises and his censures, sometimes in jest and sometimes in ignorance, must be read with discrimination to be understood.

We cannot answer our Norwich correspondent respecting Sopwith's Writing Tables. Pratt's Travelling Compendium is to be had at Mr. Pratt's, Bond Street, and generally at respectable trunkmakers.

We have to thank the editor of the "Expositor," New York Literary Journal, for several Nos. of his publication.

ADVERTISEMENTS,

Connected with Literature and the Arts.

BRITISH INSTITUTION, FALL MALL.

The Gallery, for the Exhibition and Sale of the Works of British Artists, is open daily, from Ten in the Morning until Five in the Evening.

Admission, 1s. Catalogue, 1s.
WILLIAM BARNARD, Keeper.

STAMMERING, whether Natural or

Acquired, Effectually and Permanently Removed.
By Mr. HUNT,
151 Regent Street, London; and late of Trinity College, Cambridge.

(Country Address, Swanage, Dorset.)

See *Literary Gazette* of 2d June, 1838, and 30th of March 1839, for opinions on this subject. Prospectuses containing testimonials of cures, during ten years, may be procured gratuitously at the above address.

THE ART UNION OF LONDON.

The Committee beg to inform the Subscribers of the Year 1837-8, that the Print after Mr. Simpson's Picture of "The Camaldolese Monk Shewing the Relics," will be delivered at Mr. Colnaght's, Pall Mall East, on Tuesday, April 9, on the production of the Secretary's Circular Letter. The names of the members whose Addresses are not well known will be reserved for their mail application, or until such Addresses be furnished.

The following is the Plan of the Society:

1. The Art Union is composed of Annual Subscribers of One Guinea and upwards.
 2. The Funds, after paying necessary Expenses, are devoted to the purchase of Pictures, Sculpture, or Engravings.
 3. Every Member, for each Guinea subscribed, is entitled to one chance of obtaining some Work of Art at the Annual Distribution.
 4. The number of Works of Art which are to constitute the Prizes drawn for at the annual Distribution, are determined by the Committee according to the state of the Funds at the closing of the Subscription-Books of the year.
 5. The Drawers of those Prizes severally, are entitled to select, each for himself, Works of Art of equivalent value, from the Public Exhibitions in London, of the current year.
 6. In addition to the equal chance annually afforded to each Subscriber of becoming the Possessor of a valuable Work of Art by the result of the allotment, it is proposed to set apart a certain sum every year, for the purpose of Engraving some Work of Art which shall have been purchased by the Association; and of this Engraving each Member will receive one impression for each Guinea subscribed.
- The Subscription Lists for the Year 1838-9 are now open. Subscriptions are received by Charles Francis Dimond, Esq., Treasurer, 10 Henrietta Street, Cavendish Square; by Edward Edwards, Esq., Honorary Secretary, 15 Lower Brook Street; and by any Member of the Committee; at the London and Westminster Bank, 38 Throgmorton Street; and at the Branch Offices of the same, 9 Waterloo Place, Pall Mall; 155 Oxford Street; 210 High Street, Whitechapel; and by Mr. Thomas Brittain, Collector, 10 Clarendon Square, Somerset Town.

ROYAL EXCHANGE. The Joint

Graham Committee beg to inform Architects who are desirous of submitting Designs for the intended Royal Exchange, that they may obtain a Lithographic Plan of the intended site, with other particulars, upon payment of One Pound, at the Office of the Surveyor to the Committee, Mercers' Hall, London. *Mercers' Hall, 30th March, 1839.*

SALES BY AUCTION.

IMPORTANT SALE OF A SPLENDID AND GENUINE COLLECTION OF PICTURES, LIVERPOOL.

Messrs. T. Winstanley and Sons most respectfully announce to the Amateurs of the Fine Arts, that they have received directions to sell by Auction, at the Exhibition Rooms, Post Office Place, Liverpool, by Messrs. Winstanley and Sons, on Thursday, the 15th, & 16th of April next, at 10 precisely.

THE ENTIRE, EXTENSIVE, AND WELL-CHOSEN COLLECTION of noble GALLERY and

chosen CABINET PICTURES, collected during a period of many years, principally in Italy, by the late WILLIAM B. RILE, Esq. of Everton, near Liverpool.

The Collection comprises a splendid Picture of Jacob feeding the Flocks of Laban, and of the Angel visiting St. Peter in Prison, by Spagnoletto; Christ with the Doctors, by Caravaggio; a grand Gallery Picture of the finding of Eucalyptus, by the celebrated modern Italian Tognoli; a capital landscape, with the Flight into Egypt, and others of a high quality, by Salvator Rosa; John baptizing Christ, a masterpiece of Paris Bordone; a fine Portrait by Paul Veronese; the Holy Virgin and Child, by Sassio Ferrato; "Ecce Homo," by Guido; "Two Cabinet Pictures by Guercino; Two Religious Subjects, highly finished and beautiful Pictures, by that rare master Andrea da Salerno; the Marriage of St. Catherine, by Agostino Caracci; with estimable Works of Previtali, Giulio Romano, the Bassano, Tempesta Maroli, Simonini, and other favorite Italian Masters. Landscapes by Gaspard Poussin, Mils, Goussier, &c.; Bacchus and Ariadne, by Coppel; a very highly finished duplicate of the celebrated Micer, by Quintin Matsys; a Cattle Piece, in the most finished manner of Albert Cuyp; a beautiful Landscape, by Both; a Ditto, by Wynants; a superb Forest Scene, by Artzt; a superb, in the manner of Sturck; the Siege of Lisle, by Vander Meulen; the Interior of a Cathedral, by Neefs; the Head of a Dutch Admiral, a genuine and powerful specimen of Rembrandt; and other productions of Van Bloemen, Bamboccio, De Jordaen, Berchem, Carré, Kierlings, Vangoyen, Aelsyn, Foenberg, and other admired Dutch and Flemish Artists. Two Scenes in Italy, undoubtedly genuine Pictures, by Richard Wilson; the Ponte Nemestana, by Wright of Derby; the much admired Scene in Hamlet, by Fuseli; with smaller productions of Lambert, Eastlake, Williams, &c.

The whole may be viewed on Monday the 15th, and Tuesday the 16th, between whatever will be admitted to the view without a Catalogue, which may be had of Messrs. Winstanley, Paternoster Row, London; of Mr. R. Winstanley, Manchester; and of Messrs. T. Winstanley and Sons, Auctioneers, Church Street, Liverpool. Price 1s. each.

* We seldom notice works in periodical progress, because it would open too wide a field for us to do equal justice to all, where praise is merited, and we should consider it unbecoming to censure our contemporary companions; but we cannot help advert to the little episode of the life and death of the Cripple Boy, in the last part of this tale. If Mr. Dickens had never written any thing else, it would have placed him by the side of Sterne, as one of the most natural and affecting painters of life that ever studied the finest sympathies of humanity, and bade them touch every heart of feeling with the tenderest emotions. It does not fill a page, and is worth a volume!—Ed. L. G.

ACKERMANN'S PHOTOGENIC DRAWING-BOX, for copying objects by means of the Sun, containing the various regulations and instructions for carrying out this most important and useful discovery; particularly recommended to Botanists, Zoologists, and the scientific; sufficiently clear to enable ladies to practice this pleasing Art.

Price, per box, 21s.

N.B. The Prepared Paper may be had separately, 1s. per Packet.

London: Published by Ackermann and Co. 98 Strand.

New andy, royal 6to. with Eight Plates, price 11s. 1s.

THE ROYAL GALLERY OF BUCKINGHAM PALACE, Part II.

James Hahn, 18 King William Street, Strand.

BOOKS IN THE PRESS.

Nearly ready, with Map and Plans, post 8vo.

HAND-BOOK FOR TRAVELLERS in Denmark, Norway, Sweden, and Russia.

Lately published.

Hand-Books for Travellers in North and South Germany and Switzerland.

RAMBLES IN THE SOUTH OF IRELAND, in 1838.

By **LADY CHATTERTON**, With Engravings, Engravings, Engravings.

Saunders and Otley, Publishers, Conduit Street.

In a few days will be published, in 1 vol. super-royal 8vo.

A TREATISE ON WOOD ENGRAVING, Historical and Practical. With upwards of Three Hundred Illustrations, engraved on Wood.

By **JOHN JACKSON**.

This Work, which contains upwards of Three Hundred Wood Engravings, many of which are elaborate facsimiles of some of the most scarce and beautiful works in that branch of art, has occupied the attention of Mr. Jackson (a pupil of Bewick), as an engraver, for many years. It was Mr. Jackson's original intention that the literary portion of the work should have contained only a slight Sketch of the History, with some details of the Practice, of the Wood Engraving; but the importance of the work has, however, been greatly extended, Mr. Jackson having been fortunate in procuring the literary assistance of Mr. W. A. Chartist. The following is a brief analysis of the volume:—

In the first chapter an attempt is made to trace the principles of Wood Engraving from the earliest authentic period, the second chapter contains an account of the progress of the art as exemplified in the earliest known single cuts, and in the block-books which preceded the invention of typography. As printing from movable types was unquestionably suggested by the earliest chapter of the history of the art, it is brought down from the commencement of the eighteenth century to the present time. The eighth chapter contains an account of the practice of the art, with remarks on Metallic Relief Engraving, and the best mode of printing Woodcuts. As no detailed account of the practice of Wood Engraving has hitherto been published in England, it is presumed that the information afforded by this part of the work will not only be interesting to amateurs of the art, but useful to those who are professionally connected with it.

London: Charles Knight and Co. 25 Ludgate Street.

M. R. BENTLEY has just ready for publication the following **NEW WORKS**:

I. **A Summer in Andalusia**, With Rambles through the Moorish Cities and Palaces. 2 vols. 8vo. 12s.

II. **MR. G. F. R. JAMES'S NEW ROMANCE**. Charles Tyrrell. (On Monday, April 1.)

III. **Memoirs of His Own Time**, Including the Revolution, the Empire, and the Restoration. By **Lieut.-General Count Dumas**, Private Secretary of Napoleon. 2 vols. 8vo.

IV. **England under the Reigns of Edward VI. and Mary.**

With the Contemporary History of Europe. Illustrated by Original Letters, and Historical and Biographical Notes. By **Patrick Fraser Tytler**, Esq. 2 vols. 8vo. with Portraits.

V. **The Court and the Bastille; Or, the Days of Cardinal Richelieu.** By **M. Salicrue**, a Author of "Ficelles."

VI. **Bishop Goodman's History of his Own Time**. Containing Memoirs of the Courts of Queen Elizabeth and King James I.

With numerous Letters of the most Eminent Personages. The whole now first published from the Originals. Edited by **Rev. J. E. Brewer**. 2 vols. 8vo. with Portraits. New Works now ready.

I. **Births, Deaths, and Marriages.** By **Theodore Hook**, Esq. 2 vols. post 8vo.

II. **The Life and Times of Louis XIV.** By **G. P. R. James**, Esq. Author of "Darnley," "The Huguenots," "Charles Tyrrell," &c. 4 vols. 8vo. bound, with many fine Portraits.

III. **The Bivouac; Or, Scenes of the Peninsular War.** By the Author of "Scenes of Waterloo," "Wild Sports of the West," &c.

Forming the New Volume of **The Standard Novels and Romances.**

Embellished with Engravings, price 6s. **Richard Bentley**, New Burlington Street, Publisher in Ordinary to Her Majesty.

THE ARCANIA OF SCIENCE, for 1839, by a new Edition, a Gentleman of acknowledged Scientific Ability, will shortly be published.

John Linsbald, 145 Strand.

BOOKS PUBLISHED THIS DAY.

In small 8vo. with Plans and Maps, 12s. boards.

GUIDE through IRELAND, descriptive of its Scenery, Towns, Seats, Antiquities, &c. with various Scientific Tables. Also, an outline of its Mineral Resources, and a brief view of its Economy.

By **JAMES FRASER**.

"As a work of topography, it possesses a high degree of excellence; and its statistics will be found available and most useful to the traveller. There is nothing remarkable along any line of road that has escaped the attention of the author, and which will not be found here for the instruction of the tourist."—*Dublin Evening Mail*.

"After years of diligent application, Mr. Fraser has produced a work which may truly be called a Guide through Ireland. As a book of reference it will be found invaluable by the commercial traveller, and by all who seek for information connected with trade and agriculture."—*Dublin Evening Post*.

"This is perhaps the most interesting guide book we ever met with, and abounds with information of the most varied and valuable description. It is utterly impossible, within the limits of a weekly journal, to do the work that full justice which it so eminently deserves; but as we have lately visited several of the places which it professes to describe, we are quite competent to pronounce a decided opinion of the correct observation, faithfulness, and general accuracy of its author."—*Manchester Courier*.

Dublin: Published by **William Gell**, and **C. J. Upper**, Seckville Street. Sold by all Booksellers.

THE MONTHLY CHRONICLE for April contains—1. Ireland and Lord Northington—The Ministerial Crisis. 2. Map's Elements of the Pathology of the Human Mind. 3. The Abbe de Lamennais. 4. Savonarola and the Campaign of 1799. Part I. 5. Shelley's Poetry. 6. On Style in Architecture. 7. Niebuhr's Historical Speculation. 8. Undeveloped Characters in Shakespeare's Plays. 9. Contributions to the History of Fergny. 10. Journal of a Dutch Minister in London, &c. &c.

London: Longman, Orme, and Co.

Price 2s.

SAINT CYPRIAN VINDICATED—against certain Misrepresentations in a Work by the Rev. G. A. Poole, entitled—"The Testimony of St. Cyprian against Rome"—chiefly on the Pope's Supremacy.

By the Rev. **F. C. HUSBENBETH**.

"Prime est in Ecclesia, quam constat tantum esse prelatum Cyprianum; et tunc adeo velut autem sententiam tunc nomine Cyprianum."—*S. Aug.*

London: Kettling and Brown; Bookers and Dolman; P. Andrews and T. Jones.

In 1 vol. 8vo. price 2s. 6d. extra boards.

SOLDANELLA; a Fragment; and other Poems.

By **GEORGE LLOYD**, Esq.

London: J. Madden and Co. late Parbury and Co. 8 Leadenhall Street.

A new edition, illustrated with Portrait and Engravings, post 8vo. 10s. 6d.

THE PILGRIM'S PROGRESS, with a Life of John Bunyan.

By **ROBERT SOUTHEY**, Esq. LL.D. John Murray, Albemarle Street.

TO ILLUSTRATORS OF BYRON'S WORKS.

A 4to. edition, in 2 vols. beautifully printed, with a new and copious Index and a Portrait, of

BYRON'S COMPLETE WORKS. A very few Copies are printed to bind up with illustrations. John Murray, Albemarle Street.

10mo. 2s. 6d.

A NEW GREEK GRAMMAR, for the Use of Schools.

By the Rev. **CHARLES WORDSWORTH**, M.A. Late Student and Tutor of Christ Church, Oxford; Second Master of Winchester College. John Murray, Albemarle Street.

Price 1s.

AN EPITOME OF CHEMISTRY, with two Experimental Illustrations; adapted for the Use of Amateurs, Schools, and the Junior Members of the Profession.

By **J. BAKER**, Practical Chemist.

"We therefore cordially recommend it, satisfied that it cannot fail to interest and instruct the youth of both sexes. We know no better companion for the winter evening's fire."—*Edinburgh Observer*, Oct. 18th, 1838.

Sold by Mr. Charnell, Medical Publisher, Princes Street, Soho; and by the Author, No. 14 Holborn, opposite Farnival's Inn.

DISSEMINATED ILLUSTRATED.

2d edition, post 8vo. 7s. 6d.

NEW CURIOSITIES OF LITERATURE.

By **BOLTON CORNET**, Esq.

"A clever little work."—*Gentleman's Magazine*.

"A very amusing and clever specimen."—*Atlas*.

"A masterly volume."—*Edinburgh*.

"The author has conferred a service on literature."—*Observer*.

"We should like to see the thin octave blank the poetry royal of Disraeli in all its beauty."—*Edinburgh Magazine*.

Richard Bentley, New Burlington Street (Publisher in Ordinary to Her Majesty).

A new edition, price 12s. boards, of

M'CULLOCH'S COMMERCIAL DICTIONARY, illustrated with Maps and Plans; with a new and enlarged Supplement, bringing down the information contained in the work to January 1839.

* * * The Supplement, containing excellent Maps of the completed and proposed Canals, Railways, &c. of Great Britain and Ireland, and of the British Possessions in North America, may be had separately, price 7s. 6d. Amongst the articles in it are:—Austrian Tariff, and new Commercial Treaty with Austria; Joint-Stock Banks; Cotton Trade of Great Britain, from 1818 to 1838, both inclusive; Tables of Imports and Exports, comprising a full account of the Foreign Trade of the United Kingdom during the Ten Years ending with 1838; Trade with Prussia; Prussian Commercial League, and Tariff; Railways and Railway Legislation; Post-Office Arrangements; Alterations in the British Tariff; Russian Tariff; Classification of Ships; Sugar Trade, Growth of Beet-root Sugar; Commercial Treaty with Turkey; with notices of Civita Vecchia, Moulmein, &c.

London: Longman, Orme, and Co.

HISTORY OF IRELAND, from the Raising of the Siege of Derry in 1690 to the Surrender of Limerick in 1691.

By the Rev. **JOHN GRAHAM**, A.M.

In 12mo. with a Portrait of Schomberg, &c.

"This is a most interesting publication."—*Drogheda Con.*

"We must be content to recommend the book itself to the reader; and we assure him that he will not rise from its perusal without deriving both pleasure and profit."—*Edinburgh Observer*.

"We beg most earnestly to urge its high claims on the attention of our readers."—*Norwich Freeman*.

"We consider this book exceedingly opportune in time, and valuable in materials."—*Derry Sentinel*.

"We trust it may have a circulation as extensive as our own pages."—*Dublin Evening Mail*.

"Though the work of a strenuous partisan and distinguished advocate of Protestant ascendancy, it is, on the whole, temperately written."—*Atlas*.

William Blackwood and Sons, Edinburgh; Thomas Cadell, London; and John Canning, Dublin.

CAREY'S NATIONAL HISTORIES.

On the 15th will be published, price 7s. 6d. cloth, by C. Tilt, of Fleet Street,

THE HISTORY OF FRANCE.

By EMILE DE BONNECHOSE.

(The Two Volumes of the French Edition comprised in the One of the Translation.)

All historians must have their prejudices; and a consideration of this fact has given rise to the proposed Series. For what is a History of France by an Englishman, but another version of the History of England? Has not the success of the one been the defeat of the other? Truth must be sought for by comparing the respective Histories as written by the National Historians. It is therefore proposed to translate and publish, at such prices as will bring them within the reach of all classes, a Series of these truly National Histories.

THE HISTORY OF THE UNITED STATES OF AMERICA,

By JOHN FROST, of Philadelphia,

Is already published, and may be had done up in cloth, price 5s. 6d.

The HISTORY OF GERMANY, and others, in due course, will follow.

THE APRIL NUMBER OF

THE UNITED SERVICE JOURNAL,

and NAVAL AND MILITARY MAGAZINE, contains,

AN INQUIRY whether the Sentence of Death pronounced at the Fall of Man included the whole Animal Creation, or was restricted to the Human Race. A Sermon preached before the University of Oxford.
By the Rev. W. BUCKLAND, D.D. F.R.S.
John Murray, Albemarle Street.

DOMESTIC MANNERS OF THE RUSSIANS.

By the Rev. R. LISTER VENABLES, M.A.
I cannot venture to add another to the numerous books on Russia which have already appeared, without pleading as my apology that I visited that country under circumstances affording opportunities, not usually within a stranger's reach, of observing the habits and character of the people. I am, therefore, induced to publish the following letters under an impression that some degree of domestic life in the interior may be, to a certain degree, interesting from its novelty.
Being nearly connected by marriage with several Russian families, I accompanied my wife into that country in the summer of 1857, for the purpose of visiting her relations, among whom we spent twelve months, either in private houses in the interior, or in habits of constant intercourse at St. Petersburg.
John Murray, Albemarle Street.

ENGLISH AGRICULTURAL SOCIETY, No. 1.

Contents.
1. On the Present State of the Science of Agriculture in England.
2. Earl Spencer on the Breeding of Cattle and Sheep.
3. Sir James Graham on the Drainage and Frequent Drain System.
4. On several Operations of Domestication, from the Hon. R. Clive, M.P.
5. Charles Shave Le Fèvre, M.P. on Subsoil Ploughing on a Dry Ground.
6. J. Palmer, Esq. on Gas Water as a Manure.
7. On the Values of several Varieties of Wheat, by John Marten, Esq.
8. Rev. W. Rham on the Analysis of Soils.
9. On the Progress of Agriculture in Scotland, since the Formation of the Highland Society, by Mr. John Dugdown.
R. and J. E. Taylor, Red Lion Court, Fleet Street.

Edinburgh: WILKIN, Whyte and Co. London: Longman and Co.

MR. COLBURN'S NEW PUBLICATIONS.

I.

DEDICATED TO GENERAL LORD HILL, G.C.B. &c. &c.

Now ready, embellished with a fine Portrait of the Duke after Sir T. Lawrence, Part I. price 2s. 6d. of

THE LIFE OF FIELD-MARSHAL HIS GRACE THE DUKE OF WELLINGTON,

Embracing his Military, Civil, and Political Career, to the present Time.

Edited by SIR J. E. ALEXANDER, K.L.S. 42d Highlanders.

The Work will be completed in Twelve Monthly Parts, at 2s. 6d. each, beautifully embellished with Portraits, Views, &c. by Landseer, Warren, Landells, &c.

No period of modern History lays claim to more absorbing interest, or is susceptible of richer illustration, than that of the celebrated wars in which the great Captain of his age has shone with such distinguished lustre.

As the leader of armies, the character of the Duke of Wellington was known to all the world; but his disposition, his qualities as a man, his conduct as a statesman and diplomatist, remained yet to be portrayed. To supply this desideratum is the object of the biography here announced, which, not confining its scope to the display of that genius which conceived and executed the plans that were crowned with lasting success at Waterloo, and decided the future destinies of Europe, endeavours to bring into fuller view all the most striking points of the character of the individual.

Works of great variety and extent, by able writers, embracing every subject connected with the military history of the times in its minutest details, have doubtless appeared, and still continue to invite public curiosity and attention; but valuable as these records are, and many of them written by men who bore a share in the memorable scenes which they describe, not one of them has attempted to give more than casual sketches of the character and opinions of their illustrious contemporary. In so far, it may justly be observed, that while the great commander has often formed the subject of a portrait, he has never sat for a whole-length view. That any one hand should succeed, however, in delineating all parts of a character like that of the Duke of Wellington, would not be less extraordinary than if the same artist were to undertake to represent portrait, landscape, battle scenes, historical subjects, in all their varieties, and even to draw plans and maps.

To treat with success the numerous important matters essentially connected with the career of such a man, required a combined effort. This plan of co-operation has accordingly been adopted, and the entire work, thus fully prepared, from exclusive as well as from open sources, is now presented to the public, and the Publisher trusts that he is not too sanguine in his expectation of its proving one of the most comprehensive, interesting, and popular works of its class.

II.

THE PHANTOM SHIP.

By CAPTAIN MARRYAT, R.N. Author of "Peter Simple," "Frank Mildmay," &c. 3 vols.

III.

LIFE AND CORRESPONDENCE OF M. G. LEWIS.

PRICE 8d.
Stamped Edition, 9d.

REVIEW OF NEW BOOKS.

Songs and Ballads. By Samuel Lover. 12mo. pp. 135. London, 1839. Chapman and Hall.

"**LOVERS** (says Touchstone, see epigraph on the title-page) are given to poetry;" and, truly, if all **Lovers** were like unto Samuel, we should not be sorry that they rhymed for ever, holydays and working-days and all. Hitherto we have only seen or heard his charming compositions married to the concord of sweet sounds, and hardly felt their complete value as lyrical productions of the highest order. We have seen them, indeed, moisten every eye, or raise the ready laugh, or excite the powerful sense of admiration as they were chanted with their melodious accompaniments (also the work of this accomplished individual), in every circle of society. But to appreciate their variety, the intense pathos of some, the natural interest of others, the comic of a third class, the characteristic nationality of a fourth, and the spirit and beauty of all, it was necessary to have them in the closet, and to peruse them in solitude as the effusions of the lyric harp of Ireland.

Rich in minstrelsy as this country is — with a Moore in advance of his time — it is delightful to observe how Lover has followed without imitation, and presented the world with a volume of Song so entirely different from the elder bard, that it would seem as if the noble preoccupation of the ground, instead of marbling his efforts, had only stimulated him to more distinct originality in style and sentiment. The sparkling, the exquisitely polished, the classic, the amative, the alternately gay and touching Moore, seems almost to have exhausted the genius of Irish poetry; but Lover found new ground, and dwelling on the legends and superstitions of the soil, has wrought them into some of the most affecting ballads that ever were written, or occasionally converted them into the merriest pictures of manners and subjects for laughter. To the former belong "The Angel's Whisper," "The Morning Dream," "The Fairy Boy," "The Letter," "Native Music," and a host of others. To the latter, "Rory O'More," "The Blarney," "Molly Carew," and others of that cheerful description. Not to be classed with either, we have such songs as "The Four-leaved Shamrock," breathing of friendship and human kindness; "True Love can ne'er Forget," a history in a few verses, and an achievement in that sort where the writer has no equal, and of which "Jessie" is another incomparable example; the playful "Wind and the Weathercock," and "Yes and No," and the splendid pieces of national feeling and enthusiasm — "Victoria the Queen," and "Twas the Day of the Feast." Upon referring to these, our readers will agree with us that Lover is as unlike Moore as any two bards of the same country and in the same style of writing can possibly be. The temple of Fame has opened to them, though they took such different roads; and this may be an Irish feat, since opposite ways have tended to the same point.

It has been our pleasant duty on many occasions to introduce Mr. Lover's performances to the public; and will, therefore, trespass but

little on this small but delightful volume, rich in no fewer than seventy-six of his songs. They are prefaced by a becoming and grateful dedication to Lord Morpeth, who, as Secretary for Ireland, is justly honoured in a literary view; for that to him, as the writer says, "is due the credit of having discovered a neutral ground whereon your love of Ireland might display itself, apart from the fiery contention of politics, and where, unarmed, you may tread in security. That one sacred spot is the refined and refining region of literature and the arts. You, my lord, have dedicated one particular banquet, among your official entertainments, to rally round you Irishmen distinguished in arts and letters, regardless of their private political opinions; thus honouring with a distinct recognition the genius and talent of Ireland. Of this mark of favour to my country, which you, my lord, are the first to have instituted, I, for one, profess myself proud; and as some of the following songs relate to my native land, they may the more fitly be offered as a heartfelt homage to your lordship from a grateful Irishman."

It is now our welcome task to select specimens of the newest and least known of these ballads. The first more resembles Moore than any other in the publication:—

"The Happiest Time is Now.

Talk not to me of future bliss!
Talk not to me of joys gone by!
For us, the happiest hour is this,
When love bids time to fly.
The future—doubt may overcast,
To shadow Hope's young brow;
Oblivion's veil may shroud the past,
The happiest time is now!

Tho' flowers, in spicy vases thrown,
Some odour yet exhale;
Their fragrance ere the bloom was flown,
Breathes sweeter on the gale:
Like faded flowers, each parted bliss
Let memory keep—but how
Can joy that's past be like to this?
The happiest time is now!

Unmark'd our course before us lies
O'er time's eternal tide;
And soon the sparkling ripple dies
We raise, as on we glide:
Our bark the brightest bubbles fling
For ever from their prow:—
Then let us gaily sail and sing,
The happiest time is now."

A fine German superstition is embodied in the next:—

"The Angel's Wing.

"There is a German superstition, that when a sudden silence takes place in a company, an angel at that moment makes a circuit among them, and the first person who breaks the silence is supposed to have been touched by the wing of the passing seraph. For the purposes of poetry, I thought two persons preferable to many, in illustrating this very beautiful superstition.

When by the evening's quiet light
There sit two silent lovers,
They say, while in such tranquil plight,
An angel round them hovers;
And further still old legends tell,—
The first who breaks the silent spell,
To say a soft and pleasing thing,
Hath felt the passing angel's wing.

Thus, a musing minstrel stray'd
By the summer ocean,
Gazing on a lovely maid,
With a bard's devotion:—
Yet his love he never spoke,
Till now the silent spell he broke:—
The hidden fire to flame did spring,
Fann'd by the passing angel's wing!

'I have loved thee well and long,
With love of Heaven's own making!—
This is not a poet's song,
But a true heart's speaking:
I will love thee, still untired!
He felt—he spoke—as one inspired—
The words did from Truth's fountain spring,
Unwaken'd by the angel's wing!
Silence o'er the maiden fell,
Her beauty lovelier making;
And by her blush, he knew full well
The dawn of love was breaking.
It came like sunshine o'er his heart!
He felt that they should never part,
She spoke—and oh!—the lovely thing
Had felt the passing angel's wing."

Of the playful, the following is a good example:—

"Father Land and Mother Tongue.

Our Father land! and would'st thou know
Why we should call it Father land?
It is, that Adam here below,
Was made of earth by Nature's hand;
And he, our father, made of earth,
Hath peopled earth on ev'ry hand,
And we, in memory of his birth,
Do call our country, 'Father land.'
At first, in Eden's bowers they say,
No sound of speech had Adam caught,
But whistled like a bird all day—
And, may be, 'twas for want of thought:
But Nature, with restless laws,
Made Adam soon surpass the birds,
She gave him lovely Eve—because
If he'd a wife—they must have words.
And so, the native land I hold,
By male descent is proudly mine;
The language, as the tale hath told,
Was given in the female line.
And thus, we see, on either hand,
We name our blessings whence they've sprung,
We call our country Father land,
We call our language Mother tongue."

Our last is of the genus of "The Four-leaved Shamrock":—

"The Meeting of Foes and the Meeting of Friends.

Fill the cup! fill it high! Let us drink to the might
Of the manhood that joyously rushes to fight;
And, true to the death, all unflinching will stand,
For our home, and our hearth, and our own native land!
'Tis the bright sun of June, that is gilding the crest
Of the warriors that fight for their isles of the West;
The breeze that at morning but plays with the plume,
At evening may wave the red grass o'er the tomb:
The corn that has ripen'd in summer's soft breath,
In an hour may be reap'd in the harvest of death:
Then drink to their glory—the glory of those
Who triumph'd or fell in that meeting of foes.
But fill the cup higher to drink to the friends
Bound fast in affection that life only ends;
Whose hearths, when defended from foes that have
dared,
Are prized all the more when with friends they are
shared!

Far better the wine-cup with ruby may flow,
To the health of a friend than the fall of a foe;
Though bright are the laurels that glory may twine,
Far softer the shade of the ivy and vine:
Then fill the cup higher—the battle is won—
Our perils are over—our feast has begun!
On the meeting of foemen, pale sorrow attends;
Rory joy crowns our meeting—the meeting of friends!"

We thought we had done, but we must quote

"Native Music.

Oh, native music! beyond comparing
The sweetest far on the ear that falls,
Thy gentle numbers the heart remembers,
Thy strains enchain us in tender thralls.

Thy tones endearing,
Or sad or cheering,
The absent soothe on a foreign strand:
Oh! who can tell

What a holy spell
Is in the song of our native land?
The proud and lowly, the pilgrim holy,
The lover, kneeling at beauty's shrine,
The bard who dreams by the haunted streams,—
All, all are touch'd by thy power divine!
The captive cheerless,
The soldier fearless;

The mother—taught by Nature's hand,
Her child when weeping,
Will lull to sleeping,
With some sweet song of her native land!"

The Life and Correspondence of M. G. Lewis, Author of the "Monk," "Castle Spectre," &c. &c. 2 vols. 8vo. London, 1839. Colburn.

WE should have thought, *a priori*, that there was hardly enough in this subject to sustain two thick octavo volumes; and our perusal of them has convinced us of the fact. But the work might have been called the history of the Lewis family; for there is as much about his father and mother, his sisters, brother, and other relations, as about our hero: and a very queer family its elders, at least, appear to have been. Their free, promiscuous living, and visiting—the parents separated—the mother blamed as imprudent—the father taking up with a Mrs. R———loving—corresponding—ceasing to love—quarrelling—forgiving—dying! such are the peculiar features of this strange group of the Lewis dynasty. Well might Mat. try to dissuade his mother from publishing a novel—and would that another, whom we noticed last week, had heard and listened to similar reasoning—and say,

"I do most earnestly and urgently supplicate you, whatever may be its merits, not to publish your novel. It would be useless to say that it should be published without your name. Every thing is known in time, and it would be the bookseller's interest to have your name known, in order that people may read it from curiosity. He would not fail to insert in the newspapers that 'it is whispered, that such a novel is written by Mrs. Lewis,' and then would follow paragraph after paragraph, with all our family affairs ripped up, till every one of us would be ready to go mad with vexation. I cannot express to you in language sufficiently strong how disagreeable and painful my sensations would be, were you to publish any work of any kind, and thus hold yourself out as an object of newspaper animadversion and impertinence. I am sure every such paragraph would be like the stab of a dagger to my father's heart. It would do a material injury to Sophia; and although Maria has found an asylum from the world's malevolence, her mother's turning novel-writer would (I am convinced) not only severely hurt her feelings, but raise the greatest prejudice against her in her husband's family. As for myself, I really think I should go to the Continent immediately upon your taking such a step. Pray write me a line immediately, to assure me that you have laid aside your intention of publishing; and that, even if you have already made a bargain for your novel, you will break it; for I will not suppose that after what I have said you will refuse my request."

This book begins with many childish stories, and throughout contains a load of matter which cannot by possibility possess public interest. The accounts of the precocious genius of Lewis (though that genius never soared to a high pitch) are pleasant literary recollections. "The East Indian," a comedy (afterwards acted as "Rich and Poor"), written at the age of sixteen; "The Monk" when only twenty; and the "Castle Spectre," and a number of other theatrical pieces, as well as his ballads and other productions, display very early and very great fertility. At seventeen "he had already written an original farce, and had translated another from the French; also a comedy, 'The East Indian,' already mentioned as having been given to Mrs. Jordan, and of which

more will immediately appear in the succeeding letters; two volumes of a novel, and two of a romance, besides numerous poems. It may be necessary to state that none of these volumes formed any portion of 'The Monk.'"

And "The Monk" he wrote in ten weeks! The correspondence exhibits Mr. Lewis in a most amiable light—well principled, affectionate, generous, and sound-minded. We select an example, from Germany, when only eighteen years old, and which is a fair specimen of his talents:—

"Weimar, 30th July.

"As I know, my dear mother, you must be anxious, to hear from me, and that I have escaped all the perils and dangers, both by land and water, I take the earliest opportunity of letting you know that I arrived safe at Weimar three days ago. I should have written to you on the moment of my arrival, had it not then been too late for the post. I had a very disagreeable journey, being very sea-sick in crossing from Harwich to Helvoet; and the roads were so bad, the postillions so stupid, and the time I was obliged to wait at the post for horses so long, that at last I began to be quite out of patience, and to despair of ever arriving at the place of my destination. I am now knocking my brains against German as hard as ever I can. I take a lesson every morning; and as I apply very seriously, I am flattered with the promises that I shall soon speak very fluently in my throat, and that I already distort my mouth with tolerable facility. The place is at present rather dull, most of the people who compose the society being gone to different places; some to their country-houses, and others being with the duke and his army at Coblenz. But I am not sorry for this; since, as the common conversation of the town is German, I wish, before I enter the routine, to know a little what people say when they speak to me; which you will acknowledge to be a very reasonable desire. The few people who are still here are, however, extremely polite; and I doubt not, when I know a little of the language, I shall find the place extremely agreeable. Among other people to whom I have been introduced, are the sister of Schweter, the composer, and M. de Goethe, the celebrated author of 'Werter'; so that you must not be surprised if I should shoot myself one of these fine mornings. As to my own nonsense, I write and write, and yet do not find I have got a bit further, in my original plan, than I was when I saw you last. I have got hold of an infernal dying man, who plagues my very heart out. He has talked for half a volume already, and seems likely to talk for half a volume more; and I cannot manage to kill him out of the way for the life of me. I have had no news of Maria since I left England, but she was infinitely better when I left her: perhaps that might have done her good. I may safely beg you to 'honour me by laying your commands on me,' since I do not conceive it possible for you to have any to lay; and, indeed, I should as soon expect you to lay eggs. But you will believe me when I tell you, could I find any opportunity to do any thing which would give you satisfaction, I would offer my services as readily as I do when I can find none. Let me hear from you soon, and tell me what you have done about the farce, the comedy, &c.—Believe me, my dear mother, your most affectionate son,

"M. G. LEWIS."

The following is an example in which his good sense and good feelings are strongly manifested:—

"My dear Mother,—I was not conscious of shewing any coolness or reserve when I saw you. Believe that my affection is still as warm for you as ever; but since you desire me to tell you my thoughts, I will openly confess to you that I feel many very different sensations upon your subject. I feel for you the greatest regard, the most eager desire to do any thing that can give you even the most trifling satisfaction; and, at the same time, I cannot help recollecting the pain and anxiety you have occasioned to my dear, my worthy father; and that it is owing to your conduct that my sisters are deprived of maternal care and attention, and of receiving the benefit of those little instructions and observations, so necessary to make young women accomplished, and which are in the power of a mother alone to point out to them with success. You ask me how much I know of your difference with my father, and whether I could publicly make allowances for you. You suppose my father has been giving me instructions. You accuse him unjustly: he has never said a syllable to me with regard to you; and my behaviour is entirely such as is dictated by my own heart. If that is good, as yourself has often told me, my conduct must be the same; if my conduct is wrong, my heart is the same; and it will be worth no one's while to seek to have a share of it. No: I will own to you openly, I could not declare in public that I can make allowances for you. In my heart I can excuse you, and believe that your own innocence, and the deceit of others, may have been the occasion of your errors. But these are arguments never received by the world, which is always eager to believe the worst side of every thing. But, saying I have arguments to bring against your adversaries (though I swear to you, on my soul, I know of no adversaries that you have), I never could bear to talk coolly upon the subject. But let me put a case to you, and make you remember a circumstance which must speak to your own feelings. My sisters are now at the age when their minds are most capable of receiving lasting impressions: they have been taught to regard me almost as attentively as their father; and from my being more with them, and entering into their amusements with more vivacity than people who are not so near their own age can do, they readily adopt any sentiments they hear me declare. Can you then openly confess that you wish your conduct to be followed by your daughters? I will not say your conduct is to be condemned; but I cannot call it commendable, when I know the anxiety it has occasioned, and still occasions, to my father, and which, at your separation, was perfect frenzy. As to the two lights which you say I may regard you in, the light in which I do regard you is composed of both. I feel the love and respect for you which you state in the first: I conceive your heart to be so good, your mind so enlightened, that I am astonished that you could be led into those errors, when the strength of your understanding must have shewn to you the calamities you were bringing upon yourself; and the excellence of your heart must have made you feel for those your errors must bring upon the people whom you declare were then, and still are, the nearest to your heart. You tell me that I ought to hear your arguments, as well as those on the other side. I have heard neither on one side nor the other; and you ought to consider it as a mark of generosity, that whilst it was in my father's power to have made my mind receive any impressions he chose to give it, he did not take the opportunity, but suffered me to draw my

own sentiments from what I might afterwards hear and feel myself: for, in these circumstances, the heart must be the best and most impartial judge. You have put me into the most distressing and embarrassing situation in the world: you have made me almost an umpire between my parents. I know not how to extricate myself from the difficulty. I can only believe neither of you to be in the wrong; but I am not to determine which is in the right. Only believe that my affection for you is as great as ever, and that there is nothing which I can do to oblige you, which shall not be done with the greatest readiness. When I am obliged not to see you, I deny myself a pleasure; and be convinced that I should not do it without good reasons. There are many reasons which make Oxford an improper abode for you. It is an uncommon thing to see a lady arrive there by herself; and as there are people who have a right to inquire into my actions, I should be subject to many unpleasant questions; and what answer would you have me give them? You wish to spend the ten pounds I offer you at Oxford, and you tell me your difficulties are over; but they may recur, and I imagine you would not wish positively to throw away ten pounds. I must now beg you to have done with this subject. Never let me again be obliged to write such a letter—so embarrassing, so distressing. I really think it unkind to tax me with coolness and reserve of conduct. I am not conscious of having failed to you in any one point of affection. The way, also, and manner in which you put it, was not a fair one. You must have been conscious that I could not decide in your favour; and to decide against you would give me infinite pain. But I have now done with this painful subject."

The poems republished here, and others which are new, do not require any critical notice; and, therefore, with a few detached anecdotes, and the striking *facts* of the life of this prolific dramatist (resembling one of his own stage imaginations), we shall conclude our review.

At the Hague, Mr. L. writes:—

"You will easily conceive that, after such society, the Dutch assemblies must be dreadful. I, therefore, seldom go near them; and, indeed, a late proof of their stupidity would have terrified a man possessed of more courage than myself. An unfortunate Irishman, known by the name of Lord Kerry, being the other night at one of the Dutch assemblies, and quite overcome with its stupidity, yawned so terribly that he fairly dislocated his jaw. It was immediately set again; but he has suffered much from the accident, and is still confined by it to his bed. He is a man upwards of fifty; and, consequently, must have been frequently envious of me. But such peculiar enmities were more than he had bargained for, or had power to resist. You may think this is a made anecdote; but I assure you that I have told you the plain matter of fact. There is a *Duchesse de Force* here, a sort of idiot, whom I wish you would see. She would entertain you much. Her conversation is composed of the same set phrases, which she vents upon all occasions. One of them is '*Et les détails?*' She said, the other day, without minding her question or his reply, '*Eh bien! M. Dillon, y'a-t-il quelques nouvelles?*' '*Il n'y en a pas, Madame.*' '*Vraiment! et les détails?*' When they told her that the Queen of France was dead, she asked for the *détails?* She would make an excellent character in a comedy."

In the Highlands of Scotland we have an extraordinary story of the timid roebuck:—

"About ten days ago, one of the farm-keepers' wives was going homewards through the woods, when she saw a roebuck running towards her with great speed. Thinking that it was going to attack her with its horns, she was considerably alarmed; but, at the distance of a few paces, the animal stopped and disappeared among the bushes. The woman recovered herself, and was proceeding on her way, when the roebuck appeared again, ran towards her as before, and again retreated without doing her any harm. On this being done a third time, the woman was induced to follow it till it led her to the side of a deep ditch, in which she discovered a young roebuck unable to extricate itself, and on the point of being smothered in the water. The woman immediately endeavoured to rescue it, during which the other roebuck stood by quietly, and as soon as her exertions were successful, the two animals galloped away together. Now, this is really a matter of fact; and if all matters of fact were as pretty, I should think it quite superfluous to read romances, and much more to write them."

"Among the visitors at Oatlands, during the period to which Lewis alludes in the foregoing letter, were Lord Erskine, and the witty and accomplished Lady Anne Cullen Smith, with both of whom he was on terms of intimacy and friendship; and one evening, after dinner, these three amused themselves in writing what is not inaptly called, 'thread paper rhymes.' It was commenced by the following impromptu of Lord Erskine, on returning Lewis's pencil:—

'Your pencil I send you, with thanks for the loan;
Yet writing for fame now and then,
My wants I must still be content to bemoan,
Unless I could borrow—your pen.'

His lordship having indulged in a not very complimentary comparison at the expense of the ladies, was thus answered by Lewis:—

'Lord Erskine, at women presuming to rail,
Says, wives are tin canisters tied to one's tail;
While fair Lady Anne, as the subject he carries on,
Feels hurt at his lordship's degrading comparison.
Yet wherefore degrading? Considered right,
A canister's useful, and potsherd's, and bright;
And should dirt be original purity hide,
That's the fault of the puppet to whom it is tied.'

To which Lord Erskine immediately rejoined:—

'When smitten with love from the eyes of the fair,
If marriage should not be your lot,
A ball from a pistol will send your despair—
It's safer than canister-shot.'

The subject of the canister was not suffered to drop, but in the course of the evening, produced the following. The 'thing of shreds and patches,' from which we copy it, hardly permits us to give it correctly.

'Ah! happy dog, too blest were I
With the fair canister I loved,
Whose prattling music spoke the tie
Of gentle guidance, as we roved.
Un-canister'd through this world's strife,
On its rough way I growling jog,
Proving myself (upon my life!)
A very stupid, idle dog.'

Now would it cheer life's pilgrim hours,
The sounds of tin or tongue to hear!
As joyful, 'mid life's sweetest flowers,
Fidelity would his treasure bear:
Perceiving he his rule might right,
From which no honest dog would stray,
That the fair canister, still bright,
Must prove his own well-chosen way.'

Then, surly hound, or puppy vain,
Deem not a canister's a log;
Winning such a prize—ah! prize the chain!
And think yourself—a lucky dog.
For in Pandora's box of ill
The snuffing hope yet lingering there,
Assurance sweet to man was still,
That canisters should banish care."

A fancy sketch of the mother of persons distinguished in our day may not be misplaced among these scraps. It is dated from Inverary Castle:—

"Mrs. T. Sheridan is also here at present, very pretty, very sensible, amiable, and gentle: indeed, so gentle, that Tom insists upon it that her extreme quietness and tranquillity is a defect in her character. Above all, he accuses her of such an extreme apprehension of giving trouble (he says), it amounts to absolute affectation. He affirms that, when the cook has forgotten her duty, and no dinner is prepared, Mrs. Sheridan says, 'Oh! pray don't get dinner on purpose for me; I'll take a dish of tea instead.' and he declares himself certain, that if she were to set her clothes on fire, she would step to the bell very quietly, and say to the servant, with great gentleness and composure, 'Pray, William, is there any water in the house?' 'No madam; but I can soon get some.' 'Oh! dear no; it does not signify; I dare say the fire will go out of itself!'"

We now close the scene. Mr. Lewis died on his voyage returning from Jamaica, in 1818; and a lady fellow-passenger writes:—

"I last saw Mr. Lewis about nine on the same evening, before I retired for the night, and promised to call out, to those who were watching in the outward cabin, the half-hours when he was to have a medicine given him. I did so. At two o'clock I heard him say, 'Thank you, thank you!' All that night his groans were dreadful; I could only lie in my berth and listen to them, for illness rendered me powerless. By degrees, his moanings subsided into low convulsive sobs; they grew fainter and fainter, and became calmed into a gentle breathing, as though the sufferer slept. I was worn out, and lost all consciousness. From this state of stupor (for I can hardly call it sleep), I was roused by the steward, at a little past four on the morning of the 14th of May, calling me by my name. He came to inform me that 'Mr. Lewis was no more.' It seemed he had requested to be left undisturbed, and appeared inclined to sleep, when the last dose of medicine was administered, and the watchers remained in the outward cabin, leaving the door of his berth ajar. All continued still for some time: at four o'clock the steward approached, and thought he slept; he described him as lying with his head a little thrown back on the pillow, his arms crossed upon his breast, as though attempting to suppress some internal convulsive feeling. The man approached his ear to the sleeper's lips to listen to his breathing, but that sleep was death; and, in a slumber, gentle as the rest of childhood, the worn-out spirit had passed away for ever!

"With all the decencies that can be observed on such an occasion, the corpse of our lamented and regretted fellow-passenger, having been placed in a proper coffin, at that impressive sentence in the form of burial at sea, 'we commit our brother to the deep,' was gently lowered into its ocean-tomb. Never shall I forget the sound of the splashing waters, as, for an instant, the ingulfing wave closed over his remains!

'Oh! that sound did knock
Against my very heart.'

The coffin, encased in his shroudlike hammock, rose again almost immediately: the end of the hammock having become unfastened, and the weights which had been enclosed escaping, the wind getting under the canvass acted as a sail, and the body was slowly borne down the current away from us, in the direction of Jamaica. I remained on deck straining my eyes to watch, as it floated on its course, the last narrow home of him who had, indeed, been my friend; till nearly blinded by my tears, and the distance that was gradually placed between the vessel

and the object of my gaze, it became like a speck upon the waters, and—I saw it no more!’

The Claims of Japan and Malaysia upon Christendom, exhibited in notes of Voyages, made in 1837, from Canton, in the Ship Morrison, and Brig Himmaleh, under Direction of the Owners. 2 vols. 12mo. New York, French; London, Wiley and Putnam.

COMBINING philanthropic and missionary labours with commercial and political pursuits, and adding something to our geographical information, these American voyages describe events, certainly of no great importance in themselves, or attended by any interesting immediate results; but well worthy of attention, as indicating the views of the United States in those remote parts of the globe, and conveying to us a few gleanings of general intelligence to add to our stock of useful knowledge.

The first volume sets out with a retrospect of the earliest European adventures (chiefly Dutch and Portuguese) in these seas; and notices the accidental intercourse between the western shores of America and the opposite coasts in the Pacific, which has been brought about by the drift of tempest-tost junks, and their despairing crews, across that mighty ocean. The voyage of the Morrison was undertaken from Macao, and seven shipwrecked Japanese were humanely embarked to be restored to their country, and in the hope that this generous act might lead to the opening of a friendly intercourse with the impracticable rulers of Japan. How vain such an attempt was shewn in the sequel.

Nagasaki, the only port to which a very restricted admission is allowed by this jealous government, was the original destination; but it was afterwards changed upon considerations which turned out to be very ill-founded. The ship touched at Loochoo, where the voyagers saw and conversed with Anyah, mentioned by Capt. Beechey and Maxwell, but could neither find nor learn much of his native companions, of whom we have an account in their narratives. The country is painted as poor and wretched in the extreme, disarmed and oppressed by its Japanese conquerors, and altogether unlike the sunny picture from the pencil of Capt. Hall.

“The last spot,” says the writer, “on which the eye rests with pleasure, after leaving the harbour of Napa, is the ascent towards Showle; the tract which Capt. Hall has peopled with the citizens of a metropolis, and crowned with the palace of a king. From all we could learn, the petty Loochooan dependant of the feudal Prince of Satsuma lives somewhere thereabouts; but whether those beautiful rising grounds, thickly interspersed with trees and dwelling-houses, should be called country or town, and whether the common-looking building on the summit of the hill be a palace, or an old temple, or a fort, was not at all important, and not at all clear.”

Hence they steered for Yeddo, and anchored in its outer bay; where they were boarded by some apparently inferior functionaries, and tried to get their packet delivered to the tyrannical authorities of Japan.

“This packet contained four papers in my name—one introducing the returned men—one respecting America—the third, presenting list of presents—and the fourth, list of cargo on board. Translation of 1st paper. ‘The American merchant King respectfully addresses his imperial majesty on the subject of the return of seven of his shipwrecked subjects. He is come to this honourable country from Cap-shuy-moon in

China, in a ship of three masts, &c. &c., called the ‘Morrison,’ commanded by Capt. Ingersoll, having on board a physician, a naturalist, &c. &c. Three of the shipwrecked men, which he has brought with him, are natives of the village of Ono-oura, in the district of Stangoi, in the principality of Owari; their names, ‘Ewa,’ st. 33; ‘Kioko,’ 21; ‘Oto,’ 19. They left Owari in November, 1830, in a rich junk for Yeddo, and meeting with a great tempest, lost their mast and their reckoning, and drifted fourteen months on the wide ocean without knowing whither they went. Their eleven companions sickened and died, and they three only remained alive, when their junk was thrown on shore in a country called Columbia, belonging to America, and in part inhabited by savage tribes. Some hunters in that country kindly took care of them, and sent them in a ship to China, where they lived nineteen months at a place Heang-shan-héen. The good people there, remembering the words of Mencius, that ‘he who does not rescue the shipwrecked, is worse than a wolf,’ took care of them until an opportunity might offer for their return to their native country again. The other four shipwrecked men are natives of different villages in the island of Kiuisu; their names, ‘Chiojo,’ st. 28; ‘Yusaboroo,’ 25; ‘Cumatoroo,’ 28. They left a port in the island of Amakusa in December, 1834, bound to Nagasaki, but were driven off in a tyfing, lost their mast and rudder, and, after drifting thirty-five days, were cast on shore in a country called Takarobo. Thence the people of that country sent them to Heang-shan-héen, where they met with their three countrymen, whose shipwreck has been detailed above. Now, I, seeing the distressed condition of these men, have brought them back to their country, that they may be restored to their homes, and behold again their aged parents. Respectfully submitting this statement, I request that an officer may be sent on board to receive them—to hear the foreign news—to inspect the register of my vessel—to grant supplies and permission to trade. I also request, that if there be any shipwrecked Americans in your country, they may be given up to me, that I may take them home with me on my return.’ Translation of the 2d paper. ‘America lies to the east of your honourable country, distant two months’ voyage. Its western parts are not yet cleared, but are still inhabited by savage tribes. On its eastern side, where the people are civilised, and from which we come, it is separated from England and Holland by a wide ocean. Hence it appears that America stands alone, and does not border upon any other of the nations known to the Japanese. The population of America is not great, though the country is extensive. Two hundred years ago it was entirely inhabited by savages; but at that time, English, Dutch, and other nations went there, and established colonies. Their descendants increased gradually, and sixty-two years ago they chose their first president, named Washington. That high office is now filled by the eighth president. Within the space of sixty-two years America has been twice invaded, but its people have never attacked other countries, nor possessed themselves of foreign territory. The American vessels sail faster than those of other nations, traversing every sea, and informing themselves of whatever passes in every country. If permitted to have intercourse with Japan, they will communicate always the latest intelligence. The laws of America are just and equitable, and punishment is inflicted only on the guilty. God is worshipped by every man according to

his own conscience, and there is perfect toleration of all religions. We ourselves worship the God of peace, respect our superiors, and live in harmony with one another. Our countrymen have not yet visited your honourable country, but only know that in old times the merchants of all nations were admitted to your harbours. Afterwards, having transgressed the laws, they were restricted or expelled. Now, we, coming for the first time, and not having done wrong, request permission to carry on a friendly intercourse on the ancient footing.’ The list of presents comprised a portrait of Washington, a telescope, a pair of globes, an encyclopædia, a collection of American treaties, an American history, &c. &c., to which the following remark was appended. ‘Languages of nations differ, and perhaps ours, though much more extensively spoken than the Dutch or Portuguese, may not be understood in your honourable country. If so, and at your request, one of my party shall remain in Japan a year to teach our language.’ The list of articles of merchandise on board was closed by a simple request to have free intercourse with the native merchants, so that future cargoes might be made to suit, in all respects, the Japanese taste. Those who are familiar with the accounts given of Japanese ideas, prejudices, &c., will perceive why some points have been touched on in these papers, and others avoided or suppressed. To the above communications there was added a further one of Dr. Parker, respecting the medicines he had brought with him, ‘the wonderful efficacy of which, as well as the singular skill of their employer, could only be known by experience.’

In reply to this ingenious contrivance, the Morrison was next morning bombarded from batteries brought to bear upon it, and obliged to cut and run as quickly as it could. The next attempt was made at Kagasima, further up the coast to the west; but here, also, after a little shuffling with boats and junks, they were again fired at, and the non-intercourse policy enforced in the most offensive and intelligible manner. The author observes—

“I rely, however, in the present case, on considerations drawn from the occasion, and not from theoretic principles. As I regarded the possession of three Japanese, who had been wrecked on the American coast, as an opportunity afforded by Providence of getting into private communication with Japan, so I look upon the injury done to the American flag in the treatment of the Morrison, as an occasion too valuable to be lost for bringing national influence to bear on the point where private effort has failed to make any impression. My view of national remonstrance is, that it is never dishonourable, even when unsuccessful. To submit for a time may sometimes be the duty of a Christian nation; to submit ‘to suffer as an evil-doer,’ by implication with other men’s sins, never. To clear itself from all such debasing connexions, is an object worthy of every nation careful of its Christian honour. On the other hand, the gratification of private or public revenge, the resort to any other than open measures for redress, the punishment of the innocent with or for the guilty, is national degradation; deeper even than cowardly submission. From all these objections, I trust that the following recommendations for the amelioration of our relations with Japan will be found free, and therefore becoming the character, and meriting the approval, of the American executive. I propose, then, that a small naval force (say two sloops and a tender) shall be directed to pass the summer of 1839 on the coasts

of Japan; the commanding officer, or rather the accompanying envoy (for I am afraid of military men) being furnished with the views of the government on the late treatment of the national flag, and with its ultimatum on the point of future intercourse. This ultimatum should embody security for the kind reception of the vessels and seamen of both nations in each other's ports; the admission of an American minister to the court of Yeddo; the necessary exequatur for such consuls as may be appointed to care for our seamen, and some other like provisions. Unless altered circumstances invite, I would not embarrass the first demand for admission to political relations with Japan, by including any stipulations whatever as to commercial intercourse. This may be the subject of after-negotiation, when distrust has given way to confidence. The first approach should be kept above the suspicion of mercenary motive; the first call should be made in the name of humanity. It is true that the right of commercial interchange is well based, on the providential division of earthly productions to different climes, and on its own beneficent results; but mankind is so little agreed on the extent of the right, and so much less on the propriety of enforcing it, that it cannot be placed in the same category with the claims of common humanity. Against this little squadron, it is my belief that no force could be immediately brought, or would be brought at all, even in the harbour of Yeddo; while a tender would find a station for it, secure from the weather. Probably the ultimatum it carried would be rejected at first without much hesitation; but circumstances may exist, which would secure its immediate acceptance. Suppose it accepted; how cheap a conquest, how fine a triumph, would be achieved over the strongest hold of Asiatic exclusion. If rejected, it should be pressed again, along with a free exposition of the injustice of such a policy as respects America, and an exhibition of the defencelessness of Japan, its immense coast line, its exposed capitals, its feudal weaknesses, its entire dependence, in fact, on the very moderation and good-will in our own and other foreign nations; on the denial of which it expels us, as it has so long excluded them. These declarations could scarcely fail to make a salutary impression, though they might come short of securing an immediate choice of the safe, easy, honourable, humane concessions proposed in the ultimatum. But if rejected, pertinaciously and finally, there remains beside an honourable retreat; beyond the discharge of the duty of protest; beside the consciousness of having attempted to subvert the cause of humanity, with which I would rest satisfied, a bolder alternative—a choice of two sets of coercive measures, if indeed it should be that circumstances justify and demand such extremities. The first of these is, and I give it first only because it has often been thought that it would work well, both in Japan and China, to turn back the junks approaching Yeddo with fish from the northern colonies and rice from the western provinces; and thus to convince the Kubo of the truth of that defencelessness, of which words have failed to convince him. There is, however, an objection to this proceeding, to me insuperable; the scarcity which would follow it, must fall on the unoffending multitude, and pride and fulness of bread would still characterise the circle around the court, unless invaded and broken up by a popular insurrection. Now, it cannot be the pleasure of the American people to inflict one pang on the guiltless and friendly million of the Japanese capital; I turn,

therefore, to the less objectionable alternative alluded to, and which, if it do not throw open the ports of the empire at a touch, can hardly fail to produce sufficient impression to warrant, in the extreme case of absolute necessity under consideration, an adoption and trial. This alternative is—the emancipation of the insular dependencies of Japan from Satsuma southward to Formosa. To accomplish this milder alternative, the harbour of Kagoshima, the only point from which a communication is maintained with these islands, need only, in my opinion, be strictly guarded; and the sole link which chains the archipelago to the master country will thus be severed. While this only avenue is commanded, a vessel should proceed to Loochoo, and successively to the smaller islands; declaring them free, relieving them entirely and for ever from the presence of their Japanese masters, and aiding them in their first efforts to discharge the obligations of independence. That it would be so easy to change the condition of this archipelago, is nearly certain; because the Japanese, after disarming these conquered islanders, proceeded next to disarm themselves; by forbidding all foreign commerce, and all deviation from the worst model in the construction of their national vessels."

We need not point public attention to the importance of this exposition; but, before we proceed to voyage the second, give a paragraph to a Loochoo fish, with which we were previously unacquainted:—

"We were boarded on the 16th by some little canoes, hollowed from logs, when fully ten miles from the shore; nor did the poor fishermen in these frail vessels appear to feel any concern at the distance. From one of these boats, we obtained some fish of an oval shape, of one to two pounds in weight and a deep blue colour, spotted all over with white. Sailors call them 'trigger' fish, because their large back fin cannot be pressed backward by a strong effort, but is levelled by the slightest touch on a smaller fin, planted a little below it."

The voyage of the Himmaleh was not more productive of results, and it seems to be as difficult to get into a little friendly correspondence with the Malayan Archipelago as with Japan itself. The writer pursued his inquiries into natural history, and botany in particular, with much assiduity; but we cannot detect much to detach for the information of our readers; nor do the missionary exertions appear to have been attended by any marked success. Singapore, Macassar, Ternate, Mindanao, and Borneo, were severally visited, and in the latter a very extensive coal-field discovered near the capital, which may, in future years, be of much consequence to the steam navigation of these seas. The government is most despotic; but the following is a curious account of its construction:—

"In all Malay governments there are certain persons called mantri, or privy counsellors, many of whom, if not all, are so constituted by special appointment. These are certain grave and reverend bodies, who visit the palace towards the decline of day, and sit down before the sultan in a thoughtful posture, as if they were musing deeply upon some important question of state. Let us take a sample, to shew us how far we may be warranted sometimes in drawing conclusions from appearances only. We may conceive that the subject of one day's consideration is propounded in the following terms: 'My lords, I went betimes this morning into the recess at the back of my throne, which is occupied by the white men, where I saw this charming piece of printed

cotton as it was suspended by a cord; I forthwith asked whose it was, whereupon the doctor said, 'It belongs to my lord, the sultan.' I then demanded, 'Who gave it to him?' 'The captain gave it to him,' was the reply.' 'No question, of course, arose out of this,' which might rob any counsellor of a night's rest; still every one was bound to regard it as a circumstance highly curious and interesting. And, to tell the truth, it had more interest than, perhaps, the reader was prepared to expect; for he had paid a certain sum of dollars in purchase of the self-same piece of cloth the last thing he did before he retired to rest, which was two or three hours after midnight; a fact which he suppressed for the sake of telling a story; as he had a memory too retentive to forget a matter that so nearly concerned his own interest. The freaks of a man, however, who had done his best to abuse the good gifts of a natural understanding, were chiefly confined to the palace; for the minister had put a hook in his nose, and so kept him from doing the mischief abroad which his folly or his avarice might prompt him to. A levee was an amusing sight; on one hand you might see the minister, in person a small man, sitting with a demure countenance at a most respectful distance, and now and then uttering some expressions in a subdued and plaintive strain. On the other, the sultan, with a proud stare mingled with a wild anxiety, who felt these soft words to be severe strictures upon his behaviour, coming, too, from a man who expected that they should not only be felt, but be considered as cautions for regulating his conduct in future. He resembled an animal with one foot in a trap, who would fain change his uneasy position with no less cost than the loss of a limb. The minister, to whom we have referred more than once, is the chief executive officer in the state. The distinction between him and the sultan was very concisely made by a brother of the latter in conversation with myself and fellow-traveller one evening. 'The one speaks and the other acts.' The entire control and management of all public matters are placed in the hands of the latter, who, from the advantage of such a situation when a man of talent, like Muda Hasim, can enact his own pleasure, and so leave the sultan a mere pompous trifle, surrounded, indeed, with the habiliments of war and majesty, but destitute of any real power or authority. We see a large hall of assembly, a throne, and a large gong, with a hide stretched over the end of a hollow tree, which hangs in a shed at the end of a long jetty, that its deep tone may not be broken by conflicting echoes. His liege subjects are at times summoned by the sound of this instrument, in conformity with the Malayan custom; when we may suppose him seated upon his throne, in the midst of his guards, while every thing is done to impress them with a sense of his royal magnificence. At other times his counsellors sit at his feet; the chiefs pay frequent visits of respect, and the orang kaya, or great men of the realm, who live at a distance, wait upon him from time to time. But, in the midst of much real respect for his person and office, and a thousand usages of ceremony observed with the most scrupulous attention, he seems to be only free to do evil; he can harass any part of his people, or put a chief to death, because his own person is sacred; but for any benefit that he might wish to confer upon the general welfare, he is solely dependent upon the wisdom and integrity of his minister. Such, if we reason truly, is a kingly denomination: without a free constitution

and a virtuous community, it may do as much mischief as it pleases, but to do good it hath no might. As the boat proceeded but slowly, we did not reach the residence of this man till midnight, as was intimated above; here we found a great number assembled, partly to welcome us, and partly to gratify their curiosity. As the interpreter had been a great favourite, the room, which good manners oblige us to style a hall, was filled with a most joyous uproar, and accents of cordial greeting saluted his ear from every side. After we had waited long enough to compose our thoughts and reckon up all the particulars of our errand, Muda Hasim stepped forth, and with an easy air shook hands with his guests, and then presented each of them with a cigar of about a foot in length. This little ceremony being over, he sat down before us, and then looked round with a studied but pleasant smile. At the first sight of him the uproar instantly subsided; without hurry or bustle in taking their places, every native sank down upon the floor with that noiseless ease and address which are the result of early habit; nor was the remnant of a smile left upon a single visage in the company. One could perceive in him a certain consciousness of his rank and mental superiority, which he exhibited as much, perhaps, to honour his guests as to exalt himself. The peaceful state of things at Borneo, when we saw it, was due to the merits of this man, which, when we consider them in reference to what we see in the rest of his countrymen, seem to be of no ordinary kind. The order of his household, and the character of the persons about him, afforded a great contrast to what we saw at the palace of the sultan. In one we have a motley group of ill-favoured eyecophants, whose business it is to execute the dirty errands of their master, and to abet him in all his knavish practices; in the other we have men of a respectable bearing, and, whatever may be some of their moral delinquencies, they appear to understand that it is their duty to perform the biddings of a spirited and enterprising chief, and not merely to wait upon his vices. He is anxious to introduce improvements among the people, and takes the surest way to accomplish his wishes by setting the example in his own establishment. The work will, of course, advance but slowly at first, for want of models, instruction, various kinds of stuff, and different utensils, and withal, that encouragement which an experienced and liberal-minded foreigner could give them. He, and several leading persons besides, are willing to learn, and would gladly listen to any hints that would assist them in the construction of useful articles. This I think I may affirm with a considerable degree of certainty, and should rejoice to see the experiment fairly tried, as there is little doubt in my mind about its successful issue. His thoughts are not confined to mechanical undertakings, they extend to the general concerns of his subjects; he wants to put matters upon some durable footing, so that his son, a very interesting youth, and the chief joy of his father, may find his seat easy and secure when his kind protector is no more. He was meditating a visit to all the neighbouring places upon the coast which acknowledge the supremacy of Borneo, in order to bind them to that state by leagues of confederacy and exchanges of mutual confidence."

From the court we descend to an assemblage of another kind, and conclude with a description of Borneo bats:—

"The bats are of the same kind as that curious one which I found in Beechey's expedition at the Bonin Islands. They live in

society about one spot, where two or three tamarind-trees afford them a lodging. From these they hang in crowds, rank and file, uttering a loud noise in concert. Their colour is black with a mixture of gray, and at a certain age with a brown patch upon the nape of the neck. Their head is shaped like that of a dog, with spiral nostrils, and an eye and mien that bespeak compassion. When first caught, they endeavoured to bite, but they soon exchange their fierceness for a temper of meekness and resignation. A single shot brought several to the ground, and among them a mother and her young one. She was wounded, but not mortally, while the young one lodged under her wing, and seemed as if doubled up in a fold of it. Though they are sightless creatures by day, yet scent directed it in the choice of its mother, to whose breast it continued to hang long after her death. This was a pitiful sight, but pity does not form any item in the composition of either a sportsman or a naturalist. I put one alive into a bottle of spirits, but did not attempt to skin any, as having no place proper for keeping such things. The pupil did not shut up like the individual of Bonin, nor did it contract on holding any object near the eye, but light seems to render them either quite blind, or so dim-sighted that they cannot discriminate objects that are near them; for when a stick was brandished near the eye, the animal did not attempt to elude the threatened blow, though it made every effort to escape when laid hold of. I suppose their food is principally tamarinds, though I made no inquiries respecting this point. They pour forth at eventide in great numbers, and resemble a crow upon the wing, both in motion and size; the tongue is thick and long, and thus well fitted for extracting the juices of fruit."

Odious Comparisons; or, the Cosmopolite in England. By J. Richard Best, Esq. author of "Transalpine Memoirs," "Satires," "Rondeaux," &c. 2 vols. 12mo. London, 1839. Saunders and Otley.

AMONG his other cosmopolitan qualities, our author is a zealous Roman Catholic and advocate for the ballot-box. He, however, professes as follows:—

"I do not pretend to justify opinions resulting from the superficial glance of a stranger; and if I take upon myself to praise or to blame, it is in the character of one unacquainted with the origin and object of the custom to which he alludes. I do nothing but compare; and, like the lord mayor in his judgment-seat, I wish to be, to each country and on every subject which I mention, 'neither partial nor impartial.'"

Having spent much of his life in Italy and France, he revisits his native England with peculiar ideas; and fancying that he sees our manners differently from either a native or a foreigner, he has here given to the world the fruits of his observations. From these it will be quite sufficient for us to select a few of the most readable specimens; there being some (see p. 196, vol. i.) which would not bear extract, and serve only to shew how strong a hold continental habits had laid upon our absentee countryman. *Inter alia*, he speaks well of the wines of Auvergne, and tells us—"Both in the home and in the foreign market, depth of colour is what is most demanded. Great quantities are sent to Paris to be mixed with other wines, to which they give an undue appearance of strength and consistency: and when an Auvergnat peasant purchases wine, in order to judge of its merits, he dips his finger into the liquid and drops it on the fronting of his shirt;

according to the depth or paleness of the stain that remains on the linen, he then decides on the good or bad qualities of the wine! What would poor Sancho have said to this? When the landed proprietors of a province have gathered in and disposed of this, the last harvest, their business, as country gentlemen, is ended, and they resort to the *chef lieu*—the capital of their department. The more opulent endeavour to repair to Paris every winter, or every two winters [second winter?], according to the state of their finances; for, now that they have lost their feudal power, their country can present few attractions, and Paris is daily becoming the place of resort of all those who can afford to meet the expenses of the capital."

Drinking wine at an opulent, but evidently, from the dishes and manners, a vulgar, house in London, he says:—

"These wines were declared to be excellent and unadulterated: and I am well assured that Mr. — would set none but such as are considered the best on his table. Yet my palate—accustomed to taste the produce of the vine in its native countries—now sought in vain for the flavour of the grape; that of brandy, or some such drug, for brandy itself is too dear an article with which to adulterate another—alone predominated. When the duty on wines is so great as to make the slightest adulteration a source of gain to all those through whose hands they pass, this must be expected to be the case. The tax, indeed, has been diminished, and probably the quality of the wine is better for the change. At all events, an effort has been made towards abolishing these deceptive, unjust, interested systems, which lead nations to deprive themselves of the enjoyment of the produce of the whole globe, merely because that globe happens to be divided by a strip of water or a fictitious demarcation. The wines of the greater part of France could be more easily conveyed to London than to Paris. When I was leaving Clermont, a friend, the proprietor of extensive vineyards, offered, at the rate of two-pence a-bottle, to ship a cargo of his wines and send them by the small stream of the Allier to the mouth of the Loire, where they might have been embarked for England. Would the English custom-house be content with an *ad valorem* duty, even of cent per cent, I might now be drinking my friend's wine from the very centre of France, and should have that wine as cheap as I can here purchase the 'barley broth' of the country."

We must, however, give the dinner, to exhibit its vulgarity:—

"The repast began with a soup, the whole flavour of which was derived from the pepper with which it abounded: this seems to be the usual and only English method of seasoning a dish. As at Dover, we had helped ourselves to pieces of heavy bread, cut into small notches and carried round in a tray. Is the English climate unable to ripen your wheat, or is it solely to adulteration that we must attribute the heaviness and universal badness of your bread? This, however, sufficiently accounts for the comparatively little quantity eaten by my countrymen. The soup was removed, and four dishes with covers—as in France—were set on the table. The mistress of the house informed us what was under each cover, and what would follow in the second course. In France, the lady of the house would have known nothing of the matter. According to the custom of the country, we first partook of the fried fish placed at the head of the table: in France and Italy, the master and mistress of the house are seated at the opposite sides of

the table, whence they are able to pay more general attention to the whole of their guests. The servant brought round the stand of sauces: in France, it would have been taken for a *plateau d'liqueurs*: and, following the example of the others, I helped myself from one or two phials; mixing the contents with the melted butter and anchovy sauce contained in a separate vase. Another servant then handed round a deep octangular dish; at one end of which were potatoes, at the other cauliflowers: to me, this mixture of two vegetables on the same dish appeared far from inviting. Each helped himself to some of each sort, and then taking his silver fork—for each was provided with both steel and silver, the steel instrument being, it seems, destined for the meat—we at length tasted this long-preparing fish! The sauce mixture was very good; but a deal of time and trouble would have been saved had it been cooked up in the kitchen, and served on the same dish as the fish. I could not eat without bread; and yet found it difficult to manage at the same time the fish, sauces, potatoes, cauliflower, and bread, amongst which my appetite lost itself. [No wonder, with such a mixture!!!] However, in this *embarras des richesses*, I got on as well as I could; wishing to conform as much as possible to the customs of those amongst whom I was thrown. In the midst of the difficulty of distinguishing amongst the many and various articles which then covered my plate, the master of the house invited me to 'take a glass of wine with him.'

'Though I scarce understood
What he wished me to do, I said, Thank him, I would.'

The butler brought me a couple of glasses of white wine, and, following the movements of my adversary—for I had no will of my own, and, in true simplicity of heart, might have been led to do any thing under the idea that it was English—I put on a grave look, and then, with a dismal, solemn, and important mien, returned the nod of my friend. The servants carried off the glasses as soon as empty. Having recovered from this interruption, all proceeded well again. A couple of dishes were uncovered; one contained a joint of roast mutton, the other a plain boiled fowl; for curiosity sake, I desired to taste the latter. I was helped to a wing, and a servant offered me melted butter with parsley: this I thought as odd a sauce as the dish for which it was intended. The bird had no flavour; that, of course, had been boiled away; and the butter was little able to replace it. I refused to join to this insipid meat, potatoes and boiled cauliflowers equally insipid; and I thought with a sigh of the cookery of *Very's* and the *Café de Paris*.

From the feast and the bottle we get to the newspapers:—

"My arms (says our cosmopolite) were at full stretch, endeavouring to manage a morning paper—so much larger than our foreign journals. Yet those I have met with in England do not seem to contain more readable matter. Two sides of the sheet I was now trying to wield were exclusively devoted to advertisements, which, though they may prove profitable to the editor, have little interest for most readers. After a small portion of an English newspaper has been given up to one leading article on the most interesting subject of the day, and to one short extract from a French journal, which is sufficient to satisfy those interested in foreign news and politics,—the rest of this enormous extent of paper seems to be generally devoted to reporting the movements of great person-

ages; the proceedings at county or party meetings; a long list of births, marriages, and deaths; dreadful accidents; shocking murders; coroners' inquests; curious occurrences; the state of the weather; the particularly early appearance of different vegetables; the exact dimensions of wonderfully large potatoes; and other articles equally interesting: although to my mind they appeared insulting to the judgment of a British public. Nevertheless, they are certainly as harmless, and, perhaps, as useful, as the violent, coarse, and ungentelemanly political squabbles which, I admit, swell the unrestrained columns of a French newspaper. I once lighted upon a journal entitled 'Lloyd's List': the existence of such a paper as this speaks volumes, of which an Englishman, nay, the whole world, may be justly proud. How must not the admiration of the most classical enthusiast be diminished by a single glance over these modern mercantile pages!"

His opinion of our fine arts is a startling one, and the last that will obtain subscription amongst us.

"Of landscape painting (he boldly states), I must venture to say that my countrymen, at least the generality of those who have exposed their works, have not the most distant idea: their attempts to render the foliage of trees are, for the greater part, most completely unsuccessful, and shew an apparently insurmountable stiffness of manipulation. They do not attempt to mark the leaves of their trees, however near; but lay on dabs of yellow or green paint which they seem too idle to subdivide or to restrict to any outline. I was surprised to find them equally at a loss to represent clouds; in that department, I should have anticipated a different result."

Of the portraiture in the Exhibition, he observes:—

"In this collection, I was not only surprised at the number of portraits painted, but, still more so, at the number of those exposed to view. That a private gentleman, or his wife, or his daughter, should display their harsh, honest, homely, or blooming and coquettish, features to public gaze, appears to me directly contrary to the boasted English modesty. The good of the artist is pretended as the object in view; a charitable intention which might, perhaps, excuse the favourite exhibition of a richly embroidered military coat; but cannot justify the public appearance of a young and beautiful maid or wife, displayed in all the seducing and conceited attitudes of archness or amiability. In France and Italy, I have seen nothing so indelicate as the fashionable exhibitions of Somerset House."

Jam satis; but for a bousing anecdote from an election treat to finish withal:—

"As I was leaving it my attention was, however, arrested by seeing several persons endeavouring to remove from the floor a jolly-looking, round-about man, who lay half-asleep under a table. He had, they said, drank an unusual quantity of wine, even for him; and had, at last, succumbed. As they raised him up, he half opened his drunken eyes; and, with a cunning leer, hiccuped out 'Hallo! you must not move me without a permit.' Roars of laughter followed this speech, which, I presume, contained some hidden wit, which I am too much of a foreigner to understand."

"* This seems a joke good enough to call forth a note stating the meaning to be that a *dozet* of wine could not then be moved without a permit.—*Pyrrhus's devil*."

Democracy in Modern Communities. Translated from the French of M. Guizot. 8vo. pp. 50. London, 1838. C. and H. Senior. At this moment, with such a ministerial and political struggle at issue in France, the opinions of a person in the position of M. Guizot are worthy of more than ordinary attention. We, therefore, transcribe two of the most prominent passages from this pamphlet.

"That the state should live according to the example of the church; that the state should think, speak, and act in conformity with the church; that the people of the state should be as one with the people of the church; are the principles which the Christian church has advocated and acted upon without intermission; such (and let no believer be offended at my words, for they are full of respect), such was her Utopia. It was an Utopia of the sixteenth no less than of the eleventh century. Knox maintained it in the presence of Mary Stuart, as did Gregory VII. in that of the Emperor Henry. It was an Utopia whose most efficacious weapon was the extension and the application of those principles, full of power and attraction, upon which, in its separate existence, the religious community was based—of the fraternity of believers in Jesus Christ, and the equality of all men before God; that is to say, the principles most favourable to the increase and acceleration of the democratic movement, already so far spread and so active among the civil community. A day arrived when the church beheld with anxiety the tendency of this movement; and, as in her profound knowledge of the opposite wants of man, she professed those principles which elevate his hopes, in conjunction with those which restrain his passions, she sought, in her lofty hierarchy, in her powerful moral discipline, in her respect for established order, in her views upon the origin and nature of power, for the means of curbing within bounds that movement which she had seconded. She now became the ally of the few against the pretensions of the many, as, upon a former occasion, she had been the protectress of the people against the oppression of the great. But the movement continued; democracy was ever making further advances. The church herself, however, did not abandon those maxims which had contributed to her gradual elevation. There existed at the bottom of the moral which Massillon preached to the great ones of the earth, a policy very different from that by which Bossuet sought to restrain the ambition of the multitude. And moreover, at the same moment, when the church beat a retreat and furlled the standard of her Utopia, another power advanced and took possession of this standard.* Reason declared herself heiress of the faith; philosophy undertook to follow up the work of religion. * * * At present, thanks to the triumph of the good cause, and to God, who permitted that triumph, positions and interests are changed. There is no longer a war to be waged between the lower and upper ranks; there is no longer occasion to raise up the standard of the many against the few. No obstacle now exists to prevent either individuals or the multitude from improving their condition, except, indeed, those obstacles which are natural and inherent to the condition of humanity, such as God has ordained it; a state of perpetual labour, frequently difficult, and tedious to be borne. God has destined man to exertion, and exertion itself does not always receive its reward on earth. No longer, therefore, is there legitimate cause, no longer colourable pretext for adhering to the maxims, pretensions, and passions so long ranged together under the banner of democracy. What

was formerly democracy would now be anarchy; the democratic spirit is now, and will long continue, nothing but the spirit of revolution. Not but that society still comprises, and must of necessity comprise, high and low, rich and poor; not but that much remains to be accomplished, far more than the most ambitious dream of, for the moral and material condition of the multitude. But the reciprocal position of high and low, rich and poor, is at present regulated according to the dictates of justice and liberality. Each possesses his rights, his position, and his prospects, well defined. And with regard to future progress, the field is open before us; a wide field, indeed, already conquered, and which it will be the work of ages to occupy regularly with order and peace. The dominant and urgent, the moral and material necessities of society, at the present day, consist in construction and organisation; for it is deficient in both. Ideas, ambition, habits, social relations, and internal dispositions, all require regulation and extension among us. And the old democratic systems must, above all, prove fatal to us, inasmuch as they tend to retard the progress of general improvement. We should thus creep along in the revolutionary track, instead of ameliorating and advancing our condition. We all fear the recurrence of the past: let modern democracy strive to bury in oblivion the recollections connected with its former existence; let it occupy the high position it has conquered for itself; then only will it satisfy the present, and be able to look forward to the future in security."

MISCELLANEOUS.

Stanley; or, the Infidel Reclaimed, and other Poems. By James C. Fyler, Esq. M.A. 12mo. pp. 87. London, 1838. Rivingtons. STANLEY is founded on one of Mr. Roby's "Traditions of Lancashire," which Mr. Fyler has rendered into smooth verse. Like the rest of the compositions in this little volume, it is of a highly moral and pious tendency. See *Lit. Gaz.* No. 1156. As a specimen, we copy another of the minor pieces:—

"On Friendship.

Say, would you know pure Friendship's pow'r?
Learn it from yonder broken tower,
To which the flow'ret fondly clings,
And verdure round a covering flings;
Not Time's rude hand, nor angry storm,
That lovely ruin can deform.
Thus o'er distress and human woes,
Friendship her hallow'd mantle throws,
Her smiles the wreck of age repair,
Smoothing the rugged brow of care;
She cannot stay life's parting breath,
But brightens e'en the gloom of death."

Sermons preached in St. George's Chapel, Albemarle Street: to which is added, an Essay on the Prophecies relative to Christ. By the Rev. W. Webb Ellis, M.A. Minister of the Chapel. 8vo. pp. 328. London, 1839. Rivingtons; Hatchard.

FORTUNATE is the chapel to have such a minister. The Essay is clear and most judicious: the sermons, sixteen in number, eloquent and convincing. Were divinity a subject to which it was consistent with its plan to devote the *Literary Gazette*, we should go at length into Mr. Ellis's great merits as a preacher. Suffice it earnestly to recommend his volume for private perusal and family reading.

The Life of Edward Gibbon, with Selections from his Correspondence and Illustrations. By the Rev. H. H. Milman. 8vo. London, 1839. Murray.

THE eleventh volume and conclusion of this work, upon which we have offered the few observations that seemed requisite as the preced-

ing ten volumes successively appeared. The portrait of the historian, after Reynolds, is prefixed.

Modern Art, and Living Artists. 12mo. pp. 108. Glasgow, 1839. Symington and Co.

A PRETTY little volume of gossip on art and artists. If it does not contain much that is new, it tells in a very lively style that which is known already. As an instance, we subjoin the description of the artists who preceded Michael Angelo and Raffaele:—

"Painters there were in the thirteenth century, but their works resembled more the figures on a china bowl, or the hieroglyphic designs of an Egyptian temple. Harshness and angularity were their characteristics, with a total ignorance of the harmonies of colour, and the greatest disdain of any thing approaching to perspective; so that in a martyrdom your alarm is excited not so much for the culprit from the sword of the executioner, as for the governor of the city, who is intended to be full a quarter of a mile off; and it is no uncommon occurrence to see a distant church apparently astride on the back of a saint in the foreground, evidently without his permission or invitation."

In some of the author's dicta we cannot concur. For example, we differ from him in his depreciation of Opie and Northcote. The comparative merits of living artists is too delicate a subject for our handling; but we cannot refrain from quoting "the wicked witicism, that if Turner were engaged to portray a blackbird, he would make it a canary before he had done with it." Mr. Turner has genius enough to laugh at a thousand such jokes.

Bentley's Standard Novels, LXXIII.: The Bitouao; or, Stories of the Peninsular War. By the Author of "Stories of Waterloo." London, 1839. Bentley.

EVER lively and interesting, the lovers of these qualities must rejoice to find so characteristic a work of this author in a single volume, and in such excellent company. The frontispiece and vignette, by Brooke, are extremely spirited.

The Physiology or Mechanism of Blushing, &c. By Dr. T. H. Burgess. 8vo. pp. 202. London. J. Churchill.

WHEN that sweet girl, to whom you are popping the question, turns scarlet from as low on her neck as you can see to the height of her forehead, she knows nothing of the manner in which you affect her dermoid process and rete mucosum, or how her own and her capillary attractions are mingled with your declarations of eternal love! But if she wishes to know all this and more, let her read Dr. Burgess, from whom she will learn that "*blushing is the poetry of the soul*," and be taught the way in which it is visibly written upon a great variety of events, occasions, ideas, reminiscences, and expectations. But, to speak seriously, this is a curious treatise, and contains much valuable matter on the subject, as regards its natural history, anatomy, and mechanism."

The Barber of Paris; or, Moral Retribution. By Paul de Kock. 3 vols. post 8vo. London, 1839. Whittaker and Co.

THE writings of Paul de Kock are so well known and so popular in the originals, that it is barely worth while to translate them. The present work is so indifferently done, that we shall dismiss it without extract. Should the translator again try his fortune, we would recommend him to render some of the French ideas in a manner more in accordance with

English feelings; this would be no difficult task, and would avoid many indelicacies.

History of the Great Reformation of the Sixteenth Century in Germany, Switzerland, &c. By J. H. Merle d'Aubigné, President of the Theological School of Geneva, &c. 8vo. Vol. II. pp. 520. London, 1839. Walthers.

THE period is auspicious to this publication, at all times an important one, for the renewal and increase of controversy between the Romish and Protestant churches, and the marked division which has recently sprung up in the very centre of the latter, have given singular interest to any account of the reformation, and especially to one so detailed as this is. Here the reader will find the opinions, doctrines, correspondence, and proceedings of the earliest reformers; and from these he may form a better judgment on most of the points which so deeply occupy the public mind, and are indeed so fruitful of coming events. It is, however, one of those works, the merits of which it is not within our province to discuss; and we can only recommend it for the information it contains.

The Philosophy of Artificial and Compulsory Drinking Usages in Great Britain and Ireland, &c. &c. By John Dunlop, Esq. President of the General Temperance Union of Scotland. 12mo. pp. 331. London, 1839. Houlston and Stoneman.

To promote the purposes of the Temperance Societies, Mr. Dunlop details the various provocations to drinking, particularly by the customs in trades, shops, &c. &c., and, animadverting upon what he considers to be their deteriorating and immoral effects, earnestly recommends abstinence from the use of spirituous liquors and other libations.

Dr. Buckland's Inquiry concerning Death: a Sermon. Pp. 81. J. Murray.

IN this discourse, preached at Christ's Church before the University of Oxford, Dr. Buckland endeavours to reconcile the previous existence and destruction of whole classes of animals with the texts of Scripture which declare that death came into the world with the fall of man. It is a question far more easily raised than settled. *English Stories of the Olden Time.* By Maria Hack. 2 vols. London, 1839. Harvey and Darton, Gracechurch Street.

HAVING ourselves carefully read over the two volumes before us, we can honestly and warmly recommend them. The stories are of English history, not only of kings and queens, in the order of their succession—as is frequently the case with abridgments intended for the young—but embracing principal events, and persons whom fortune or favour made of far more importance in the history of the times than monarchs were. The explanations of names (as, Plantagenet—Planta-Gemista) are simple and comprehensive, and the references excellent. We highly commend the plan, as calculated to interest as well as greatly benefit the youthful reader.

ORIGINAL CORRESPONDENCE.

EXPERIMENTS WITH WOURALI POISON.

ABOUT a fortnight since we had a distressing case of hydrophobia in Nottingham, and Mr. Waterton (the celebrated wanderer in South America) was requested to attend, for the purpose of testing the wourali poison. He very promptly and kindly quitted his seat at Walsom Hall, near Wakefield, and came to Nottingham; but, unhappily, existence terminated before his arrival here. The faculty, however, expressing a wish to witness experiments made with the poison, Mr. Waterton readily consented to

* At pages 77, 28, American and Armenian make a puzzling misprint.

instruct them; and Monday morning a large room in St. James's Street having been selected for the purpose, it was soon crowded by anxious members of the profession. After eight o'clock a dog was brought in; and an incision having been made near its neck, the head of an Indian arrow was inserted and confined in the incised wound. The animal appeared fresh and lively, apparently experiencing no inconvenience for half an hour; but at the expiration of that time convulsive and spasmodic twitchings were evident, and continued to increase for several minutes. The pupils of the eyes became dilated, the pulse was very irregular, the animal struggled convulsively, and in three-quarters of an hour from the insertion of the poison the animal was dead. The body was almost immediately opened. The head was found to be full of blood, and on being pricked with the point of a scalpel, did not shew the slightest irritability. A female ass, eight years old, was next brought in; and before operation the action of the heart was regular, and the pulse at sixty-two. An incision was made on the right shoulder, and at six minutes past nine an arrow-head strongly poisoned was inserted in the wound. For nearly a quarter of an hour the pulse remained the same; but at twenty minutes past nine the pulse rose to seventy-two, and became irregular, with spasmodic twitching and distress, the respirations being fourteen in a minute. Soon after the pupils of the eyes became dilated. At thirty-six minutes past nine the pulse rose to eighty-four; there was great uneasiness, and the animal fell down, struggled for a short time, and at forty-one minutes past nine animation was entirely suspended, the respiration was gone, and pulsation wholly imperceptible. The ass was laid upon a table, the trachea was opened, and a tube, attached to a double pair of bellows, inserted for the purposes of artificial respiration. For nearly an hour the process was carried on without any sensible effect, but at the expiration of that time the heart resumed its action, and the pulse continued to fluctuate between fifty-six and ninety. This was the only symptom—not a single muscular motion was visible; the creature lay as if irrecoverably dead, with a thick film over the eyes. The process was continued for five hours without intermission, and then a slight twitching was perceptible in the fore-leg. Injections were administered, and some counter-poison applied, and at the end of about five hours and a half the bowels resumed their action; but still no sensible movement in the animal. In about six hours and a half from the commencement there were evidences of an attempt at natural respiration, and in another hour the artificial respiration ceased as the lungs were in very fair play, and the animal breathed pretty freely. Still it was considered in a very precarious state, and but few expected that it would live till morning. However, it was laid on straw before a large fire, and horns of gruel given at intervals during the night. The next morning about nine o'clock it was raised on its belly, and, to the surprise of every one, consumed a tolerably fair warm mash. Thus it continued through the day, much debilitated, and one of its legs (the left) being paralysed, it could not stand. On Wednesday morning it was recovering, but still unable to stand.

As various applications had been used to the ass, such as strychnine, turpentine, ammonia, injections, &c., it was determined to renew the experiment on another ass, leaving it to artificial respiration alone. Accordingly, on Tues-

day morning, a male ass, about six years old, was brought in, and exactly at eight o'clock the trachea was first opened. The action of the heart previously was thirty-six, the animal vigorous and playful. At six minutes past eight the arrow-head (with scarcely one-quarter of the quantity of poison inserted on the ass the day before) was introduced into an incised wound on the right shoulder, and in ten minutes the pulse rose to sixty-six, the creature perfectly quiet, without any symptoms of distress. At thirty minutes past eight the pulse was at sixty-two, and the pupil of the eye dilated; but the ass ate of some oats that were offered it, and continued eating. At thirty-eight minutes past eight spasmodic twitchings were evident near the abdomen, the animal gave indications of restlessness, and at forty minutes past eight fell on the floor, where it was allowed to remain, some loose straw having been shook down for the purpose. The respiration became quicker, convulsive, and difficult, the animal gave occasional struggles in trying to rise, but the heart was regular. At forty-nine minutes past eight the respiration was extremely difficult, with strong spasms, but the vision perfect. At nine o'clock there was a quivering of the muscles, but the action of the heart strong and irregular. At seven minutes past nine respiration entirely ceased, but the heart was energetic. The artificial respiration was commenced and kept up at an average of sixteen or eighteen per minute. At twenty minutes past nine the pulsation was imperceptible, except in the action of the heart, which was feeble. At thirty-six minutes past nine the extremities became cold, but the limbs were not rigid. At forty-five minutes past nine the action of the heart was quick but feeble, with an occasional convulsive motion of the tongue and eyebrows. At ten o'clock the nostrils manifested returning natural respiration, the heart's action irregular, but not powerful. At twenty-five minutes past ten natural respiration was restored, but irregular and hurried. At forty-one minutes past ten the artificial respiration was discontinued, the natural respirations being thirty-eight, which, in a few minutes, increased to fifty-six, the breath warm. At five minutes past eleven the pulsations of the heart were seventy-nine, quick and laborious, with sudden starting at any noise. At seventeen minutes past eleven the pulsations of the heart were sixty, and very feeble, barely perceptible in the arteries, and impossible to count. Water and gruel were occasionally given, which he licked in with his tongue, but evidently producing great agitation. At forty minutes past eleven the respiration was fifty-six, the pulse about sixty-five, and feeble. At twelve o'clock there were symptoms of sucking, but some hay being offered, it tried to eat. From half-past twelve to half-past one, mucus, sometimes tinged with blood, was forced through the tube from the trachea. At forty-seven minutes past one the pulse was at sixty, and a straw having got into the tube, irritated the trachea, and caused the animal, solely by his own exertions, to rise on his legs. He breathed more freely, discharged a considerable quantity of mucus, and walked about with a considerable degree of strength. The tube from the trachea was removed, some water was given him in a bucket, of which he drank freely. The animal continued gradually to recover; and at thirty-seven minutes past two the bowels were acted upon freely. At half-past four he ate some warm bran-mash and some hay; the wound in the trachea closed, and was done up by a veterinary sur-

geon, and the animal is now (Wednesday afternoon) perfectly restored and quite frisky, eating with freedom, and sporting about the room. Too much praise cannot be given to Mr. Sibson, the resident surgeon at the General Infirmary, for the indefatigable exertions he used, having superintended the operations on both occasions; and at each, throughout the long process, attended to the tube by which artificial respiration was kept up. The room was excessively and stiflingly crowded on Monday, but on Tuesday better arrangements were made, and the whole was admirably conducted.

ARTS AND SCIENCES.

SOCIETY OF ARTS.

MR. QUICKET, 'On the Structure of Wood.' It is quite obvious that little or nothing new can be said on such a subject; yet it was made very interesting by a judicious condensation of facts, reference to exquisitely finished drawings and diagrams, and, finally, by the wonder-working agency of the oxy-hydrogen microscope, under the careful and experienced handling of Mr. Ross. The lecturer described nearly every species of wood known amongst us, from the iron wood of Demerara, so hard as to defy the tool of the workman, down to the softest, which crumbles between the finger and thumb, observing, that hardness, or softness, or colour, is so vague, that botanists are obliged to have recourse to microscopic tests for the purpose of ascertaining the true characteristics of specimens. The tissues—cellular, vascular, and ligneous—were then described. Some of these fibres are marvellously minute; pine-apple fibre, for instance, is only $\frac{1}{1000}$ of an inch in diameter. The curious and interesting appearance of the medullary ray, by which *cleavage*, to borrow a term, is effected, was next explained: then the simple, though exquisitely delicate, manufacture of rice-paper by the Chinese—a process exactly like that adopted by our own cork-cutters: next followed a few observations on the compression of wood, so wonderful in its effects, that boats employed in the whale-fishery, sometimes dragged by a wounded fish into the deeps, come up perfectly useless, and remain so, by the concussion and pressure of the waters, for a considerable time. These, and two or three other points, were explained with much skill. Many specimens of wood were submitted to the action of the oxy-hydrogen microscope. Amongst them were the sandalwood; the satinwood; rosewood; oak; mahogany, in most of its varieties; and, lastly, the creeping bramble and the angry nettle; the magnified sections of the latter two surpassed all the others in symmetrical beauty. The lecture and experiments gave much satisfaction. In the museum were many rare specimens of fossil wood, and a variety of pretty photogenic drawings.

ROYAL GEOGRAPHICAL SOCIETY.

APRIL 8. Mr. W. R. Hamilton, President, in the chair.—Extracts from the following papers were read:—1. 'From a letter from Major Rawlinson, dated Rûddar, in Persia, December 5, 1838.' "During the last month," says the writer, "I have been engaged on a very interesting tour through Persian Kurdistan, the result of which has been, that I have satisfactorily determined the very intricate and little understood questions of the Ecbatana of Deioces, Gaza Phraata, and all collateral matters regarding the comparative geography of Media Atropatene; which, if possessing less general interest, will, at any rate, I think, be found equally novel with my attempt to dis-

tingulah the two cities of Sûs and Sésan — the retreat of Mark Antony and the campaigns of Heraclius impart at the same time a classic interest to the field of my recent researches."—

2. Mr. Charles Fellows gave an account of his 'Travels in Asia Minor in the spring of 1838.' "As the former part of my route," said Mr. Fellows, "has often been described, I shall merely trace the line of road. Quitting Constantinople, on the 17th of March, I travelled in a general S.S.E. direction to Nicosa, a distance of about 46 miles. There seems to me reason, from the marked difference in the natural features in the ancient architecture, as well as the implements and customs of the present inhabitants, to retain the ancient divisions of this country. Bithynia in its features is bold, and its extended mountain range of Olympus resembles Switzerland, its valleys are rich and luxuriantly wooded; I know no scenery surpassing in rich soft beauty that around the lake of Ascania, at the southern end of which, stands the ancient Nicosa. The characteristic feature in the scenery of Mysia, is the distinct division of hill and valley, scarcely a stone or undulation being found in the valleys which are bounded by abrupt mountain ranges. This great flatness gives an idea of their having been formerly lakes; the soil is extremely productive in corn, cotton, and tobacco. Rising from the back of the town of Nicosa to the S.S.E. I traversed ranges of mountains, each higher than the preceding, crossing a considerable river; and again another, the ancient Gallus, which, a little below the town of Lefké, the ancient Leuca, unite and run in a north-easterly direction toward the Sangarius; continuing through forest and mountainous country, I arrived at Vîsir Khân; then bore E.S.E. to Sobât, through a gorge in the mountain; and from this point travelled due south, continually rising up mountains, and seldom descending, each range being backed by numerous flat plains or table-lands. The very singular cavernous rocks overhanging the town of In ôni were seen across an extensive swampy plain. From the state of the receding spring, I became aware of my great elevation; but I again had to ascend the range of mountains at the back of the town, and again traversed thirty miles of table-land, which now assumed a most singular geological appearance; groups of cones or spiral rocks rising to a height of 60 to 100 feet, and in some instances considerably higher, from a thin stratum or shelf of chalcodeny or agate; the cones are chiefly a conglomerate of pumice-stone. The whole of the plains I have seen between Olympus and Taurus, as well as from the accounts of other travellers, appear to be immense raised table-lands, covered with volcanic tufa, amassed together by a rush of waters. A very large proportion is of pumice, and innumerable pieces of fractured agate and lava. This forms the characteristic feature of Phrygia, held up on all sides by ranges of mountains; the whole being of burnt earth. The irregularity of the outline of this district embraces the whole of this peculiar formation. The vegetable produce is scanty, consisting of barley and wheat; but the great proportion is pasture. Near the Taurus range a good deal of opium is grown; but on this elevated and porous district the rivers are few; trees are seldom seen, and the general aspect is wild and dreary. From Kutâhiyah I travelled about thirty-six miles S.W. to the ruins of Axani, situated upon the river Rhyndacus, there a small stream, and perhaps not far from its source. I made another excursion of about thirty miles, in search of, ac-

ording to the maps, Tôghânki. Near this is the village of Dûsalân; but Tôghânki, described as containing the interesting inscriptions upon the rock forming a tomb of a very early construction, is incorrect, for the name Vasilika, a village twenty miles further to the S.E. near Ghumbat, and eight miles from Kosev Kham, means 'writing on rocks,' and contains the objects I sought. Ascending a range of hills to the south of Kutâhiyah, following the course of the Thymbrus, and crossing a level plain of fifty miles long and twenty broad, I arrived at the village of Aktun-tash; thence to Sîchani, thirty-six miles—a country almost as dreary. A gradually descending valley, bounded on either side by chains of mountains, formed the district called Dûnbet-ovah-si, or buffalo valley, leading to Kachiburlû, on the lake Ascania, thirty-six miles from Ballûk. I entered Pisidia over ranges of beautifully wooded mountains towards the east, resembling Bithynia, which, with its alpine appearance, formed a pleasing contrast with the plains of Phrygia. Ispartah is a large populous city, with thirty or forty thousand persons, on the declivity of a hill, with numerous streams, which probably form the source of the Eury-medon. Entering at the back of the town, I ascended the mountain to the S.E. Here are immense hills of volcanic dust, with peaks of limestone rocks, forming a nucleus for the soft earth, held together in mass by a deposit from the water of the lime rocks. To the south, before ascending to Aghlân, stood the city of Saglasus, whose remains are interesting. In the valley a river forms its course, which I had reason to believe to be the source of the Cestrus. In twenty-four miles to the S.E. I arrived at Bâjak; some miles up the ridge of a chain of mountains, I discovered a most splendid city; the promontory rose perpendicularly perhaps 1000 feet, on three sides from a valley, the principal town in which appeared to be Dovre, covering an extent of not less than seven miles in circuit. I counted here more than fifty columned buildings, and saw several theatres and miles of scattered tombs, which here, and throughout Pamphylia, were of peculiar structure and ornament. This town, no doubt, was the ancient Selge. Although it was April, at this elevation the spring had scarcely commenced, and the plough was at work preparing for the seed. Within a day's journey I saw the corn in ear, so great is the change in climate occasioned by the elevated land. On the right was a fine river, with a rapid and broke a course down a steep ravine, which we entered soon after leaving Bir-Margi. The precipitous road was paved, for fifteen miles, with large irregularly shaped stones, in many places retaining the ruts cut by the wheels of chariots—the work of the ancient Greeks. The scenery towards the south, from the stern portal, in beauty and character, was almost an illusion. The whole, on each side, was bounded by lofty ranges of mountains, inclosing the gulf of Antaliyah. On the right rose the jagged limestone peaks, by degrees, to Mount Climax. About twenty miles before arriving at Antaliyah, the river had almost disappeared, and the level plain was formed of a conglomerate of pebbles and of encrusted vegetable matter. This porous substance received almost all the water of the river, which was artificially carried over the surface for the supply of mills and aqueducts. The reappearance of the fresh water from under the matter embosomed in the Taurus, is perceptible along the coast for some distance at sea. The river Cestrus is an exception, building its course down a rich valley into a

deep bed of soil, and passing the highly interesting ruins of Pergæ. Most of these plains are barren, with nothing but shrubs for the browsing of camels. From this level rise several isolated limestone rocks, on some of which have been placed Greek cities: three of these I visited; probably they were Isionda, Pedinelessus, and Sylleum. At the second of these the ruins did not appear of the earliest ages of the Greeks; but perhaps under the Roman dominion. They were in a perfect state of preservation, with the paint remaining upon the masks and ornaments, and upon the walls of the proscenium of the theatre. The country here being highly cultivated, well wooded, abounding with figs, vines, Siberian crabs, and shrubs, rendered travelling extremely difficult. Side has been fully described by Capt. Beaufort, R.N.; and, compared with many towns in the interior, appears amongst the most ruinous. I am sorry that the highly intelligent author of "Karamania" had no opportunity of seeing even a few miles of the interior of the country, as probably his opinion of its fertility would have differed less from mine. A lake is laid down on all maps between the rivers Eurymedon and Cestrus; but I sought it in vain. I found the palm-tree, apparently indigenous, at Phindka. In Sicily and elsewhere I have seen it finer, but then it was cultivated. The whole of the coast of Lycia has been so well described that I shall confine my remarks to the interior, which is very mountainous, but not barren. The hills richly wooded, and much of the timber well grown; the scenery highly picturesque, and upon the apparently inaccessible crags are tombs cut in the rock, in imitation of temples of various orders, and massive sarcophagi, of a form apparently peculiar to Lycia. Here the country is not thinly peopled, nor is there any want of hospitality. The inhabitants live in tents. The valley of the river Xanthus would in itself offer sufficient temptation to the artist, antiquarian, or naturalist, to visit the country if he were aware of its attraction. The city of Patara, at the mouth of the valley, has been well described in the excellent work of the Society of Dilettanti. About nine miles up the valley, overhanging the river, is the small but exquisitely beautiful city of Xanthus—beautiful not only in situation, but in its relics of art. Crossing the river below the town, I went about fifteen miles up the valley to Demelîr; then descended towards the river, crossed it again, and climbing the steep mountains for nearly three miles, I reached the modern town of Duvah; we found there the remains of a large town which from numerous inscriptions proves to be the city of Tlos. Travelling due west over a series of hills branching from Mount Cragus, we arrived at Makry, the ancient Telmessus, then through a country abounding in wooded scenery, crossing a considerable river, reached Dolomân; a governor's house comprising the whole village. Twenty-five miles beyond is Kugez, a large lake or bay from the sea, accessible to ships, and much misrepresented in all extant maps. The post-town of Hulah contains about eight or ten thousand inhabitants; and Mughlah, with 15,000 persons, lies twelve miles still higher up in the mountains. About thirty-two miles due west, over a country slightly undulated, but, perhaps, elevated 4000 feet above the sea, stood the ancient Stratoniceia. Bearing to the N.W. we visited Melassa, then Labranda, and, descending, skirted a beautiful little lake connected by a short river with the Mœander. Here were the extensive ruins of Miletus. Ascending the valley as high as the

ancient Priene to the modern village Sansón, we struck up the steep range of mountains broken into the Troglitum promontory, although the geological feature continues into the island of Samos. Descending to the coast, and passing the recently flourishing town of Scala Nova, we proceeded to Ephesus, crossed the range, and descended upon the ancient Tralles. Following the Meander till joined by the Lycus, I visited Laodicea, Hierapolis, and returned by Philadelphia and Sardis to Smyrna. I am at a loss to conceive the reason of this country having been so little visited, and I must, in justice, observe that during the whole of my tour I met with the greatest hospitality from all ranks, from the pasha to the peasant on the mountain; all supplying gratuitously every necessary food, with attention sometimes bordering upon annoyance. This was offered to me as to a stranger, whom their religion bids to feed and welcome. I always travelled in my European dress of the roughest materials, strongly contrasting with the splendid Turkish costume." Among the donations on the table were 15 vols. 4to. of the "Transactions of the Academy of Sciences at Berlin," liberally presented by the Academy; also a south circumpolar chart, recently constructed at the Hydrographic Office, exhibiting the tracks of all navigators in those seas from Cook to D'Urville, including that of Bellingshausen in 1820, and shewing the vast unexplored space which remains for future discoverers in the Antarctic Ocean.

BOTANICAL SOCIETY.

FRIDAY, 5th April. Dr. Macraight in the chair.—Read, the conclusion of Mr. Lee's paper 'On the Species of *Tilia*, natives of England.' (Former report, *Literary Gazette*, No. 1158.) This portion of the author's interesting observations embraced the growth and longevity of the linden, the historical and poetical associations of the tree, and particulars connected with its natural history. The former was illustrated with drawings of the most remarkable with which Mr. Lee was acquainted. This, however, with the next division, we will pass over, and select our notice from the particulars of its natural history. The coriaceous and indigestible fruit of the linden seems to be almost entirely neglected by man, animals, and birds. Avenues of the trees are, however, favourite resorts of the thrush family; and hence mistletoe is often abundantly distributed in such situations. The saccharine exudation termed "*honey-dew*" is more abundant upon the leaves of the linden than on those of any other tree, as might be expected from the nature of its juice and nectarious flowers. It only occurs in profusion in very sultry weather, and is not, as regards the linden, an excrementitious product of *Aphides*. On several days of extreme heat in 1837, Mr. Lee noticed thousands of bees and other hymenopterous and dipterous insects swarming on every part of the trees under his observation, upon which the phenomenon had presented itself, and no aphides were any where perceptible. Besides, the appearance did not present itself for more than two consecutive days, which it must have done if produced by aphides. During the flowering season, the linden forms a magazine of sweets for bees; hence the vicinity of such trees should not be disregarded by apiarists. Various insects may be met with on the lime, of which the most interesting and remarkable is the "lime-hawk" of collectors (*Sphinx tilia*). *Aphis tilia* is supposed to be peculiar to this tree; and a species of *Cynips* often causes a very profuse crop of pale erect *nidi* upon its leaves. The

linden is somewhat earlier disrobed than most other deciduous trees; but its fading leaves often assume brilliant orange tints, which, in masses, present a splendid effect in autumnal scenery, when lit up by the setting sun; and in early spring the ruby twigs and rosy buds have a cheering aspect wherever they present themselves.

UNITED SERVICE INSTITUTION.

MONDAY, 8th April. Major Shadwell Clerke in the chair.—Amongst the several presents to the Museum announced and exhibited, was a fine specimen of the sea-snake (*Hydrophis nigrocincta*), six feet in length. Mr. Haydon, the historical painter, presented this specimen (the bite of which had caused the death of Mr. Hyman, midshipman of H.M.S. "Wolf"), in the hope that the public exhibition of it, with the melancholy interest attached to it, may remove the erroneous impression which generally exists of the harmlessness of the sea-snake, and prevent the recurrence of a similar accident. The following papers were read: 1. 'Continuation of a Paper on the Longitudes of the Principal Maritime Points on the Globe,' by Lieut. H. Raper, R.N.—2. 'On the Coinage of the Ancient Cities of Crete,' by Mr. L. H. I. Tonna.

LITERARY AND LEARNED.

ROYAL SOCIETY.

THE Marquess of Northampton in the chair.—Several eminent foreigners were proposed as foreign members. A paper, giving an account of a new salt, called oxy-cyanic (if we heard aright), by Mr. Johnston, was read. This communication is almost wholly analytical. The new substance possesses a strong desodourizing power, and exhibits many interesting reactions. It is readily soluble in water, and its solution has a strong alkaline reaction. It crystallises to the last drop. Amongst the donations, there was presented by Mr. Curtis a New Acoustic Instrument, lately invented in Paris, for assisting hearing, and called the "Soniferous Coronal." It goes over the head, whence the sound is collected, and is conveyed by small tubes into each meatus. It has this great advantage over cornets, that it occasions no noise in the ears. The instrument has been tried at the Royal Dispensary by Mr. Curtis with much advantage; and he considers the "Coronal" much improved by the tips of the tubes being covered with caoutchouc.

ROYAL SOCIETY OF LITERATURE.

ON Thursday, the Earl of Ripon, President, in the chair.—Members were admitted, including the Earl of Durham: others were elected, and the names of new candidates ordered to be suspended. A letter of the 28th of February, from Mr. Tatam, at Cairo, was read, in which he mentioned that he had obtained four Coptic lexicons, and many copies of Scriptures in that language, of extreme value towards its elucidation; and also one of the finest collections of Syriac MSS. ever known. Mr. Tatam was on the eve of starting for the convents of St. Antonio and St. Paul, on the borders of the Red Sea, which were understood to be very rich in the possession of ancient literature, and where he hoped materially to increase his already important stores. Further extracts were next read from Mr. Wright's 'Introduction to the *Biographia Literaria Britannica*,' announced for publication by the Society. They furnished some most curious details of the earliest modes of education and study among our Saxon progenitors; from

which it appeared that the Hamiltonian system, the method of teaching by question and answer, and Classics with interlinear translations, were commonly used by them a thousand years ago. Some of the riddles, enigmas, and quaint stories, which have appeared in our latest publications, were found among these antiquities, and quoted by Mr. Wright as the originals from which so many of our jokes and puzzles have descended. The paper was altogether of a very interesting character; but as the whole essay will be shortly (by the anniversary meeting on Thursday week) before us, we shall not now further anticipate any of its striking and entertaining statements.

SOCIETY OF ANTIQUARIES.

MR. HUDSON GURNEY, V.P. in the chair.—Sir Gore Ouseley exhibited an ancient spur, purchased, among some old iron, at Chalfont St. Peter's, Buckinghamshire, in January 1830.—M. de Gerville presented casts of a stone mould for casting celts, found at Montaignu, near Valognes, and of a bronze mould for celts, found in the forest of Brecequebec, France.—Mr. Bond, of the British Museum, communicated 'An Essay on the early History of the Italians, who, being in a state of great Oppression and Distress, formed into Bands for mutual Support and Defence; and thence became Traders and Money-lenders over Europe,' part of which being read, the remainder was postponed.

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Statistical, 8 P.M.
Tuesday.—Linnæan, 8 P.M.; Horticultural, 3 P.M.; Electrical, 7 P.M.
Wednesday.—Society of Arts, 7½ P.M.; Noviomagians, 4½ P.M.
Thursday.—Royal Society, 8½ P.M.; Antiquaries, 8 P.M.
Friday.—Royal Institution, 8½ P.M.; Botanical, 8 P.M.
Saturday.—Royal Asiatic, 3 P.M.; Guy's Hospital Physical Society, 8 P.M.; Artist's Conversazione, 7 P.M.

FINE ARTS.

PHOTOGENIC ART.

[It is with great pleasure we insert the following letters, which continue to unfold discoveries and improvements in an art which may almost be considered as magical, and the importance of whose eventual results it is impossible to over-estimate. Mr. Talbot's, Sir John Herschel's, and Mr. Downing's communications all tend to the same issue, and to complete the elucidation of this engrossing topic.—Ed. L. G.]

Lacock Abbey, Wilt., April 8, 1839.

DEAR SIR,—I have the greatest dislike to controversy, which I regard as a complete waste of time. I consider it sufficient to have stated, once for all, in your widely circulated journal, that I discovered the art of obtaining photogenic pictures from glass in the year 1834, along with the other processes, of which it is but a slight variation. It would have been sufficient for me to refer to the seventh section of my first memoir to the Royal Society (published January 31st). But, since that account seemed to have been already in some measure forgotten by the public, I stated it again, and in a fuller manner. How could I do otherwise, when I found that a patent had been applied for for this identical process? I was obliged then to step forward and "claim my own," which I endeavoured to do in the most courteous manner, observing what I sincerely believe "that I had no doubt that the gentleman who proposed it imagined it to be a new process, hitherto overlooked." Pressing forward in the ardour of discovery, they did not stop to inquire what had been already achieved.

I should take blame to myself for not having dwelt longer on this particular point, in my memoir to the Royal Society, if it had not been that that memoir was written under circumstances which would have pleaded excuse for much more considerable omissions. For, I beg to recall to your recollection the sudden and unexpected announcement of M. Daguerre's discovery in the month of January last; by which I was placed in a very unusual dilemma (scarcely to be paralleled in the annals of science): for I was threatened with the loss of all my labour, in case M. Daguerre's process proved to be identical with mine, and in case he published it at Paris before I had time to do so in London. I was obliged, therefore, to use all possible expedition in drawing up a statement, and exhibiting specimens to the Royal Society. If I had known that M. Daguerre intended to keep his process so long a secret, I would certainly not have written on the subject in so imperfect and hasty a manner. But I had no choice; at least, I thought I had none, which comes nearly to the same thing. But I never supposed for a moment that this memoir would be mistaken for a regular treatise written by me on the Photogenic art, or as containing all the facts which I was acquainted with. In fact, to have detailed all the experiments which I have made on the subject, would have occupied a much longer time than I had at my disposal. Many points were necessarily omitted, or abridged: and, moreover, I had laid down as a rule to myself not to include in my statement to the Royal Society any methods which I had not actually made trial of, however certainly they might seem deducible from the same principles. Thus, for instance, I have said nothing of perhaps the most important application of which the new art is susceptible (that of taking portraits from the life with a camera obscura), because I have not yet accomplished this, although I see no reason to doubt its practicability. And, upon the same grounds, I omitted mention of the process which I am now about to relate:—

Some years ago, a French artist announced that he had discovered a method of increasing or diminishing at pleasure the size of an engraving. This created considerable curiosity, and many conjectures were made concerning the process by which he effected it. But, I believe that the precise means which he employed have not yet been discovered. I suppose that these will one day be made known; in the meanwhile it may interest your readers to know that the photogenic art affords a ready method of obtaining this *desideratum*, the power of expanding or diminishing a design in any required ratio. I had long contemplated this as an almost certain consequence, from the known properties of the camera obscura. By altering the position of the lens, the image could be made to bear any required proportion to the object; and this image would stamp itself upon prepared paper, in the way which has been already described. Unless, therefore, some very unlooked-for circumstance interfered, I had no doubt of a satisfactory result to the experiment.

The same having occurred to Mr. Wheatstone, he proposed to dispense with a lens, and to use any radiant point of light. (This simplifies the process of *enlarging* the design; we lose, however, the power of *diminishing* it.)

However, the best evidence of the possibility of a thing is its actual performance; and this proposed improvement has been successfully accomplished by Sir J. Herschel, as you will

see by the following extract from one of his letters, which, with his leave, I will transcribe. His experiments were made without knowledge of our contemporaneous speculations.

Extract of a Letter from Sir J. Herschel.

"By placing an etching on a smoked glass (not having a resinous ground) behind an *aplanatic* lens, the smoked side towards the focus, a copy of the etching reduced on any required scale, is obtained. By exposure to a solar beam radiating from the focus of a lens, the scale may be enlarged. The reducing process, on trial, succeeded perfectly, only a little care is required to follow the sun. By the use of highly sensitive paper, this inconvenience would be much diminished; and, by attaching the whole apparatus to an equatorial with a clock, it would be entirely removed. If a resinous ground is used, the etching must be afterwards varnished or gummed, to destroy the loose light refracted obliquely by the thin edges of the cut-up ground, which is never quite opaque.

"Slough, March 27."

I have communicated these details of Sir J. Herschel's recent experiments, believing that you will view with interest the important extension which the art of *photogenic drawing upon glass* is likely to receive, and remain, dear Sir, &c.

H. FOX TALBOT.

To the Editor of the Literary Gazette.

SIR,—As your magazine contains an excellent account of all the discoveries in photogenic drawing, and as you seem to take a great interest in the subject, allow me to offer a few suggestions, which may tend to render the art more available to your unscientific readers.

In the course of my first experiments on this fascinating subject, I had to encounter many disappointments and vexatious failures. Difficulties occurred in the preparation of the sensitive paper, by which I either found it altogether insensible to light or too susceptible to its influence, becoming blackened by exposure to candle-light. I also had the mortification of once or twice spoiling the drawing after its completion in the process of *fixing the shadow*. Now, Sir, I attribute the greater part of these effects to the incomplete directions hitherto given—to the undefined quantities of the salts recommended to be used. Instead of vague proportions and cautions against dangers, we must be more exact and certain as regards the knowledge which is only to be acquired by experience.

From considering the chemical changes which take place in the processes, I believe it will be easy to deduce the exact proportions of the substances employed, without depending for success upon chance or good fortune. In the first manner of preparing the paper, it is recommended that it should be alternately washed with solutions of table salt and lunar caustic, in order to form a coating of chloride of silver. The chemical title of table salt is, as you well know, chloride of sodium; and as the atomic numbers of these elementary substances are respectively 35.42 and 23.8, according to Berzelius and Turner, the equivalent of the salt is 58.72. The caustic, consisting of $(n + 50 + ag + 0)$, has, according to the same authorities, the equivalent of 170.15. It must be evident, therefore, that if these two salts are mixed together for the purpose of exact mutual decomposition, their relative proportions should be as 58.72 to 170.15. If, after the drawing has been completed, the iodide of potassium be employed for the purpose of *fixing the shadow*, its equivalent being 165.45, that relative pro-

portion must be used in order to adjust the quantity to the conversion of the chloride into the unchangeable iodide of silver.

If then we use a solution of nitrate of silver, of the strength of thirty grains to the ounce of distilled water, which I have found to answer the purpose, the proportions of the other salts will be—

As 170.15 : 30 :: 58.72 : 10.3
As 170.15 : 30 :: 165.45 : 29.5

The strength of the solutions should, therefore, be thirty grains of nitrate of silver, ten grains of common salt, and twenty-nine and a half of iodide of potassium, to the ounce of water.

The hypo-sulphite of soda, used by some persons for the purpose of fixing the shadow, need not be in any definite proportion, as it acts in a peculiar manner upon the unblackened chloride.

The later process of Mr. Talbot I observe to be the employment of the bromide of potassium in conjunction with the nitrate of silver. As the equivalent of this new substance is found to be 117.55, its relative proportion to the thirty grains of caustic should be, by the same simple calculation, twenty-one grains nearly. I may be allowed to observe, *in limine*, that the paper prepared in this manner is certainly more sensitive to the action of light, but it does not, according to my observation, become so black by exposure, nor is it rendered so free from change after washing with the iodide. I am not aware that any certain method of fixing has been yet suggested. Hoping these ideas may be useful to the readers of your valuable journal, I beg to subscribe myself, your obedient servant,

C. TOOGOOD DOWNING.
29 Carey Street, April 8, 1839.

To the Editor of the Literary Gazette.

SIR,—My name having been lately frequently published, as seemingly connected with the party who attempted to secure a patent to themselves, "for an improved method of multiplying original designs," &c. &c. long after the publication of Mr. F. Talbot's original invention of photogeny, I beg to explain, that I knew nothing of their proceedings till after the attempt had been made, and I then expressed my decided disapprobation and opposition to the whole affair. The art of etching on glass was practised many years ago, and specimens printed and published by Mr. Blake, the celebrated artist and engraver: "its application to photogeny very readily suggested itself."—I am, Sir, your obedient humble servant,

WM. HAVELL.*

April 11, 1839.

24 Montague Street, Portman Square.

GRAPHIC SOCIETY.

ON Wednesday, this Society held its fourth meeting this season, at the Thatched House. It was fully attended by members and visitors, of whom the resources to "furnish forth a feast" seem inexhaustible. The tables were covered with drawings and folios. Sir Jeffrey Wyattville sent four engravings of his great work on Windsor Castle; Mr. Allnut, some fine drawings, by Dewint, and books of sketches in the Grampians, by the late George Robson. Mr. Leitch, Mr. Owen Jones, and many other members, contributed rich folios of drawings. Mr. O. Jones sent a folio of drawings, coloured on the spot, in Egypt, by Jules Gourey; and some fine sketches in Spain and Barbary, by

* Mr. Havell has sent us a specimen, a sitting figure, with an effect of a Rembrandtish character, and altogether striking and artistic. With regard to the patent, enough, we think, has been said.

Lieut. Twopenny, 52d. It is impossible to mention all the beautiful contributions to the evening's enjoyment; but Mr. J. Nash's folio of drawings must not be forgotten. The New Art, however, seemed to be the chief subject of conversation, and the repetitions (we cannot say impressions) of the beautiful subjects produced by Mr. Willmore, which he sent to us with his letter last week, were the admiration of the persons assembled.

NEW WATER-COLOUR EXHIBITION.

THIS truly interesting Exhibition opens to the public on Monday, and from the slight glance of its contents with which we have been favoured we can confidently affirm, that, in its character and improvement, it exceeds any of the preceding Exhibitions. Even the last, though greatly admired, must succumb to the present in works of talent superior to those which then met our highest approbation. Among those which attracted our principal notice, we may mention "The Happy Valley," by Henry Warren; "The Tournament," E. Corbould; "Interior of the Hall at Courtray," Haghe; "The Battle of Flodden Field," Messrs. Weigel and Warren; "Sunset, with Mackerel Fishers throwing their Nets," Duncan; "Gamblers," Johnston; "Gurth and Wamba," Newton; "Sunday Morning," Fahey; "Entrance of Henry the Fifth into London, after the Battle of Agincourt," Kearney; "Romeo and Juliet," Hicks; together with others by Green, Miss F. Corboux, Penrose, &c. &c.

NEW PUBLICATIONS.

The Royal Gallery of Pictures. Part II.
Bohn.

THE Second Part of the "Selection of the Cabinet Paintings in Her Majesty's Private Collection at Buckingham Palace." It is quite equal to the First Part, noticed in the *Literary Gazette* on its appearance. Of the eight plates of which it consists, our favourites are, "Rembrandt's Ship-Builder and his wife," by Quilley; "Titian's Landscape, with Herdmen," by Linnell; "Tenier's Gardener," by Le Petit; and "Sir J. Reynolds's Marquess of Granby," by Reynolds. We entirely agree with the writer of the text, that the "Battle Field" is erroneously attributed to Wouvermans.

Sketches in France, Switzerland, and Italy.
By Samuel Prout, F.S.A. Hodgson and Graves.

If there be any one artist for whom lithography seems to have been more especially invented than for any other, it is Mr. Prout. Of that gentleman's style, firmness, freedom, and precision of outline, are the peculiar characteristics; and in those qualities he has, in his walk of art, no rival. When, therefore, his works are copied by others, however skilful, their spirit and beauty must, of necessity, be in some degree impaired. How fortunate, therefore, for Mr. Prout, that a mode of reproducing himself has been discovered, by which, with his own hand, he can communicate to stone all the raciness and feeling of an original design! This is precisely what has been accomplished in the superb and charming volume before us. It contains twenty-six original sketches, by one of the most able and popular artists of the day. The subjects are as well chosen, as the execution of them is admirable. It is truly said by the publishers, "The countries of France, Switzerland, and Italy—so fertile in natural beauties, and so rich in works of art—afford the artist abundant means for promoting gratification and conveying information. He

has only to select from stores which can never be exhausted, and his taste and skill cannot fail to be exercised with advantage to those for whose enjoyment they are exerted. Mountains and valleys—rich marts of commerce—amazing structures, reared as if to outlive time, and the relics of those over which time has triumphed, meet the traveller at every change of place; and if he go but a little out of his way he discovers new treasures that may have escaped the note-book of the author, and the sketch-book of the artist." Our favourite views are, "Interior of the Cathedral—Chartres," one of the finest and best preserved cathedrals in France: the screen is an exquisite piece of shrine-work, full of rich sculpture; "Interior of the Cathedral at Milan," the extraordinary size and elevation of which are most happily expressed; "Mausoleum of the Family of L'Escaille—Verona," a magnificent memorial of aristocratic greatness; "The Temple of Pallas—Rome," merely two Corinthian columns, supporting an entablature, but conveying a grand idea of the architectural splendour of the ancient capital of the world; "The Ducal Palace and Pillars of St. Mark—Venice," picturesque remains of what was once the scene of the most severe and powerful oligarchy that the world ever knew; "Como, from the Lake," to the natural beauty of which the poetry of Byron gives additional interest; "The Front of the Cathedral—Milan," though still incomplete, the noblest specimen of Gothic architecture existing; &c. &c. &c.

Finden's Female Aristocracy of Great Britain.
Parts V. and VI.

"THE Duchess of Roxburghe," from a picture by Robertson; "The Countess De Grey," "The Countess of Tankerville," and the late "Lady John Russell," from pictures by Chalon; and "Viscountess Canning," and "Lady Elizabeth Hay," from pictures by Hayter, are the ornaments of Nos. 5 and 6 of this elegant publication. We will not presume to adjudge the apple among these Grosvenor Square and St. James's divinities; but they are all more or less beautiful, and, of course, have all the air of fashion. The various plates are finely engraved by Messrs. Jenkins, Cochran, Egerton, Artlett, Holles, and J. and W. Holl.

Equestrian Sketches, by a Walking Gentleman.
No. III. M'Lean.

FIVE excellent portraits of the following well-known individuals, viz.: The Earl of Chesterfield, Lord Denman, the Earl of Brandon, Sir Edward Codrington (who is riding at as slapping a pace as if the royal hint, "Go it, Ned!" still rung in his ears), and Count D'Orsay. They are full of character; and their horses are equally so.

ORIGINAL POETRY.

SPRING.

SPRING, Spring, beautiful Spring,
Laden with glory and light you come,
With the leaf, the bloom, and the butterfly's wing,
Making our earth a fairy home.
The primroses glitter, the violets peep,
And zephyr is feasting on flowers and balm;
Arouse, ye sluggards, what soul should sleep
While the lark 's in the sky and the bee 's on the palm?
The sweetest song and the loudest string
Should pour a welcome to beautiful Spring.

Spring, Spring, eloquent Spring,
Thine is a voice all hearts must love,

Plenty and joy are the tidings you bring,
As an earnest below of the tidings above.
Oh, dull is the spirit, and cold is the breast,
That forgets not awhile it is earthly born,
As we look on the branch where fruit shall rest,
And the green blade promising golden corn.
Arouse, ye sluggards, awake and sing
A chorus of welcome to beautiful Spring.
ELIZA COOK.

THE DRAMA.

Her Majesty's Theatre began in earnest, and deliciously, on Tuesday, with the *Puritani*, in which the extraordinary combined talent of Grisi, Tamburini, Rubini, and Lablache was called into full exercise. Nothing can excel their exquisite mingling in this opera; which admits of each displaying, to the best advantage, the powers with which nature and cultivation have gifted and inspired them. The treat is of the highest order. The new tenor to succeed Rubini is described as a great acquisition.

Drury Lane.—On Tuesday, Albertazzi reappeared at this theatre in her popular character of the *Maid of Palaiseau*, and being well supported throughout by the rest of the musical and operatic corps, caused the performances to go off in the most agreeable and captivating style.

Covent Garden.—We sincerely regret to see it announced that Mr. Macready leaves Covent Garden at the end of the season; previous to which, however, he has announced a round of all the Shakspeare plays, which he has brought out with so much effect. He has raised the stage, and this theatre in particular, to their proper standard of elevation; and it seems a most short-sighted piece of business in the proprietors not to seize and go along with a tide so honourable, and likely to be so advantageous to all parties. For the national drama it is a very serious misfortune.

VARIETIES.

Literary Fund.—After the meeting of the committee on Wednesday, the Literary Fund Club entertained as many of the fifty stewards for the ensuing fiftieth, or jubilee anniversary, on the 8th May, as favoured it with their company, at the Freemasons' Tavern, Mr. B. Bond Cabell in the chair, and supported on the right and left by Mr. Hope and Sir Wm. Chatterton, vice-presidents. The health of H.R.H. the Duke of Cambridge, who has condescended to preside on that occasion, was toasted with every demonstration of grateful respect; and the whole entertainment, together with the arrangements in progress, and the numerous acceptance of invitations by distinguished persons, give promise of a brilliant meeting on the appointed day.

Sale of Rare Etchings in Paris.—We hear from a correspondent of the very curious collection of Etchings by Rembrandt, Albert Durer, Claude, Berghem, Paul Potter, and other celebrated masters, the property of the late Marshal Massena, which were sold by auction, by order of his executors, on Monday, Tuesday, and Wednesday last. The sale created quite a sensation, and the attendance was extraordinary, including amateurs from all parts of the Continent, and the leading printsellers of Europe. The prices were beyond all former sales, and we are happy to find that some of the most exquisite *morceaux* were secured for this country by Mr. Graves (of the firm of Hodgson and Graves), probably to be added to the national collection in the British Museum.

M. Arago has devised a means by which he thinks violent hail-storms may be averted. It is by elevating a small balloon where the storm threatens, armed with attractors, and connected with the earth by a conducting rope and metallic wires. Thus he supposes the + and - electric clouds would be discharged, and a heavy fall prevented.

M. Colas, a French artist, has invented a method of copying the finest sculptures in perfect proportions and of any size, either as large as the originals or in the smallest dimensions.

The *Barrel-organs* of Paris are far more clever musicians than those of London! The "National" states, than in consequence of the political aspects of the day, they all took to playing patriotic and revolutionary tunes. Prodigious!

Left their Homes.—The South and West winds. Have been seen separately and together, till of late, when both disappeared. If they will return to the disconsolate people of this country, they will meet with a hearty welcome, and no questions asked, notwithstanding they have been so long missing.

LITERARY NOVELTIES.

A learned Italian, Manzoni, in searching through the archives of Bologna, has discovered that the celebrated Maid of Orleans was descended from the race of the Ghislieri, and was the daughter of Ferrante Ghislieri, who fled from his country in 1401, when Giovanni Bentivoglio usurped the sovereignty of Bologna.—*Foreign Quarterly.*

The Iliad of Homer has been lately translated into the Sanscrit.—*Id.*

The following account of the circulation of the Vienna journals is taken from the "Nuremberg Correspondent":—"Official Gazette, 2600; Austrian Observer, 600; The Eagle, 270; Theatrical Gazette, 1300; Humorist, 450; Vienna Journal, 600; Spectator, 750. A commercial journal, the Shareholder, is to appear next year, as well as a literary paper in French.—*Id.*

10,000,000 volumes are printed in Germany annually, and 50,000 authors.—*Id.* [See in orig. We suppose, however, that the authors are not put to press.—Ed. L. G.]

In the Press.

Forty Sermons, with an Introductory Essay, by the Rev. Richard Cattermole, B.D.—The Fine Arts in England, their State and Prospects, considered relatively to National Education. By Edward Edwards, Hon. Sec. of the Art-Union of London.

LIST OF NEW BOOKS.

DOMESTIC MANNERS OF the

RUSSIANS.

By the Rev. R. LISTER VERNABLE, M.A.

I cannot venture to add another to the numerous books on Russia which have already appeared, without pleading as my excuse that I visited that country under circumstances allowing opportunities not usually within a stranger's reach, of observing the habits and character of the people. I am, therefore, induced to publish the following letters under an impression that some account of domestic life in the interior may be, to a certain degree, interesting from its novelty.

Being nearly connected by marriage with several Russian families, I accompanied my wife into that country in the summer of 1837, for the purpose of visiting her relations, among whom we spent twelve months, either in private houses in the interior, or in habing of constant intercourse at St. Petersburg.

John Murray, Albemarle Street.

CAREY'S NATIONAL HISTORIES.

On the 26th will be published, price 7s. 6d. cloth, by C. Tilt, of Fleet Street,

THE HISTORY OF FRANCE,

FROM THE EARLIEST PERIOD.

By EMILE DE BONNECHOSE.

(The Two Volumes of the French Edition comprised in the One of the Translation.)

All historians must have their prejudices; and a consideration of this fact has given rise to the proposed Series. For what is a History of France by an Englishman, but another version of the History of England? Has not the success of the one been the defeat of the other? Truth must be sought for by comparing the respective Histories as written by the National Historians. It is therefore proposed to translate and publish, at such prices as will bring them within the reach of all classes, a Series of these truly National Histories.

THE HISTORY OF THE UNITED STATES OF AMERICA,

By JOHN FROST, of Philadelphia,

Is already published, and may be had done up in cloth, price 5s. 6d.

The HISTORY of GERMANY, and others, in due course, will follow.

In the press, a complete and uniform edition of

THE WORKS OF MRS. HEMANS;

To which will be prefixed,

A MEMOIR BY HER SISTER.

To be published Monthly, in handsome fcap 8vo. volumes (similar to Scott, Byron, and Crabbe), price 5s. each, illustrated with a Portrait of Mrs. Hemans, from an original Picture in the possession of her Family; a Portrait of her Mother, and appropriate Landscape Illustrations.

The whole Work will not exceed Six Volumes. The First, containing the Memoir, will appear early in May.

ALISON'S HISTORY OF THE FRENCH REVOLUTION.

Next week will be published,

THE SEVENTH VOLUME OF

THE HISTORY OF EUROPE,

FROM THE COMMENCEMENT OF

THE FRENCH REVOLUTION

TO THE

RESTORATION OF THE BOURBONS.

By ARCHIBALD ALISON, F.R.S.E.

CONTENTS.

Rise, Present State, and History of British India—Administration of Marquess Wellesley, and Campaigns of Wellington and Lord Lake in the East—Characters of Wellesley, Wellington, Castlereagh, and Canning—Campaign of Eckmühl, Aspern, and Wagram—Description of, and War in, Tyrol—Walcheren Expedition, and Overthrow of the Papal Power—Campaigns of 1808 and 1809, in Portugal and Spain, and Battles of Talavera, Busaco, and Fuentes D'Oncor.

The Eighth and Last Volume will be published in the course of this Year.

William Blackwood and Sons, Edinburgh; Thomas Cadell, London; and John Cammings, Dublin.

THE EIGHTH EDITION OF Sir Lytton Bulwer's New Play, Richelieu, or the Conspiracy, is now ready.
Saunders and Otley, Publishers, Conduit Street.

Girdlestone's Commentary on the Bible.

In two, price 2s. the Fourth Part of

THE OLD TESTAMENT, with a Commentary, consisting of Short Lectures for the daily Use of Families.

By the Rev. CHARLES GIRDLESTONE, M.A.
Rector of Alderley, Cheshire.

In this edition of the Holy Bible, it has been the chief object of the Editor to furnish families with an exposition for daily reading. The Scripture is divided into paragraphs of a convenient length, and the explanatory and practical matter is digested, under each portion, into one consecutive lecture, so as to demand of the reader no previous study or attention.

Printed for J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Lately published,

The First, Second, and Third Parts, price 8s. each; or Vols. I. and II. the each.

Also, by the same Author,

The New Testament, with a Commentary.

In 2 vols. 8vo. price 1l. 10s.; or in Four Parts, at 9s. each.

PRACTICAL SERMONS.

By the Rev. G. W. WOODHOUSE, M.A.

J. G., and F. Rivington, London; H. G. Langbridge, Birmingham; T. Simpson, Wolverhampton.

WALKINGAME'S ARITHMETIC AND KEY.

Modernized and improved, price 2s. bound, 76th edition.

WALKINGAME'S TUTOR'S

ASSISTANT; being a complete Compendium of Arithmetic, and a complete Question-Book. Containing the New Tables of Weights and Measures, with Rules and Examples for comparing the New Measures with the Old. To which is added, an Appendix on Repeating and Circulating Decimals, with their Application.

By JOHN FRASER, Accountant, &c.

Also, by the same,

A Key to Walkingame's Tutor's Assistant, modernized and improved, containing Solutions of all the Exercises, &c. 12mo. price 6s. bound.

Longman, Orme, and Co.; T. Cadell; Baldwin and Cradock; J. G. and F. Rivington; Hamilton and Co.; Whittaker and Co.; Dawson and Maclellan; Sherwood and Co.; Simpkin and Co.; Bealson and Sonnesman; Harvey and Darton; L. A. Lewis; T. Green; Beoker and Dolman; and E. Williams.

In 2 vols. post 8vo. 94s. boards.

THE BARBER OF PARIS.

By PAUL DE KOCK.
Whittaker and Co. Ave Maria Lane.

Illustrated by Eighteen coloured Plates, 18s. cloth, lettered, LECTURES ON DISEASES OF THE EYE, delivered at Guy's Hospital.

MIDDLETON'S LIFE OF CICERO.

New edition, revised, in 1 vol. 8vo. price 14s. boards.

THE LIFE OF M. TULLIUS CICERO.

By CONVERYS MIDDLETON, D.D.

"As to the nature of my work, though the title of it carries nothing more than 'The History of Cicero's Life,' yet it might properly enough be entitled 'The History of Cicero's Times.'"
Original Preface.

Longman, Orme, and Co.; J. G., and F. Rivington; E. Williams; Hamilton and Co.; Whittaker and Co.; Simpkin, Marshall, and Co.; J. Bohn; J. and A. Arch; Bealson and Sonnesman; E. Hodgson; L. A. Lewis; J. Cape; W. Morrison; and H. Wadsworth; and Wilson and Sons, York.

2d edition, with large Additions, price 6s. 6d.

THE MANUAL OF FAMILY AND PRIVATE DEVOTION, consisting of Prayers, originals and selected.

By JAMES COCHRANE, A.M.

Librarian of the Edinburgh and Theological Library. With a Preface, by THOMAS CHALMERS, D.D. LL.D. &c.

"There is no book of the kind which I have better relied on, or more highly approved of. I anticipated a very superior collection, and in this anticipation I have not been disappointed. I am not able, in fact, to name another book of prayers, whether for personal or family use, which I could recommend more highly."
—Dr. Chalmers.

Edinburgh: William Whyte and Co. London: Longman and Co.

DES CARRIERES' WORKS.

The 11th edition, with a Vocabulary, 8s. 6d. bound.

FRENCH IDIOMATIC PHRASES, and FAMILIAR DIALOGUES, intended to promote a Practical Knowledge of the French Language. Designed for the Use of Schools.

By M. DES CARRIERES.

Also, by the same Author, 18mo. price 7s. bound,

Abrégé de l'Histoire de France,

Depuis l'Etablissement de la Monarchie.

Longman, Orme, and Co.; Baldwin and Cradock; J. G., and F. Rivington; Hamilton and Co.; Whittaker and Co.; J. Duncan; Simpkin, Marshall, and Co.; Sherwood and Co.; J. Bouter; Dulau and Co.; Bealson and Sonnesman; W. Edwards; Harvey and Darton; and J. Wacey.

Published by Harvey and Darton, Gracechurch Street, complete in 3 vols. 18mo. cloth lettered, with elegant Frontispieces by Harvey, price 15s.

ENGLISH STORIES OF THE OLDEN TIME.

By MARIA HACK.

Also, by the same Author,

Winter Evenings—Geological Sketches—Lectures on Home—Familiar Illustrations of the Etymology of Christianity—Many Readings and Stories of Animals.

"Mr. Hayter had the honour of submitting to Her Majesty his large oil sketch for the grand historical picture of the coronation, with which Her Majesty was graciously pleased to express the highest approval."—*Court Circular*, July 12.

"On Saturday, Her Majesty honoured Mr. Hayter by sitting to him in the coronation robes; and her Serene Highness the Princess of Hohenlohe also sat to him, for his great picture of Her Majesty's coronation."—*Court Circular*, August 4.

"Her Royal Highness the Duchess of Kent honoured Mr. Hayter by sitting to him in the full coronation robes, for his picture of that august ceremony."—*Court Circular*, August 12.

"Her Majesty was graciously pleased to do Mr. Hayter the honour to sit for him to paint her portrait into his great picture of the coronation, and her Highness the Princess Hohenlohe sat also for the same picture."—*Court Circular*, August 20.

"Her Royal Highness the Duchess of Cambridge did Mr. Hayter the honour to sit to him, to be painted into the grand picture of Her Majesty's coronation."—*Court Circular*, Feb. 2.

"Her Royal Highness the Duchess of Gloucester did Mr. Hayter the honour to sit for the great coronation picture."—*Court Circular*, March 26.

"His Royal Highness the Duke of Sussex honoured Mr. Hayter with a sitting for the historical picture of Her Majesty's coronation."—*Court Circular*, April 2.

BY COMMAND OF HER MAJESTY.

MESSRS. HODGSON AND GRAVES,

HER MAJESTY'S PRINTSELLERS AND PUBLISHERS IN ORDINARY,

Have the honour to announce that they are preparing for immediate publication,

THE AUTHENTIC STATE PORTRAIT OF

HER MAJESTY IN HER CORONATION ROBES,

SEATED ON THE THRONE IN WESTMINSTER ABBEY,

Painted for Buckingham Palace, by GEORGE HAYTER, Esq. Her Majesty's Historical and Portrait Painter.

And engraving in Mezzotint by SAMUEL COUSINS, Esq. A.R.A.

This whole-length Portrait of the QUEEN in her CORONATION ROBES, seated on her Throne in Westminster Abbey, is acknowledged by the Court Circle, and every one who has had the pleasure of seeing the Picture, to be the most correct Portrait of Her Majesty yet produced, and altogether the most pleasing Picture ever painted. The Price to the Subscribers for this splendid Portrait will be—
Prints, 3*l*. 3*s*. Proofs, 5*l*. 5*s*. Proofs before Letters, 8*l*. 8*s*.

BY AUTHORITY.

THE ROYAL CORONATION PICTURE,

Painted by GEORGE HAYTER, Esq. Her Majesty's Historical and Portrait Painter.

Messrs. HODGSON and GRAVES have also Authority to announce that they will have the honour to publish

THE MAGNIFICENT ENGRAVING FROM THE GRAND HISTORICAL PICTURE OF

THE CORONATION.

Any attempt at Description of this grand and noble Picture must be very imperfect; but the Publishers trust that the SPLENDID ENGRAVING which they are to have the honour of publishing, will enable all the admiring Patrons of Art to possess this, the only AUTHENTIC MEMORIAL of the most interesting event of Her Majesty's Reign.

Not only has Her Majesty been graciously pleased to give Mr. HAYTER numerous sittings for this National Picture, but the whole of the Royal Family, the Foreign Princes, the Dignitaries of the Church, the Ladies and Officers of State, have all, by SPECIAL DESIRE, sat to Mr. HAYTER for THEIR INDIVIDUAL PORTRAITS: thus combining, in one grand Picture, nearly One Hundred Authentic Portraits of the most Illustrious Personages of the Age, assembled round the Throne of our youthful Sovereign, in the venerable Abbey of Westminster.

Mr. HAYTER has progressed with all possible despatch compatible with the great labour of the Picture, and his desire to give it, on a grand scale, those GENUINE FEATURES and AUTHENTIC CHARACTERISTICS which can alone be done by FIDELITY of PORTRAITURE and CORRECTNESS of COSTUME. And the Publishers are happy to announce that,

BY HER MAJESTY'S SPECIAL PERMISSION,

They will very shortly be permitted to exhibit this magnificent National Picture in their GALLERY, No. 6 PALL MALL.

Among the numerous Subscribers whose Names already honour the Subscription List for this grand National Engraving, are the following Illustrious Personages:—

HER MAJESTY THE QUEEN.
HER MAJESTY THE QUEEN DOWAGER.
HIS MAJESTY THE KING OF HANOVER.
HIS MAJESTY THE KING OF BELGIUM.
HIS MAJESTY THE KING OF THE FRENCH.
HER ROYAL HIGHNESS THE DUCHESS OF KENT.
HER ROYAL HIGHNESS THE PRINCESS AUGUSTA.
HER ROYAL HIGHNESS THE DUCHESS OF CAMBRIDGE.
HER ROYAL HIGHNESS THE PRINCESS OF HOHENLOHE.
HIS ROYAL HIGHNESS THE DUKE OF SUSSEX.
HIS ROYAL HIGHNESS THE DUKE OF CAMBRIDGE.
HER ROYAL HIGHNESS THE DUCHESS OF GLOUCESTER.

HIS ROYAL HIGHNESS THE PRINCE OF LEININGEN.
HIS ROYAL HIGHNESS THE DUKE DE NEMOURS.
HIS GRACE THE ARCHBISHOP OF CANTERBURY.
HIS GRACE THE ARCHBISHOP OF YORK.
HER GRACE THE DUCHESS OF SUTHERLAND.
HIS GRACE THE DUKE OF NORFOLK.
HIS GRACE THE DUKE OF DEVONSHIRE.
HIS GRACE THE DUKE OF BEDFORD.
HIS GRACE THE DUKE OF ARGYLL.
HIS GRACE THE DUKE OF SUTHERLAND.
THE LORD CHANCELLOR.
THE FOREIGN AMBASSADORS, &c. &c. &c.

NEARLY READY,

THE ROYAL CORTEGE IN WINDSOR PARK,

INCLUDING THE EQUESTRIAN PORTRAIT OF HER MAJESTY,

ATTENDED BY HER ILLUSTRIOUS VISITORS AND SUITE.

By command of Her Majesty, painted by R. B. DAVIS, Esq. for Windsor Castle, and engraving in the finest style of Mezzotinto, by F. BROMLEY.

The Plate has been engraved on a scale proportionate to the great interest of the Picture. The Etching may be seen at the Publishers', and the Engraving will be shortly ready for publication. Price to Subscribers—Prints, 3*l*. 3*s*. Proofs, 5*l*. 5*s*. Before Letters, 6*l*. 6*s*.

LONDON: HODGSON AND GRAVES, PALL MALL,

Printsellers and Publishers in Ordinary to Her Majesty.

REVIEW OF NEW BOOKS.

Rambles in the South of Ireland, during the Year 1838. By Lady Chatterton. 2 vols. 12mo. London, 1839. Saunders and Oley.

THIS is a charming book. Before we have been engaged with it ten minutes, we feel as if we had got into refined and intellectual company, and confidently anticipate that the better we become acquainted, the more agreeable and pleasant we shall find it. Nor is the hope disappointed. The ease and nature of good breeding and society gradually develop in picturesque description, interesting observations on life and manners, amusing anecdote, legendary lore, just feeling, and sound common sense. With every generous sympathy enlisted on the side of the people amongst whom she rambled, Lady Chatterton is not blind to their defects; and her remarks on every Irish subject seem to us to be peculiarly unprejudiced and impartial. This is a valuable quality in a work upon that country; and though we shall rather address ourselves to its lighter features, we will commence our illustrations with a selection applicable to the point in question. After dwelling with much gratification on the kindness of heart and other good dispositions of the natives, Lady C. says:—

"It is the fashion to attribute to England all or most of Ireland's sufferings; but I think that a dispassionate and accurate view of Ireland, if such can be obtained, would prove that fashion is wrong. That some of its misery originated in its imperfect conquest by England is most certain; that this misery was increased by the Union, is a question I have frequently heard discussed; but no woman ought to be a politician, for she is sure to judge by the heart, not by the head. Therefore, without entering upon often-debated ground, I will venture to assert that, in my opinion, it forms, volcano-like, the fire within itself; and thus, from the strange character of its people, the principal miseries and misfortunes of Ireland arise. What must strike a stranger most in a visit to this country, if he happen to preserve his own senses, is the utter deficiency of that useful quality, common sense, in the inhabitants. As in quarrels between man and wife there are generally faults on both sides—so it is in the dissensions between different classes in poor Ireland. There are faults every where. The Protestants, Roman Catholics, landowners, and peasants, high and low, rich and poor, are all more violent, more full of party spirit,—in short, more angry, than in any other country. It seems as if there were something in the atmosphere of Ireland which is unfavourable to the growth of common sense and moderation in its inhabitants; and which is not without an influence even on those who go there with their brains fairly stocked with that most useful quality. Even strangers are sure to lose their sober-mindedness after a few months' residence, and to become most violent partisans. This sort of infatuation, which, to use the words of an old writer, often makes 'an Englishman more Irish than the Irish themselves;' which comes over every resident among this strange people, creates that extreme difficulty of ascertaining truth, which

has always been so wonderful. Every one who comes among the Irish is immediately hooked into some party; and unless he possess a most independent mind, and a sufficiency of self-confidence to enable him to see with his own eyes, he is sure to judge of every thing according to the ideas of that party with which he happens to associate. This is the origin of those strange and contradictory reports which are in circulation as to the state of Ireland. Common sense, I repeat, is lamentably wanted; and this occasions all other wants. Want of sense peeps through the open door and stuffed-up window of every hovel. It is plainly stamped on every thing that is done or left undone. You may trace it in the dung-heap which obstructs the path to the cabin; in the smoke which finds an outlet through every opening but a chimney. You may see it in the warm cloaks which are worn in the hottest day in summer—in the manner a peasant girl carries her basket behind her back. This is generally done by folding her cloak, her only cloak, round it, and thus throwing the whole weight of the basket on this garment, of course to its no small detriment. This same want of sense lurks, too, under the great heavy coat, which the men wear during violent exertion in hot weather. In short, it is obvious in a thousand ways. The cause of this remarkable want of sense will be more difficult to find out, than the effect it has on Ireland. Perhaps the Irish are sprung from some wandering tribe; perhaps—but a truce to speculation: let me confine myself to facts."

This extract will sufficiently bear out the truth of our remark; and we pass from it to some of the other pleasing characteristics of these entertaining pages.

"In an intercourse with the common people, a day, an hour, cannot pass without being struck by some mark of talent, some display of an imagination at once glowing and enthusiastic, or some touch of tender and delicate feeling. How strange it is that such a people should be content to dwell in smoky hovels, when, if they chose to exert themselves, and employ the energies which I think they possess, their condition might be improved. But they are generally happy; therefore, why wish to alter their state? They find additional clothing an encumbrance. How often have I heard them say, their Sunday dress gave them cold! and the first illness our old gate-woman ever had, was occasioned by her wearing a pair of shoes and stockings! A poor family were in what we considered a most miserable condition: at Christmas, by way of making them comfortable, we had given to each individual a nice suit of clothes: the consequence was, they were all laid up with bad feverish colds! Since this, I have come to the wise determination of allowing people to be happy in their own way. And the more we see of the world, the more convinced must we be, how totally independent of every outward cause and circumstance is happiness;—that it springs entirely from the mind within, the Irish are living and laughing proofs. As I said before, what surprises me is, that a country where all are clever, shrewd, and intelligent, should not have produced more

characters of celebrity. The only reason I can discover for this is, that perhaps when talent is so common, it is but little valued; and a man who in another country would be considered quite a prodigy, is here raised so little above the common standard, that he knows not his own worth, and therefore does not take any pains to improve his natural abilities."

An account of Dingle may be quoted as an example of another kind:—

"Dingle.—I have been told many whimsical stories about this very primitive place; among other strange matters, that, in a population of five thousand, there was not to be found one regularly bred M.D., or practising attorney. 'Happy people,' exclaimed the gentleman to whom I am indebted for this piece of information; 'Happy people!' and he then inquired, being a stranger like myself—'Pray, what do the inhabitants of Dingle do, in case of serious indisposition?' The reply was, 'Oh we have an excellent apothecary here; and when he sees much danger, why he sends to Tralee for help—and so most of the people, you see, die easy, without troubling the doctor.' Thus satisfied as to the state of medical practice in this ancient town, he proceeded to inquire about its form of government, whether by a corporation, or a single county magistrate, &c. To this his friend rejoined, with some warmth—'Our town, sir, governed by a county magistrate?—not it, indeed! We have a corporation, a sovereign, a deputy sovereign, and various other officers. Our court possesses great powers. We could confine you, sir, in our prison for ten pounds; and let you out on the insolvent act, without giving you the trouble of going to Dublin.' 'Your powers are very great indeed, sir,' observed the visitor of Dingle; 'but I hope your sovereign will not have an opportunity of extending his kindness to me.' 'If he had,' was the answer, 'our sovereign, with that warmth of feeling and good nature, so characteristic of his townsmen, would visit you in prison—he would entertain you there, and he would drown your sorrows in mountain dew.' 'Your court, sir, having so much power,' said the stranger, 'must occasion many trials of great moment to be held in it; and of course you have a number of those ingenious gentlemen commonly called attorneys, residing in your town.' 'Attorneys! attorneys!' exclaimed the indignant inhabitant of Dingle. 'No attorneys, sir—not an attorney—thank goodness, we have not one nearer than Tralee; and that is two-and-twenty long miles from us, the shortest way, and a hilly road.' 'But suppose,' continued the pertinacious stranger, 'that a point of law occurred in one of the cases that came before your court; what would you do then, without legal advice to expound and unravel the matter?' 'Do, sir?—Law, sir?' repeated the man of Dingle, with a look of astonishment and affright.—'Law, sir! we never mind the law in our court. We judge by the honesty of the case that comes before us; and let me tell you, sir, that if every court were so conducted, there would be but few attorneys, and the country would be quiet and happy.' 'But what would you do, if any person brought an

attorney these twenty-two long miles, and hilly road, and introduced him into your court, and that he started some points of law, which required professional skill to reply to?" "I'll tell you what I did myself," was the answer to this apparently perplexing question. "When I was deputy sovereign, two fools in this town employed each of them an attorney, whom they brought at a great expense from Tralee. When the attorneys went into court and settled themselves with their bags and papers, all done up with red bits of tape, and one of them was getting up to speak, 'Crier,' said I, 'command silence.' 'Silence in the court!' says he. So I stood up, and looking first at one attorney, and then at the other, I said, with a solemn voice, 'I adjourn this court for a month.' 'God save the king!' said the crier, and then I left them all; and I assure you," he added, "that from that day to this, no attorney ever appeared in our court; and, please God, we never will mind law in it, but go on judging by the honour and honesty of the cases that come before us."

After describing a curious ancient cell at Gollerus, Lady Chatterton tells us a nice traditional story:—

"A boy once clambered to the top of this holy cell, and stole the bell-stone, which he carried away with him, for some good or bad reason, now forgotten. But he had scarcely reached the village with it, when, to his horror, he found himself beginning gradually to swell all over like an inflating balloon; for which strange and awful phenomenon no explanation could be given, except that the guardian spirit of the place had punished him in this terrific manner for his depredation upon the property of the church. What to do to appease the anger of the supernatural protector of the bell-stone, or to propitiate it, puzzled the poor boy and the terrified villagers. He soon became too large to get out through the door of his cabin, and still went on increasing; swelling bigger and bigger, until at last it appeared probable that he would have grown as big as the little chapel itself; and then most probably have died of repletion. Happily this sad fate was prevented by a plan to which his mother had recourse, after her unfortunate son had, by gradual swelling, nearly come to that extraordinary size that he must have either pushed out the walls of his cabin, or have squeezed all its inmates to death against them, or have burst asunder himself. Before he had quite arrived at these dimensions, his distracted mother suddenly thought that, by restoring the charmed stone to its original position, her son might possibly appease the offended being by whom he was punished in this dreadful manner. The stone was accordingly conveyed back to the church, and in one moment the boy found himself restored to his natural dimensions,—thus escaping, by the happy thought of his mother, the awful fate which threatened him. Where this stone now is, no one knows; it has either been taken away by the presiding spirit, or otherwise disposed of. But certain it is, that all the people of the district believe the story, as I heard it, to be quite true, and would sooner pick a hole in their own cabins than take one stone from this holy cell, which is under such powerful and mysterious guardianship."

These traditions are very captivating, and we are tempted by another, a legend of Owennafahadee, a circular building, not unlike an old well:—

"Once on a time, one Nick Saddler, a pa-

tive of this part of the country, who was a soldier in a regiment that happened to be quartered at Dingle, dreamed one night, that beneath a certain stone, near to this round building, with a hole in it, there was a treasure of thousands of gold coins, locked up snug in a box, several feet below the ground; and that if he went there, on a certain day, and at a certain time, he would find it. Well, the day came, and away went Nick Saddler, till he arrived at the field, where he was much surprised to find several people digging, and picking up the stones that were turned up close by the very spot which he had seen in his dream; but Nick was not the sort of fellow to be daunted by a small matter of a trifle; so, as he saw little chance of getting rid of the people that had gathered there, by telling them to go away fair and easy, and with a thank'ee, so what does Nick do, but, as well became him, he pulled off his coat, and put the back of it before, and ~~was~~ it tight behind, like Paddy from Cork, he began hooting and yelling, and dancing about the field like mad; and sure enough, as 'twas in the time of the dog-days, 'twas mad that all the people thought he was, by his gambols; and they began to feel terrified, and one after the other they to their legs, cutting away without once looking back, for the fear of mad Nick Saddler; and leaving their spades, crowbars, and pickaxes behind them. Nick laughed at the fun, which pleased him mightily, when he saw them right and left taking to all points of the compass, like quarry stones blasted by gunpowder. And when he thought every one was far enough away not to observe him, he went to work without delay upon the spot that he had dreamed about. Nick soon dug a very deep hole—but as digging was new work to him, he soon began to be tired; after pulling off his coat, and putting it on the right way, and pulling it off again, at last, he began to get out of heart with his job, and was about giving it over for good and all; when what should he throw up, but a great lump of earth with his spade! and what should roll out of it but a great jack-boot! Well, the next lift of the spade brought up another jack-boot. Nick stood fairly bothered—he did not know whether to be disappointed or not; for expecting to find the thousands of gold coins he had dreamed about, and to turn up nothing but an old pair of jack-boots—that maybe wasn't a pair—was certainly not what he expected according to his dream; but sure every body knows that a little luck is better than no luck at all; so stepping aside, Nick deliberately set to work at trying on the boots, not knowing but that they might fit him, and then again he began his digging. After a little work, he dug up a fine new bridle; and as well becomes Nick, not satisfied with his luck, he went on digging lower and lower, for the gold coins that he had dreamed about by the thousands; till, with one powerful dip of his spade, he suddenly raised a great stone, which had closed up the mouth of a cavern that was quite light inside, from a pair of candles that were burning on a square table. At this table a cat and a greyhound were sitting, playing at points. 'Hallo!' says Puss, 'who's there?' 'Only me,' says Nick. 'And who's me?' says the Greyhound. 'Why, Nick Saddler to be sure, and who else?' 'Ah ha!' says the dog, answering him; 'and what do you want, Nick?' 'Want, ye puppy!' says Nick, 'I want the gold.' 'Nick, you're a rascal,' says Puss. 'Well now, I never heard a cat say that before,' observed Nick—so striking a blow at the

cat with the bit-end of the bridle, he gave one great spring, and jumped out of the cave, with both Puss and Greyhound after him, and away with him down the hill as hard as his legs could carry him, and they following him, and he with the old jack-boots. Where Nick Saddler went to, or what became of him after that, is not rightly known; but 'tis commonly said that if people were to dig deep enough near this round building with the hole in it, they would assuredly find the cave that the dog and cat are sitting in, guarding the gold; and sure 'tis a queer pair of sentries, whoever put it there, they fixed upon to take care of it; though they didn't let Nick Saddler get at it, and 'tis hard to say who will have the luck of it, though many 's the man that is wanting the same this blessed day."

Another illustration of these Kerry superstitions occurs near Darrynane, as related by the piper of that place, but we must retain it for a while.

Intermingled with such interesting relations as these, Lady Chatterton, both with pen and pencil, gives us much information in regard to Irish antiquities, and particular pagan remains of the darkest date, and Ogham inscriptions equally dark. The lithographic sketches are very pretty; and never was antiquarian research rendered less dry by taste and fancy, than in her ladyship's narrative. But we must conclude; and have two or three slight anecdotes in store to make "a good ending," which if we did not do, we should make one quite inconsistent with the genius of the work:—

An Irish boy.—"My father was looking over the labourers' book as usual, to see what work had been done in his absence. All the people were marked as regular in their attendance, with one exception—that of a young lad named Carroll, opposite whose name the ominous word 'absent' invariably appeared. Now this Carroll has been always a notorious scamp, whom my father was advised long since to 'send to sea,' as the only vocation for one of his incorrigibly wild and unsteady habits. He is the most comical-looking urchin you ever saw; with a face of irresistible drollery and shrewdness, and a pair of eyes as sharp and bright as a rat's. 'What could he be about, to keep him so long away from the work?—perhaps he staid at home to dig out his own potatoes?' 'No—the never a potato he dug, good nor bad; his mother had to do 'em with her own hands, while he was away on his thricks about the country.' 'Drinking, very probably,' said one. 'Ah, I never thought he would come to any good,' said another. All joined in deploring the depravity of so young an offender. A few days after, the truth came out,—and what do you think it was that kept Miater Patrick, commonly called Patsey Carroll, away from his work and his potato-garden?—learning the flute! We called at the cabin of the delinquent's mother soon after this. 'Terrible news about Patsey, Mrs. Carroll!' I said, looking very solemn. 'Oh then, you may well say that, miss,' she exclaimed, with a face full of tribulation;—'I don't know what I'll do with him, at all, at all. Sure I'm afraid he's past advice or mending now entirely, since he's taken to the music—bad luck to it! Here's the thing that's putting him astray,' she added, taking down an old flute from the dresser; 'only 'tis a borrowed one, I'd put it behind the fire, so I would, for all the holes that's in it, and the black rings round about it,' she continued, holding out the obnoxious instrument with a look of such indignant spite, that I was obliged to bite my lips to avoid laughing out-

right. 'And 'tisn't to play tunes like any other Christian he does he doing,' she continued; 'only he must have notes wrote down before him on a paper, just like a reading book. He'd sooner, now, part with a bit of his heart than that old flute; and he thinks more of the music he gets out of them little holes than of his breakfast, dinner, or supper. I'm afraid I'll never get any good out of him. But,' said the poor woman, trying to console herself under her misfortunes, while the mother broke out in spite of her wrath, — 'maybe 'tis better than drinking or fighting, any way; and who knows but he'll repent yet?'

There follows a touching tale:—

"When we left Mrs. Carroll and the flute, we went into the next cabin, to visit a young woman who had lost her mother-in-law during our absence. We found her and her children in great poverty, and with scarcely any clothes to cover them. 'How comes it that you are in such rags?' we inquired; 'what has become of all the good clothes that were given to the old woman shortly before she died?' 'I never touched one of them,' answered the poor creature; 'I gave 'em away, flannels and all, to poor people, for the good of her soul, the very week she left me.' I cannot tell you, my dear G——, how touching was the beautiful though mistaken piety of this poor woman. There she stood, shivering under the piercing blast of a bitter winter's day; and as I looked at her, and saw the sacrifice she had made, in giving away her mother's clothes, 'for the good of her soul,' it was not without a pang of shame at my own luxurious self-indulgence. When had I foregone ease or convenience for the good of a fellow-creature's soul?"

One more, equally honourable to the Irish character, and we have done:—

"I heard to-day an anecdote of the worthy rector of Adrigoil, a place which, even without this anecdote, was interesting to us. This excellent man, during the period when the payment of tithes had ceased altogether, had been in consequence so straitened in circumstances, that his wardrobe was in a very threadbare state. At last, with great difficulty, he contrived to get together four pounds, and with this sum he one morning started for Bantry, to make a purchase of a new suit, which was absolutely necessary for the respectability of his appearance; however, it was destined that he and his worn-out companions were not so soon to part, for, on his way, he met a parishioner in great distress, threatened with arrest and total ruin. The sum required was exactly that which the poor rector had provided for his suit, but he gave his parishioner the money, and returned home in the evening with his shabby coat; but with the enviable feelings an act like this must inspire."

Appropos, however, at this part we have a remarkable literary anecdote, from a Mr. Davy, whom the author encountered near Adrigoil:—

"Mr. Davy (she states) is still a young man, — about thirty, but has travelled a great deal, in all parts of the world. He was of Colonel Chesney's expedition, and, it would seem, is of opinion that the Euphrates, owing chiefly to freshes in the river, can never become a regular passage to India. He has been recently in the service of Mahomet Ali Pacha, and served with Ibrahim in Syria. Mr. Davy lived two years at Damascus; by his account, the Egyptians cannot retain Syria. He seems to have been admitted a good deal into the confidence of Ibrahim; an intelligent man like Davy must have been a valuable acquisition to

so inquiring a mind as the pacha appears to possess. 'Pickwick' happened to reach Davy while he was at Damascus, and he read a part of it for the pacha, who was so delighted with it, that Davy was on one occasion summoned to him in the middle of the night to finish the reading of some part, in which they had been interrupted. The extended popularity of 'Pickwick' is certainly without parallel in English literature. Mr. Davy mentioned his having read in Egypt, upon another occasion, some passages from these unrivalled papers to a blind Englishman, who was in such ecstasies with what he heard, that he exclaimed he was almost thankful he could not see he was in a foreign country; for that, while he listened, he felt completely as though he were again in England."

England under the Reigns of Edward VI. and Mary, with the Contemporary History of Europe, illustrated in a Series of original Letters never before printed; with Historical Introductions and Biographical and Critical Notes. By P. Fraser Tytler, Esq. 2 vols. 8vo. London, 1839. Bentley.

OUR opinion of works like the present has been so often recorded, that it would be worse than useless to repeat or insist upon it. They are the corrections of the Romance and the Philosophy of History; the former being an idle imagination, and the latter an unreal dream. But when one is enabled to put their finger here and there upon undoubted facts, and say, like Master Froth, "here be truths," the fanciful chimera vanishes, and the unsubstantial vision fades away. Thus great events come to be sifted to their original causes; and even the collection of very slight and minute details which can be depended upon leads us to right conclusions on their compounded consequences and mingled effects.

Of so valuable a character is the work before us, wherein Mr. Tytler has, with his usual industry and judgment, brought together a mass of information which throws a curious light upon the English history of a very remarkable period. But he himself describes his task so distinctly, that we may copy his words for our introduction. Speaking of the State Paper Office, whence his materials are chiefly drawn, he says:—

"So important, indeed, are these stores, and yet so little are they known or appreciated, that the author believes he does not overstate the fact when he asserts that no perfect History of England, either civil, ecclesiastical, or constitutional, can be written till this collection is made accessible by catalogues to men of letters. But leaving this subject, upon which he will never cease to hope that something may at last be effected by the country, it occurred to him that an experiment might be made by printing a selection of such letters as illustrated a small portion of European history, and making an attempt to present them to the public in a more popular form than has yet been done. * * * Hitherto all the 'Collections of Original Letters' with which he is acquainted, valuable as they have undoubtedly been to the historian and the antiquary, have possessed few attractions for the general reader; and the reason seems obvious. They presuppose in any one who takes up the book a full acquaintance with the history of the period which they illustrate, a familiarity with an ancient and repulsive orthography, and an intimate knowledge of the lives and characters of the personages by whom and to whom they are written. Is it too much to say that these qualifications are rarely pos-

essed,—that even the best-informed reader will often find himself at fault? With a view to obviate such objections, the present work has been divided into periods, each of them prefaced by short historical introductions; slight biographical sketches are given of those illustrious statesmen and scholars who pass in review before us; and occasional critical discussions are introduced where the letters were calculated to throw new light on obscure or disputed passages of English history, or supplied unknown or important facts in the lives of eminent men. Lastly, it has been judged right to render these letters intelligible to general as well as antiquarian readers, by abandoning the ancient mode of spelling."

Our author proceeds to divide his work into convenient epochs; the first commencing with the death of Henry VIII. and descending to the overthrow of the Protector Somerset, viz. 1546, 7, 8, and 9. At the very outset, we perceive the singular nature of these revelations; and when we learn that the death of the king was concealed nearly three days, till those who succeeded to his authority and the custody of his young son had matured their plans, we feel that we are indeed raising the curtain on strange and hitherto unknown circumstances.

"Henry the Eighth died at Westminster, on Friday, the 28th of January, 1546-7, at two o'clock in the morning. Parliament was then sitting; but the king's death was kept secret for nearly three days. On Monday, the 31st of January, the Commons were sent for to the House of Lords; and the Lord Chancellor Wriothesley acquainted them with the melancholy event, scarcely able to speak from tears. He then requested Sir William Paget, secretary of state, to read to the parliament such parts of the late king's will as related to the succession, and the system by which the realm was to be governed during the minority of his son; and on the same day, Edward the Sixth was proclaimed and conducted to the Tower of London. The parliament was then declared to be dissolved by the death of the sovereign; and the members were licensed to depart, except the peers, whose duty it was to be present at the coronation. The two following letters, the first from the Earl of Hertford, shortly afterwards created Duke of Somerset, to Sir William Paget, the second from the same nobleman to the council, are valuable, because they contain some account of what took place in the obscure interval between the king's death and the public notification of that event by the chancellor,—a portion of secret history not to be found elsewhere. Even the MS. Council-books of Edward the Sixth do not commence till the 31st Jan., being the Monday after the king's death. It will be observed, that the first letter is written between three and four in the morning of the 29th January, little more than twenty-four hours after Henry expired.

"*The Earl of Hertford to Sir Wm. Paget.*

"Orig. St. P. Off. Domestic. 29 Jan. 1546-7.

"This morning, between one and two, I received your letter. The first part thereof I like very well; marry, that the will should be opened till a further consultation, and that it might be well considered how much thereof were necessary to be published; for divers respects I think it not convenient to satisfy the world. In the meantime I think it sufficient, when ye publish the king's death, in the places and times as ye have appointed, to have the will presently with you, and to shew that this is the will, naming unto them severally who be executors that the king did specially trust, and

who be councillors; the contents at the breaking up thereof, as before, shall be declared unto them on Wednesday in the morning at the parliament house; and in the meantime we to meet and agree therein, as there may be no controversy hereafter. For the rest of your appointments, for the keeping of the Tower, and the king's person, it shall be well done ye be not too hasty therein; and so I bid you heartily farewell. From Hartford, the 29th of Jan. between three and four in the morning. Your assured loving friend,
"E. HERTFORD."

"I have sent you the key of the will."

"Endorsed, 'To my Right loving Friend, Sir William Paget, one of the King's Majesties Two Principal Secretaries."

"Haste, post haste, Haste with all diligence, For thy life, For thy life."

"Edward the Sixth, at the moment of his father's death, was at Hartford, not Hatfield, as has been erroneously stated. Immediately after the event his uncle, the Earl of Hertford, and Sir Anthony Brown, hastened to this place, from whence they conveyed the young king privately to Enfield, and there they first declared to him and the Lady Elizabeth the death of Henry their father. Both of them heard the intelligence with tears. 'Never,' says Hayward, 'was sorrow more sweetly set forth, their faces seeming rather to beautify their sorrow, than their sorrow to cloud the beauty of their faces.' The following letter is written by the Earl of Hertford from Enfield.

"The Earl of Hertford to the Council.

"Orig. St. P. Off. Domestic. January 30th, 1546-7.

"Your lordships shall understand that I, the Earl of Hertford, have received your letter concerning a pardon to be granted in such form as in the schedule ye have sent, and that ye desire to know our opinions therein. For answer thereunto, ye shall understand we be in some doubt whether our power be sufficient to answer unto the king's majesty that now is, when it shall please him to call us to account for the same. And in case we have authority so to do it, in our opinions the time will serve much better at the coronation than at this present. For if it should be now granted, his highness can shew no such gratuity unto his subjects when the time is most proper for the same; and his father, who we doubt not to be in heaven, having no need thereof, shall take the praise and thank from him that hath more need thereof than he. We do very well like your device for the matter; marry, we would wish it to be done when the time serveth most proper for the same. We intend the king's majesty shall be a-horseback to-morrow by eleven of the clock, so that by three we trust his grace shall be at the Tower. So, if ye have not already advertised my Lady Anne of Cleves of the king's death, it shall be well done ye send some express person for the same. And so, with our right hearty commendations, we bid you farewell. From Enwild (Enfield) this Sunday night, at eleven of the clock. Your good lordship's assured loving friends,

"E. HERTFORD.

"ANTHONY BROWNE."

"Short as are these two letters, they furnish us with some important facts, which are new to English history, and throw light on what may be justly called the salient points in the policy of Hertford and his party—their proceedings in the interval between the king's death and its being communicated to parliament. It has been observed by Sir James Mackintosh, that, in our own time, the delay of three days before taking any formal steps relating to the demise of the sovereign, would be censured as a daring pre-

sumption; but neither this writer, nor any of our historians who had before, or who have since treated of this reign, were aware how far more daring was the conduct of Hertford and his associates than the mere concealment of Henry's death. Their leader had the will in his private keeping. This is proved by the emphatic postscript, 'I have sent you the key of the will.' And the fact increases the suspicion which hangs over this extraordinary document. They opened it before the king or the parliament were made acquainted with the late king's death; they held a consultation what portions of this deed were proper to be communicated to the great council of the nation. Hertford himself deemed some parts of it not expedient to be divulged; and when parliament and the nation yet believed Henry to be alive, the measures which were to be adopted under the new reign were already secretly agreed on by a faction to whom no resistance could be made. It is worthy of remark, also, that Hertford, although still bearing no higher rank than one of the executors of the late king, is consulted by them as their superior, and already assumes the tone and authority of protector; another proof that all had been privately arranged amongst them."

This is a fair example of our author's labours; and throughout the whole, he fills up many blanks which the preceding researches of Strype, Haynes, Carte, Burnett, Sir H. Ellis, and others, had left in the secret history of this period. Among the rest, we have some very interesting particulars of the entrance into life of the famous Lord Burleigh. Thus we are told:—

"The following letter from Lady Browne, written in July 1547, not six months after the accession of Edward the Sixth, proves that Cecil was then in some situation of confidence and power under the Protector Somerset. The author of his life in the 'Biographia Britannica' (the best critical account of him yet written, though too indiscriminate in its praise), imagines that he was Master of Requests as early as 1547; but to this office he certainly was not promoted till much later. This clearly appears from the letters addressed to him which I have seen in the State Paper Office; and from the same source it is evident, that in 1547 he managed the whole correspondence of the protector; probably, in the capacity of his private secretary. The letter of Lady Browne, at all events, establishes a fact, not before known in the life of Burleigh—that, at the age of twenty-seven, he had embraced the service of the Duke of Somerset, and was not only a statesman, but in a place of high trust and influence. It is pleasant to find a letter, apparently immaterial, throwing light upon the early life of so remarkable a man.

"The Lady Browne to Cecil.

"Orig. St. P. Off. Domestic. 23rd July, 1547.

"Gentle Mr. Syssyll,—After most hearty commendations. This shall be to render you most hearty thanks, for your gentleness shewed unto me at all times. Further, it may be to certify unto you, that I have unto my lord protector's grace a letter, in the which I am a humble suitor to the same his grace, for as much as I understand, his grace doth appoint certain gentlemen and others to go into Scotland to serve the king's majesty there, that it will please his grace to accept and appoint my brother to be one also amongst them. And supposing his grace not to know my brother, I shall desire you to prefer his suit, and that by your means he may deliver my said letter to my lord's grace; and for your gentleness herein, I

shall reckon myself, as I am indeed, much beholden unto you. Thus always ready to trouble you, I will desire you to have me commended unto your good bedfellow, and so bid you most heartily to farewell. From Horsley, this Saint James's day. By your assured to my little power,
"ELIZABETH BROWNE."

"Endorsed, 'To my friend Mr. Syssyll be these delivered.'"

A letter from Wotton, our ambassador at France (April 16th, 1548), leads to a remarkable historical fact, thus stated by Mr. Tytler:

"Henry the Second about this time incurred great odium for his project of creating a diversion in his favour, during his wars with the emperor, by bringing in the Turks upon Christendom: his object being to keep Ferdinand employed at home in defending his dominions against the infidels, and thus prevent him from assisting Charles the Fifth. It was this conduct which drew from Sir John Mason the pithy remark, that if the devil were to be had as an ally, Henry would not scruple to entertain him; and it is to this that Wotton alludes in the following extract from one of his letters to the protector and council. It proves also, that the French intrigues with the sultan commenced at a much earlier period than is assigned to them by Sismondi, the latest French historian."

The political position and hostilities of the Protector Somerset, and his brother, the lord high admiral, Seymour, are significantly illustrated in these pages, and Mr. T. relates:—

"In these designs to supplant his brother, Lord Seymour was assisted by John Fowler, one of the gentlemen of Edward's privy chamber. The following letter from Fowler to the lord admiral shews how artfully and successfully they worked:—

"John Fowler to my Lord High Admiral.

"Orig. St. P. Off. Domestic. 15th July, 1548.

"I most humbly thank your lordship for your letter dated the 15th of this present, which letter I shewed to the king's majesty: and whereas, in my last letter to your lordship, I wrote unto you, if his grace could get any spare time, his grace would write a letter to the queen's grace, and to you; his highness desires your lordship to pardon him, for his grace is not half a quarter of an hour alone: but such leisure as his grace had, his majesty has written, here inclosed, his recommendations to the queen's grace and to your lordship, that he is so much bound to you, that he must needs remember you always; and, as his grace may have time, you shall well perceive by such small lines of recommendations with his own hand. News I have none to write to your lordship, but that we have good hope that Haddington shall be able to bide this great brunt. The king's majesty looks every hour for good news; for, as they come, my lord's grace sends the letters to the king's majesty. My Lady of Somerset is brought to bed of a goodly boy, thanks be to God; and I trust in Almighty God the queen's grace shall have another. The king's majesty shall christen my lord's grace's son. I cannot tell your lordship whether his grace shall go to Shene himself or not, for as yet the child is unchristened. I must, among other news, declare unto your lordship, that my lord protector's grace is so good lord unto me, that his grace hath given me the keeping either of the great park of Petworth, or else of Wellawynnton,

* It is curious to observe, how little regard was paid to the spelling of names in those days. In this volume the name of Cecil is written by his most intimate friends, in no fewer than ten different ways: Crecell, Syssyll, Cecil, Cicill, Cecille, Cysell, Cycill, Cycle, Sicile, Cicil. And Lady Jane Grey, of unfortunate memory, signs herself Jane Graye.

ther I will choose ; and, Monday next, I in-
God willing, to go into Sussex and see them.
sire your lordship, when you send me any
ers, let them be delivered to myself ; trust-
also, your lordship will provide, that this
tell no more tales after your reading ; for
I write at length to your lordship, because
n promised of a trusty messenger. And
I commit your lordship to Almighty God,
preserve your lordship with the queen's
e, and all yours, to his pleasure ! Written
ate, at Hampton Court, this 19th of July.
r lordship's most bounden,

"JOHN FOWLER."

'I had forgotten to declare to your lord-
concerning the money your lordship would
friend should have : when he has need, I
be bold to send.'

The 'small lines of recommendations,' writ
the king's own hand, are enclosed in this
or of Fowler's. They are as follows :

'My lord. Send me for Latimer as much
e think good, and deliver it to Fowler.'

"EDWARD."

To my Lord Admiral."

The second is, if possible, still more laconic.
'My lord. I thank you, and pray you to
me recommended to the queen.'

The minute, torn, and shabby scraps of pa-
tron which these royal notes are written, seem
indicate the haste and secrecy which Edward
obliged to use."

[To be continued.]

Charles Tyrrell ; or, the Bitter Blood. By
P. R. James, Esq., author of "Darn-
y," &c. 12mo. pp. 717. London, 1839.
entley.

only objection we can have to this novel
a novel form, which is certainly incon-
ent, and will not, we hope, pass into a
edent. A volume of above seven hundred
is unhandy, and one of the delights of
t reading certainly consists in the ease with
h one can turn over the well-printed pages
lear paper in a neat shape.

ut, leaving externals, we have to speak of
Charles Tyrrell as a work of fiction from a pen-
ally prolific and popular. Had the author
before him the melancholy catastrophe
h has lately painfully occupied the public
tion, with the untimely death of one
able youth, and the unhappy condemnation
a felon of another, he could not more
bly and emphatically have illustrated the
of giving way to passionate temper than
as done in this history of "Bitter Blood."

Tyrrell, like the Medhurst family, yields
ible examples of this fatal error ; and a
al lesson fraught with more useful inculca-
while it is wrought up with admirable skill
deep interest, has seldom been presented
the reading world. The characters are
rn with a fine insight into human nature ;
yet, in several instances, stamped with an
anality which shews the high creative, as
as the descriptive powers of the writer.
plot thickens to the close, and the
ément is unexpected and striking. What
e could we require in a tale of fiction ?
e we have feeling, style, reflectiveness,

'There are strange contradictions in Mr. Lodge's
or Characters of two persons so intimately connected
een Catherine Parr, and her husband, the Admiral.
e queen's life, he doubts whether she was ever de-
ed at all. 'It has been commonly asserted,' says
that she died in childbirth ; 'a report which, ad-
ding to the fact, that she had been childless in three
ous marriages, might reasonably be doubted. In the
ral's life he states, without the slightest reference to
unreasonable scepticism, a few pages back, 'Lord
our was never married but to Catherine Parr, who
him an only daughter, Mary, born in Sept. 1548.'"

incident, verisimilitude, touches of humour,
and an excellent and instructive finale ! That
we may, in our notice, illustrate some of these
attractive qualities without making inroad into
those secrets which would partially rob the
story of its zest is rather a difficulty, and must,
at all events, shorten our extracts ; we select,
as a commencement, the account of the fated
race of Tyrrell :—

"The father of Sir Francis Tyrrell had
differed very little from his ancestors. He
had been a bold, fearless, overbearing, and
tyrannical man ; a soldier in his youth, a
fox-hunter in his latter days ; a despot in
his magisterial capacity, an irritating neigh-
bour, and an insufferable master of his house.
He had been a very handsome man withal ;
and, in order to prove his disregard for per-
sonal beauty, he had married a young lady
of the neighbourhood of considerable fortune,
but who certainly possessed few personal at-
tractions. As a girl, she had been silent,
calm, unobtrusive, apparently thoughtful ; in
person, little, dark, pale, with small keen
black eyes, and a somewhat pointed nose.
Her voice had been sharp, but not very mu-
sical ; and there was something in her whole
demeanour which made the old clergyman of
the parish, who had known her from her
youth, and who was, moreover, somewhat
waggishly disposed, declare, when he heard
of the marriage about to take place, that he
was excessively glad of it, for that she was
just the wife for Sir John Tyrrell. When
they were once fairly married, more of the
lady's character appeared ; not that she ever
became more loquacious or loud-tongued than
she had been before ; but Sir John very soon
found that she had always ready for any of his
furious breakings forth of passion a calm,
quiet, stinging reply, in which she seemed to
combine with diabolical ingenuity every thing
that was most disagreeable for him to hear,
and to compress it into the fewest possible
words. She had a particular art, too, of mo-
dulating her voice, so that in the midst of one
of his most furious and noisy fits of rage, her
low quiet tones made themselves distinctly
heard, and not one biting word was lost to his
ear. Sir John was not a man to be frustrated
even by this sort of warfare, and he carried it
on with his lady through the whole of his life ;
but he was a candid man, and used occasion-
ally to acknowledge that his furious speeches
and behaviour, compared with the quiet words
and demeanour of his wife, were as a drubbing
with a crab-stick to a cut with a sith. The
offspring of this hopeful union was Sir
Francis Tyrrell, and well might his bio-
grapher declare that he combined in his own
person all the virtues and qualities of his father
and his mother : for, to an ungovernable tem-
per, such as had descended to him from his
ancestors, he added a sarcastic bitterness pecu-
liarly his own.

"His family were totally without what the
phrenologists call the organ of veneration.
They had little respect for any thing, and set
out with having no respect for themselves.
This they concealed in their own case, of
course, as far as possible ; but this want of
respect never failed to make itself manifest
both in words and deeds, when it referred to
any member of their own family. Thus, Sir
Francis was heard to declare that his father
was one of the greatest fools that ever lived,
and, on being asked why, replied, 'For mar-
rying my mother.' 'A man puts a lemon to a
bottle of spirits,' he said, 'and people call him
a sensible fellow, and go to drink punch with

him ; but if a man were to eat a whole lemon,
plain people would say he was mad.' Again,
on the occasion of his own marriage, he set out
upon the principle of finding somebody the
direct reverse of her who had been chosen by
his father, declaring that he looked upon it as a
duty to his children. Such an event, he said,
as the marriage of his father and mother was
sufficient to serve ten generations, and that he
would do his best to dilute the quintessence of
bitterness which had been hence produced.
He chose, accordingly, a young lady from a
distant part of the country, possessed of little
or no fortune, of a gay and happy disposition ;
who had been brought up in great subjection
to the will of parents that were really kind to
her, and who had a fund of gentle and kindly
feelings and good principles, but who was
somewhat imprudent and incautious of speech,
and of a timid as well as of an affectionate na-
ture. From the first sight of Sir Francis Ty-
rell, she had rather disliked him than other-
wise. He had gained a little by attention upon
her good graces, and upon her esteem by some
philanthropic doctrines which he put forth ;
with no desire, indeed, of deceiving her or
others, but solely because they were theories
for which he had a fondness, and in which his
vanity was concerned. His progress in her
favour, however, had not arrived beyond the
dangerous point of indifference, when he pro-
posed himself to her parents as her future hus-
band. She shrank from the very idea ; but he
was wealthy, bore a fair reputation, had, in-
deed, acquired a high character as a man of
honour and integrity, and her parents pressed
her so urgently to accept him, that she who
was accustomed to yield to them in all things,
yielded to them in this also, and she became
the wife of a man that she did not love."

One of the principal persons who figure as a
friend in this domestic circle is a Mr. Driesen,
very cleverly drawn and original, from whom
we shall endeavour to extract a few passages
that may be understood by themselves without
trenching on the plot :—

" 'I defy him to spoil the case of my good
friend, Charles, who is as certain of being ac-
quitted as I am of living till to-morrow morn-
ing, which I'm sure I hope I shall do, as I have
no less than seven letters to write, some upon
business, which might be put off very well upon
the eve of a journey to the other world ; but
some mere letters of politeness, and the good
folks would think me rude if I were to go
without writing to them.' As he ended, he
whistled two or three bars of an air, and then
suddenly turning to Mrs. Effingham and seem-
ing to recollect himself, he said, 'I beg pardon,
my dear lady, for presuming to whistle in your
presence ; but that whistling lili-bullero is a
bad trick, which I caught of my uncle Toby.
I always do it when there's a cat or a lawyer in
the room — no offence, Mr. Morrison ! for I
was bred a lawyer myself, you know.' 'And
pray, my good sir,' said Morrison, 'how did
you manage then, if you always whistle lili-
bullero when there's a lawyer in the room ?'
'Why I did nothing but whistle all day long,
with my hands in my pockets,' replied Mr.
Driesen, not at all put out of countenance ;
'so I was obliged to give up the law, my good
sir, otherwise I should have whistled myself
away altogether. As it was, I had whistled
myself into the shape and likeness of a flagpole,
as you now see.' "

A part of the examination of a queer old tar
on the trial referred to in the foregoing, may
further serve to exhibit the humorous portions
of the work :—

"The evidence was so clear, so exact, so conclusive, in regard to the facts which it went to establish, that a well-pleased murmur ran through the court; and the counsel, who had received a hint from Morrison not to press Captain Longly further than necessary, upon his occupation at the time, judged that he might leave the matter there, especially as he might elicit any other facts from Hailes at an after period, if he found it requisite. The counsel for the prosecution, however, was not to be so satisfied; and as it fell to one of the junior counsel to cross-examine this witness, he did it in a less mild and considerate manner than his leader might have done. 'Now, Mr. Longly,' he said, 'or Captain Long, as I am told you are called, you have given very good evidence indeed; but I have got a question or two to ask you, and be so good as to remember that you are upon your oath. Now, Mr. Longly, alias Captain Long—' 'Make haste,' said Longly, bluffly; 'for though they call me Captain Long, as you say, I am fond of short questions and short answers.' 'Well, then, Captain Long,' he continued, 'be so good as to explain to us, if it is not an impertinent question, what you were doing at the time the prisoner at the bar was with you, as you have stated.' 'Why, I think it is an impertinent question, Mr. Parchment-face,' replied Captain Long, who did not at all admire the demeanour of his cross-examiner. 'I came here to give evidence of what he was doing, not what I was doing, and so I say it is an impertinent question, and I shan't answer it.' 'Then the court must compel you,' replied the lawyer. 'I am afraid you must put your question in another form,' said the judge. The lawyer bowed, and tried it in a different shape. 'Pray, then,' he said, 'what was Sir Charles Tyrrell, the prisoner at the bar, doing at the time that he was with you, as you have just stated?' Captain Long, however, was not a man to be easily outdone, and he replied, 'Why, part of the time he was walking up under the park-wall towards me; part of the time he was talking to me, and part of the time he was walking away again; part of the time he was turning to look at what we were about; part of the time he was coming back again to us, and part of the time he was going back to his own house;' and Captain Long put his hands behind his back, and looked the lawyer straight in the face, while a general and unbecoming titter ran through the court. 'Silence!' exclaimed the judge; 'this is very indecent! I do not, however, think our learned brother can press the witness to say anything that might criminate himself.' 'I have no objection, my lord,' replied Longly, turning towards the judge, 'to say anything in the world, if I am asked in a civil way, do you see; but if he tries to brow-beat me, he shall find himself mistaken.' 'You must respect the court, sir,' replied the judge. 'We will not suffer you to be brow-beaten, but you must remember the awful nature of the proceeding in which we are engaged. The life of a fellow-creature is at stake—a terrible crime has been committed, and the law must be satisfied. Have you any objection, Mr. Longly, to answer the court what was the business you were engaged in during the time that the prisoner at the bar was with you? You are not obliged, however, to say any thing to criminate yourself, therefore let your answer be considerate.' Longly paused for a moment, ere he replied, and turned his eyes towards Everard Morrison; but then, slapping his knee after his own peculiar fashion, he answered, 'Well, I don't care! It must be told one day, so it shall out now.'

But not "now" with us; for we must leave this to the readers of the book itself, and conclude with a few brief selections, as specimens of the author's talent, as plentifully sprinkled over these delightful pages.

Childhood.—"The innocence of childhood is the tenderest, the sweetest, and not the least potent remonstrance against the vices and the errors of grown man, if he would but listen to the lesson and take it to his heart. Seldom, too seldom, do we do so."

Silent Language.—"Throughout life we are constantly holding long conversations without saying a word, for the expression of the countenance is just as much a language as that which hangs upon our tongue; and though the one and the other are often equally deceitful, yet we are constantly endeavouring to correct the falsehood and mistakes of either by the commentary of the other."

Boarding-School Education.—"She had in most things a natural good taste, and notwithstanding having been at school, was not, in reality, vulgar, except inasmuch as the least approach to affectation of any kind is vulgar in itself."

Housemaids in the Morning.—"Those lazy jades of yours are never up before six o'clock in the morning, so that when I come down sometimes, to seek for a book in the library, I find them walking about with their brooms in their hands, like the apotheosis of a March wind enveloped in a cloud of dust."

The World fairly divided.—"There are two classes of consummate fools in the world: the fools that cannot open their eyes, and the fools that cannot shut them. The first are very annoying to every body round them; but the second are very annoying to every body else and themselves too."

We have only to add, that a clever portrait of Mr. James, engraved by Greatbatch, after a drawing by Houghton, adds much to the value of this excellent novel.

Hymns and Fireside Verses. By Mary Howitt. 12mo. pp. 202. London, 1839. Darton and Clark.

THE tears shed by a little girl (who for several days has looked upon this little volume as her own), on parting with it, is a greater compliment to its merits than all we can say in its praise. She called it her "Little Mabel," from the title of one of the beautiful poems which it contains, and would only be consoled by a promise that it should again be her own when noticed. We know no living writer who has done more to please and instruct the rising generation than our fair authoress; she has children of her own, and has written to their capacities, taking care to select such subjects as are best adapted to their tastes, and veiling under her beautiful stories just such morals as they are capable of comprehending. They read her works with both interest and pleasure, and we doubt not but that in after-life many a sweet stanza which had its birth in her own home-loving and quiet mind, will come like a dream of the past upon their memories, and they will bless her in their hearts for the thoughts she first awakened. There is a simplicity about her writings which even we, who are bending westward, are not yet too old to feel; and although she strikes the chord with a gentle hand, yet the sound vibrates through a thousand emotions which have long slumbered, and the past again arises: visions—how bright!—upon which we deemed the night of memory had closed for ever, rise like the morning upon another world. Her mind has been steeped in the holy

fountain of the Scriptures; and many a drop from that sacred stream has she treasured in her heart, which now steal forth with a low sweet gushing sound—

"Dropping gentle tears"

wherever they fall—for there is a healing and a freshness in the waters. Take but the first and longest poem in the present volume, and see what a sweet simplicity reigns throughout it. Christianity is personified, and, to use her own words, "Like a little child goes wandering over the world, fearless in its innocence." There may be those whom the amiable Cowper has hit off in three lines, who

"— know no better
Than to interpret by the letter
A story of a cock and bull—
Who have no brains within the skull,

and who do not feel the beauty of this allegory; but we will read a few more pages, and soon forget their foolishness. Little Marien sets out on a pilgrimage through the world—an angel in the disguise of a child. But here is the opening:

"Through the wide world went Marien,
On a holy mission sent,
A little child of tender years,
Throughout the world she went.

And ever, as she went along,
Sweet flowers sprang 'neath her feet;
All flowers that were most beautiful,
Of virtues strong and sweet.

And ever, as she went along,
The desert beasts grew tame;
And man, the savage, dyed with blood,
The merciful became.

No friend at all had Marien,
And at the break of day,
In a lonesome place within the world,
In quiet thought she lay.

The stars were lost in coming morn,
The moon was pale and dim,
And the golden sun was rising
Over the ocean's rim.

With upturned eyes lay Marien;—
'And I am alone,' said she;
'Though the blackbird and the nightingale
Sing in the forest-tree:

Though the weak woodland creatures
Come to me when I call,
And eat their food from out my hand;
And I am loved by all.

Though sun, and moon, and stars, come out,
And flowers of fairest grace,
And whate'er God made beautiful,
Are with me in this place:

Yet I am all alone, alone,—
Alone both night and day!
So I will forth into the world,
And do what good I may:

For many a heart is sorrowful,
And I that heart may cheer;—
And many a weary captive pines
In dungeons dark and drear;—
And I the iron bonds may loose,—
Then why abide I here?

And many a spirit dark with crime,
Yet longeth to repent;
And many a grievous wrong is done
To the weak and innocent;—
And I may do the injured right,
May save the penitent!

Up, I will forth into the world!
And, thus as she did say,
Sweet Marien from the ground rose up
And went forth on her way.

Through the wood went Marien,
The thick wood and the green."

In the dark wood she meets with two brothers who are at strife about their heritage. The elder says, "Thou shalt not have a part of our father's land;" the younger stabs him to the heart without replying, then escapes into the forest, and gentle Marien is left kneeling beside "the bleeding and murdered man." Such are the first objects that the angel-pilgrim meets when she sets out into the world: so murder speedily followed the expulsion of our first parents from Paradise. Poor Marien leaves the murdered man "stiff in death," and journeys along disconsolate through the wild forest

until she comes to where a woman sits with her arms folded upon her breast. "A woman desolate," pale as marble, she sat with fixed eye, "enchained, as in a trance, by her great misery." But it is in vain attempting to connect the beauty and simplicity of the narrative by analysis. The following will find its way into every feeling heart:—

"What ails thee, mother?" Marien said,
In a gentle voice and sweet;
'What aileth thee, my mother?'
And knelt down at her feet.
'What aileth thee, my mother?'
Kind Marien still did say;
And those two words, 'my mother,'
To the lone heart found their way.

As one who wakeneth in amaze,
She quickly raised her head:—
And 'Who is it calls me mother?'
Said she, 'My child is dead!'

'He was the last of seven sons—
He is dead—I have none other;—
This is the day they bury him;—
Who is it calls me mother?'

'Tis I,' said gentle Marien,
'Dear soul, be comforted!'
But the woman only wrung her hands,
And cried, 'My son is dead!'

'Be comforted,' said Marien,
And then she sweetly spake
Of Jesus Christ, and how he came
The sting from death to take.

She told of all his life-long love,
His soul by suffering tried;
And how at last his mother stood
To see him crucified.

Of the disciples' broken hearts
She told, of pangs and pain;
Of Mary at the sepulchre,
And Christ arisen again.

'Then sorrow not,' she said, 'as though
Thou wert of all bereft;
For still, though thy beloved are not,
This blessed faith is left,

That when thy dream of life is o'er
Thou shalt embrace thy seven,
More beautiful than earthly sons,
With our dear Lord in heaven!'

Down on her knees the woman fell,
And 'blessed be God,' said she,
'Who in my sorrow need hath sent
This comfort to me!'

Marien, "abides a little space" with the "desolate woman," and becomes as dear to her as a daughter. But the time arrives when she must again depart; and the childless mother accompanies her a part of the way across "the desert heath, and the wild mountain." They sleep together in the "hoar forest," and in the morning,

"They said farewell, as those who part
To meet on earth no more."

Marien pursues her journey alone, "from morn till set of day," singing as she goes along, for the "peace of God rested upon her spirit," and

"The joyfulest song sang Marien
That e'er left human tongue;
The very birds were mute to hear
The holy words she sung."

But the "darksome night came on," and the heavenly pilgrim laid her down to sleep beside a cave,

"On mosses green and brown."

In "the deepest hush of night," rude robbers entered the cavern, and having ate and drank, they prepare to murder an old man whom they have robbed. But Marien springs up from her mossy couch, and enters the cave, and the robbers fly, believing her to be "a spirit stern and beautiful." The aged man is rescued, and journeys hand in hand with his deliverer to the "forest grange," where he dwells, a sweet sylvan spot, "where the white doe and the antled stag" bound in freedom. But the good old man dies soon after, and,

"Then came forth
A kinsman for the heir.
A lean and rugged man of pelf
In wickedness grown old;

From some vile city-den he came
And seized upon the gold;—
He slew the tamed forest-beast,
The forest-grange he sold.

And with hard speeches, coarse and rude,
Away the child he sent:
Meek Marien answered not a word,
But through the forest went."

With the following, from the third part of "Marien's Pilgrimage," we must conclude:—

"Through the wild wood went Marien
For many a weary day;
Her food the forest-fruits, and on
The forest-turf she lay.

The wildern wood was skirted
By moorlands dry and brown;
And after them came Marien
Into a little town.

At entrance of the little town
A cross stood by the way,—
A rude stone cross, and there she knelt
A little prayer to say.

Then on the stone-steps sate her down;
And soon beside her crept
A pale child, with a clasped book,
And all the while he wept.

'Why weep you, child,' asked Marien,
'What troubleth you so sore?'
At these words spoken tenderly,
The child wept more and more.

'I have not heard,' at length he said,
'Kind words this many a year,
My mother is dead—and my father
Is a hard man and severe.'

I sit in corners of the house
Where none can see me weep;
And in the quiet of the day
'Tis here I often creep.

The kid leaps by his mother's side,
The singing birds are glad;
But when I play me in the sun,
My heart is ever sad.

They say this blessed book can heal
All trouble, and therefore
All day I keep it in my sight;
I lay it 'neath my head at night,
But it doth bring no cure to me:—
I know not what the cause may be,
For I of learning have no store!

Thereat, like to a broken flower,
The child dropped down his head;
Then Marien took the clasped book,
And of the Saviour read.

She read of him the humble child
Of poverty and scorn;
How holy angels sang for him
The night that he was born.

So conversed they of holy things
Until the closing day,
Then Marien and the little child
Rose up to go their way.

As to the town they came, they passed
An ancient church, and 'Here
Let us go in!' the pale child said,
'For the organ pealeth over head,
And that sweet strain of holy sound
Like a heavenly vesture wraps me round,
And my heavy heart doth cheer.'

So Marien and the little child
Into the church they stole;
And many voices rich and soft
Rose upward from the organ loft,
And the majestic instrument
Pealed to an anthem that was sent
To soothe a troubled soul.

Anon the voices died away,
The pealing organ ceased,
And through the church's ancient door
Passed chorister and priest.

And Marien and the little child
Went forward hand in hand
Adown the chancel aisle, and then
At once they made a stand.

Over the altar hung a piece
With holy influence fraught,
A work divine of wondrous skill
By some old painter wrought.

The gracious Saviour breathing love,
Was there like life expressed,
And round his knees the children small
Were thronging to be blessed.

Down dropped the child upon his knees,
And, weeping, tenderly
Cried 'Bless me also, poor and weak,
Or let me go to thee!'

Anon his little head dropped low,
And his white lips 'gan to say,
'Oh kiss me, gentle one, for now
Even I am called away—
The blessed mother's voice I hear,
It calleth me away!'

So died the child;—and Marien laid
His meek arms on his breast,
With the clasped book between his hands:
Thus God had given him rest!

And Marien, weeping holy tears,
Sate down beside the dead,
And slept that night within the church,
As in a kingly bed.

Scarce from the church had Marien passed,
When came the father there,
As was his wont, though fierce and bad,
To say a morning prayer.

Not seven paces had he gone,
When, heart-struck, he surveyed
Before his feet, that little child
In his dead beauty laid.

At once, as by a lightning stroke,
His softened soul was torn
With a deep sense of all the wrong
That little child had borne.

And then came back the timid voice,
The footsteps faint and low,
The many little arts to please,
The look of hopeless woe,
And many a shuddering memory
Of harsh rebuke and blow.

No prayer of self-approving words,
As was his wont, he said,
But humbled, weeping, self-condemned,
He stood before the dead."

We did purpose giving an analysis of the whole of this poem (the idea of which may have been suggested by Parnell's "Hermit"); but we have already trespassed deeply upon our columns; for it is seldom that we meet with a work that carries us so far away, and has such a just claim to the space of our pages. Of the smaller ballads and hymns, we can only say that they are all excellent; and the one entitled "Mabel on Midsummer Day" is a perfect little gem, finished exquisitely. We do not remember reading a fairy legend, addressed to children, that we liked so well. The book is illustrated by several very beautiful vignettes designed by Mr. Brown, whose name, in connexion with the late splendid annuals, is well known. Mabel milking the ewe, and surrounded by the "fairy folk," together with Marien reading at the ancient cross, are most to our liking; but they all do great credit to this young and rising artist. We need not add a further recommendation, the extracts we have given will speak for themselves. The volume ought to be put into the hands of all good children who can read; and those who cannot might, like Alfred of old, be tempted to learn by a sight of it. We give it our praise and our best wishes; and, in the words of the fair authoress, conclude:—

"Go forth, and have thou neither fear nor shame;
Many shall be thy friends,—thy foes be few;
And greet thou those who love thee in my name,—
Yes, greet them warmly! Little book, adieu!"

MISCELLANEOUS.

The Numismatic Chronicle. Edited by J. Y. Akerman, F.S.A. No. IV. April 1839. London. Taylor and Walton.

THE present number of this interesting periodical, for interesting it is, as well as indispensable, to all who devote any attention to the subject of numismatics, fully maintains the reputation which its predecessors have acquired. In addition to various papers, of which some are curiously illustrative of classical antiquities; some of mediæval archaeology; and others, as that on the medals of the Pretender, of more recent English history; and the usual reviews and miscellanea; it gives us the first portion of a descriptive catalogue of the curious collection of the Chevalier de Horta, formed by his father while ambassador at Vienna, the Hague, and St. Petersburg, drawn up by Mr. Akerman, who has made several of the inedited coins which it contains the subject of a very ingenious paper.

Mr. Akerman, acting upon the Shaksperian

doctrine "of finding good in every thing," has applied himself to the study of numismatics in a very philosophical spirit; and in his hands the work before us will, no doubt, prove highly instrumental in spreading abroad a well-directed taste for a branch of antiquarian lore, which, if rightly applied, is eminently calculated to throw light upon the most important historical questions.

A Brief History of the United States' Boundary Question. Drawn up from Official Papers. By G. P. R. James, Esq. Pp. 32. London, 1839. Saunders and Osley.

As historiographer to her Majesty, Mr. James has access to the current tide of State Papers; and from those relating to the important question of a boundary line between the territory of the United States and the British North American Colonies, he has drawn up this concise and clear account of the question. He shows that in rejecting the award of the King of Holland, the United States have taken new grounds, and put forward claims not only inconsistent with the treaty of 1783, but with that of Ghent; and he contends that there is no use in going to another reference, unless provision is made for its being finally binding on both parties, and not liable to be set aside because the general government of the United States cannot control the independent government of the State of Maine—a State, by the bye, which did not exist when the treaty of 1783 was concluded. Mr. James suggests proper measures to be adopted to secure this finality.

We should very much have missed a map to render Mr. James's statements more distinct as to geographical points, but, by a lucky coincidence, one by Mr. James Wyld, with the whole North-Eastern Boundary in dispute laid down for reference, has just been published, and reached us whilst reading his pamphlet. They are necessary to each other, and should go together.

The Guberniusia, a Scottish Comedy. Pp. 75. (Edinburgh, W. Elgin; London, Simpkin, Marshall, and Co.)—Rather a pleasant imitation of Allan Ramsay's "Gentle Shepherd;" in which the disguised King James, of merry memory, figures in his old character of a guburnius; and with a jolly friar, a miller, and his bonny daughter, and other characters, makes out a light comic pastoral, interspersed with songs of an agreeable description.

Marianna, a Tragedy, by W. Waller. Pp. 50.—We cannot say much for this play, wherein are figured Herod and his court. The conclusion is very lame.

Isabella Aldobrandi, a Tragedy, by Guido Sorelli. Pp. 84. (London, Rolandi).—M. Sorelli, so well known and appreciated as the translator of Milton, has given us here a fair specimen of his own original composition in the English language. There are many poetical thoughts in the play of *Isabella Aldobrandi*.

Wolcott, a Tragedy, and the Poetical Works of James Magnus. Pp. 179. (London, S. Magnus).—These compositions have amused the writer, and we fear they will not extend their influence much further.

The Organs of the Brain, a Comedy, in Three Acts, Translated from "Kotszebue," by Lieut. Colonel Capodose. Pp. 68. (London, E. Bull.)—Phrenology, a comedy:—we always thought it a farce.

The Siege of Vienna, a Tragedy. Pp. 91. (Edinburgh, Bell and Bradfute; London, Ridgway.)—We cannot say that this breaks the spell of mediocrity, which comprehends so many of our recent dramatic productions.

The Priamides, a Tragedy. Pp. 84. (London, Saunders and Osley.)—Nor this, which is very mystical, and has no interest.

Montezuma, a Tragedy, by Dillnot Sladden. Pp. 95. (London, Longman and Co.; Canterbury, Ward).—Nor this.

Edith and Morcar, a Tragedy. Pp. 132. (London, Miller.)—Norman and Saxon, in prose and verse.

Eucharistica: Meditations and Prayers from the old English Liturgy, &c. by the Rev. S. Willerforce, M.A. Pp. 150. (London, Burns.)—A pious selection, and well calculated to impress the mind in a salutary manner in regard to the solemn ceremony of holy communion.

The Simplicity and Intelligent Character of Christianity, by Presbiterius. 8vo. pp. 64. (London, Longman and Co.; Bath, Simms, Collings, &c.)—Four brief discourses, the object of which is to show that the Christian is a clearly revealed religion, and not a mystery.

On the Present State of the Navy, by Capt. Sartorius, R.N. Pp. 32. (London, Turner.)—A pamphlet to point out the expediency of making the naval service more

coveted than at present, by securing and increasing the pensions for long services, &c.

Trials of Strength: a Tale, illustrative of Moral and Physical Courage, by Mrs. Barwell. Pp. 256. (London, Harvey and Darton.)—A book of instruction for boys, from which improvement may be gathered, though we dislike the expatriation of vicious contrasts, which suggest evil that might never otherwise enter into the mind.

The Animal Creation: its Claims on our Humanity stated and enforced, by the Rev. John Styles, D.D. Pp. 357. (London, Ward and Co.)—This essay, gained for its author the prize of a hundred guineas offered by the Society for the Prevention of Cruelty to Animals, for the best illustration of the argument on behalf of the brute creation, and the obligations of mankind to treat them with humanity. We are afraid that our account of the experiments with the Woorah poison, in our last Gazette, might expose the operators to severe animadversion, notwithstanding the useful object they had in view. We would recommend this work to them and all others who are liable to forget a duty in itself so gratifying as mercy and kindness to animals.

Notes on the Relations of British India with some of the Countries West of the Indus. Pp. 23. (W. H. Allen and Co.)—A brief but intelligent exposition of our past and present relations with Persia and Afghanistan; and contending that, when the former lends itself to Russian influence, it is our policy to strengthen our frontiers by cultivating the best understanding with the Afghan rulers. At page 29, a misprint of Indus instead of Indus (twice on the same page) ought to be corrected, as very fatal to the sense.

Gertrude and Beatrice; or, The Queen of Hungary; a Historical Tragedy, by G. Stephens, author of the "Manuscripts of Eridy." Pp. 104. (Mitchell.)—Mr. Stephens himself justly observes, that there are parts of this play which are a bar to its appearance on the stage; and he might have gone a step further, and allowed that even for perusal they go beyond the taste of the present age, whatever license may have been given to our elder dramatists from whom he has drawn his inspiration. With some happy thoughts and expressions, and more that are strained and offensive, we must dismiss his effort with this slight note, complimenting him, at the same time, on his consolatory and joyful condition as described in his preface, where he unfolds his felicity in the following confession: viz. that "partly owing to his reclusive habits, he has not the happiness of owing in this world one single literary acquaintance or friend to whom he might submit his MS." As the Archbishop of Dublin said to the beggar, who urged charity because he had no relations, "Would the man be an archangel?"

The New Aid to Memory, Part First: containing the Most Remarkable Events of the History of England; illustrated by One Hundred and Twenty Symbolical Engravings, by a Cambridge M.A. 12mo. pp. 63. (London, Whitaker and Co.)—A hundred and twenty symbolical engravings, illustrating the history of England, are the keys to this new aid; but as we have never professed to be able to follow systems of artificial memory, we can only say, that those whom they do assist, will find this a very curious and impressive form. We insert some of the examples of the mode of simplifying the remembrance of letters, for instance:—"C. K. p. q." The figure 7 somewhat resembles a hooked stick, and to remember this stick the better, let us suppose a cage to be suspended from it. In the word cage there are the consonants c and g—k is also added to the number, for c is more frequently pronounced hard (as in cage) than soft (as in centre)—g being a guttural, and a crooked letter may unite with the cage and the stick. Thus, for the figure 7, we have the voice of the letters, c, k, g, q.—8. B. a, v, w. In the numeral 8 there are two noughts, or two round things: these may be converted into bee-hives; and if one be placed upon the other, the result will convey a tolerably accurate idea of the figure 8. For the numeral 8, then, we adopt the letters b, a, v, w,—it being scarcely possible to pronounce the word beehive without calling to mind these letters. 9. P, f. The figure 9 is rather like a pipe, and a pipe is seldom used without a puff of smoke issuing from it. The association of p and f with the pipe-like form of the figure 9 cannot, therefore, easily be forgotten.—0 S, z, z. The 0 being round may be compared to a wheel or grinder of a mill; and this wheel, when in swift rotation, gives out a hissing sound. The hissing consonants, s, z, z, are therefore attached to the cipher; z is also formed (in writing) from two half circles or wheels; and z is the first letter of the word zero or nought.—We have thus the ten numerals, of which all letters are composed, expressed by certain letters of the alphabet, which letters are consonants, be it observed. It only remains to convert these letters into words by the introduction of vowels.

The author states that in practice his method has proved very sufficient.

Stammering practically considered, with the Treatment in Detail, &c. by T. Bartlett, Assistant-Surgeon King's Own Light Infantry. Pp. 83. (London, Sherwood and Co.)—We regret to say, after the examples we have witnessed of Mr. Hunt's successful treatment of stammering, that we consider this treatise equally wrong in principle and the remedial treatment prescribed.

ARTS AND SCIENCES.

ROYAL INSTITUTION.

FRIDAY, 12th April.—Mr. Everett, 'On Professor Liebig's Method of Analysing Organic Bodies,' introduced the subject by explaining

the difference, to the chemist, of organic and inorganic matter. Both are composed of certain distinct principles or elements, the former invariably of a few, the latter of upwards of fifty, according to our present knowledge. The organic relieved of vitality can be reduced to its inorganic elements, but, with perhaps one exception, cannot be reproduced artificially; the inorganic, on the other hand, after being resolved into its elements, by an acquaintance with their influences and agencies can be reproduced. This difference, however, may only exist because of our limited knowledge. Organic substances are compounds or proximate principles, which exist ready formed in animals and plants. In some cases, one principle is so mixed with others, that a process is necessary for its separation. This is termed proximate analysis, and a further resolution of the proximate principles into their elements constitutes ultimate analysis, which presents to the chemist a knowledge of the quantity of carbon, hydrogen, oxygen, and nitrogen, in either of the before-mentioned proximate principles. Previously to 1810, when Gay Lussac and Thenard proposed their simple method, little was known of the latter process. Though difficult in practice, in theory it is easy. It consists in mixing a portion of the substance to be analysed with peroxide of copper, exposing the mixture to a red heat in a glass tube, and collecting the gaseous products over mercury. They are also passed through a tube filled with fragments of chloride of calcium to absorb the portions of oxygen and hydrogen forming watery vapour; and if nitrogen forms a constituent of the substance, it passes over mixed with carbonic acid. Its quantity may be ascertained by removing the carbonic acid by a solution of potash. The analysis having been successfully conducted, the weight of the different products added together will make up the exact weight of the organic substance. The chief difficulties attendant on the practical analysis are the presence of moisture and atmospheric air, which would give an erroneous amount of oxygen, hydrogen, and nitrogen. To remove which, and every other source of error, much has been done, and very successfully, by Dumas, and more especially by Liebig, as described and practically illustrated by Mr. Everett. Sugar was the substance analysed: it would be impossible, however, in our limited space, to describe the minutiae of the process; we shall, therefore, only point out the essentials. The sugar having been ascertained to be perfectly pure and to contain no moisture but what was necessary for its composition, every precaution must be taken to prevent it, or the substances employed in the process, absorbing moisture. For this object it was, after having been accurately weighed, as well as the peroxide of copper, mixed with the latter, which had been heated and not allowed to cool, and placed in a tube of Bohemian glass, in which was no lead, in the following order: oxide of copper, unmixed; sugar and oxide, mixed; then, again, oxide, unmixed. This tube, containing nothing but oxide of copper and sugar was submitted to heat; the products of the combustion would be, of course, water and carbonic acid. To collect these, fragments of chloride of calcium for the water were used, which allowed the carbonic acid to pass over (the chloride had been previously dried, and the mode was described), and for the carbonic acid, in lieu of the mercury of the process of Gay Lussac and Thenard, which was the source of many errors, liquor potassæ was employed. It was contained in five bulbs of a triangular glass

tube, three of which occupied the base; the centre one larger than the others on each side of it; and the remaining two, larger than either of the other three, were on the top of each side of the triangle. This, we understood, was an invention of Professor Liebig's. The tube being very light, and the specific gravity of the liquor potasse known, the weight of the whole could be ascertained to the one-hundredth of a grain. Various little niceties to obtain the whole of the constituents, and to obviate the difficulties of practical analysis, before stated, were satisfactorily described. The increase of weight of the chloride, and of the liquor potasse, gave the results of the water and carbonic acid, the oxygen of the copper, or otherwise, being taken by the difference; upon which any error was consequently thrown, and, therefore, the chance of the numerical proportions of the constituents being wrong, was considerably diminished. The sources of error arising from the possibility of the chloride absorbing carbonic acid, and from the presence of atmospheric air, were shewn, by calculation, to be inconsiderable and neutralized. From those bodies containing nitrogen, similarly treated, that gas would be left, and the process was therefore equally accurate for either animal or vegetable substances. The practical results, Mr. Everett observed, were data producing quite a revolution of ideas, and interpretations of changes of bodies to mathematical precision. The conversion of starch into sugar, alcohol into ether, acetic acid into acetone, &c., and that which affords a glimpse of hope of ultimate success with respect to all organic matter, the artificial production of urea, are determined. This will be the more evident from the numerical examples we subjoin: the constituents of each compound will be given, and the necessary subtraction or addition of the superfluous or the requisite substance will be manifest.

Alcohol	C.	H.	O.	=	46
Ether	4	6	2	=	37
Water	0	1	1	=	9
Acetic acid	4	3	3	=	51
Carbonic acid..	1	0	2	=	23
Acetone.....	3	3	1	=	29
Cyanic acid ..	2	0	1	=	34
Ammonia ..	0	3	0	=	17
Water.....	0	1	1	=	9
Urea	2	4	2	=	60

The interest and importance of the subject we think an excuse for the length of this notice.

STATISTICAL SOCIETY.

THE Right Hon. Holt Mackenzie in the chair.—A number of fellows were elected, others proposed.—It was announced from the chair, that the president had appointed, in accordance with the regulations, the vice-presidents of the Society for the present year as follows: Lord Sandon, Right Hon. Sturges Bourne, Right Hon. Holt Mackenzie, and James Heywood, Esq.—The paper read was a 'Report made to the Council by a Sub-committee of the Committee on Vital Statistics,' upon the subject of the next census of the population of the kingdom in 1841. It states that the committee, entertaining a deep sense of the importance of a well-directed census of the British population, view with considerable anxiety the near approach of the year in which the next decimal census is to take place, and regard the present season as one of preparation, in which the friends of useful statistical inquiries ought to watch attentively the signs of the intentions of government, and interpose their objections or recom-

mendations according as they appear necessary to secure, on the part of the government, the selection and adoption of such questions as are calculated to render the results of the next census most valuable. The committee would, in the first place, remark that there have been four censuses of the British population at decimal intervals, the first in 1801, and the last in 1831. In each of the four censuses the males and females have been separately enumerated. In each of the last three censuses have been distinguished the number of families employed in agriculture, the number employed in trade and manufactures, and the number of families not employed in agriculture, trade, or manufacture. In the census of 1821 the population was distinguished according to the gradation of age to which each part belonged, the numbers of males and females being separately stated: in this classification according to age, one-ninth part only of the total population was admitted. In the census of 1831 the important question of age was altogether omitted, and in its place was substituted a question as to which of some 80 or 90 specified callings or occupations each man belonged. The question of age, one of practical and acknowledged utility, was omitted in 1831, in order that room might be found to insert an experimental question, of which the utility has not yet been discovered. The committee would now earnestly recommend that the influence of the Statistical Society and of the council should be especially directed to securing the adoption, by the government, of the question of age, among the questions for the census of 1841. The classification of the population according to age, is indispensably requisite for the determination of the law of mortality suffered by that population; and, in order that the resulting law may be entitled to a high degree of confidence, the enumerations, according to age, ought to be repeated at intervals not exceeding ten years. In Sweden, which is the only country wherein the mortality of the population is accurately known, the enumerations of the living, classified according to age, are made once every five years, and enumerations have been made for a continued series of more than eighty years. In the United States of North America there have been made five enumerations of the living according to age, at the decimal periods 1790, 1800, 1810, 1820, and 1830. But the value of these enumerations has been greatly reduced by a deficit, which was not discovered and rectified until the census of 1830. At this last census the intervals of age comprising the separate classes were changed, and made to ascend by decimal gradations, from birth upwards; the gradations of age adopted in the previous censuses being sometimes greater and sometimes less than ten years. It is now known that the gradation of age observed ought to correspond with the intervals between different enumerations. If the population be enumerated once every ten years, the gradations of age must be decimal; so that the survivors of those contained in one class, at a certain enumeration, may constitute, and represent in succession, the classes in the higher gradations of age, observed at subsequent enumerations. In recommending, to the especial attention of the Society, the means of securing the insertion of the question of age in the next census, the sub-committee are biased by their devotion to vital statistics. The contemplated census is an arrangement for collecting the statistics of population, of which the chief branch will generally be admitted to be the statistics of the mortality of such population. In recommending the question of age,

the sub-committee are merely recommending the ascertainment of a class of facts which they know to be essential for the accurate determination of the law of mortality of the population. The sub-committee have also to observe, that, connected with the results of the past censuses of the English population, there have been published the numbers of baptisms and burials entered in all the parish registers of England and Wales during the ten years preceding each census. Together with the result of the census of 1831, there was also published a return of the ages of all the burials recorded in the parish registers. It is the opinion of the sub-committee, that this parish-register inquiry ought to be continued, and that the publication (similar to that of 1831) of the ages of all the dying in England, during the ten years 1831-1840, would be productive of great benefit, and prove a valuable addition to the materials requisite for determining the mortality of the English population. Some conversation followed the reading of this report, and a resolution, approving of it, was passed *nem. con.*

GEOLOGICAL SOCIETY.

APRIL 10th. Rev. Dr. Buckland, President, in the chair.—A paper was read on as much of the 'Transition or Grauwacke System' as is exposed in the counties of Somerset, Devon, and Cornwall, by the Rev. D. Williams, F.G.S. The author commenced by stating, that his views respecting the structure of the country had been derived from independent observations; but that, while he claimed originality for himself, he did not in the remotest sense impugn the originality of the views of other geologists who have examined the same districts. The sedimentary deposits older than the new red system, and constituting the whole of Cornwall, the greater part of Devon, and the south-west of Somersetshire, are arranged by Mr. Williams in the transition class, and under the following formations, commencing with the youngest:—9. Floriferous slates and sandstone; 8. Coddon Hill grits; 7. Trilobite slates; 6. Wollacomb sandstone; 5. Morte slates; 4. Trentishoe slates; 3. Calcareous slates of Linton; 2. Foreland and Dunkerry sandstone; 1. Cannington Park limestone. Of these formations, only 9, 8, and 7 were described in the paper, the other six not occurring in Cornwall or in Devonshire, except in the north-west corner of the county, and are reserved by the author for future consideration. The floriferous slates and sandstone (9), arranged in the true coal measures by Professor Sedgwick and Mr. Murchison, in memoirs read before the British Association in 1836, and the Geological Society in 1837, Mr. Williams considers to be a grauwacke formation, because he has traced passages into the subjacent deposit (8), and he employs the term floriferous to avoid the ambiguity which he conceives would arise from using the word carbonaceous; and he objects to the expression culmiferous, as anthraxite constitutes but a very small part of the formation. The deposit occupies a large portion of Devonshire and detached minor areas in Cornwall. The sandstone, he says, are quite distinct in external aspect from any other in the district, but that the slates are occasionally undistinguishable from those employed for roofs. The Coddon Hill grits (8) constitute, on the north, a narrow band from Fremington, near Barnstaple, to Holcomb Rogus, and in the south a broader district flanking the floriferous sandstones, from Forraburg, by Launceston, to the granite of Dartmoor. The deposit passes

gradually upwards into No. 9, and downwards into number 7, the intermediate strata being termed by the author neutral beds. The grits which compose the greater part of the formation are perfectly distinct from any other in the district, and afford most valuable assistance in tracing the range of the deposit; they contain, also, the Wavellite, for which the north of Devonshire has been long distinguished. In the middle of the series are lenticular masses of limestone associated with beds of black shale, the former containing goniatites and posidonia, and the latter, plants with flakes of anthracite. The trilobite slates (7) constitute, in the north of Devon, a band ranging from Braunton on the west, nearly to Milverton on the east, and, on the south, extensive districts around the granite of Dartmoor; he believes that the whole of the slate series of Cornwall belongs to them. In the north and south they gradually pass upwards into the Coddon grits, and in the north downwards into the Wollacomb sandstones (6); the expression neutral being also applied to these passage beds. In some parts the slates abound with trilobites, and the limestones of Plymouth, Newton Bushel, and Torbay, which belong to the formation in corals and shells. The remainder of the series, from 6 to 1, will be described in a future memoir.*

LINNEAN SOCIETY.

THE Bishop of Norwich in the chair.—The first paper read was 'On a Gall, gathered in Cuba by Mr. Macleay, upon the leaf of a plant belonging to the order *Ochnaceae*, by the Rev. Mr. Berkeley. The greatest peculiarity of this gall, is its being possessed of an *operculum*, and presenting a striking analogy to some of the *Epiphytous fungi*. The border is furnished with seven lobes, resembling very much a *Peziza*. It is the only instance known of a gall having an *operculum*. Mr. Macleay is inclined to think that it is the gall of a hymenopterous insect, allied to the *Diplolepidia*. Another paper read was, 'On British Lichens and Fungi,' by C. Babington, Esq. The paper comprised descriptions of a number of new species and varieties, not before recorded as British. Five new members were admitted.

ELECTRICAL SOCIETY.

TUESDAY, 16th April.—Read, a paper 'On the use of Black Paint, in diverting the effects of Lightning on Ships,' by Capt. John Arrow-smith. In the "Philosophical Transactions," vol. xlvii., will be found a relation of lightning passing over the parts of the masts painted with lampblack and oil, without the least injury, while it shivered the uncoated parts, tearing out splinters in such a manner as to render the masts entirely useless. The experience of thirty voyages, during which, on reference to his journals, the vessels he commanded had been at ninety-eight different periods within the vortex of the electric fluid, and escaped without having been once struck, has confirmed Capt. Arrow-smith in the belief of the efficacy of the precautions adopted by him at the commencement of those voyages, on reading the singular facts related of piebald cattle and horses struck by lightning. The affinity of the fluid to those parts of the streaks in the animals which were white being very remarkable, led him to adopt the use of black paint on the mast-heads, yards, caps, and trucks; and to take in and furl the upper and light sails, whenever forked lightning approached the vessels he commanded. The security afforded in the numerous instances of

* Our report of the preceding meeting is still in arrears, owing to the pressure of other papers.

his experience, presents a conclusion, "that any part of a body composed of wood, sufficiently coated with black, or lamp black and oil, possesses a property of resisting the destructive effects of the fluid, and did resist it in those instances related in the "Philosophical Transactions" above referred to, which, if Capt. Arrow-smith had seen and read during his sea-life, he would have used the black in the fullest extent, covering with it the entire of the masts and hull of the vessels. Read, also, a paper 'On the action produced in the flame of a Candle by the Voltaic Battery,' by Mr. Gassiot. Dr. Paris, in his life of Sir Humphry Davy, states, that in the "Laboratory Register of the Royal Institution," of the 6th of October, 1807, there is described a beautiful experiment of Sir Humphry's—"that of producing the vegetation of the carbon of the wick of a candle, by placing it between the wires of a voltaic battery." No further account of this experiment appearing in Dr. Paris's work, or in the life of Sir Humphry, published by his brother Dr. Davy, induced Mr. Gassiot to repeat it and follow it out; who says, "It is difficult to describe the beautiful appearance displayed during the progress of the experiment, while the carbon is depositing on the electrodes." The result of Mr. Gassiot's series of interesting experiments is, that when the ends of the terminal wires or electrodes of a voltaic battery are introduced into the flame of a candle, certain constant and distinct effects are produced on each electrode, although no evidence of the circuit being completed can be detected, either by a delicate galvanometer or by the evolution of iodine from hyd. of potas. On the other hand, while, with single plates, electro-magnetical and electro-chemical actions are distinctly shewn, and are so easily developed, no effect can be produced on the carbon of a candle. The battery used by Mr. Gassiot consisted of one hundred cells, each containing about one quart of rain-water: it was composed of the usual elements—copper and zinc, rolled one within the other—metallic contact being prevented by linen interposed between the plates.

LITERARY AND LEARNED.

UNIVERSITY INTELLIGENCE.

OXFORD, April 16th.—The following degrees were conferred:—

Doctor in Civil Law.—J. P. Deane, Fellow of St. John's College.

Masters of Arts.—Rev. P. Maule, Fellow of Exeter College; Rev. A. Hackman, Chaplain of Christ Church; B. E. Bridges, Fellow of Merton College; Rev. F. Curtis, Balliol College.

Bachelor of Arts.—J. M. Lakin, Worcester College, Grand Compounder.

ROYAL ASIATIC SOCIETY.

APRIL 6.—Professor Wilson read 'An Account of the Physicians of India who taught and practised in Arabia before the 13th Century of the Christian Era,' taken from the original Arabic, by the Rev. W. Cureton, with some notes by the professor, identifying some of the works mentioned by the Arabian writer with those now in use in Hindustan. The paper of Mr. Cureton contained the names, and some biographical anecdotes, of many Indians, with short accounts of their writings, some of which Professor Wilson shewed to be now actually in use. One of these physicians, named Mankah, had acquired sufficient celebrity in his own country to be sent for by the great Hareem Al Rashid, to cure him of a serious illness, which he readily effected. It is related of Mankah that one day he saw in the market-place a quack selling a medicine which cured all kinds of diseases: being informed by his interpreter

of what the fellow said, he observed, that if it was true, the khalif was guilty of folly in sending so far as India to get a physician; and, if false, he was equally reprehensible in not putting such a dangerous quack to death, whose living would doubtless cause death to many persons. A curious anecdote is told of Salih bin Bhalah, who also lived in the reign of Hareem al Rashid. A favourite relative of Hareem, named Ibrahim bin Salih, was, apparently, at the point of death; and the physicians had declared that he could not live the day through. Hareem was then persuaded by his vizir, Jaaser, to send for the celebrated Hindu, Salih bin Bhalah, who, on examining the patient, declared that he was ready to give up his property, to manumit all his slaves, and to divorce his wives, if he did not succeed in restoring him to health. It was, however, reported to the khalif in the course of the night that his cousin was dead; on which the khalif cursed India and its medicines, and sat on the ground in the extremity of his grief, which, says the writer, in a parenthesis, was the origin of the custom of sitting on the ground instead of on sofas, which had been hitherto used. But the Hindu, nothing abashed, persisted that the patient was alive, but in a trance; and in proof of his assertion, he pierced his thumb with a needle, on which the patient drew away his hand quickly. He then blew some stimulating powder up his nostrils, when Ibrahim rose up, and said that he had been sleeping comfortably, and that he had had very agreeable dreams, until he dreamed that a dog had rushed upon him, and had bitten his thumb, of which he still felt the pain. He then shewed the mark on his thumb where Bhalah had pierced it with the needle. The account goes on to say that Ibrahim lived many years after this, that he married the princess Alabbasah, daughter of Almuhd, and that he became governor of Egypt and Palestine, and that at last he died in Egypt. Many of the names of the physicians mentioned in the paper were clearly shewn by Professor Wilson to be Sanscrit; and others were probable corruptions of the same language. The identification of some of the works was very manifest. The "Kitaba Sasrao" was the "Susruta," a work of such note in India that it had been printed in the original Sanscrit. Another was the "Yedan," which was said by the Arabian to be a description of the symptoms of diseases, without notice of the treatment. This, the professor observed, is the branch of the art known as Nidan, which word differed from the Arabic Yedan only by the position of the diacritical points of a single letter. Upon the whole, he remarked, the account was very interesting, as demonstrating the antiquity of the Hindu medical literature, and of its cultivation by the Arabs of the eighth and ninth centuries; and as proving that the text-books of a modern Hindu physician were studied by the learned men of the courts of Hareem and Mansur.

SOCIETY OF ANTIQUARIES.

MR. HUDSON GURNEY, V.P. in the chair.—The auditors' report on the treasurer's accounts for the year 1838 was read, and contained a statement of the improved and prosperous finances of the Society.—Mr. Halliwill exhibited a drawing on vellum of three figures, which, from the costume, he considered to be of the time of Edward the Fourth, or Richard the Third. A letter was also read from Mr. Halliwill, containing some notes on the early history and constitution of Freemasonry in

England. Mr. C. R. Smith communicated an account of Roman remains discovered at Baisdon, near Pangbourn, Berks, with drawings of two tessellated pavements, destroyed by the railroad makers. An extract of a letter from the Commander of H. M. schooner, *Magpie*, to Capt. Beaufort, was read, announcing that, while surveying the Gulf of Kos, he had discovered several tombs, inscriptions, columns, and other remains, of the ancient city of Keranus, the particulars of which were promised at a future period. Mr. Harding exhibited a copy, in water-colours, of a large painting of the ancient family of Clifford, of Skipton Castle, Yorkshire. The several portraits, and numerous shields of arms, were minutely described in a letter from Mr. H., which was read.

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Geographical, 9 P.M.; British Architects, 8 P.M.; United Service Institution, 9 P.M.
Tuesday.—Antiquaries (Anniversary), 3 P.M.; Medical and Chirurgical, 8½ P.M.; Civil Engineers, 8½ P.M.; Zoological, 8½ P.M.
Wednesday.—Society of Arts, 7½ P.M.; Geological, 8½ P.M.; London Institution, 7 P.M.; Medico-Botanical, 8 P.M.
Thursday.—Royal Society, 8½ P.M.; London Institution (Anniversary), 8 P.M.; Royal Society of Literature (Anniversary), 3 P.M.; Numismatic, 7 P.M.
Friday.—Royal Institution, 8½ P.M.

FINE ARTS.

NEW SOCIETY IN WATER COLOURS.

This Exhibition is now open to the public; and, possessing every claim that merit can give, is entitled to their best patronage and encouragement. We feel assured that the lovers of native art will find in it varieties of subject and style calculated to gratify the most fastidious taste. Our first sample shall be

207. *Interior of the Town-Hall at Courtray.* L. Haghe.—It is not in language to convey an adequate idea of the technical skill with which this admirable performance is executed. We must content ourselves with saying, that nothing more perfect of the kind has hitherto met our view; whether with regard to the richly decorated interior and its splendid accessories of carved work, or to the animated characters which constitute the pictorial drama performing in it. Here are seen the deliberative statesman, the ardent soldier, the anxious citizen, all occupied with a game, in which life or death, freedom or slavery, is the stake to be played for. This fine production has been purchased by Mr. Vernon; and we congratulate that gentleman on so valuable an accession to his noble collection of the British School.

From this scene of agitation and solicitude, we turn to

224. *The Happy Valley.* (See Dr. Johnson's "*Rasselas, Prince of Abyssinia*.") H. Warren.—There are few, we believe, in this sublimely working-day world, who have not occasionally "recreated their travail'd spirits" by allowing their imagination to dwell on some such spots as this. It is for the poet to represent them to the "mind's eye;" the painter's privilege is to embody them, and to render them the objects of actual vision. In the present instance, the artist has most happily performed his pleasing task. For our own part, its sunny glades, its lengthened vistas, its rippling waters, and its covert shades, would content us: let the castle-builders, landscape-gardeners, or improvers of domestic grounds or forest scenery, try to do better if they can. Independently, however, of its brilliant colouring and poetical character, Mr. Warren has enriched his performance with figures, clad in the real costume of Abyssinia.

Upon the whole, whether as a splendid vision of the fancy, or as an excellent work of art, it is deserving of the highest commendation.

53. E. Corbould.—A quotation in the catalogue shows that this is a representation of one of the chivalrous achievements of Richard Beauchamp, earl of Warwick; and certainly a more romantic incident could hardly have been described in a work of fiction. Yet, in times of old, such things were; and were considered "sport for ladies!" However that may be, a more splendid "passage at arms" (to use Froissart's phrase) was never illustrated by pictorial skill. To the right and to the left excitement has reached its climax; and the catastrophe has called into every countenance an expression of intense interest. When to this we add that the whole is executed in the most spirited yet finished style of art, some idea may be formed of its excellence.

328. *Battle of Flodden Field.* C. H. Weigall and H. Warren.—From the tournament to the actual battle-field was no uncommon transition in those days; but to be equally at home in the battle-field and in the poultry-yard, as shewn in No. 9, by Mr. Weigall, or with the lace-maker, as shewn in No. 345, by Mr. Warren, is reserved for the versatility of an artist. Referring, however, to the work immediately under our consideration, we congratulate Messrs. Weigall and Warren on having produced one of the most spirited and picturesque representations of a well-fought field it has ever been our happiness to—encounter we were about to say, but see will do better. By the bye, Sir Walter Scott, in "*Marmion*," has greatly added to the effect of his description of this memorable battle, by borrowing a thought from Drayton, who, in his "*Barron's Wars*," has the following simile:—

"From battered casks with every envious blow
The scattered plumes lie loosely heere and there,
Which in the ayre doth seeme as drifts of snow,
Which ev'ry light breath on his wings doth beare."

But now for something in the way of repose; and where shall we find that feeling better or more agreeably illustrated than in 154, *The Spanish Girl*, L. Hicks, where the sunshine without seems reflected by the sunshine within; or in such scenes as 153, *A Ripple on the Thames*, Thomas Robins, and 149, *Scene near St. Donat's Castle, South Wales*, H. Bright? All here is harmony and tranquillity. The same sentiment pervades 219, *A l'Opéra*, F. Rochard; a gem of art, beautiful in character, and exquisite in execution.

To prolong the alternation of scenes of horror and pleasure we will now notice 233, *Brasilian Gamblers*, H. Johnston. The quotation in the catalogue states, that in Brazil "all disputes are settled by an appeal to the knife." It is an appeal which, we regret to observe, is becoming much too frequent in our own country. Mr. Johnston has well suited the action to the words. His composition reminds us of one of the spirited designs of Tintoret, or of the powerful contrasts in the groups of Rubens.

[To be continued.]

BIOGRAPHY.

JOHN GALT, ESQ.

WE see with sorrow in the Scottish newspapers, that our old and estimable friend, John Galt, is no more. He died at Greenock, whither he had retired for some years, to reside amid the attentions of near relations, on Thursday week. Galt's was eminently a literary life. His first work with which we are acquainted, was "*Voyages and Travels in 1809, 10, 11*," in which he described his journey to Malta,

Serigo, Turkey, &c., in a portly quarto. "*The Life of Wolsey*" appeared in 1812; and in the same year, the four tragedies of "*Maddalen*," "*Agamemnon*," "*Lady Macbeth*," and "*Antonio and Clytemnestra*." "Letters from the Levant," were published in 1813, and "*The Life of Benjamin West*," and "*The Majola*," a tale, in two volumes, shortly followed. But at length he discovered his true vein, and gave the public in succession those inimitable pictures of Scotch life and manners, which have fixed his name among those of the most popular writers of the age. "*The Provost*," "*The Spae-wife*," "*The Last of the Lairds*," "*The Radical*," &c. &c., are delightful examples of his inimitable art in this style of composition. At one period, Mr. Galt was almost sovereign of Upper Canada; but we fear his latter days were clouded, in consequence of the disappointment he experienced in that quarter. His health too suffered, and he was frequently attacked by paralysis. In person, Mr. Galt was uncommonly tall, and his form muscular and powerful. Pleasant and frank in his manners and conversation, he was ever a most intelligent and agreeable companion; and though he had been for a considerable while out of the circle of his literary friends, we cannot but deeply feel and deplore his loss, now that he is taken from us entirely and for ever.

PETER TURNERELLI, ESQ.

WE have also to announce the death of this artist, about the 20th ult., at his house in Newman Street, after an illness of only a few hours. For many years his busts in the Exhibition displayed his talents as a sculptor, and it was his good fortune to model many very eminent and distinguished persons. His figure of Burns at his plough, for the monument erected to his memory at Dumfries (that monument, the beautiful work of the late Mr. Thomas Hunt), is his principal work known to us; though his statue of George III., his bust of the Princess Charlotte, his Blucher, Platooff, and a long list of other interesting personages, will long preserve his name and memory from oblivion. Mr. Turnerelli was a charming singer, with a voice of singular quality and sweetness. He had a few years ago married a second time, and has, we believe, left families by both wives. His eldest son entered the paths of literature with much promise, but we have not recently seen any proof of his having pursued them.

THE DRAMA.

Her Majesty's Theatre.—Madlle Dettmar, on Tuesday evening, made her appearance as *Pippo*, in *La Gazza Ladra*. Her voice, as far as we could judge from so slight a part, is pleasing, and she sings in good time and tune. She seems accustomed to the stage, and her manner is easy and unaffected.

Drury Lane.—A certain class of musical entertainments, called *Concerts à la Valentino*, was begun here on Saturday, for the enjoyment of which there was the small charge of a shilling a-head; and we will say for the heads we saw, that most of them were in such shocking bad hats, that we are sure the price was conformable to circumstances, if not rather too high. The four walls of a theatre never witnessed a rabble to compare with this audience; and the lowest meeting of pot-house radicalism alone can afford any idea of its quality. The pit was boarded over, level with the stage, and crammed with men, not a female being able to endure the mob. A shabby orchestra displayed some sixty-five performers,

whom the bills advertise as a hundred; and, in the midst of din, vulgarity, and confusion, Mr. Eliason produced some fine pieces of music, and Albertazzi sang delightfully.

"So Orpheus daddled, and so provoked the brutes."

The whole affair seemed worthy to succeed Van Amburgh and the beasts; only the visitors were more mixed up with what was disagreeable in this than in the preceding *entertainments*. On looking into the area there was no need to cry "take care of your pockets," every body did it instinctively; and the only hope of impunity that appeared was, that the crew did not look genteel enough for pickpockets.

Haymarket.—Touch and Take; or, The Law of the Kiss, produced at this theatre on Monday, was less successful than might have been expected from the strong cast of characters. The plot is whimsical enough, and the music lively and pleasant; the fault is in the length of some of the scenes, and the general meagreness of the dialogue, which gives the actor little scope for display. Mr. Power did the best he could for a part somewhat graver than he is accustomed to play. Mr. Webster and Mr. Strickland also made the most of theirs. Mrs. W. Clifford played a learned and stately dame very well; and Miss Taylor looked and dressed the heroine most temptingly: she had little to do except a single speech in the last scene, which she delivered with great feeling—and to become necessary after the fact, to the kiss-stealing by *Sir Roderick Macarthy*. Mrs. Fitzwilliam, always lively and agreeable, sung two songs with great archness; notwithstanding which some disapprobation was manifested at the end of the piece. It has, however, since been shortened, and goes off with much better effect. Power, who was really nervous on the first night, is now fully assured, and of course carries the audience along with him.

Mr. Webster has wisely secured the services of Macready for the whole of next season. At the Haymarket we shall then have Shakspeare and sterling plays got up and performed as they have been at Covent Garden; and there cannot be a doubt but that this liberal enterprise will have its great reward. The *Geese* who have caused this loss to Covent Garden Theatre will then find to their cost that *ubi Macready ibi Drama*.

Olympic.—Dr. Dilworth, a very droll and farcical piece of humour, has been brought out here with complete success. The story turns on the humours of an old grammarian, and is capably supported by Farren, Vestris, Mrs. Orger, Miss Murray, Keeley, and Brougham.

The *Adelphi* has got Musard concert promenades; and the band of the Coldstream Guards are announced, in full uniform, for performances on wind instruments, at the *Lyceum*. At the *Surrey* the *Adelphi* company are carrying on in great style; and at the *St. James's* the monkeys proceed with undiminished *colat*. *Sadler's Wells* has produced some successful novelties; and improves much upon the productions of late years.

New Strand.—I would be a Duchess is so full of points, that it must increase the funds in the treasury of the prosperous little theatre in the Strand.

Miss P. Horton.—Our dainty Ariel takes her first benefit to-night, and sure we are that public liberality will stamp the occasion in a way to show how highly her rising merit is appreciated. We always predicted that her versatile powers would make her an ornament to the stage; and every new character she undertakes confirms that opinion. Give her opportunity, she will do more yet, and reach such

a station as will negative the green-room joke upon her name.—*Missphorton*.

Queen's Rooms, Hanover Square.—On Monday evening, Mr. G. A. Kollman gave his first grand concert, in which the new pianoforte invented by him was introduced with very fine effect. The novelty consists in the hammers striking downwards instead of upwards, and, consequently, instead of causing the strings to fly off with uncertain vibration, confining them to tone, which the music requires. The *terzetto*, "Ti parli l'Amore," by Miss Birch, Begrez, and Phillips, was the most applauded vocal effort of the concert; and there were some good instrumental pieces by Kollmann, Mori, Puzzi, Hansman, and Sedlatzek.

Hanover Square Rooms.—On Wednesday, Mademoiselle C. Botts, one of the most extraordinary piano-fortists we have heard, gave a concert, which was crushingly attended. The entire music was good. Mrs. and Mr. E. Seignin sung well. We were not fortunate enough to obtain a programme, so cannot venture upon names. Mademoiselle Botts herself was the principal performer. Her wonderful power over the instrument astonished and enchanted us: her execution with the left hand alone was perfectly magical, and we fear indescribable, as, though we may praise, we can scarcely give an idea of the rapidity, force, and sweetness of her performance.

On Monday, the second *Societa Armonica* was attended even to the filling of the passages. Madame Persiani, Madame Albertazzi, and Signor Ivanhoff, sung separately and together during the evening. Donizetti's delightful "Sulla Tomba" was encored; in it Madame Persiani and Signor Ivanhoff made perfect harmony. Madame Albertazzi was in full voice, and gave Lord Burghersh's serenade, "The Dew of Night," finely. The instrumental music was of the first order.

VARIETIES.

Caricatures.—H. B. has been busy again. 585 and 586 represent, the first the collision between the Lords and Commons, the Duke of Wellington and Lord John Russell as dogs fighting for a stick (it should have been shillelah) marked "Ireland Committee." John Bull is looking on one side, and O'Connell behind a tree on the other. The last is Giovanni in London, with the infernal chorus "Turn him out." The Premier is the fallen Don, and Lords Brougham and Durham, Mr. C. Buller, Mr. Roebuck, Mr. Grote, &c., are the Furies, armed with torches inscribed Ballot, Universal Suffrage, Canada—the whole Hog (Buller), Everything (Brougham), Radicalism (Durham), make altogether a very spirited group.

Adelaide Gallery.—Among the present attractions in this very instructive lounge, we were very much gratified the other day with a lecture on the polarisation of light, with beautiful illustrations, by Mr. Goddard, in which the important phenomena in this branch of science were demonstrated in a novel and interesting manner. The Invisible Girl is also deservedly popular; and the gymnotus feeds and flourishes in high health and electricity.

Female Musicians.—"The Musical World" of last week announces the formation of a Female Musical Society, with a fund to aid them in old age and cases of poverty and distress. Such an institution is much wanted, and we trust it will meet the support it deserves. No class of persons is more exposed to the sad contingencies of life, and a provident

provision to meet them cannot be too much or too warmly encouraged.

A very interesting *Antiquarian and Archaeological* meeting is appointed for Monday, in connexion with the Archaeological Society at Rome.

The Winds.—It is with great pleasure we have learned that the advertisement for the return of the South and West in our last, has been the cause of restoring them to their long-lying friends. The whole country appears to rejoice in this auspicious event.

LITERARY NOVELTIES.

In the Press.

BOOKS IN THE PRESS.

Preparing for publication, the Continuation of **M. DE TOCQUEVILLE'S DEMO.** CRACY IN AMERICA, translated under the Author's Inspection, by his Friend HENRY REEVE, Esq. Saunders and Otley, Publishers, Conduit Street.

Of whom may be had, just published, a 3d edition of **Democracy in America.** By M. de Tocqueville. In 2 vols. post 8vo.

SIR THOMAS GRESHAM.

In June will be published, in 2 thick vols. demy, and royal 8vo.

THE LIFE and TIMES of SIR THOMAS GRESHAM: compiled chiefly from his hitherto Correspondence, and the MSS. of his State Paper Office, with Memoirs of many of his Contemporaries, including the principal Statesmen of Queen Elizabeth's reign; and some Antiquarian Notices of the Royal Exchange and Gresham College.

By JOHN WILLIAM BURTON, Esq. Accompanied by a portrait, engraved in line by Woodman, and 50 other Illustrations on Copper, Wood, or Stone. These Subscribers who have honoured the publisher with their names are respectfully informed, that in consequence of the work having extended much beyond what was originally contemplated, it cannot appear before June, and to all future Subscribers the price must be raised, on the Royal 8vo. to 4s. to 12. 10s.; and on the royal 8vo. (strictly limited to 100 copies) from 2l. 2s. to 2l. 10s.

Robert Jennings, 61 Chapside.

In May, will be published, in Monthly Parts, price 3s. 6d.

THE FIRST PART OF THE
PICTORIAL HISTORY OF PALESTINE.

By the Editor of "The Victorial Bible." The main object of the present Work is to relate every event of interest or importance in the Political, Social, Military, Physical, and Religious History of the Country called Palestine, from the most remote Ages to the Times in which we live. It will thus be, in the largest sense,

A HISTORY OF PALESTINE.

and not merely of the Hebrew Nation; but seeing that it is only its connexion, and the consequences of its connexion, with the History of the Hebrew People, which has rendered this small Country of historical importance, it is also intended that the present Volume should be complete as

A HISTORY OF THE JEWS;

not leaving them, as most Histories do, when they were utterly cast forth from their old possessions; but while, on the one hand, the History of the Country is still continued, on the other pursuing the People into all the places of their dispersion.

The Wood Engravings, which will be very numerous, will be executed in the first style of the art. The subjects of these engravings will be strictly illustrative; being representations of actual scenery, costume, manners, monuments, and objects of natural history—in some instances combined into a picture or group, but never exhibiting anything merely fanciful. "The Pictorial History of Palestine" will form 2 handsome vols. of the size of "The Victorial Bible," to which Work it will form a Supplementary Companion.

London: Charles Knight and Co. Ludgate Street.

NEW PERIODICAL.

On the 30th April, price 6d. with 12 Engravings, Part I. of the **LITERARY WORLD**; a Journal of Popular Information and Entertainment.

Conducted by JOHN TIMBS, Eleven Years Editor of "The Mirror."

Contents:—Engravings of the Scott Cemetery, Edinburgh; Dr. Ewaldich's Birthplace; and of New Bow Bridge; Hoople's "St. Peter's" Institute; New Front; Milan Coronation Medal; La Scala; the Invisible Girl, &c. &c.; and 54 columns of Literary and Scientific Novelties, Original and Selected.

London: George Banger, Holywell Street, Strand.

Will be published in a few days.

GOETHE'S FAUST, translated into English Verse, by J. BIRCH, Esq. and embellished with Twenty-nine Engravings on Steel, after M. Retzsch. Royal 8vo. cloth, price 15s. India Proof, 21s.

Black and Armstrong, 8 Wellington Street, Strand.

13 Great Marlborough Street, London.

COLBURN'S NEW MONTHLY MAGAZINE AND HUMORIST.

Edited by THEODORE HOOK, Esq.

The Publisher has the pleasure to announce, that in the May Number of this popular periodical will be commenced a New Series of Papers, by Mrs. Trollope, entitled "The Widow Marriell," forming a sequel to "Widow Barnaby," by the same Authoress. Each article to be illustrated with Two Etchings by Bask. In future Numbers will be also given the first of a New Series of "Gurney Papers," by the Editor, Theodore Hook, Esq., entitled "Gurney Settled," comprising Gilbert Gurney's Adventures in Foreign Parts.

"Colburn's New Monthly Magazine" for May will also contain the continuation of Capt. Mayrath's "Phantom Ship," and a variety of other articles by the most distinguished writers of the day.

Henry Colburn, Publisher, 13 Great Marlborough Street, London. Orders received by all Booksellers.

DEDICATED TO LORD HILL.

On the 1st May, with the Magazines, Part II. price 2s. 6d. embellished with an Engraving of the Storming of Seringapatam, by Landseer, of

THE LIFE OF FIELD MARSHAL HIS

GRACE THE DUKE OF WELLINGTON. Embracing his Military, Civil, and Political career, to the Present Time.

Edited by Sir JAMES E. ALEXANDER, K.L.S. &c. This important and interesting Work will be completed in Twelve Monthly Parts, at 2s. 6d. each; a price which, it is to be hoped, will place it within the reach of all classes. It will be embellished with Portraits, Battle-Scenes, &c. by Landseer, Warren, Landells, and other eminent Artists. The First Part included the Duke's entrance into Military Life—his Campaigns in Holland, under the Duke of York, and his first exploits in India; and the Publisher trusts that this Life of his Grace, when completed, will prove one of the most comprehensive, interesting, and popular of its class.

Henry Colburn, Publisher, 13 Great Marlborough Street.

* * * Orders received by all Booksellers.

John Weale, 50 High Holborn.

Girdlestone's Commentary on the Bible.
In 8vo. price 8s. the Fourth Part of
THE OLD TESTAMENT, with a Commentary, consisting of Short Lectures for the daily Use of Families.
By the Rev. CHARLES GIRDLESTONE, M.A.
Rector of Alderley, Cheshire.

In this edition of the Holy Bible, it has been the chief object of the Editor to furnish families with an exposition for daily reading. The Scripture is divided into paragraphs of a convenient length, and the explanatory and practical matter is digested, under each portion, into one consecutive lecture, so as to demand of the reader no previous study or attention.
Printed for J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Lately published,
The First, Second, and Third Parts, price 2s. each; or Vols. I. and II. 18s. each.

CONVERSATIONS on CHEMISTRY, with a Conversation on the Steam Engine. 12th edition, 2 vols. 16s. boards.

CONVERSATIONS on POLITICAL ECONOMY. 6th edition, 8s. boards.
London: Longman, Orme, and Co.

Second Edition. In 8vo. price 3s.
BELFEGOR; a Poem. The Idea of the Story is taken from the "Novella di Belfegor" of the famous Machiavelli.
"This is a satirical poem, founded upon the 'Novella di Belfegor' of Machiavelli, and displays considerable talent, as well as a good ear for that species of versification with which such travesties as Cotton's 'Virgil' have made us familiar, &c. There is also a good deal of quiet humour."—*Literary Gazette.*
"He evinces considerable cleverness in passing from one subject to another, so as not to seem the result of study or of art, as well as pith in his satire, and ease of versification in expressing himself."—*Monthly Review.*
"Talents of the highest order, and poetic fire sufficient for a first-rate poem. . . . Flashes of genius which we would gladly see devoted to more worthy topics."—*Christian Remembrancer.*
London: Simpkin, Marshall, and Co. Stationers' Hall Court.

In 2 vols. post 8vo.

PRICE 8d.
Stamped Edition, 9d.

ARCHÆOLOGY.

Egyptian, Etruscan, Greek, and Roman Antiquities.

THE meeting we mentioned in our last, and one, as it turned out, of very great interest to the antiquary and archaeologist, took place in the Rooms of the Royal Society of Literature on Monday, the Earl of Ripon in the chair. Among the company assembled, we noticed the Marquess of Northampton, P.R.S., the Earl of Munster, Lord Stanhope, Lord Burghersh, the Bishop of Llandaff, Sir T. D. ACLAND, Sir R. Inglis, the Right Hon. H. Ellis, Sir Alexander Johnston, Mr. Bankes, Mr. Sturges Bourne, Sir J. Dorant, and many other gentlemen distinguished by foreign travel, learning, and literature. The nature of the meeting will be explained by the following notice, which was issued on the occasion:—

“A Meeting of Gentlemen who take an interest in Literary and Archaeological Pursuits will be held, &c., to commemorate the Institution of the Archaeological Institute of Rome, which on that day will complete the first decennium of its existence; and whose anniversary was selected to coincide with the generally received opinion of the foundation of the city of Rome. The Chevalier Bunsen, secretary-general of the Archaeological Institute, and Dr. Lepsius, secretary of the same, will lay before the meeting various notices appropriate to the occasion, and in connexion with some of the latest discoveries, which serve to illustrate the antiquities of Egypt and Italy. The proceedings of the day will commence at one P.M., and the chair will be taken by the Earl of Ripon, President of the Royal Society of Literature.”

“W. R. HAMILTON, H.S.”

Soon after one o'clock the noble president took the chair, and briefly addressed the meeting, nearly as follows:—

Gentlemen,—It is with no ordinary gratification that I have accepted the honour which has been proffered to me, of presiding at the meeting which is assembled in these apartments; and I am sure that those members of the Royal Society of Literature, who are now present, will rejoice with me, that it has been in our power to render these apartments, however small in their pretension and limited in their extent, available for an occasion so interesting to the friends of literature and the arts. We are met together for the purpose of doing honour to an institution recently established in the imperial city of Rome, of which the object is to forward archaeological inquiries, and to develop those yet unexplored treasures of ancient taste and learning which industry and science delight to draw from the obscurity under which barbarous ages have concealed them, and to spread before the light of modern investigation. Those who have summoned this meeting, and invited your attendance on this day, feel that the most effectual mode of doing honour to such an institution is to make it known; and it cannot be made known more effectually than by presenting to a meeting, constituted as this is, the two individuals who, holding an eminent place in that Society, have favoured us with their company this day. In the Chevalier Bunsen, we acknowledge the founder of the Archaeological Institute of Rome, and one of the most distinguished contributors to its interesting lucubrations. In Dr. Lepsius we recognise a fellow-labourer in the same field, no less distinguished by the depth of his knowledge and the extent of his

researches. In both we see united that unwearied spirit of investigation, that capacity of combining the most discordant materials, that power of analysing the most abstruse arcana of literary speculations, and that habit of systematically applying philosophy to literature, which distinguish the learned men of the country to which they belong, and of which they are justly the ornament and the pride. Having thus taken the liberty of introducing to you by name the two gentlemen who have honoured us with their company, I do not think that I can more appropriately illustrate what I have presumed to say respecting them, than by reading to you a short memorandum with which they have kindly furnished us, explanatory of the objects and progress of the Institution with which they are connected; and I flatter myself that they will be so obliging as afterwards to lay before us some specimens of the manner in which they discharge the functions which devolve upon them in that capacity.

His lordship then proceeded to read the memorandum alluded to, and make a few comments on its more important passages. We are happy to be enabled to give the mem.; and only regret that we took no note of his lordship's valuable observations upon it:—

“The Institute of Archaeological Correspondence at Rome.”

FOUNDATION.—“The Institute was founded on the *Natalis Urbis*, or the *Palilia*, of ancient Rome, as the anniversary of the beginning of the Roman era (the 2582, according to the commonly received computation, beginning with 753 A.C.), on the 21st April, 1829, under the patronage of H. R. H. the Crown-prince of Prussia. The direction was vested in a president and a board of ten directors; the business to be carried on by one or two acting secretaries and their assistants. The names of the founders are as follow:—

President.—The Duke of Blacas.

Members.—Chevalier Bunsen, Secretary-General of the Institute; Count Bartolomeo Borghesi; Signor Carlo Fea; Chev. Gerhard, R.A. of Berlin, Secretary; Chev. Kestner, Archivist of the Institute; Duke de Lugo, Secretary of the French Section; Mr. James Millingen, Secretary of the English Section; M. Panofka, R.A. of Berlin, Secretary; Chev. Thorwaldsen; M. Welcker, Professor at Bonn, Secretary of the German Section.

OBJECT.—“The object may be most concisely stated to be a double one: on the one hand, to supply the learned men and friends of classical monumental antiquity in the north of Europe with the facts and monuments furnished by the classical soil, in the speediest and most faithful manner; on the other, to acquaint the antiquarians and the public of Italy and Greece with the researches and inquiries of England, Germany, and France.

MEANS.—“I. *Publications*. For these purposes the direction publishes yearly twelve great plates of inedited monuments, and six or more smaller ones; forty sheets of letterpress, divided into annals, or explanation of the plates, and similar articles, yearly or half-yearly; bulletins, monthly, for the current news.

“II. *Literary Management*.—1st. Regular, generally weekly, meetings in the library hall of the Institute, erected in the capital in 1836, for all the subscribers, and, besides, for the

artists of all nations residing at Rome. The substance of the correspondence is read; new monuments, or their copies, exhibited; and the explanations of such exhibitions are given orally.—2d. Correspondence, for communication of current news and local or provincial illustrations. It is carried on actually under the superintendence of the secretaries of the national sections (Italy, France, Germany, England).

III. *Excavations and Literary Expeditions.*

—Both are undertaken when extraordinary means are supplied. Thus the substructions of the Temple of Jupiter Capitolinus have been excavated at the expense of the Earl Stanhope. The paintings of the tombs of Tarquinii have in the same way been copied under the direction of the Institute, before they went into decay.

“IV. *Finances*.—The expenses of the publications, the correspondence, and the appointment of two acting secretaries, and an assistant treasurer, are defrayed by the annual contributions of the members and subscribers, of two guineas and a half yearly, and voluntary contributions.*

“V. *Establishments*.—By voluntary contributions, and by gifts of the directors in particular, a Library and Museum have been established in the hall of the Institute, containing about 2500 volumes and specimens of the different species of ancient monuments. They are open to all subscribers three times in the week, besides the hours of the meetings. All residing artists of England, Germany, France, and Russia, have free admission to them, on giving their names.

“VI. *Actual State of the Members and Subscribers*.—

1. Crowned Heads, Princes of Royal Blood, and Cardinals	47
2. Public Libraries	71
3. Individual Subscribers	120
4. Members.	
Subscribers—Honorary Members (Patrons or Proprietors of Classical Collections)	30

Correspondents	160

“VII. *Publications and Subjects treated*.—

20 volumes of Annals and Bulletins.	
120 large Plates of Inedited Monuments.	
80 smaller ones.	
1 volume of Memoirs.	

The principal subjects contained are:—1st. The great subject of the origin and interpretation of the painted vases, called Etruscan or Grecian. The discovery of the thousands of these vases at Canino and its neighbourhood (Vulci) connected with the foundation of the Institute. It is only in the Annals and Monuments that the facts are completely and faithfully collected, and brought before the public. Prof. Gerhard's ‘Rapporto Volcente’ contains

* Lord Ripon upon this offered a very convenient suggestion, viz. that on subscribing ten years' purchase (twenty-five guineas), the parties should enjoy for life the rights of annual subscribers.

the result of an examination of upwards of 3000 vases. The finest of them are given in the *Monuments*.—3d. The *Annals of Roman Topography, and the Results of the Excavations of the Forum*, began at the same period. The last work is the complete plan of all the fora of Rome and their restoration, by the Secretary General.—3dly. The Egyptian archeology has been set on a safe foundation, first by the more enlarged and correct system of the phonetic alphabet, and secondly by the fixation of the epochs of Egyptian art, both by Dr. Lepsius. The proof of the unsafe basis of the chronological system of M. Champollion and his followers is also contained in the *Annals*, in the 'Discours Préliminaire' of the *Annals* of 1834, by the Secretary-general.—4th. Many important inscriptions, particularly the last will of Dasumius, found on a marble tablet in a tomb on the Appian Road, and preserved in the portico of the Institute. It contains the names of his two friends, Pliny the younger (who speaks of him) and Tacitus, and is explained by Niebuhr and Borghese."

The Chevalier Bunsen, being then called upon, read a very learned and interesting *Essay on the Authors and the Age of the Great Pyramids*.

After some complimentary expressions he proceeded, as he said, agreeably to the Statutes of the Society, to submit "some observations on the most important archaeological facts that have come to light, or received their completion, during the last twelvemonth, and to accompany them with such observations as our own researches and studies have suggested to us on the same. The facts (he observed) which present themselves to us in the first rank, if we consider merely their importance, are of such a magnitude, as to overawe the mind of the inquirer, even more powerfully than they attract it irresistibly by the interest that is connected with them. The subjects to which we are led by them are so vast, that we must almost necessarily either become tiresome to you by our explanations, or appear presumptuous by our bare assertions; or, what would be still worse, incur the one evil without avoiding the other. By a singular favour of circumstances, those facts and monuments to which I have alluded have been brought to light by the efforts of illustrious individuals of this nation, and most of them are deposited in this metropolis, in that sanctuary of monuments which unites with the most sublime remains of Grecian sculpture the very records on which the whole knowledge of the most ancient epoch of profane history chiefly depends—in that Museum which is worthy of the name it bears. Whatever therefore, we—my friend and I—may believe that we know of those monuments, is due principally to what we have found in this country; and if this fact renders it our more imperative duty to mention on this day what we consider the most important events in the archaeological annals of this year, the same seems also to call upon us not to lose this opportunity of offering, in the observations to which we are led by your own monuments, the feeble but sincere tribute of gratitude to your country, and to those in particular whose kindness has afforded us every imaginable facility, and a highly valuable assistance, in approaching and studying them. The first subject, then, on which we shall have to submit our observations to your kind attention, are the discoveries recently made in two

of the three great pyramids, the results of which have during the last twelve months been placed in the British Museum. It would be superfluous to call your attention to those remains which, as the reward of the most indefatigable and judicious efforts of Colonel Howard Vyse, have been presented, by his generosity, to the national Museum—the remains of the most interesting and the mummy of king Mycerinus, the author of the third of the great pyramids of Dgizeh, and the inscriptions found in the newly discovered chambers of the first of them. It would be equally superfluous to recall to your mind the splendid work in which most of those remains have been published by their enlightened discoverer, and to the acute and learned observations of our honoured colleague, Mr. Samuel Birch, of the British Museum, and acting secretary of the Institute in this realm, whose researches do honour to the country of Doctor Young. My object now is exclusively to lay before you some of the arguments which have led me to believe that, by combining the facts which those monuments reveal to us with other facts and dates known besides, particularly through the benefit of the greatest discovery of this century, the hieroglyphical alphabet, we are enabled to resolve that historical problem which has occupied the human mind so many centuries; yea, which had been the sphinx of humanity before that city was built whose 2591st anniversary we celebrate on this day: I mean the destination of those pyramids, and the name and age of their authors. This assertion must certainly appear rash, if not presumptuous, to those who have gone through the sterile and apparently despairing researches of the most learned book on the ancient monuments of Egypt, published on the very eve of the finding of that precious tablet which first led to the discovery of the hieroglyphical alphabet. The book I mean is Zoega's work on the Obelisks. That assertion may even appear bold to those who, having approached the monuments and history of Egypt, even with the light of that precious discovery, have been the more struck by the awful silence that surrounds those imposing masses; who know that the hieroglyphical researches have hitherto only been able to prove that the pyramids cannot have belonged to the epoch after Sesostris, in which Herodotus evidently places them; who may even have doubted, with many learned authors, although against the authoritative evidence of Herodotus, the existence of original hieroglyphical inscriptions on the pyramids, and therefore even the nationality of these monuments; who, finally, recollect the condemning sentence passed upon all the efforts of classical antiquity to resolve the great problem raised up to all posterity by the mysterious and indestructible towers that seem to mourn, through all periods of history, over the tomb of an age of gigantic power, and to challenge and baffle the inquisitive and bold mind of Europe. Pliny the Elder sums up, in the following words, the result he had been obliged to draw from the study of all the ancient authors before him respecting the epoch and authors of the pyramids. "Qui de illis scripserint, sunt Herodotus, Euhemerus, Darius Saminus, Aristagoras, Dionysius, Artemidorus, Alexander Polyhistor, Butoridas, Antisthenes, Demetrius, Demoteles, Apion. Inter omnes eos non constat, a quo factæ sint; justissimo casu obliteratæ tantæ vanitatis auctoribus." This result appears certainly discouraging, for it seems unreasonable to hope that we should ever collect from the few isolated fragments of ancient records, from which

it is the object of philology to reconstruct the history of the ancient world, a more satisfactory result than one of the most learned Roman authors has been able to do, writing, as he did, in the fulness of all those materials mostly lost to us, and surrounded by every facility of inquiry and living information. But the appearance is by far more discouraging than the reality. Had Pliny extended his researches to the whole of Egyptian history, as he might have found it treated in Eratosthenes, Apollodorus, and other writers of the Alexandrian school; and had he taken the slight trouble of having himself taught the hieroglyphic alphabet, in which, at his own time, and a century later, inscriptions were composed and sculptured in honour of the Cæsars, and placed in Rome and its neighbourhood, he would not have passed that sentence, which in, in truth, more a condemnation upon himself than upon the Greek or Egyptian authors he consulted, or ought to have consulted. But the gallant and inquisitive admiral was too good a Roman to go out of his way for any such trouble; antiquity and ancient history were so much a sealed book for his countrymen, that the Greeks were to teach them first to inquire into their own; and when, in the imperial age, the conquerors and rulers of the world found leisure for studies, they preferred the more material objects of natural history to the less tangible problems of the history of mankind, as their readers did single curiosities and striking anecdotes to deep research or patient speculations on the laws of the human mind and its development. Pliny did not attach any real importance to the question: What age, and what circumstances, produced those gigantic masses? His own words afford a proof, even more convincing than the catalogue of his narrow researches. 'The most important question,' he says, in that very passage about the pyramids, 'is this: How could the Egyptians raise their materials to such a height, and contrive to leave no traces of the scaffolding behind?' With such a low view of the object of historical inquiry, even a learned and ingenious author will scarcely find any thing beyond the surface of human history. The problem of our age is evidently acknowledged to be a higher one, and Providence itself seems in our days not obscurely to call our mind toward the investigation of the history of the human mind, by the unparalleled accumulation of new materials, brought out of the very bowels of the earth, and the most remote corners of our archives, mostly by circumstances independent of human ingenuity and research. I take the first leading assumptions of the system which I shall venture to lay before you on that great subject, from a work almost ready for publication, of which I shall premise a few words here, only to prove that, in speaking of these questions, I have at least satisfied the Pythagorean precept of seven years' silence, and may probably satisfy, as to some parts, of the existence of convincing proofs not yet brought to bear upon the subject, even the 'nonum præmatur in annum,' of Horace. It was in 1832 that I was first struck with the untenableness of that system of chronology which Champollion and his followers in France and Italy, up to this day, have adopted, as to the era of that new Egyptian empire, which is known to have risen out of the struggle against northern conquerors and usurpers. I had, in the following year of 1833, an opportunity of hinting at this point in the preliminary discourse, delivered on the Capitol, on the anniversary of the Institute, and printed in the *Annals* of 1834.

* Our readers will remember our review of Lucian Buonaparte's (*Prince of Capri*) interesting work on this subject.—Ed. L. G.

Having followed those dates down to the Persian conquest, I extended my researches in the summer of 1835 to the chronology of the earlier periods of Egyptian history, and finally availed myself of the unhopd-for leisure afforded to me in the two first months of last year at Rome, in order to compose from these researches a general work of Egyptian chronology and history, the first volume of which will soon appear in Germany, containing the entire system of that chronology from Menes to Alexander. The principal results of these historical researches that bear directly upon the monuments in question, may be comprised under the following heads:—1st. What regards the authority of the Greek historians, it may be considered as a fact established by the indisputable results of the examination of the Egyptian monuments themselves, that of the time before Psammeticus they had no certain chronology; and of that before Sesostris, only fragmentary facts, mostly unintelligible to them, and mixed up with popular fictions and sacerdotal impositions. Examining now their accounts from the monumental knowledge we can derive elsewhere, we find that here, also, Herodotus is at once the father, and the never-equalled model of history; his very errors and mistakes proving in Egyptian history his eminent genius and his admirable veracity, as his doubts against the account of the sailors afford the best proof that Africa was really circumnavigated under Necho. 2d. The justly doubted, and at last, by the best critics, despairingly rejected, lists of the thirty dynasties extracted from the historical work of Manetho, the priest of Sebennytus under the second Ptolemy, are proved by the monuments to contain a groundwork of chronological truth from the eighteenth dynasty, or the era of the restoration of the Pharaohs on the throne of whole Egypt. But they are convicted by the same monuments of interpolations so palpable during the epoch of the eighteenth and nineteenth dynasties, or the epoch of Thuthmosis and Ramesses-Sesostris, that the question for the critical examiner can now only be, whether we are able to find the key to the real understanding of these lists, and separate the interpolations from the genuine groundwork, without destroying the chronological authority of the lists themselves? I believe that this question can be answered in the affirmative, and that Manetho himself may be brought forward as an evidence against the misunderstandings and interpolations of the lists in general, and in particular against the extracts of that period, given by Josephus, and afterwards reproduced in the lists of Julius Africanus, and of Eusebius. On these premises I believe, therefore, that a real and complete restoration of the Manethonian chronology of this later Pharaonic empire is possible and safe. It would follow from this assumption, that the era of the restoration has been fixed 250 years too high by the French and Italian Egyptologists; who, from the beginning, have been contradicted by all English writers on this subject. The epoch of 1570 B.C., which I believe to be the true Manethonian assertion, is most satisfactorily concordant with the chronology of Scripture, and the safest fixation of the epoch of the Exodus; but it is as perfectly independent of it, as it is supported by the evidence of the monuments. According to this, the reign of Sesostris must have lasted from about 1318 to about 1253 B.C. 3d. The later, or restored Pharaonic empire, was indeed preceded, as Manetho asserts, by an epoch of foreign dominion and oppression, during which a Philistean or Palestine nation ruled over

Lower Egypt; and, during a certain part of it, also over Middle Egypt, or the Heptanomia. The duration of the reign of the Shepherd Kings, or Hyksos, cannot yet be fixed with certainty; it must suffice here to say, that, according to Manetho, it lasted either 518 or 511, or about 900 years. The contemporary monuments, and other Egyptian evidence, prove the existence of such a period of foreign domination, and oblige us to acknowledge that it was indeed an epoch of some centuries. We have the names of more than sixty Pharaonic kings, which must belong to this period; they exist on monuments either contemporary, or of the good times of the restored empire; but it can be proved by Manetho himself, that there were during this period two collateral lines, at least, of Pharaonic kings, and probably more; the researches of Doctor Lepsius on the Chamber of Carnac, will enable him to shew more than two co-existing dynasties in a part of that period. In this state of the inquiry it seems, then, safest to adopt for that period the lowest number of Manetho, which seems critically to be very well attested as really proceeding from him; I mean, 518 or 511 years. 4th. As we ascend the current of Egyptian history, we find that these pastoral tribes whom we have seen in possession of a part of Egypt, had on their arrival destroyed a great Egyptian empire; 'beginning' with Menes, the confused anagals of which are given in the first twelve dynasties of Manetho. But we have a critical and authentic record on the successions of the Pharaohs in this primitive empire, from the hands of the most learned and most critical of all Greeks, the Aristotle of the historical school, Eratosthenes, founder of the Alexandrine critics. He was charged by the third of the Ptolemies, Evergetes I., to compile a list of those Pharaohs out of the records and lists of the archives of Thebes. If can be proved, on the principles of strictest criticism, that we possess at least the extract of this great work, in an authentic form, without the possibility of an error in the chronological dates given by Eratosthenes, and with a very considerable assistance for the restoration of the Egyptian names of the Pharaohs, by the Greek version added to them by that author. According, then, to this list, the duration of the first empire was of 1075 years; and it can be proved that the genuine Manetho, whose lists seem now to assign almost 2500 years to this period, did really differ from his more critical Greek follower in Egyptian research, by less than one hundred years. 5th. According to this system, the era of Menes would have begun about two centuries after the epoch of Noah, if we fix this point of sacred history with Syncellus, and many of the fathers and chronologists of the Greek church, at about 3350 B.C., the era of Menes beginning about 3150. Thus the Egyptian monuments and records themselves speak against those of modern authors, who pretend that we are obliged by them to assign to Menes a period before the Mosiac time of creation; and still more against those who, with the Greeks, have maintained that they attest an antiquity of from 10,000 to 15,000 years before our era. 6th. Of the period of those thirty-eight Theban kings, we have not a few contemporary monuments, shewing a great proficiency in the arts of civilisation, and exhibiting the phonetic alphabet and writing. All the gigantic works of Egypt belong to this period; in particular, the Pyramids, the Canal of Moëris, and the Labyrinth; works, in comparison with which, in point of magnitude, the renowned and wonder-

ful palaces and temples of Thebes and Nubia, of the Sesostrian period, dwindle into miniature performances. The Moëris of Herodotus, author of the canal which bears his name, and also of the Labyrinth, is one of the last of that series, and not Thuthmosis III., fifth king of the restored empire, who was surnamed Moëris, and who has been quite gratuitously identified with the real Moëris of the Egyptian and Greek authors. Having thus enumerated the general results of my researches, which seem to bear upon the immediate subject of our inquiry, I request you to accompany me for a few minutes in the inquiry into the monuments themselves, which we have to examine. Manetho's lists add to the name of the second king of his fourth dynasty, called Suphis, the following statement:— 'He built the greatest pyramid, ascribed by Herodotus to Cheops.' It is known that the names of kings found by Col. Howard Vyse, painted on stones in the chambers of the great pyramid, are NVKHVFV, or NVKHVVV, and KHVFV, or KHVVV, according to the correct reading of them demonstrated by Dr. Lepsius: names both known already by other inscriptions. We pass here over the first name, of which we shall speak later. As to Chuuf, it is clear that both Manetho's and Herodotus's Greek spelling of the name, Suphis and Cheops, are derived from the hieroglyphic writing, in which the first character has been proved by Dr. Lepsius to have become afterwards sibilant; so that Herodotus's spelling has preserved the ancient pronunciation; Manetho's, that of the later period. It is further known, that Herodotus ascribes the second pyramid to Cheops's brother and successor, Chephren, who reigned, according to him, fifty-six years, as his brother had reigned fifty; and the third, to Chephren's successor, Mycerinus; lastly, the fourth pyramid to Asychis, who followed Mycerinus on the throne. Others ascribe this to Nitocris, a queen of Manetho's sixth dynasty. Diodorus gives, first, the same account as Herodotus, with a slight variation in the names, and then some other fragmentary accounts borrowed from different authors. Manetho's lists exhibit the following series:—

1. Soris	29 years.
2. Suphis	63 ..
3. Suphis	66 or 66 ..
4. Mencheres	63 ..
5, 6. Two kings, with 25 and 32 ..	
7. Sebercherus with	7 ..

Now I maintain, first, that in this series there are interpolations; and, secondly, that it may be reduced to its authentic state by means of the list of Eratosthenes and of the monuments. The fifteenth king of the list of Eratosthenes is called Saôphis, in which we acknowledge easily the Suphis-Cheops-Chuuf, author of the great pyramid. He reigned twenty-nine years; his successor, Saôphis II. twenty-seven: both together, therefore, fifty-six years, which is the exact number of years ascribed by Herodotus to the one Chuuf he knew. This coincidence can scarcely be accidental, even if two reigns, amounting together to 106 years, were not highly improbable in themselves. But Manetho's errors (viz. that of his lists) are still greater, and more evident. His first $\omega\upsilon\pi\iota\varsigma$ is evidently $\omega\upsilon\pi\iota\varsigma$. The identity of the years of his reign, twenty-nine, with the first Saôphis of Eratosthenes, would suffice to prove it. Now the two Suphis, his pretended successors, are stated to have reigned fifty-six and sixty-three, making 119 years; and their successor again, sixty-three—

three successive reigns of 182 years. It is evident that three reigns of 182 years are an impossibility in a hereditary monarchy; but the comparison with Eratosthenes shews immediately how such an absurdity came into Manetho's extracts. There existed only two Suphis, having reigned together fifty-six years. Now Manetho's first Suphis has the correct number of the historical Suphis I.—twenty-nine years; and his third, exactly the sum of the reign of both—fifty-six; for sixty-six must be corrected into fifty-six, to make the sum total agree with the single reigns. The fifty-three years of the second Suphis, finally, are again the sum of the two reigns, less exactly given. In the same way, Manetho's Mencheres, the follower of the Suphis, and the only one of this name in his lists, has the amount of the reigns of the two historical kings that follow in Eratosthenes's list after the Suphis I. less one year—sixty-three instead of sixty-four. The repetition of the same corruption shews the origin: interpolation and misunderstanding of identical names differently spelt. But what shall we say of the name of the successor of the first Suphis—Cheops, according to Herodotus—the well-known Chephren, Cheops's brother—Diodorus's Kephren, or Chephren, or Chabryes? It is evident that the Egyptians must have distinguished at least the second Suphis by an individual name, such as the prenomen of the later kings exhibit; for denominations like Saophis II., and so on, are not in the spirit of antiquity, and the assumption of such a use is in direct contradiction with all Egyptian monuments. We now are, indeed, already enabled to say, that the monuments prove Herodotus to have given, in the name of Kephren, the surname or individual name of the second Suphis. For, although the second of the great pyramids has not yet been explored, a sepulchral monument of exquisite beauty, discovered by Mr. Salt near those pyramids, and now one of the brightest ornaments of the British Museum, affords us this very name. For the name of the king, which occurs repeatedly on this monument, read according to the same system as other prenomen, sounds SCHE or SCHAPHRE, according to the usual pronunciation of the first element; which, from the analogy of homophonic signs, may even be supposed to have sounded originally *ch*. Wherever this name occurs in the different inscriptions of that monument, it is followed by the hieroglyphic OER, great, and the sign of the pyramid. An inscription published by Mr. Burton, and found likewise near these pyramids, shews the same particularity; the name of the king is followed by the two signs just mentioned. Mr. Leemans, in his excellent collection of royal names existing in the British Museum, proposes to explain those signs in the sense of the great pyramid. Perhaps it may be more accordant to the way in which they are simply annexed to the royal name, and more agreeable to the grammatical order of the words, to translate them 'The Great of the Pyramid,' as a title of this king. At all events, a connexion between him and one of the pyramids of Gizeh, where these inscriptions were found, seems in itself indubitable: and the name is as near to the name of Kephren, as it is unlike any one of the other authors of pyramids. We may therefore take it for granted, that we are in possession of the monumental name, preserved by Herodotus, as that of the author of the second pyramid; and we learn from the list of Eratosthenes, that the king, whose common designation that prenomen

must have been, was the second Saôphis or Suphis. I have met with the same explanation in the French translation of the English *Memoirs on Mycerinus*, by M. Lenormant, communicated to me last week; and I feel it my duty to attest that Mr. Birch had arrived at this solution already in the summer of last year, in application of a principle to which I had come before my arrival in this country, and which was also known to Champollion, as his posthumous works shew. The third pyramid was built by Mycerinus, according to Herodotus, or by Mecerinus, Mencerinus, as Diodorus calls him. He was the son of Cheops, according to the father of history; which, absurd as it would be if his father and uncle had reigned 106 years, is not exactly impossible, according to the true historical account which we know through Eratosthenes. But it is more probably only a misunderstanding originating in the circumstance that his father was also really called Cheops, which name Herodotus knew only as that of the first of the two. Mr. Birch has been the first to read the Egyptian form of this royal name in the inscription engraved on the coffin of the king, found in the third pyramid by Col. Howard Vyse. It contains a prayer for the blessing of Nephe, Osiris's mother, over the deceased. This royal name reads most unequivocally MEN-KA-RE, from which all the Greek forms are so obviously derived. Evidently this Mencheres-Mycerinus must be one of the two Moscheres which followed the two Suphis, in the Eratosthenian list. This reading is perfectly sure, and so is the interpretation 'Hades', which can never be made to contain the translation of Mencheres; for in Menkare we have two well-known roots, *stabilire* and *offerre*, or *oblato*; and this is as far from the translation of Eratosthenes as Menkere is from Moscheres. An observation of M. Rosellini (*Mon. Stor. iii. pt. i. p. 99*) seems to prove that the word written MC, and pronounced Mus, or Mos, designated often the action of oblation in a sacrifice; and this explanation would illustrate admirably the translation of Eratosthenes, the literal translation being *oblatum donum soli* (MOS-KA-RE). This, then, we have to take as the individual name of that king; that the Manethonian name, Mencheres, gives us the prenomen (as is often the case in these lists), is proved by that hieroglyphic inscription, which exhibits all the insignia of a royal prenomen (Suten-het). But we are even able to explain why Manetho has given here not the common name, but the prenomen or individual name. As there were two kings of the same family name, it is very natural that they were also both called and recorded by their individual names. We believe, moreover, that the name of the second Moscheres is discoverable in Manetho. Mencheres has now in his lists two successors, whose names occur in the Eratosthenian lists in the same order, but as the immediate predecessors of the first Suphis. If then we eliminate them here as intruders, the real successor of the first Moscheres in the Manethonian text is Sebercheres. This name is not reducible to any hieroglyphical writing, but if we adopt Dr. Lepsius's emendation, and read, with a scarcely perceptible variation, Sebekcheres, we have a very intelligible Egyptian name: Sebek-che-re, viz. *Sebek*, like *Phre*, the Sun, one of whose forms was called Sebek, the god with the head of the crocodile. But this trace leads us, perhaps, further; for Herodotus calls the successor of his Mycerinus, which we found to be the first Moscheres-Mencheres, Asychis, and to him the construction of

the fourth pyramid, that built of bricks, is ascribed. The name of Asychis is evidently formed from the root of Sûch, Herodotus's Sûchos, the Egyptian word for the good crocodile, exactly as Athothis is formed from Thoth, with the usual abbreviations of the vowel. The name of the crocodile-god is Sebek, perhaps the more ancient and complete form of the name of the animal itself. But whether this be admitted or not, the hieroglyphical sign of the crocodile might as well be read Sebek the god as Sûch the crocodile, and SEBEK-CHE-RE seems the full individual name of the second Mencheres, called by Herodotus, Asychis. The chamber of Karnak proves that one of the prenomen of the ancient kings began indeed with the figure of the good crocodile. However this may be, Manetho himself ascribed the third pyramid, or that of Mencheres, to the Queen Nitôcris, the fourth after the second Moscheres. The fact, that one of the latter pyramids was the work of that queen, celebrated as the most beautiful and most valiant of her sex in Egypt, explains a tale of Herodotus, which hitherto has appeared merely a ridiculous fable. He says, that some ascribed the fourth pyramid to Rhodôpis, who was slave of Iadmon, together with Asop, and who was, as a frail Ionian beauty, renowned equally in Greece and Egypt. He ridicules himself the belief, that such a woman could have amassed riches to so enormous an amount; which, again, would not be more incredible than that she actually obtained a burial among the most ancient kings of Egypt. But Manetho's account of Nitôcris, 'that she was celebrated for her fair complexion,' seems to give the key to this strange tradition. Rhodôpis, the rosy-faced, appears to be the translation of a surname given to that celebrated queen; a flattery not so much to be wondered at, considering the ordinary dingy hue of Egyptian ladies. This surname, then, was mistaken for the well-known name of the fair Ionian by the Greeks, who found nothing too strange to believe, if it tended to attest Hellenic genius and beauty, acknowledged and worshipped by barbarians. The four kings of Herodotus represent thus four successive kings of Manetho's fourth dynasty, corrected after Eratosthenes; and Manetho's own account seems to have differed from him only as to the author of the third, or rather of the fourth pyramid. Those kings were the fifteenth, sixteenth, seventeenth, and eighteenth of that list of the Pharaohs of the first empire which begins with Menes; and their reigns must have occupied the years 415 to 534 of the era of that king. This, then, would give us the year 2735, or the beginning of the seventh century after the Noachian epoch, for the first year of Suphis, the author of the great pyramid. The age of Mencheres, according to this computation, extends from 2680 to 2650 B.C. The relics of this king, then, who reigned twelve centuries before Moses conducted the children of Israel out of Egypt, and six centuries before Abraham came down into Lower Egypt, then ruled by a kindred shepherd nation—the relics of this king, I say, may be visited by every one here present; and the very name given by Herodotus may be seen engraved on the coffin, which was extracted in 1837 from the interior of the third pyramid, and may be read with the greatest ease by every one who will apply the leisure hours of a week to the hieroglyphical alphabet. The most ancient name we find in the pyramids is that of Nuchuf, mentioned already before, as painted on some of the stones employed in the interior of the great pyramid. He was, ac-

according to Eratosthenes, who calls him Anusyphus, or Anusyphis, the fourth predecessor of Cheops, and preceded, therefore, Mycerinus by 138 years. Is it possible that this king, who died 63 years before the accession of Cheops, began the building of the pyramid, or at least the preparations for the immense undertaking? Otherwise, we must assume that Cheops used some stones which bore the marks of Nuchuf's name, either for having been extracted by that king from the quarries, or employed by him in a construction demolished by his fourth successor. That the inscriptions are mere stone-marks from the quarries, is proved by the circumstance of most of them being in the wall inverted. If thus, according to our system, we cannot defend the chronology of Herodotus, we must not forget to observe, how admirably he has preserved the genuine series of the first four kings of that Memphitic dynasty, which were named to him as the builders of the four most celebrated pyramids. That he misplaced this whole series, so as to range those kings after Sesostris, is a mistake that can easily be accounted for, by reducing his narrative of the kings to the sources of information from which he took it. Herodotus evidently knew nothing of the shepherd-epoch, although a passage of his gives evidence that he was really told of a shepherd nation ruling over Lower Egypt, after the mighty, and probably, in part, tyrannical Pharaohs of the first empire. But I must not trespass any longer on the patience of this meeting, and will only express here my most ardent wishes that the other pyramids of Dgizeh and Saggarah, and the tombs around them, may be made the objects of the most scrupulous inquiry; and that the site and ruins of the old labyrinth in the Fayum, the discovery of which is one of the most brilliant parts of the French expedition, may be carefully examined. The documents and remains of the most ancient ages are to be found on those sites; and the history of mankind, and many of the most important researches, are intimately connected with them."

REVIEW OF NEW BOOKS.

Diary of the Rev. John Ward, A.M. Vicar of Stratford-upon-Avon. Extending from 1648 to 1679. From the original MSS. preserved in the Library of the Medical Society of London. Arranged by Charles Severn, M.D. Registrar of the Society, &c. 8vo. pp. 315. London, 1839. Colburn.*

"QUOTATIONS (says Mr. Ward, in one of his diarial entries, selected by Dr. Severn), quotations resemble sugar in wine, says one, marring the natural taste of the liquor, if good, then of itself, if bad. The more triviale and drie the subject is you write uppon, the more braines must bee allowed for sauce."

Now, as this our review will consist chiefly of quotations, and as, indeed, the plan of the *Literary Gazette* indulges in that course, though we do endeavour to throw in some brains by way of sauce, we would humbly protest against the validity of this doctrine, and insist that there is no better way of making a book tell its own tale than by rationally sugaring, or, it may be, squeezing some lemon into the wine. Crumbs of criticism thus applied are, in our opinion, far superior to whole batches which overlay a small article; as a *côtelette panée* is a finer dish than a toad in a hole, especially if there be very little toad in an insignificant hole, and

* Only thirty-two years after the death of Shakspeare.—How near!! His mention of him, however, occurs in 1663—fifteen years later.

a huge matrix of indigestible dough. So, 'spite of Mr. Ward, we will proceed in our old way.

To Dr. Severn we feel infinitely indebted for this volume. There is, we confess it with him, less of Shakspeare in it than could have been wished, but there is enough to leaven the whole; and what else there is, is curious and full of interest. Of the library of the Medical Society we mentioned the character and value in our notice of its anniversary meeting (see *L. G.* No. 1141); and well has the editor of this work availed himself of one of its singular portions, viz. seventeen volumes of Mr. Ward's genuine common-place books, probably belonging to Dr. Sims, which he discovered on one of its dusty shelves. From these the selections now before us have been made; but first we have a biographical sketch of their writer, who, at the period indicated by the title-page, combined the offices of vicar and medical practitioner at Stratford-upon-Avon, where "his memoranda present a more lively, interesting, and exact picture of the state of medical practice, and of the method of performing surgical operations, than can be collected from works printed at the time." He died in 1681.

Dr. Severn observes:—

"The effect of time and proximity on human judgment with regard to contemporaries, is aptly illustrated by the scantiness of Mr. Ward's records of that divinely gifted being, whose name has immortalized the obscure village where he dwelt, and whose simple tomb had so recently invested the humble roof of its rude church with a halo of splendour and fame unknown to the proudest mausoleum that earthly wealth, or human pride, ever piled over the ashes of mortal grandeur. With unavailing regret we perceive how numerous, varied, and precious our memorials might have been in these volumes, but for the strange and almost universal sentiment which prevents men from appreciating the talents of those with whom they hold familiar intercourse. 'His father and mother are with us, and his brethren we know,' is the language of envious mediocrity, ever prone to treat the genius it can neither understand nor value with insulting disregard. Many a priceless gem must also have been scattered, forgotten, and lost, amidst the rude but useful and engrossing avocations of the vicar's rustic flock; and as John Ward bent over the beds of the aged and the dying, to impart religious consolation, or, in his character of medical friend, ministered to the infirmities of sickness and decay, he must frequently have conversed with those to whom Shakspeare was well known, and who had 'walked awhile with him' in the world, as acquaintances, friends, and neighbours. At these professional and consolatory visits it must be supposed that by a man of Mr. Ward's kindness of heart, mental research, and social feeling, many interesting conversations must have been entered into; but regardless of a 'pearl richer than all their tribe,' it appears they talked not of Shakspeare, who had proved his love to his native village by returning to it, and again becoming the associate of his former friends, after his splendid career, when he had, with unblemished character, acquired an ample competency, and won a name that must last as long as the annals of English history. What Mr. Ward does record of him, who wrote 'not for an age, but for all time,' little though it be, must be regarded with deep interest by all who have felt the power of the immortal bard."

And who does not? Is there a British bosom that does not kindle with enthusiasm at the bare mention of the sweet Swan of

Avon? For ourselves, if we may say it without impropriety, so strong is our admiration, that we can hardly bear his name mentioned without coupling it with an aspiration from our earliest prayer that it may be "hallowed." Shakspeare is to England what Apollo was to the Greeks,—an unembodied essence, a god of poetry; and every mode and particle of the worship addressed to him are symbols of feeling allied to genius, and the love of what is glorious and good. In adoring Shakspeare, even in the smallest degree, there is something to be approved; for it shews that we appreciate what is excellent, and to imitate is the next step to such appreciation. We can form an idea of a Bacon, a Newton, a Milton—how their wonderful minds grasped matters far above the sphere of common humanity; but Shakspeare is alone—we cannot comprehend his vastness, or conceive the superhuman powers which sprang from Nature herself, and yet so illimitably surpassed all that Nature hath ever done for another of the race of man!

With Dr. Severn earnestly do we hope that other discoveries are yet in store for us, which will throw more light upon the history of this matchless being; and we agree with him that, "in the absence of all documents of a date so near the time of Shakspeare as those of the reverend vicar of Stratford-upon-Avon, his *Diary* must be deemed the most credible authority yet published, as it is the only record extant of the income enjoyed by the poet while living, and of the illness which terminated his existence."

Previous to leading us to the brief notices of these interesting questions, Dr. S. discusses several incidental points which have been previously much debated. He seems to think there is no certain standard for the spelling of Shakspeare's name, as he and his contemporaries probably paid no attention to uniformity. Like that of Cecil (see last *Lit. Gaz.* p. 244), it was probably written a dozen of different ways, not only by others, but by himself. Jansen's portrait the editor prefers to any other. The deer-stealing story he discredits, except as a youthful frolic. He holds that the poet lived happily with his wife to the end of his days; and he shews that his birth must have been respectable, and his property, acquired by his own talents, very considerable.

With regard to the latter, we have not seen urged what we think a very strong argument in support of this opinion, namely, that Alleyn, his friend and associate in the theatre and on the stage, realised so large a fortune that he was enabled to found and endow Dulwich Hospital. Now, with similar pursuits, Shakspeare being also, as proved by Mr. Collier, highly paid as a dramatic author, is it not fair to conclude that he too must have acquired large means whereupon to retire, as he did, to his native place, and live in an honoured estate?

But come we to the memorandum respecting him in Ward's *Diary*.

"Shakspeare had but two daughters, one whereof Mr. Hall, the physician, married, and by her had one daughter married, to wit, the Lady Bernard of Abbingdon. I have heard that Mr. Shakspeare was a natural wit, without any art at all; he frequented the plays all his younger time, but in his elder days lived at Stratford, and supplied the stage with two plays every year, and for it had an allowance so large, that he spent at the rate of 1000*l.* a-year, as I have heard. Shakspeare, Drayton, and Ben Jonson, had a merie meeting, and it seems drank too hard, for Shakspeare died of a fever there contracted. Remember to peruse Shakspeare's plays, and be much versed in them, that I may not be ignorant in that matter. Whether Dr. Heylin

does well, in reckoning up the dramatick poets which have been famous in England, to omit Shakespeare. A letter to my brother, to see Mrs. Queeny,* to send for Tom Smith for the acknowledgment."

Dr. S. justly remarks, that New Place must have been a mansion of considerable magnitude, and adds:

"Shakespeare purchased the lands which he attached to New Place, anno domini 1602, at least twenty years after he had been engaged in performing and writing for the stage in London, during which time he unquestionably had an ample opportunity of making such a provision for the purchase of his house, out of the honourable earnings of his pen, without the necessity of having recourse to the Earl of Southampton's assistance. Patronised by Queen Elizabeth, by whom, doubtless, his genius was thoroughly appreciated (and who is said to have 'distinguished him by many fair marks of her favour'), it is far more likely that she very liberally rewarded the efforts of his muse, than that he should owe to the private friendship of one individual the means of making the purchase of New Place, especially as we are now informed by Mr. Ward, that 'Shakespeare's allowance for two plays a-year was so large, that he spent at the rate of 1000*l.* a year.' Out of this ample income, which, according to Malone's calculation, would be more than equivalent to 3000*l.* a year at the present day, it would have been perfectly easy for Shakespeare to make such a reservation as would fully suffice to complete any purchase 'he had a mind to.'"

We will not follow the worthy editor into his warmly imagined picture of the latter years of Shakespeare, his illness, and death: and only observe, that the feeling which dictated the fancied facts is of the true spirit, whilst we pass to a selection of some of the very interesting and strangely mixed memoranda upon general subjects from Mr. Ward's *Diary*:

"Dr. Conyers dissected a person not long since, that died for love, in London: and they found (at least as they fancied) the impression of a face made upon his heart."

"Dr. Turner being to be examined by the Colledg for his admission thereunto, the young Dr. that examined him askt him how many chapters there was in such a book of Galen? He made answer, he read Galen before he was divided into chapters."

"Almanack makers doe bring their almanacks to Roger le Estrange, and hee licenses them. Sir Edward Walker told mee he askt him, and hee confest that most of them did foretel the fire of London last year, but hee caused itt to bee put out." [The fire?]

"In the reigne of Queen Marie, one Walter Rippon made a coach for the Earl of Rutland, which was the first that ever was made in England."

Origin of the word *quid* as applied to tobacco:

"A bark of a tree, which apothecaries call *nescio quid*, itt was first brought over to bee used by dyers: but not answering expectation in their facultie, itt was made use of to scent tobacco; itt gives a fine fragrant scent."

Beware of blue lips — perhaps of Blues altogether:—

"I have heard this to be a certain truth, that women that have blew lips are allways scolds. Mr. Dod heard this att London."

"I have heard that the phraze Scott free came first thus; the Scots in King James his time, if they committed crimes still escaped, even when Englishmen were hangd."

"My Lord Paget seeing a little bitt of mutton on a great platter of fat and gravie, put off his doublet; itt being askt what hee intended to doe, hee told them hee intended to swimme for that bit of mutton."

"I heard of one neer Oxford who borrowed 50*l.* of his father-in-law, so itt was to be concluded when itt was to bee paid, and they being a little knavish concluded the 30th of next February, hee being an ignorant fellow, assented, the lawyer drew the writings accordingly, but the fellow cannot get his money to this day, hee lives at Marston, neer Oxford."

"The sleepy eye that speaks the melting soul:—"

"I have heard of a gentlewoman in Oxford, who hearing that one was accounted a beautie who had a heavie, sleepeie look with her, when shee went to the play, sate uppe the night before, that shee might look sleepeily too."

"One said merrily, hee wisht hee had a sinecure, for his parts lay much that way; itt was one Washburne of Oriell."

New music:—

"I have heard of person Philpot, that hee would have a consort of hogges, and whenne hee would have them sing hee kept them hungry, and set their trebles and bases in their several ranks and orders."

"Some say when man lost free-will woman found itt, and hath kept itt ever since."

"Our English proverb which expresses women's lying-in, by being in the straw, argues that feather beds are not auncient."

"King Henry's wives comprised in this tetrastich:—

Three Kates, two Nans, and one dear Jane I wedded,
One Spanish, one Dutch, and four English wives;
From two I was divorced, two I behadded,
One died in childbed, and one me survives."

"James Sande, of Horburie, in Staffordshire, outlived five leases, of twenty-one years a-piece, after he was married; he died aged 140, his wife, 120."

Royal Society:—

"I have heard this guest att, as the ground of founding the Royal Societie; the king well knew that Harrington, who wrote "*Oceana*," and such strange fellows as hee, had their discourses and meetings, and there tatted about a Commonwealth; whereuppon hee instituted another, whereof his royal self vouchsafed to bee one in opposition to itt, not thinking fitt to putt down the other by open contradiction."

"A Parliament is a perfect syllogism, the Lords and Commons are the two propositions, and the King is the conclusion."

"Lawyers' gowns hurt the commonwealth as much as soldiers' helmets."

"One Rainsford, a courtier, petitioned Queen Elizabeth, that Matthew, Mark, Luke, and John might be released out of prison, meaning translated into English, for the Scripture had been kept in an unknown tongue."

"Rowland Lacy, when hee heard his father was tapt, says hee, 'Is my father tapt? Then hee will not last long, for nothing in our house lasts long after itt is tapt.'"

"A good match might bee made betwixt a blind woman and a deaf man."

"King Edward the First forbad sea-coal to bee burnt in London, in regard of the great smoke which itt made."

"150,000 houses in London before the fire. About 15,000 or 16,000 dy yearly in London when no plague, which is thrice more than in Amsterdam. The excise in London comes to about 12,000 pound a-yeer, about a fourth part of the excise of England. London stands on 466 acres of ground. Lost in books 150,000 *li.* att the fire of London. London Bridg is 800

foot long, 60 foot high, and 30 broad; itt hath a drawbridg in the middle, and 20 foot between each arch."

"A certaine woman that eat much before her husband, and hee complained of her to her mother, shee told him itt was her fault, for shee had not wormd her; wherefore shee advied him to let her have her home to worrne her; and shee advied her to eat little before her husband, but to pay itt in private: and so shee did, which very much pleased him, insomuch that hee forgave tenne pound of her portion which was left behind, for worming her."

"I have heard that the protector should promise Dr. Lambert Olbeston, that no man should take away his living; so hee divided itt amongst two."

"In 266, under Gallienus, Pope Dyonysius ordained churches, and churchyards, and parishes; but Cuthbert, the archbishop of Canturburie, about the year 752, obtained that the bodies of the dead should bee buried in churchyards within cities, whereas aunciently they were buried without."

Nothing new under the sun: here is the modern *pedometer*:—

"An instrument calld a waywiser, by the motion whereof a man may see how many steps he takes in a day: I have seen one worth thirty shillings."

"Old Sampson, the chymist, told mee that hee made the aqua fortis with which Sir Walter Rawleigh did precipitate gold to enrich an oar, which hee presented to King James, proffering to bring the same from beyond sea, but could not perform his promise."

"Mr. Hartman had a piece of unicorn's horn, which one Mr. Godeaki gave him; hee had itt att some foraine prince's court. I had the piece in my hand. Hee desired Dr. Willis to make use of itt in curing his ague; but the Dr. refused, because hee had never seen itt used. Mr. Hartman told mee the forementioned gentleman had as much of itt as would make a cup, and hee intended to make one of itt. It approved ittself as a true one, as hee said, by this; iff one drew a circle with itt about a spider, shee would not move out of itt."

All Souls, Oxford:—

"Archbishop Chichly, having persuaded King Henry the 5th to a warre with Ffrance, built a colledg in Oxon, to pray for the soules of those who were killed in the warres of Ffrance. Hee calld itt Allsoules, as intended to pray for all, but more especially for those killd in the warre of Ffrance."

"Wee have utterly lost what was the thing which preserved beer so long, before hops were found out in England."

"Three spoonfuls of the juice of stinging nettles in posset drink, with three mornings intermission, is a certain cure for the stone."

A plaster:—

"Watson, parson of Sutton Colefield, in Staffordshire, hath an extraordinarie way of curing dropsies by the help of pills and a dyet drink. Hee hath likewise a kind of ointment, made, as is supposed, of tarre and the basting of a shoulder of mutton, and of soot, they tell me, or some such thing, and this cures anie sore presently."

"If a physician comes in unto a patient, let him take care that hee comes not near the fire, which draws the infection."

Phrenology:—

"If a man have a round forehead, hee is subject to follie and lightnes. If a man have a sharp chin that stands forward and a little forehead, hee is brutish and stupid, like a hogge, whose image hee bears."

* "Probably Shakespeare's daughter Judith, who lived to be seventy-seven years of age."

POETICAL WORKS,

Companion.** 1st Thousand, price 2s. 6d.

4. **The Little Linguist; or, a Complete
Guide to English Philology.** 1st Thousand, price 2s.

SMITH'S STANDARD LIBRARY.
In medium 8vo. uniform with Byles's Works, &c. price 3s. 6d.
**ANSON'S VOYAGE ROUND THE
WORLD,** with an original Preface and Memoir.
"A voyage which is still about the most delightful of any with
which we are acquainted." — *Edinburgh Review*, April 1820.
49s. Sixteen other popular Works are now published in
this Series.

London: William Smith, 115 Fleet Street; Fraser and Co.
Edinburgh; and Curry and Co. Dublin.

HANNAH MORE.
Dedicated, by permission, to Her Majesty, in 1 vol. post 8vo. 12s.
in boards, uniform with her Works, and embellished with a
Portrait, never before engraved, and numerous Illustrations,
after Sketches by the Author.
**THE LIFE OF HANNAH MORE; with
Notions of her Disputes.**
By HENRY THOMPSON, M.A.
St. John's College, Cambridge; Curate of Wringtens, Somerset.
London: T. Cadell, Strand; and W. Blackwood and Sons,
Edinburgh.

Of whom may be had,
**The Complete Works of Hannah More, in
11 vols. post 8vo. 51s. in boards.**

THE SECOND EDITION.
In royal 8vo. with Thirteen Portraits, price One Guinea, bound
in cloth, the First Series of
HISTORICAL SKETCHES OF STATES.
MEN who flourished in the Time of George III.
With an Appendix.
By HENRY LORD BROUGHAM, F.R.S.
"Several of the Sketches contained in this volume have already
appeared in print, but as parts scattered throughout other and
much larger works. But great additions have been here made to
some of them, as—George III.—Lord Chatham—Mr. Fox—
Mr. Canning—Mr. Windham. While the following are entirely
new:—Lord North, Mansfield, Thurlow, Joughborough; Lord
Chief-Justice Gibbs, Sir William Grant, Franklin, Joseph II.,
Catherine II., Gustavus III., and the Remarks on Party."
London: Charles Knight and Co. 22 Ludgate Street.

BY AUTHORITY.
In 8vo. price 6s. bound in cloth,
**FIRST REPORT of the Commissioners
appointed to Enquire as to the best Means of establishing
an Efficient Constabulary Force in the Counties of England and
Wales.**
Presented to both Houses of Parliament, by command of
Her Majesty.
London: Charles Knight and Co. 22 Ludgate Street.

THE NATURALIST, Monthly Miscellany,
price 2s. No. XXXI. for April, Portrait and Memoir of
William Hewitt; and No. XXXII. for May, Dr. Lindley, F.R.S.
Professor of Botany in London University, &c. 4th and 5th
of a regular Series.
London: Whittaker and Co.

12 Great Marlborough Street, April 26.
**MR. COLBURN has just published the
following NEW WORKS.**

I.
Diary of the Rev. J. Ward, A.M.
Vicar of Stratford-upon-Avon,
Extending from 1648 to 1678.
Edited from the original MS. by Charles Moberly, M.D.
1 vol. 8vo.

II.
The Banished; a Swabian Tale.
Edited by James Morier, Esq.
Author of "Mahj Baba," &c. 3 vols.

III.
The Life and Correspondence of M. G. Lewis,
Author of "The Monk," &c. with numerous Pieces in Prose and
Verse, never before published. 3 vols. 8vo. with Portrait.

IV.

Henry Colburn, Publisher, 15 Great Marlborough Street.

Crown 8vo. cloth boards, price 3s.
**A BRIEF SURVEY OF PHYSICAL AND
FOSSIL GEOLOGY.**
By F. J. FRANCIS.
In which is shown the probability of Geological Phenomena as
made known to us by the Discoveries of Modern Science, and the
Theory of Dr. Buckland Vindicated and Established.
"Magna est Veritas et prevalebit."
John Hatchard and Son, 127 Fleet Street.

In small 8vo. price 3s. 6d. in boards,
**THE CHURCH OF ROME IN HER PRI-
MITIVE PURITY,** compared with the Church of Rome
at the Present Day; being a candid Examination of her Claims
to Universal Dominion. Addressed, in the spirit of Christian
kindness, to the Roman Hierarchy.
By JOHN HENRY HOPKINS, D.D.
Bishop of the Protestant Episcopal Church, in the Diocese of
Vermont, U.S.
First London Edition, revised and corrected by the Author, with
an Introduction by the Rev. HENRY MELVILLE, D.D.,
Livingtons, St. Paul's Churchyard, and Waterloo Place,
Fleet Street.

THE MIRROR OF LITERATURE.
Part IV. of Vol. I. for 1829, published this day, contain-
ing 122 Engravings of highly popular interest. A Facsimile of a
Photogenic Drawing, with Dr. Götting's Birth and other Papers,
descriptive of the Art. Two Engravings of the Royal Chelsea
Ban-House—A newly invented Machine to supercede Steam on
common Roads—Engraving and Description of the Machinery
connected with the popular Exhibition of the Invisible
Girl—Assam Tea—Progress of Science during the Month—
Ancient Sunday Games, with a variety of other Papers on highly
popular subjects.
John Lambird, 149 Strand.

In 8vo. price 5s. 6d. boards.
**A SUMMARY OF THE WRITINGS OF
A SACRANTIN.**
By the Rev. JACOB HENRY BROOKE MOUNTAIN, M.A.
Vicar of Hemel Hempstead, Herts; and Rector of
Misham, Beds.
J. G., and F. Livingston, St. Paul's Churchyard, and
Waterloo Place, Fleet Street.

London to visit my native home,—to place my feet upon the very hearthstone by which I had sat when a boy. Mine was no affected feeling, no imaginary delight, but a mad, wild eagerness, to look upon the old woods and green hills which had been familiar to me from childhood, and to which my mind had so often sailed on the dreamy wings of pleasure, asleep or awake, just as fancy wandered. The old house was still the same, and every thing it contained seemed to stand in the very position that they occupied twenty years ago; there was no change, saving that they appeared to look older, somehow more venerable; but the alteration was more in myself than the objects I looked upon. I gazed upon the old clock, and fancied that the ancient monitor had undergone a great change since my boyish days; it seemed to have lost that sharp clear clicking with which it had greeted mine ears when a child, and when it told the hour, it spoke in a more solemn tone than that of former years. I looked upon the brass figures which ornamented the old clock-face, until fancy began to trace a resemblance between myself and them; in former days they looked bright and gladsome, they seemed not to bend under the huge load they supported; but now they have a careworn look about them, and what they seemed to bear once with a playful grace, now hangs upon them like a burden; their brows, too, seemed heavy, as if they had passed away long years in painful thought. The gilt balls, which decorate the tall case, were tarnished; the golden worlds into which my fancy had so often conjured them, were gone; the light that played around them in other days was dimmed; the sunshine rested upon them no longer. I heard the clock-chains slipping at intervals, as if they could not keep pace with time; they seemed weary with long watching; they could no longer keep a firm foothold down the steep hill which they had traversed so many years. I looked on those ancient fingers, now black with age, and which were bright when they pointed out my hours of pleasure. They no longer told the time when my play-fellows would call upon me to wander into the green fields,—they warned me that it was nearly the hour for the delivery of letters, and I became anxious to hear from those whom I had left nearly two hundred miles behind me;—another home and other cares came before me. I called Memory a coward for thus reverting to the past. I summoned him before me, and he stood up in my own likeness,—a boy who had seen but twelve summers. I looked upon him, and saw that he was unworthy of the notice of Care; that Sorrow disdained to buckle her load upon his back; but gave him his own thoughts for playthings to amuse himself with, until he could learn the great game of life. I saw why the tempest passed over him harmlessly, for, like a lowly plant, he had no bulk to oppose to its might, and had only, after long years, become a mark for the storm, with bole and branches strong enough to wrestle against its power. ‘The finger of heaven,’ exclaimed I, ‘guideth all things aright.’ My eye fell upon the old mirror into which I had looked twenty years ago, on which I had gazed when a child, and marvelled how another fire and another room could stand within the compass of so small a frame. It gave me neither flattery nor welcome, but gravely threw me back, seated by the same hearth which I had so often scrawled over with the mis-shapen figures of men and monsters, when a boy. We confronted each other with a familiar boldness, as if proud that we had stood the wear-and-tear of

time so well. We looked seriously, but not unkindly, upon each other. The image in the mirror seemed as if it would have accosted me, and had much to utter, but its lips became compressed, as if it scorned to murmur. It gave back another form for a moment,—a lovely maiden stood arranging her ringlets before it,—but that was only fancy, for I remembered she had long been dead. The very crack which I had made along the old looking-glass, when a boy, with my ball, seemed like a landmark dividing the past from the present. I could have moralized for hours on that old mirror. On the wall hung the large slate on which I ventured to write my first couplet: what I then wrote was easily obliterated; my ragged jacket-cuff was the willing critic that passed lightly over my transgressions, and shone all the brighter after the deed. I knew not that such men as authors lived; every book was taken up without a suspicion of its lacking truth, and, strange as they might seem, I felt proud in the wisdom I gathered from their pages. I could point out to my playmates the green rings which the fairies had made on the grass, tell them the very colours which the elves wore, or shew them a valley which resembled that wherein Sinbad gathered his diamonds. Ignorance was then bliss indeed!”

Need we pause to indicate the many beautiful images conjured up here—the flights of fancy and the frame of philosophical reflectiveness in which they are set? And the playfulness mixed with sadder thoughts; the originality of the ideas, and yet the absolute commonness of the matters brought forward for its exercise? We go on:—

“Then there was that old tea-board, with the stately lady in a garden on the centre, herself overtopping every tree. But that tray was only used on rare occasions, real ‘whitecake-days,’ when some cousin or aunt came to tea; and the mended china was handed carefully from the corner-cupboard, and the blue glass sugar-basin, which I hoped some day to see broken, that I might have the bits to spy through. The old white table was still in the same place; and its long drawer seemed at last to have found rest—tops, marbles, and fishing-tackle, which it was opened a score of times a-day to rummage for, were all gone; there is no danger now of running fish-hooks into their fingers when they open it. ‘Robinson Crusoe’ and ‘Robin Hood’s Garland’ are gone. That old drawer was a true index to my mind in those days;—they who looked therein might discover the true taste of its occupier; old and worm-eaten as it may now seem, it has contained the greatest literary treasures—the works of Shakspeare and Milton. How little it took to make me happy in those days! A dry crust from the large bread-crock, which yet stands under the old table; Shakspeare, or a volume of Scott’s immortal novels; a day of sunshine, and that a holiday, and I had but to traverse a single street, enter Foxby Lane, and bury myself in the woods, to reach my own heaven. No pride—no object—no ambition—poverty was never felt, and therefore unknown; so long as the bread-crock furnished forth its crust all was pleasure, for the clear brook in the wood was never dry. Ariel passed not a happier life than mine under ‘the blossomed bough.’”

The vivid emotions produced by these scenes tend to as touching a picture of autobiography as we have ever seen.

“And have I (exclaims the poet) forgotten those days? No! I traversed the scenes with as much pleasure last summer as ever I felt in my boyhood. And oh! pardon me, if for a

moment I felt proud at the thought, that the emotions which I had gathered in those lovely solitudes had been waited to a thousand hearths. I carried the sweet sights and sounds of the woodland with me into the huge city, and many a time, while bending over my lonely hearth, they have come upon me like music from heaven, and I have ‘blessed them unaware.’ From the low humming of unseen insects in the air, to the heavy murmuring of the bee, as it flew singing from flower to flower, or was lost amid the drowsy brawling of the brook, had my heart become a treasurer of their melodies. There I first heard the solemn tapping of the woodpecker, measuring the intervals of silence; and saw the blue-winged jay, as she went screaming through the deep umbrage, startled by the harsh sounding of the woodman’s strokes. Sometimes the grey rabbit stole noiselessly as a spirit past me through the long grass, or the ruddy squirrel caught my eye as he bounded from branch to branch. There the melancholy ring-dove struck up her mournful note, and was answered by the cuckoo, as she stood singing on the tall ash that caught the sunshine by the side of the forest. Then up flew the lark, carrying his ‘tirra lirra’ heavenward, until he was lost amid the silver of the floating clouds, and the wide azure of the sky rained down melody. Sometimes a bell came sounding solemnly over the distant river (glimpses of which might be seen here and there through the trees), until the deep echo was broken by the dreamy cawing of the rook, or the lowing of some heifer that had lost itself in the wood. Anon the shrill ‘chithering of the grasshopper’ fell upon the ear, or the tinkling of sheep-bells, mingled with the bleating of lambs from the neighbouring valleys; or up sprung the pheasant with a loud ‘whurr,’ the sunshine gilding his gaudy plumage as he divided the transparent green of the underwood in his hasty flight. Sometimes the rain fell pattering from leaf to leaf with a pleasing sound, or the wind arose from its slumber, muffling its roar at first, as if to awaken the silence of the forest, and bid the gnarled oaks to gird up their huge limbs for the battle. Nor was it from the deep woodlands alone that all these sweet sounds floated; hill and valley, and outstretched plain, sent forth their melodies until the very air became filled with dulcet sounds, made up of all strange harmonies. The plough-boy’s whistle and the milk-maid’s song mingled with the voices of children in the green lanes, or the shouts of labourers in the fields, as they called to each other. Then came the rumbling of huge wains, and the jingling of harness, mixed with the measured tramp of some horseman as he descended the hill. The bird-boy swung his noisy rattle amid the rustling corn, or the mower ceased his loud ‘rasp, rasp,’ and leant upon his scythe to wipe his brow, or listen to the report of some gun that sent its rolling echoes through the valley. Sometimes the baying of a dog, or the clap of a far-off gate, was mingled with the sound of the hunter’s horn, or the crowing of cocks, as they answered each other from the distant granges. The shrill plover wheeled above the wild marshes with its loud screams, while the bitter boomed in hollow concert from the rank sedge. When the village was neared, the humming of human voices came louder upon the ear, or the sounding of the thresher’s flail was broken at intervals by the tinkling of the blacksmith, until all was lost amid the gabble and deafening clamour of some neighbouring farm-yard. Many of these old familiar sounds fell pleasantly on mine ear when I revisited home; some of them coming upon me like departed voices, which, although

not forgotten, make the hearer start when he finds them so near at hand. They reminded me of scenes gone by—of companions who are now dead—of happy hours that can never return—they came full of foolish regrets, and

‘Silly truths
That daily with the innocence of love
Like the olden age.’

Then up rose a thousand mute objects in the landscape, which had haunted me when far away, by unconsciously shaping themselves into the imagery of thought, and diffusing their colourings over my pages. They had imprinted their forms upon the mind years ago, and ever stood present to view when Fancy turned her eye homeward. And many a time, amid the storm and darkness of winter, and in the silent watches of the night, had those scenes presented themselves, lighted by as sweet a sunshine as slumbered there when I looked upon them. The old mill still stood with its huge sails resting upon the sky boldly and darkly, as when I watched the moon rising between them, and fancied her some monster with outstretched wings, newly alighted from the clouds. The distant hills upheaved their green heads, bright and beautiful, as they had done twenty years ago, when I wondered what new world outstretched beyond them. The deep water rolled as rapidly under the dark arches of the old bridge as when I launched my paper boats upon the eddies, and stepped across to see them float through in the sunshine, and, when any of them was wrecked, sat down to draw sad comparisons between their fate and the voyage of life.”

What clusters of rustic imagery, what pictures of sylvan scenery, what animation in every part, what poetry in the whole! How strong and heartfelt the love of home, and how well is it instanced in the following exposition!

“I have at times tried to imagine the feelings of a man who is about to emigrate, fully convinced that he never again will look upon his native land—to my mind it brings thoughts allied to death. I could fancy that I was going away to die—going to live somewhere until Death came—in some huge prison, with a gaol-like sky above it, and an area that might stretch hundreds of miles with a wide sea around it, on the margin of which I should wander alone, sighing away my soul in wishes to regain my native land. Everything would be strange to me, the landscape would call up no recollections; I should not have even a tree to call my friend, nor a flower which I could say was my own. Ah! after all, it is something to look upon the churchyard where those that we loved are at rest, to gaze upon their graves, and think over what we have gone through with them, and what we would now undergo to recall them from the dead. Reader, pardon these childish thoughts—they forced themselves into my mind, and I have recorded them; they seem to awaken my memory anew and strip me of a score of years: they have a foolish hold of my affections. But surely it is a worthy passion to cherish; there seems something holy about the past; it is freed from all selfishness; we love it for its own sake; we sigh for it, because it can never again be recalled; even as a fond mother broods over the memory of some darling child that is dead, as if she had but then discovered how much her heart loved it.”

We shall only add, that the entire paper is full of similar description and sentiments: but we trust we have quoted enough to make out our case, and more! At any rate, we have quoted so much that we have left ourselves no room for the other sketches, &c., and can, there-

fore, only hastily enumerate and note them. At page 46, there is an anachronism in regard to a quotation from Sir W. Scott. “Railway Travelling,” is very clever and amusing. “Country Courtship,” “The Old Coachman,” and “The Old Fisherman,” perfect pictures of country manners, and executed with truth and feeling. “Tumbling Tommy,” the Young Outlaw, and “Jack Grab,” are very singular stories. “Mary Gray,” “Bonny Bell,” “The Gamekeeper’s Hut,” and others, very pathetic. “The Country Fair,” “The Country Justice,” &c. &c., picturesque and full of incident. And a retrospect on William Browne’s poetry, of the Elizabethan time, and another on England’s Helicon, proofs of a fine judgment in matters connected with rural poetry. We shall conclude with a few lines from the former:—

“Our object in the present chapter is to bring before our readers a few beautiful passages from the works of a sterling old English poet, whose writings are too little known; one who, in his day, was a favourite of Rare Ben Jonson, and had complimentary poems addressed to him by Michael Drayton, Selden, Brooke Herbert, Withers, and many other celebrated writers of that period. Beautiful, however, as his poems are, and excelling, in our humble opinion, nearly all that come under the denomination of pastoral poetry in the English language, you look in vain for his name in the *Essays* of Pope, Warton, and Johnson, in which they profess to treat upon this subject. They make no mention of either William Browne or his ‘*Britannia’s Pastorals*,’ and sorry are we to add, that among all the miscellaneous collections of poetry, but few extracts (and those of an inferior description) from his works are to be found. Many of the compilers of English poetry have never once alluded to him, and those who have, almost lead us to conclude that they never read a tithe of his works.

“Poetry ought to be judged by the emotions it awakens more than the mere sounding of words, and the artificial turning of its sentences; for, after all, it consists in the thought and not the expression; you cannot feel the words: the image it calls up and the feeling it stirs belong to a higher power than mere language. Instance the thousands of lines which are published and read every year, and contain not an atom of true poetry. The same power is to be found in descriptive or rural poetry; for, although in this case the passions are but seldom appealed to, yet must the author produce a series of pictures, or so shape his thought, that it shall call up some object which has before been seen, and bring it as forcibly to the mind of the reader as if it stood before him. This power, as we will prove, our author possesses to an extent which has rarely been excelled.”

We can select but two of the given examples:—

“*Early Morning.*
—‘Tis not too late,
For the turtle and her mate
Are sitting yet in rest;
And the throstle hath not been
Gathering worms yet on the green,
But attends her nest.
Not a bird hath taught her young,
Nor her morning’s lesson sung
In the shady grove;
But the nightingale P’r’ dark
Singing, woke the mounting lark;
She records her love.
The sun hath not with his beams
Gilded yet our crystal streams,
Rising from the sea;
Mists do crown the mountain tops,
And each pretty myrtle drops
‘Tis but newly day.”

“*Night.*
Now great Hyperion left his golden throne,
That on the dancing waves in glory shone;
For whose declining on the western shore
The oriental hills black mantles wore,
And thence apace the gentle twilight fled,
That had from hideous caverns ushered
All-drowsy Night; who in a car of jet
By steeds of iron-gray is drawn through the sky:
The helps of darkness waited orderly.
The pitchy curtains fell ’twixt earth and heaven,
And as night’s chariot through the air was driven,
Clamour grew dumb, unheard was shepherd’s song,
And silence girt the woods: no warbling tongue
Talked to the echo; satyrs broke their dance,
And all the upper world lay in a trance.
Only the curled streams soft chidings kept
And little gales, that from the green leaf swept
Dry Summer’s dust, in fearful whisperings stirr’d,
As loath to waken any singing bird.”

Correspondence between the Right Hon. the Speaker of the House of Commons and Sir F. W. Trench, M.P. on the Lighting of the House. Pp. 32. London, Olivier.

THIS may at first sight appear to be a light subject, and many people may be disposed to make light of it; but if we reflect that much of the comfort and health of the members of the House of Commons, sitting night after night throughout lengthened debates, depend upon it, we shall feel more inclined to give respectful consideration to Sir F. Trench’s statements and efforts. If the eyes are to have it, a glaring light may be preferred; and if the nose, an infected atmosphere. But it seems to be quite unparliamentary that both should carry it on the same question—the eyes on the oil-oxygen flames, and the nose on the oil-oxygen odours. Sir F. Trench complains that his wax lustre lights, with shades of a softening green tint, have not been fairly tried; and he appeals to the Speaker not to waste money on an uncalled-for experiment with Bude’s patent illumination, and, at any rate, to afford his plan the justice of a fair comparison. This seems very reasonable; and at all events we must pay the tribute of our hearty approbation to any man who devotes his time and talent to the best mode of enlightening the House of Commons.

ARTS AND SCIENCES.

ROYAL GEOGRAPHICAL SOCIETY.

APRIL 22. Mr. Hamilton, President, in the chair. Read extracts from—1. A letter from Lieut. Saumarez Brock, R.N. addressed to Captain Beaufort, R.N. Hydrographer. “I have at length,” says Mr. Brock, “the pleasure of forwarding the chart of the Gulf of Kos, on the southwestern coast of Anatolia, with the surveys of the various harbours contained in it, together with some sketches of the land, from the points most useful to distinguish the approaches to them. The gulf occupies an extent of nearly sixty miles, from east to west, and is very deep; no bottom in the middle of it, with three hundred fathoms of line, and even in the vicinity of the shore seldom less than from fifty to seventy fathoms. No chart extant gives an idea of its shape or extent, and the isthmus has been hitherto laid down apparently by guess. In the summer months the upper part of the gulf is unhealthy, and is abandoned by the inhabitants, in order to escape the malaria; this, combined with the absence of fresh water on the coast, rendered our survey a task of some difficulty. I have completed a plan of the town and harbour of Budrin, on the scale of nine inches to a mile: I have traced the ancient wall, and fancy I have discovered the site of the mausoleum which has been so often sought for unsuccessfully; and have got sketches of the bas-reliefs in the walls of the castle, and have little doubt but that they

were brought from that celebrated monument. The shores of the gulf are almost uninhabited, but the numerous remains of both modern and ancient edifices, prove that in former times it must have been densely peopled. The description of the isthmus given by Herodotus is true to this day; it is about half a mile broad, and a natural ravine which extends from the gulf of Symi might, with a little exertion, and by digging through a hill of moderate height, convert the Triopium promontory into an island. The structure of the isthmus appears to be volcanic; it is composed of small vitrified rocks, resembling lava, and would doubtless much annoy workmen in excavating through it; although moderns who might undertake the task would find no great difficulty in connecting the two gulfs of Kos and Symi by a canal. I send a drawing of a gate standing amongst the ruins of ancient Keramus, interesting both from its antiquity, its solidity, its complete state of preservation, and the elaborate manner in which it is ornamented. The city has been of moderate size, but contains the remains of temples and porticoes, which seem to have been overthrown by an earthquake, leaving, however, enough to shew the wealth and good taste of its former inhabitants. After much search I found some imperfect inscriptions. The doorway and gate at Keramus approaches, in form, to the Egyptian style of architecture, which frequently occurs in this place; but no others are thus ornamented. The number of sarcophagi found along the shores of the gulf is considerable, more especially at Keramus, where a double line seems to have formed the principal entrance to the city: they are very massive, but have all been opened. Some fluted columns, with Corinthian capitals, and well-executed amphoræ and grape-vines, lead me to believe that a temple to Bacchus once existed there. The columns are in excellent preservation, but prostrate and overgrown with trees and shrubs. The city has passed through many hands, and several styles of architecture may be seen; the walls, which are plainly traced, and in some places perfect, are principally Cyclopean, repaired at different periods with Hellenic masonry, and guarded by square towers at unequal intervals: they are carried up to the foot of a range of hills joining the south end of the city. On a small hill, at the extreme end of the range, there has been a square fort, surrounded by a triple wall, which has probably been the citadel. At Giova, at the head of the gulf, I found some tombs cut in the rock; of which I also enclose a drawing and ground-plan." Mr. Brock's letter was illustrated by two large and beautiful charts of the island and gulf of Kos, on the scale of $1\frac{1}{2}$ inch to a mile, shewing the sites of the ancient towns, the height of all the mountains, &c., together with various plans of ruins, and several coloured drawings of headlands.

[The rest deferred.]

LITERARY AND LEARNED.

UNIVERSITY INTELLIGENCE.

OXFORD, April 18th.—The following degrees were conferred:—

Masters of Arts.—O. Gordon, Student of Christ Church; J. C. Prichard, R. W. Church, Fellows of Oriel College; Rev. T. B. Morrell, Balliol College; Rev. J. Ballard, Trinity College; W. F. Donkin, Fellow of University College.

Bachelor of Arts.—D. W. Griffith, Jesus College.

CAMBRIDGE, April 17th.—The following degrees were conferred:—

Masters of Arts.—W. Conway, J. I. Smith, A. Smith, W. L. Coxhead, Trinity College; W. H. Bateson, St. John's College; J. Toner, Caius College; A. Paton, Queen's College; J. Cottle, Catherine Hall; P. H. Freer, Fellow of Downing College.

Bachelors of Arts.—E. Pizey, W. Mills, Queen's College; T. W. Marshall, S. Smith, Trinity College; G. H. Capron, A. J. Hammer, St. John's College; R. Wosnam, Caius College; C. E. George, P. C. M. Hoskin, Jesus College; G. J. Sayce, Christ's College; E. Husband, Sidney Sussex College; T. M. Sherwood, Downing College.

ROYAL SOCIETY.

THE Marquess of Northampton in the chair.—A paper referring to the magnetic experiments carried on by Professor Airy and others, by order of the Board of Admiralty, on iron-built ships, was in part read. These interesting and important experiments were made at Deptford, on board the iron steam-boat Rainbow, which was placed at the disposal of Professor Airy and his coadjutors by the Steam Navigation Company, to the proprietors in which it belongs. The paper briefly notices the first discovery of disturbing forces a few years ago: at that time they were not fully understood; the Admiralty, however, did not lose sight of them. An iron-built ship acts like a permanent magnet, hence the great interest which attaches to the experiments in question. Until the reading of the paper shall have been concluded, we must defer analysis.

ROYAL SOCIETY OF LITERATURE.

At the anniversary meeting on Thursday, the Earl of Ripon, President, in the chair; his Grace the Duke of Rutland, Lord Bexley, and other Vice-Presidents present; the Minutes of the last yearly meeting and the Report of the Council for the present year were read. The President also addressed the members; and the space we have this week allotted to the Archaeological Assembly on Monday compels us to postpone any report of these proceedings. A ballot took place for the officers of the Society, when it appeared that—

The Earl of Ripon was re-elected President. The Dukes of Rutland, Newcastle, and Sutherland; Lord Bexley; Sir Gore Ouseley; H. Hallam, W. M. Leake, and L. Hayes Pett, Esqrs.; and the Rev. Dr. Spry, were re-elected, and the Earl of Clare elected, Vice-Presidents. On the Council, the re-elections were—the Earl of Munster, Dr. John Bostock, the Rev. Richard Cattermole (Secretary), the Rev. Henry Cissold, N. W. Ridley Colborne, Esq., W. R. Hamilton, Esq. (Foreign Secretary), H. Holland, Esq., W. Jordan, Esq., the Rev. G. Tomlinson, and William Tooke, Esq. (Treasurer); and the new elections in the room of members retiring agreeably to the charter—the Earl of Durham, the Bishop of Winchester, Lord Carrington, Sir J. Dorant (Librarian), Hudson Gurney, Esq., and J. Morice, Esq. Newell Conop and D. Pollock, Esqrs. were elected Auditors; and the other officers as noticed above.

Thanks were voted to the chairman, and to Mr. Jacob for his great services as treasurer during eight years; and the meeting separated much gratified with the proceedings of the day.

SOCIETY OF ANTIQUARIES.

ON St. George's Day, the Society held their anniversary meeting, for the election of president, officers, and council. Mr. Hudson Gurney, V.P., in the chair.—Sir Henry Ellis announced the names of twenty-nine members who had died, and two withdrawn, within the last year, and of thirty-four new members, and three honorary, elected in the same time. At the close of the ballot, the Earl of Aberdeen was declared re-elected president; Mr. Amyot, treasurer; Mr. Gage Rokewood, director; and Mr. Carlisle and Sir Henry Ellis, secretaries; and Mr. Blom, Lord Braybrooke, Mr. Bruce, the Bishop of Durham, the Rev. J. Forshall, Mr. Hawkins, Mr. Martin, the Marquess of Northampton, Mr. Phillips, and the Rev. W. Howell, the new members elected on the Council. After the meeting, the Society dined at the Freemasons' Tavern, Mr. Hudson Gurney in the chair.

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Zoological (Anniversary), 1 P.M.
Tuesday.—Civil Engineers, 8 P.M.
Wednesday.—Horticultural (Anniversary), 1 P.M.; Society of Arts, 7½ P.M.; Royal Institution (Anniversary), 3 P.M.; Literary Fund, 3 P.M.
Thursday.—Royal Society, 8½ P.M.; Antiquaries, 8 P.M.; Zoological, 3 P.M.
Friday.—Royal Institution, 8½ P.M.; Botanical, 8 P.M.

FINE ARTS.

WATER-COLOUR EXHIBITION.

THE private view takes place to-day. Yesterday the Queen was expected, but, owing to the Court-fatigues of the two preceding days, sent an excuse. In the absence of royalty, we were favoured with our usual glance, and are happy to say that it enables us to promise the public their usual enjoyment at this justly popular exhibition. Cattermole has "Wanderers Entertained," his most highly finished production. Taylor is very good. Cox at his very best; and Evans in the same fortunate category. To Neesfield we may apply the like observation. Copley Fielding excellent as ever; and Dewint as beautiful and natural. Hunt, redolent of character and colour; and many others, whom we cannot now particularise, contributing their full complement of talent to complete a charming gallery. We miss Lewis, who has, we believe, been abroad; but all the rest reminds us of former and most successful years.

NEW SOCIETY IN WATER-COLOURS.

[Continued.]

241. *Mackerel Fishing; Fishermen laying their Nets off the Gulfstream Light; Sunset*. E. Duncan.—Though by no means confined to subjects of this class, still we consider them very prominent features in Mr. Duncan's practice; and on no occasion have we seen a more splendid display of his talent than in the present instance. The effect of sunlight on the glittering waves, and reflected upon the busy craft scattered over their surface, is perfectly magical.

246. *Roméo and Juliet*. L. Hicks.—Full of the soft and tender sentiment belonging to the subject. We think, however, there is too much of glare in the colouring—it subtracts something from the expression; but the composition, as a print, would be divested of this drawback, and would tell to great advantage.

246. *The Chieftain's Daughter*. W. H. Kearney.—The siege and the foray too frequently bring home such sights to the eyes of wife or daughter. The fields of glory abound in harvests like this. Not the least touching passage in the pictorial tragedy is that of the young heir-apparent, who has taken possession of the chieftain's sword, and is looking mournfully on the fatal catastrophe.

178. *Sunday Evening*. James Fahey.—There are few more pleasant scenes for contemplation than what this picture presents; but "Rural Life in England" must be far removed from large manufacturing towns and beer-shops ere it can be met with. As it is, let us be thankful for what remains, and hope such subjects will not become mere works of fiction.

304. — H. Newton.—Like most first impressions, the characters of Gnrth and Wamba, in the opening scene of "Ivanhoe," have always occupied a conspicuous place in our memory of that popular and interesting novel; and we are pleased to see them so powerfully and individually brought into view by the skill of the artist.

272. *Notre Dame, Calais*. G. Sims.—Though, like scenes in Venice, such views find a frequent place in our exhibitions, the interest

taken in the splendid specimens of pictorial architecture, their grandeur, and the variety of the surrounding objects, must ever attract our attention, and justly excite admiration in examples like this.

274. *Bridal Procession in Cairo, Egypt.* H. Warren.—The fidelity in character and costume which distinguishes the works of this artist, gives great interest to the representation of a custom which must appear so novel and curious to the eye of an untravelling European.

162. *Vessels Making for Port; and 17, West Indiamen Laying-to for a Pilot, off Beechy Head.* Thomas S. Robins.—Examples in a department of art much in request and practice, by a new member of this society, who does great credit to their choice, and promises future advantage to their exhibitions.

122. *Clock Tower at St. Alban's.* G. Howse.—We select this; but it is only as one of the numerous and admirable proofs of the versatility and excellence of this able artist's talents.

138. *Fraughting; or, Gathering Sea-weed on the Coast of Jersey.* E. H. Wehnert.—Clear and beautiful in effect and colour.

231. *Our Villages: "Nature in Simplicity."* A. Penley.—While we express our gratification in beholding such a scene, it is still rather in the hope than in the belief that such exhibitions of nature and simplicity really exist.

170. *Ruins of the Royal Exchange, after the late Fire, painted on the Spot.* Geo. S. Shepherd.—Strange to say, but hardly a public calamity by flood or fire, but a pictorial record of it is presented by the painter. Of such sad memorials, we have never seen a more faithful or a more picturesque representation than the present.

182. *The Tour de Beurre, Rouen Cathedral.* A. K. Penson.—Our exhibitions abound in these picturesque objects. The one under our notice is rich in form and colours, powerful in contrast, and effective in every essential quality of art. 97. is a ruin under the effect of moonlight, by the same artist, and is (as appears by the quotation) called *The Chateau of Robert the Devil*; a beautiful variety from Mr. Penson's pencil.

168. *Braemar Castle: Highlanders returning from a Tryste.* G. B. Campion.—The scenic grandeur of this view is much aided and set off by the figures in the foreground, the character of their costume, and the mellow tone in which they are made to contrast with the cool distance to which they are opposed. 131. *Windsor Castle*, by the same artist, is a gem in its way, and, as an effect of light and colour, pure and natural.

130. *King Henry the Fifth entering London with his Prisoners, &c., after the Victory of Agincourt, A.D. 1416.* W. H. Kearney.—A quotation gives the details of the subject, which the author has illustrated with considerable skill, and filled an ample space with characters and costumes of the olden time. Perhaps to the hero of all this pomp and display, a little more of dignity might have been advantageously given—even under the garb of humility. Pictorial or poetical license would have allowed it. [To be continued.]

THE DOMESTIC ARCHITECTURE OF THE TUDOR AGE.

SEVERAL specimens are lying before us of the plates, in a folio volume, which Mr. M'Lean is preparing for immediate publication, to be entitled "Mansions of England in the Olden Time," by Joseph Nash. "The revival of the old English styles of domestic architecture," says Mr. M'Lean, "is gratifying evidence of

the improvement of the public taste, shewing itself in a natural partiality for a mode of building peculiarly national, both in origin and its adaptation to our habits and climate. The few remaining mansions of the Tudor and Elizabethan periods, and the still fewer buildings of an earlier period that admit of being termed mansions, have become objects of popular interest, besides being attractive subjects for the pencil, from their picturesque beauty. To preserve the characteristic features of the several structures, and to exhibit them as they appeared when their ancient possessors dwelt in them, furnished in the quaint fashion of their day, and peopled with groups of figures, displaying the costumes, habits of life, customs, and amusements of our ancestors;—in a word, to depict the homes of merry England in the olden time, is the object of this work." Nothing can exceed the lightness, elegance, and picturesque beauty of the specimens we have alluded to. They afford an additional proof of the value of lithography, in its present improved state, in enabling an artist of taste and talents, like Mr. Nash, to communicate his original feeling to prints, which might otherwise, perhaps, be vulgarised by an inferior hand. When this promising publication comes regularly under our notice, we shall describe the various subjects of which it is composed.

ORIGINAL POETRY.

SPRING.

She is coming! she is coming! with her laughter-loving eye!
Before her car of sunshine, how the storms of winter fly!
On the brow of some bleak mountain, there may linger snow-drifts still, [in the fill.
But the lake hath burst its ice-chains, and there's music How gladly the palm-willow greets the elder's early leaf—
While Nature's life with glances, why should man give way to grief?
She is coming in her beauty! wreaths of sweetest flowers bring! [But Spring?
She is coming!—who is coming? why, who should it be Brighter skies may welcome Summer, as we wander through the glade; [shade:
More leafy and more grateful then may be the forest But there's something in the freshness of a bright and glad spring morn, [horor.
That even summer hath not; no, nor autumn's fruitful We remember, on the mountain, how we faced the sleety flower.
And we doubly feel the value of the sunshine and the She is coming in her glory! all that's bright around her cling! [Spring!
She is coming!—who is coming? Summer's herald, sunny Oh! many love the Autumn, with its reaper's shout and song, [belong:
But the corn and the primrose not to Autumn's hour Proud of her mimic honours, no young queen of "merry May"
O'er loved and loyal subjects awaits the sceptre of a day. Sweet and fair may be the flowers our autumnal walks that greet, [so sweet.
But they are not as the spring-tide's half so fair nor half She is coming, in her gladness! hark! a thousand voices sing, [Spring?
She is coming!—who is coming? who but laughter-loving April 9, 1836. H. BRANDERTH.

BIOGRAPHY.

ROBERT MILLHOUSE.

ON Saturday last, about midnight, this eccentric son of genius departed this life, after a lingering and painful illness of nearly eighteen months. Born of poor parents on the 17th of October, 1788, he was put to work when only six years old; and at the age of ten he was employed in a stocking-loom. The only education he received was at a Sunday-school, and that consisted of merely reading, the first rudiments in writing, and a very little knowledge of arithmetic. But his mind was not to be fettered by the want of scholastic lore: the vast volume of nature was opened to him, and in the ample stores which constantly presented themselves, he was taught to

"Look through nature up to nature's God."

Nor did he neglect the written records of beauty, in language and ideas which Shakspeare, Milton, Pope, Gray, Collins, Goldsmith, and many others, have shed over English literature. He became an ardent reader—reverenced the sublime, but fondly loved the passages which portrayed the works of the Creator in their simplest attire. At the age of twenty-two he quitted the stocking-frame, and enlisted in the Nottinghamshire militia. It was whilst serving with the regiment at Plymouth that he made his first essay in poetry, by "Stanzas addressed to a Swallow." Several other pieces of considerable merit followed, which were published in a Nottingham newspaper. At the peace, in 1814, the regiment was disbanded, and he returned to labour in his frame, where, during the hours of, and amidst the noise and toil of his business, he composed several longer poems, the first of which was, "Vicissitude," containing some admirable passages. This was followed by a small volume of sonnets, entitled "Blossoms." Next followed the "Song of the Patriot," which was succeeded by "Sherwood Forest," a beautiful production, attached to locality, and describing those delightful haunts that he so earnestly loved. In 1832, he gave up the labour of the loom, and applied himself to composition; but soon afterwards his wife died, leaving him a widower with five children, but, through the kind assistance of Mr. Thomas Wakefield, and of her friends, he was enabled to provide for his family. Nor was that excellent institution, the Literary Fund, wanting in rendering its generous assistance. Since that time he has published his last poem, in two parts, "The Destinies of Man,"—a work that will ensure him celebrity as a poet of no mean grade, as the following lines, closing the fourth canto, will testify. It is an invocation to worship the Deity.

"Oh, Spring! adorned with flowers, refreshed with dews!

Thou Summer! beaming with a bridegroom's smile; Thou Autumn! while the full ripe fruits diffuse Redundant stores in many a swelling pile: And thou, stern Winter! though thy frowns defile The landscape, pouring tempests, floods, and snows, Be mingled all your voices, to compile A song of praise to Him, from whom arose The bounty and the charms your changeful round bestows!

Praise Him, while here, oh, man! the very grave Shall send up gratulations to His name; He, whom His potent mercy sent to save, Will touch the dead with His immortal flame! Then, when no more oppressed by earthly shame, With soul of fire, of ecstasy, and love; When flesh no longer shall the spirit tame,— The vital particle will upwards move, And praise Him evermore with seraphim above!"

About eighteen months since, Millhouse was attacked with severe illness, but he partially recovered so as to get out of doors for a short time during the early part of last summer. On the day of the queen's coronation, however, he took fresh cold, and never quitted the house afterwards. During his long affliction he was kindly and gratuitously attended by Dr. Howitt; and though paragraphs have appeared in the papers, stating him to be in a state of destitution and want, yet they were fabricated by well-meaning but mistaken friends, who were unacquainted with the private bounty that unremittently supplied his necessities. He lived in a very comfortable house, decently furnished; and though naturally anxious, yet he never suffered privation or want. He was for some time assistant at the Nottingham Savings' Bank, and, through his illness, a considerable portion of his pay was continued to him. From early childhood, Millhouse was of an unbending disposition and irritable temper.

He considered himself entitled to the sympathy and support of the public, nor would he perform the slightest office that he considered menial or degrading to a man of talent. He was steady and sober, and rigidly honest. He has left two very young children by his second wife, making seven in all. The widow is left in indigent circumstances, but it is hoped that the hand of benevolence will be extended towards her.

MUSIC.

Mrs. Henry Mason's Musical Soirée.—A *début*, of no inconsiderable importance to the musical world, was made at Willis's Rooms on Tuesday last, in the person of Mrs. Henry Mason, whose compositions and performances on the harp and pianoforte have been hitherto confined to private society. The programme on the occasion contained some songs of this lady's composition, as well as a duet and a glee, all of which evinced not only a thorough knowledge of the art, but a pathos and accurate adaptation to the words, such as we have rarely met with. "Ye burning Stars," a very brilliant composition, was exquisitely sung by Miss Bruce, and as exquisitely accompanied on the harp by the composer, Mrs. Henry Mason. Miss Dolby evinced such purity of expression, as well as of voice, in the manner of her giving the song "Narcissa" (also by Mrs. Mason), that she may be said to have gained an additional laurel. There appeared to exist a pleasing rivalry between that young lady and Miss Cawthorn, for it must be observed that the latter also sung Mrs. Mason's song, "The Forget Me Not," in a manner which excited a deep interest. Handel Gear, and Ghibllei, contributed their valuable aid with much effect. We must not omit to observe that a duet of Mrs. Mason's, "This World is our Own," the words by Lieut. Johns, struck us as a very happy composition, and exhibited the voices of Miss Cawthorn and Miss Dolby to great advantage. The instrumental attractions of the evening were a sonata by Beethoven, for the pianoforte and violin, executed by Mrs. Mason and Mr. Dando, in a manner that highly gratified the *cognoscenti* present; as did also Mrs. Mason's extemporaneous performances on the pianoforte. Her playing is perfectly poetical, and rivets the attention. We heard some passages on the harp also, which convinced us that she is a brilliant performer on that instrument; but at times there was a feebleness of tone, for which we regretted to learn a cause before we quitted the room, viz. that this accomplished lady had just left a sick bed after a long illness, and that she was then suffering considerably. She ought not, perhaps, to have risked a first appearance under such circumstances; but, having done so, we heartily wish her a return of health, and success in a profession to which her talents well adapt her. We should remark, that the room was thronged with fashionable company, who seemed highly pleased with the evening's entertainment.

Bermondsey Amateur Concerts.—The East v. the West shews that the love of harmony is not limited to the fashionable end of the town, but cultivated and enjoyed among the mercantile and trading classes. At Hubbard's Hotel, in a part of Southwark, undergoing great improvements, the sixth of these concerts was given on Wednesday the 17th. Miss Birch sang delightfully, and with Ghibllei in the vocal department, Mr. Dando as leader, and the two Harpers, with a corps of amateur performers on various instruments, made out a concert of

a very agreeable kind. The room was filled with company.

THE DRAMA.

Her Majesty's Theatre.—On Saturday, Persiani appeared again in *Lucia di Lammermoor*. She has improved greatly since last season; or, feeling more certain of her power, she gives herself more entirely up to her part, and acts, as well as sings, in a style which entitles her to be considered at the head of her profession. In expressing extreme emotion, either in joy or sorrow, she is at present unequalled. The new ballet, *Une Nuit de Bal*, is short and showy, and the dancing therein certainly not of the first order. The quartet *cachucha* is very pretty.

Covent Garden.—On Saturday, after the *Tempest*, for the benefit of its charming *Ariel*, was produced a new piece, called *Agnes Bernauer*, which was capitally played, and went off successfully. It is from the pen of Mr. Searle.

Haymarket.—Whoever want to laugh till their sides ache, should see Power in his new portrait of the *Irish Lion*: it is irresistible, and a perfect piece of acting. Mr. Blake has appeared in the *Three Singles*, without talent enough for one.

The Queen's Theatre, Tottenham Street. is again announced to be opened, on Monday, under the management of Mr. George Wild; on which occasion, the *Evil Eye*, a new farce, a *burletta*, and a variety of other entertainments, are promised.

Diorama.—On Thursday we were favoured with a private view of the Dioramas now opened in the Regent's Park. Santa Croce, with its beautiful lights and shades, is yet worthy of its former admiration. The other is the Coronation of our Queen, at the moment the Archbishop of Canterbury is placing the crown on her head. The Abbey itself is finely painted, but the actors on this great scene are not so natural nor so like (in many instances) as could be wished. The *ensemble* is the chief merit of the picture; and those who did not see the ceremony may obtain a fair idea of it here.

VARIETIES.

The Camden Society.—We take this opportunity merely to mention the appearance of the fourth volume, within its first year, of this excellent Society; being the "Plumpton Correspondence," letters chiefly domestic of the times of Edward IV. Richard III. Henry VII. and Henry VIII. It is a quarto of three hundred and twelve pages. But our reason for directing especial attention to it at this moment is again to impress upon our readers the advice, for which we are sure they will greatly thank us, that they should get enrolled in the Camden Society, even before the general meeting on Thursday next, when the second year's subscription commences. The four volumes published are so far above the value of an annual, 11., that we are convinced it will be felt to be a literary loss and mortification not to possess them; and we would not have the opportunity for securing them lost. Instead of a thousand, there should be five thousand members of the Camden.

German Literature.—On Thursday, Mr. Hirsch began a course of lectures on German literature at Exeter Hall; and the first gives promise of much interest to the students of that language.

Natural History: Lunacy in Fleas.—A descendant and namesake of the great philosophical author of the inductive system, recently puzzled a modern man of science by asking him if he had read Dr. Von Shlenmycher's Treatise on the Cause of Lunacy in Fleas? "No," replied the hoaxee; but it is a very interesting subject, and it must be curious to trace the disease among the lower insect tribes. But (added he, after a solemn pause), how has it been ascertained that Fleas are liable to insanity?" "Oh, very easily," rejoined B—, "since so many of them die cracked!"

Box.—Among the curiosities of literature we may notice a course of lectures illustrative of the writings of this popular author, now delivering at a Literary Institution in the City, by Mr. B. Seare.

A Merman.—"Galligani's Messenger" states that a singular fish, resembling a male ape in the upper form, and a fish in its lower extremities, has been caught near Havre. It is described as quite sufficient to account for the mermaid fables of all ages.

Paul Periwinkle; or, the Press-gang, No. I. (O. Hodgson. Pp. 36), comes recommended by two clever illustrations by Phiz (Mr. Brown). The text involves us in a tale of murder; and paints characters in the broad, Smollett manner; of which, of course, as all is yet in the dark, we can say nothing, but that the distress on one hand, and the sea-caricatures on the other, form a prominent contrast.

No. I. of the Life and Adventures of Valentine Vox (Tyas) sets out with a merry account of the tricks and effects of ventriloquism. It seems laughable enough; and the illustrations by Onwhyn are broad and farcical.

Paganini.—Report says that Paganini is dying. The last notes of the swan vibrate on our ear.

Curiosities of Literature, No. III.—The following advertisement appeared in "the Times" of Wednesday:—"Curious and Valuable Relic. To be disposed of, a *Lock of the Poet Milton's Hair*. Satisfactory proof of its genuineness will be furnished to the purchaser, &c. No. IV. In "Boyle's Court Guide," the famed firm of Coutts, the bankers, is entered thus: "Coutts, and Co., Esqs., 59 Strand."

Earthquake in the Highlands.—On the 20th ult. the shock of an earthquake was pretty generally felt over the county of Inverness. Many families were greatly alarmed; but, fortunately, though it continued about a minute, no lives were lost or property injured.

The following clerical squib is handing about:—"Deanery of Exeter." Wanted a Canon, to superintend the above old-established concern. Some knowledge of Cathedral business is found to be indispensable to fill the situation. Salary good, and work easy. A premium will be expected. Inquire at the house over against the Establishment. N. B. No time to be lost.

LITERARY NOVELTIES.

The late Mrs. Hemans.—The collected works of this distinguished writer cannot fail to prove a most acceptable boon to the literary world, many of her earlier writings having been long entirely out of print, and others so little known, that they must come before the world in almost all their original freshness. Without disparagement to any of the bright female names which have adorned, or still continue to adorn, British literature, it may be affirmed that, in the walk of poetry, Felicia Hemans has hardly been excelled, and approached by only a very few. Nor is her reputation likely to suffer from the lapse of time; as her writings are founded on imagination, taste, and beauty, the great elements of poetic fame; and are indebted for their celebrity neither

to the buoyancy of current topics nor to exaggeration in the expression of the feelings. The edition recently announced in monthly volumes comes out under the superintendence of her family; and several compositions of length, which have, as yet, never seen the light, are promised. We shall be anxious, also, to see the memoir from the pen of her sister, with the correspondence attached to it, to throw additional light on the expansion of the author's mind, on the variety of her intellectual pursuits, and on her opinion of men and books.

In the Press.

A volume of Original Sermons, by Clergymen of the Church of England.—The Lord Bishop of Ripon, the Rev. Dr. Hook, &c., &c. The object of the volume is to raise a fund for the restoration of Christ's and St. George's Churches, Leeds, from the damage they sustained by the recent hurricane.

British History, chronologically arranged, from the invasion of the Romans to the accession of Queen Victoria, by the author of the "Cabinet Lawyer."

Gift of Fluency in French Conversation, and a set of Exercises for the Learner of the French Language, and the last step to French, by M. Lepage, author of "L'Echo de Paris."

LIST OF NEW BOOKS.

An enlarged Edition of Murray's abridged English Grammar, by the Rev. Dr. Giles, 18mo. 1s. 6d. bound.—The Cottager's Bee Book; containing Remarks on "The conservative Bee Keeper," by R. Smith, 12mo. 1s. 6d.—The Nautical Steam Engine Explained, by R. S. Robinson, R.N., post 8vo. 7s.—Dr. S. S. Allison's Inquiry into the Propagation of Contagious Poisons, post 8vo. 5s.—Raid's Elements of Chemistry, 3rd edition, 8vo. 18s.—Elements of Zoology, by W. Bland, fcap. 3s.—Influence of the Affections upon Character, by E. Chapman, 18mo. 1s.—Perils and Adventures on the Deep, fcap. 3s. 6d.—Rev. C. B. Pearson's Plain Sermons, 12mo. 5s.—Rural Sketches, by T. Miller, with 23 Illustrations, post 8vo. 12s.—Life and Times of Selina, Countess of Huntingdon, Vol. 1. 8vo. 10s. 6d.—Saltmarsh's Free Grace, new edit. 12mo. 3s.—Thirty Years in India, by Major H. Bevan, 2 vols. post 8vo. 21s.—Institutions Pies; Meditations and Devotions, edited by the Rev. W. H. Hale, 24mo. 7s.—The late Rev. J. Young's Sermons, 3d series, 8vo. 10s.—Historical Memorials relating to the Independents and Congregationalists, by B. Hanbury, Vol. I. 8vo. 14s.—The Gospel Preached to Babes, square, 1s. 6d.—Man in his Intellectual Faculties and Adaptations, by R. Mudie, fcap. 3s.—Hand-Book of the Toilette, 18mo. 2s.—Peele's Dramatic Works, Vol. III. edited by Dyce, post 8vo. 10s. 6d.—A Practical Treatise on Accounts, by J. P. Cory, 8vo. 7s. 6d.—Diary of the Rev. J. W. G. Aldrich, Vicar of Stamford-on-Avon, 1648 to 1679, by C. Severn, M.D., 8vo. 12s.—The Highland Inn, 2 vols. post 8vo. 2s.—The Husband Hunter, by D. J. Moriarty, 3 vols. post 8vo. 31s. 6d.

TO CORRESPONDENTS.

. Our report of the proceedings at the Archeological meeting on Monday, brings down the business to the reading, by Dr. Lepsius, of his paper 'On Mr. Bankes's Obelisk, and Translation of the Inscriptions upon it and the Pedestal.' We had rendered this from the French for insertion; but, in order to be more correct, have been obliged to leave it over for revision till next week, when we shall continue our notice of these very interesting transactions. We ought to mention that the meeting was adjourned to Tuesday next, at one o'clock, when the Chevalier Bunsen will go on with his papers 'On the Excavations and Discoveries in Rome during the last year,' and 'On the Principles of Niebuhr, as applied to his Historical Researches.' We would also direct the public regard to the liberality of the Institution at Rome towards artists of all countries; and state, what we are assured of by many of our countrymen who have been resident at Rome, that nothing can exceed the hospitality they received from Chevalier Bunsen, nor the attentions paid to them, and facilities offered for becoming acquainted with all that was worth notice by both these gentlemen, now welcome visitors to England. We are glad to find, among other compliments paid to them, that they are to dine at the Literary Fund Anniversary on the 8th.

The Duke of Wellington, if we may guess from the Numbers of works just sent to us, has about as many lives as a cat. We must take time to look to all these tales.

To Advertisers.—We have to request Advertisers will do us the favour to send as early in the week as they can. We are sorry to omit so many sent at too late an hour this week; but we have repeatedly stated that we could not go beyond Thursday evening; and when we endeavour to do so, it is at so much extra expense, and with so much trouble, as to be extremely inconvenient, and altogether unprofitable.

. We have forwarded the letters from our correspondents at Liverpool, Norwich, &c., to Mr. Hunt; and may observe that that gentleman's address has been given in his advertisements in our present and preceding Nos. We have much pleasure in adding that very recent cases, which may be referred to, have more than confirmed our opinion of the extraordinary efficacy of Mr. Hunt's remedy for stammering.

"C" is informed that we cannot make use of his proffered contributions, which are left under cover for him, at our Office.

Several articles are postponed to give room for our first paper.

ADVERTISEMENTS, Connected with Literature and the Arts.

BRITISH INSTITUTION, FALL MALL.

The Gallery, for the Exhibition and Sale of the Works of British Artists, is open daily, from Ten in the Morning until Five in the Evening.

Admission, 1s. Catalogue, 1s.
WILLIAM BARNARD, Keeper.

THE THIRTY-FIFTH ANNUAL EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER COLOURS, at their Gallery, Fall Mall East, will open on Monday next, 29th instant. Open each Day from Nine till Dark.

Admittance 1s.—Catalogue, 6d.
R. HILLS, Secretary.

SONS OF THE CLERGY.—The Rehearsal of the Music to be performed at this Festival will take place on Tuesday, the 30th of April, in St. Paul's Cathedral; and the Anniversary on Thursday, the 3d of May, when a Sermon will be preached before H. R. the Duke of Cambridge, the Archbishops of Canterbury and York, the Bishops, the Lord Mayor, Sheriff, Aldermen, Clergy, and others.

By the Rev. Lord JOHN THYNNE, D.D.,
Prebendary of Westminster.
Divine Service will commence at Two o'clock, and the Doors of
the Cathedral will be opened on each day at One o'clock.

Singers.

H. R. H. the Duke of Cambridge (seventh time).
The Duke of Wellington, K.G. Rev. Edward Hawkins, D.D.
(8d time) Rev. Thomas Heberden, B.D.
The Marquess Chomondley Rev. Benjamin Harrison, M.A.
The Earl Mann-Cornwallis Lesley Alexander, Esq.
The Earl of St. Germans Robert William Barnard, Esq.
The Lord Bishop of Chester Philip Hardwick, Esq. (3d time)
The Lord Bishop of Norwich John Austin, Esq.
The Lord Bishop of Hereford Mr. Ald. Copeland, M.P. (3d time)
The Lord Willoughby de Broke William Evans, Esq.
The Lord Sondes Philip Fidler, Esq. (3d time)
The R. H. the Lord Mayor (2d time) Henry Kemble, Esq. M.P.
The Hon. Mr. Baron Alderson John Labouchere, Esq.
(3d time) John Parry, Esq.
Sir Thomas Mayson Wilson, Samuel Poynder, Esq.
Baroness de Mervill, M.A. Frederick Robinson, Esq.
Rev. L. Vernon-Harcourt, M.A.

The Performance of Music will consist of
The Duetting to Deum Handel.
The Hallelujah Chorus Handel.
The Grand Coronation Anthem ("Zadok the Priest") Attwood.
Cantata Domino (Composed for this Charity) Attwood.
Anthem, "God is our hope and strength" Greens.
Conductor, Sir George Smart.
Organist, Mr. Jess.

Leader of the Band (which consists of the Members of the
Royal Society of Musicians), Mr. F. Cramer.
The Committee beg to state, that each person contributing
gold will be admitted either at the North or South Doors of the
Cathedral, to the Galleries and Closets; and for admission into
the Choir, at the North-west and South-west Doors, it is expected
that each person will contribute not less than Half-a-Crown.—
Carriages are to be set down at the South Door.

"The Collections at St. Paul's Cathedral and Merchant-Tailors'
Hall are appropriated by the Corporation of the Sons of the
Clergy in apprenticing the Children of Neoclassical Clergymen,
or otherwise placing them in situations of respectability.
After the conclusion of Divine Service on Thursday, the 3d of
May, the Annual Dinner will take place at Six o'clock precisely,
at Merchant-Tailors' Hall, Threadneedle Street, for which
Tickets may be had of the Treasurer; and of Messrs. Rivington,
St. Paul's Churchyard, and Waterloo Place; and at the London
Tavern, Bishopsgate Street.

Benevolence to this Charity will be thankfully received, and
any information communicated, by the Treasurer, Oliver Har-
greave, Esq., 3 Bloomsbury Place.

. Tickets are not required for admission into the Cathedral
on either of the days.

UNIVERSITY OF LONDON.

The Examinations for the Degree of Bachelor of Medi-
cine will commence on Monday, the 1st of July next, and the
Examination for the Degree of Doctor of Medicine on Monday,
the 5th of August.

The Senate is prepared to receive applications from such Me-
dical Institutions and Schools as are desirous of being authorised
to grant Certificates to Students who wish to Graduate in the
University.

The Regulations of the Senate relating to the Examinations
for Degrees in Medicine may be procured from Messrs. Taylor,
Printers and Publishers to the University, Red Lion Court, Fleet
Street. Further information may be obtained by application to
the Registrar, at the Apartments of the University.

By order of the Senate,
R. W. ROTHMAN, Registrar.
Somerset House, 18th April, 1832.

ROYAL INSTITUTE OF BRITISH ARCHITECTS. Incorporated 7 William IV. Patron- ess, the Queen. 16 Grosvenor Street, London.

The Medal of the Institute will be awarded, next year, to the
Author of the best Essay on the subject of the

1. On the different principles of Design which distinguish
the Architecture of Athens, Asia Minor, and Magna Græcia,
previously to the dominion of the Romans.

2. On the principle of Framing, which directed the Gothic
Architects in the construction of the Roofs of great span, to
cover large Halls, such as Westminster, Croydon, Eatham,
Hampton Court, and those of the Colleges of Oxford and Cam-
bridge, accompanied by Diagrams.

3. The Soane Medalion will be awarded for the best Restora-
tion of a Master House, prior to the sixteenth century, and not
hitherto published,—with the Courts, Stables, Offices,
Stabling, Gardens, and other dependencies: to be drawn from
actual measurement.

The Competition is not confined to Members of the Institute.
The Essays and Drawings are to be delivered at the Rooms of the
Institute, on or before the 31st of December, 1832, by 12 o'clock
at noon.

Further particulars may be had on application to the
Secretaries, by letter, post paid.

STAMMERING, whether Natural or Acquired, Effectually and Permanently Removed.

By Mr. HUNT,
151 Regent Street, London; and late of Trinity College,
Cambridge.

(Country Address, Swanage, Dorset.)
See Literary Gazette of 3d June, 1832, and 30th of March 1830,
for opinions on this subject. Prospectuses containing testimonials
of cures, during ten years, may be procured gratuitously at the
above address.

MR. CARLYLE'S LECTURES on the REVOLUTIONS OF MODERN EUROPE.—Two lectures on the Reformation, two on the English Revolution, two on the French Revolution, will commence on Wednesday, the 1st of May, at Three o'clock precisely, at the Lecture Room, 17 Edward Street, Portman Square, and be continued on the successing Saturdays and Wednesdays.

Subscriptions to the Course, One Guinea.
Tickets and Syllabuses at Messrs. Saunders and Oley's, Conduit
Street; and at the Lecture Room.

ENVELOPES, best Quality, various Sizes.

One Hundred... Two Shillings.
Five Hundred... Nine Shillings and Sixpence.
One Thousand... Eighteen Shillings and Sixpence.
Manufactured and sold by J. H. Hoppe, Stationer, Account-
Book Manufacturer, &c. 79 Strand (Two Doors East of Salisbury
Street), London.

MUSIC.

MORI'S GRAND CONCERT on the STAGE OF THE OPERA HOUSE, on Friday Evening, May 10, at Eight o'clock.—Meadores G. Gris, Ferriani, and Albertazzi (Madlle. No. 1. of the

FOREIGN MONTHLY REVIEW,
and Continental Literary Journal.

The aim of the projectors of this work is to supply Reviews of
the most important productions of foreign literature; intel-
ligence on all subjects connected with it; notices of books in pre-
paration; lists of new publications, &c. at much shorter intervals
than they have hitherto been furnished by any English Journal;
in short, to present a work of indispensable utility to all who,
whether from curiosity, or for the purpose of information, or profit,
seek to make themselves acquainted with the literary enterprises
of the nations of the Continent.

London: D. Nutt, 165 Fleet Street; Dulau and Co. 37 Soho
Square; and, by order, of every respectable Bookseller throughout the
Kingdom.

Henry Colburn, Publisher, 15 Great Marlborough Street.

A PROSPECTUS OF A SERIES OF

ENCYCLOPÆDIAS, each complete in 1 vol. is just
published by Messrs. Longman and Co. and may be had, gratis,
at all Booksellers in Town and Country.

A series wherein a great quantity of information is to be con-
densed into a small compass, and arranged in a form the most
convenient for frequent reference. Such a series will, when
completed, form a valuable library of practical knowledge. The
specimens we have already seen are such as do great credit to the
publishers who formed the design, and to the authors who have
executed the respective divisions. —Advertisement.
29 Paternoster Row, April 24, 1839.

BOOKS PUBLISHED THIS DAY.

Price 9d.
CODE of ENGLISH LAW—CODEX LEGUM ANGLICANARUM, or, a Digest of Principles of English Law, arranged in the order of the Code Napoleon, with an Historical Introduction.

By G. BLACKLAND.
"Mr. Blackland's learned and ingenious digest of the English law."—*The Legal Observer*.

"Mr. Blackland has very ably methodized the principles of the English law, referring, by numerals, to each corresponding enactment of the French code, which is placed in an appendix at the end of the work. The curious reader has thus at hand, without labour, the means of comparing one with the other, and of weighing their respective merits. The utility of such a publication is too obvious to insist upon. This part of the work evinces very extensive research among and acquaintance with the most eminent legal writers, no assertion appearing to be ventured upon, or any principle advanced, without a citation from the authority upon which it is founded."—*The Justice of the Peace*.

"Nearly one-third of the volume is taken up with a historical introduction, by far the most able and interesting portion of the work; evincing a very considerable acquaintance with the opinions and writings of foreign jurists."—*The Jurist*.
Published by H. Butterworth, Law Bookseller and Publisher, 7 Fleet Street.

In 5 vols. 8vo. with a Portrait and Maps, price 2l. in boards,

Printed by JAMES MOYES, of Brook Green, Hammermith, in the County of Middlesex, Printer, at his Printing Office, Number 28 Cavendish Street, Leicester Square, in the said County; and published by WILLIAM ARMOUR SCRIPTS, of Number 13 South Molton Street, in the Parish of St. George, Hanover Square, in the County aforesaid, at the LITERARY GAZETTE OFFICE, Number 7 Wellington Street, Waterloo Bridge, Strand, in the said County, on Saturday, April 27th, 1836.

REVIEW OF NEW BOOKS.

Illustrations of Science by Professors of King's College, London: Mechanics. By the Rev. Moseley, M.A. F.R.S. &c. &c. 18mo. 436. London, 1839. Longman and Co. This work is the first of a series, entitled *Illustrations of Science*, by Professors of King's College, London, to be published at intervals of months, and continued until the circle of physical sciences and the sciences of observation is embraced in it. The author has based to himself the development of that class of experimental facts and theoretical principles on which the whole superstructure of mechanical art may be considered to rest, as an introduction, under an available form, to the great business of practical education. To effect this object, and to reconcile, as far as may be possible, the strictly scientific with the popular and elementary character of the undertaking, a new method has been sought, the nature of which is sufficiently indicated by the title—'Illustrations of Mechanics.' The work consists, in fact, of a series of illustrations of the science of mechanics, arranged in order in which the parts of that science are connected with each other, and connected by such explanations only, as may serve to carry the mind from one principle to another, and enable it to embrace and combine the whole—a plan which leaves to the author the selection of such parts only of his science as are capable of illustration, and as come within the scope of practical instruction; and which enable him to exclude from his work all abstract reasoning and mathematical deduction." This is Professor Moseley's succinct description of the plan to which this volume is the first, and of the volume itself, in which he has so satisfactorily heralded the undertaking. Giving as much as possible of the sciences reduced to the level of the capacity of schools is the object; and, consequently, not to omit all the exactness of the analytical reasoning on which many of their deductions are thereby repelling fifty for every one who could be attracted by such a course of elementary education. Discarding the pretensions to a complete treatment of the various subjects in hand, abstract demonstration and mathematical deduction, there is yet enough to impart a knowledge of God's works about us, and usefully and practically mix with the business of life, whatever it may be. For the title of "Illustrations" is well chosen, and properly designates the character of the work; which, in our opinion, is admirably adapted to the general capacity of youth, and foretells precisely what such a production is to be. We cannot do better than append some examples of this, from which the nature of the whole may be appreciated:—*Art and Nature.*—"The illustrations of the mechanical properties of matter and the laws of force are drawn promiscuously, and almost indistinguishably, from art and nature. It is not by detached examples taken from these distinct sources thus intermingling, but simply because they suggest themselves as readily from the one source as the other—from nature as abundantly as from art. An important truth is

shadowed forth in this fact. There is a relation between art and nature—a relation amounting to more than a resemblance; a relation by which the eye of the practical man may be guided to that God who works with him in every operation of his skill, and mechanical art elevated from a position which is sometimes unjustly assigned to it among the elements of knowledge. It cannot be misplaced in this commencement of a work, which has for its object to develop the great principles of natural science, and which bears upon its title the arms and the motto of an institution formed to unite instruction in the precepts of religious knowledge with the elements of human learning, to point out this relation. The following illustration will serve the purpose, and will assimilate with the general method of the work:—"I take up a work of art, I examine it, I see on it stamped the evidence of the power and skill, the judgment and knowledge, of the maker: there is the evidence of design in it, there is proof of the economy of labour—its material is suited for its use, and as little of it as possible is used, and its form is controlled by a perception, however imperfect, of the beauty and regularity of form. These are things, the evidence of which I perceive in the thing itself. It matters not that I saw it not made,—that I know not the maker,—that he has never instructed me in the secret of his art: for centuries he may have been dead, and may have left no record of the manner of his working. This matters not, I see plainly the design with which he wrought. The thoughts of his mind rise up before mine as though I were present to them—stamped upon it are the traces of intelligence, power, and skill, which have operated in its formation—invisible things—no hand any longer works in it—no skill has any longer its visible exercise in it—no name is inscribed upon it—no legend records for me the fact that there wisdom, knowledge, and power were exercised—yet is the existence of these things, and their exercise in that work of art, among the most certain elements of my knowledge: my reason claims for me the admission of these among the most certain of the things that I may know, deduced by no new or unaccustomed operation of my mind, but by processes of thought which I am daily in the habit of verifying. Now let me take up a work of nature, and place it beside that thing of art. Evidence such as that which I have found in the artificial thing is to be sought only in the thing itself, and essentially belongs to it. I may seek it then in this work of nature, as in that of art, and it may, or it may not, be found here, as it was found there. By every mark and sign that I judged of that work of art I judge of this of nature—every rule which I applied to the one I apply to the other; and the conclusion which I draw from the one, with a certainty that never, as I know by experience, fails me, I draw with equal certainty from the other. Is there in the work of art the evidence of means to an end? I behold the very same evidence in the work of nature. Is there an adaptation of the material in the one case?—there is the like in the other. Is the artificial thing collected and arranged as

to all its elements for a specific object, to which each element is made subordinate?—so is the natural thing. Is the contrivance of the one complicated, involving many subsidiary contrivances, all having their direction towards an ultimate result?—so is that of the other. Does the work of art manifest an economy of material and of labour in its construction?—there is the like economy apparent in the work of nature. Subject to the adaptation of the form of the artificial thing to its use, and to the economy of its material, and the labour bestowed upon it, is the disposition of its parts governed by a certain perception of beauty and of grace—who shall describe the beauty of nature? The only difference is, indeed, this, that in the work of nature all these qualities exist in their infinite perfection—in the work of art, in their infinite imperfection. The evidence is perfectly alike in kind, although it is the evidence of things infinitely remote in degree. With whatever certainty, then, I reason of the finite wisdom and power of the artificer from that work of his art, with the same certainty do I reason of the infinite wisdom and power of the eternal God from the works of his hand; and on this evidence I declare with St. Paul, that 'the invisible things of him from the beginning of the world are manifest, being plainly seen by the things which are made, even his eternal power and Godhead.' (Rom. i. 20.) Every work of human art or skill is a thing done by a creature of God; a creature made in his own image, and operating upon matter governed by the same laws, which He, in the beginning, infixed in it, and to which he subjected the first operations of his own hands—a creature in whom is implanted reason, of a like nature with that excellent wisdom by which the heavens were stretched forth—living power as that of a worm, and as a vapour that passeth away, but an emanation of Omnipotence—a perception of beauty and adaptation akin to that whence flowed the magnificence of the universe—and to control these, a volition, whose freedom has its remote analogy and its source in that of the first self-existent and independent cause. It is from this relation between the Author of nature and the being in whom the works of art have their origin that arise those relations, infinitely remote, but distinct, between the things themselves, of which the evidence is every where around us."

"A Column of Cast-iron, whose Extremities are rounded, will support but One-third the Weight of a similar Column whose Extremities are flat.—This remarkable fact is one among a great number which have been developed by the recent experiments of Mr. Hodgkinson of Manchester. Having caused a series of cylindrical columns of cast-iron, of different diameters, to be accurately turned, with their extremities rounded, so as to support an insistent weight by the apex of the rounded end,—that is, by a single point in the extremity of the axis; and having caused another series of columns to be turned, exactly similar and equal to the last, but cut off flat at their extremities, he broke the two series of cylinders by the compression of a powerful lever, made to act vertically in the direction of their length, by

the intervention of a cylindrical hardened steel bar, acting like a solid piston through a hollow cylinder, which served it as a guide. In all these experiments he found the cylinders with the rounded ends to break with a pressure which was scarcely one-third that of the cylinders with the flat ends. When one end of the cylinder was rounded, and the other flat, the breaking pressure was about two-thirds that which broke the cylinder when both ends were flat; so that, in the three cases, the strengths of columns, equal in every other respect, were as the numbers 1, 2, 3."

"*The Strongest Form of a Cast-iron Column.*—In all Mr. Hodgkinson's experiments, before described, the cylinder was observed to break in its middle point, indicating that to be the weakest. He commenced, therefore, a series of experiments on columns in which the middle section was increased at the expense of the extreme sections, with a view to ascertain that form of the column in which, when breaking in the middle, it should be about to break at every other point; this being manifestly the strongest form. From these it resulted, that the strength of a column of cast-iron, containing a given weight of metal, whether it be solid or hollow, is much greater when it is cast in the form of a double cone; that is, with its greatest thickness in the middle of its height, and tapering to its extremities, than when cast in any other form. The precise results of these valuable experiments have not been published: we hope, however, to be able to publish them in the Appendix."

"*The Qualities of Wood as a Material of Construction.*—Such is the form which, guided by experiment and such other resources of science as we possess, we find ourselves led to give to the substance, iron, which, forming part of the solid materials of the earth, and ministering there to some wholly different use, we dig up and apply to our purposes of construction. Now let us turn to the architecture of trees, and examine Nature's material, and let us consider whether, guided by the light which our efforts to economise this artificial material of construction may have given us, we may not discover, in the material which has been elaborated wherewith to build up those stately structures, some feeble traces of that mighty and all-perfect wisdom of which ours, feeble as it is, is yet an emanation. And let the principle first of all be stated, as one observable throughout all nature, that creative power, infinite in its development, is infinitely economised in its operation. Were wood but as durable as iron and stone, it would supersede their use as a material of construction. If other evidence were wanting, the unparalleled boldness of the structures erected with wood would, for itself, speak to the fact. What have we to compare with the structures erected in wood? There is no arch of iron or stone, for example, that approaches to the span of the wooden arches which have been erected by Weibeking in Germany, or to that arch at Philadelphia, which, with one vast span of 350 feet, crosses the Schuylkill. The superiority of wood to iron or stone, as a material of construction, results from the extraordinary lightness which it unites with its strength. Thus deal has only one-fifteenth the weight of cast-iron, although it has considerably more than one-half the tenacity, and sixteen bars of it would weigh only the same as one bar of the same dimensions of wrought-iron, although they would have together more than the strength of three. Now it is evident that a building erected with a material, however

strong, which was in the same proportion heavy, might, and probably would, be a weak building. Such a structure, notwithstanding the great strength of its material, might load itself with its own mass to the utmost that it would bear, so that the slightest additional pressure would cause it to yield, as it is the last ounce which breaks the camel's back. Many, and memorable, are the instances of this weakness in artificial structures. The case of the Brunswick theatre, whose iron roof fell in by the pressure of its own weight, and that of Mr. Maude's factory in London, and of the Conservatory at Brighton, are in every body's recollection. Bat wood falls short of other materials in durability. The food of living vegetation is extracted from decayed vegetation; decay was thus, for the great purposes of nature, made its inseparable concomitant. This decay—which was a necessary property then of timber, as a material of nature's architecture—unfitted it for that of man; who, reserved for immortality, and struggling, even here, in an unceasing combat with the fleeting and transitory character of all that surrounds him, would construct for himself an abode whose durability may laugh to scorn the shortness of his tenure, and dig its material from among those mineral substances out of which the mass of the earth itself is builded up, and whose duration is coeval with it."

[To be continued.]

The Highland Inn. 2 vols. 12mo. London, 1839. Colburn.

THE *Highland Inn* is the centre of a series of tales, which, like some geometrical figures, radiate from and combine with that centre in a certain degree of natural and romantic harmony, till the author has wrought his problem to the desired conclusion, and Q. E. D. The tales possess great probability and verisimilitude—look as they might have happened to persons we know, and in everyday life, yet are dashed with tinges of an extraordinary nature sufficient to recommend them to the lovers of fiction, and often present original turns alike agreeable to artificial contrivance, or actual circumstances. This is a good feature, for in some writers contrivance is so transparent, that we can see from the beginning how they are to end; and in others so little of consequence, that we are sure to be disappointed by a result irreconcilable with the causes and course of events.

Incidental to the tales are sundry discussions on topics of interest, full of sound sense and rationality; and not too long to annoy the novel reader. Some of the characters are readily to be recognised; and particularly in *Oatlands*, a distinguished ornament of the legal profession in Scotland. It is not our business, however, to lift the veil, and we shall content ourselves with a few short extracts to exemplify the quiet humour and entertaining qualities of the whole. The editor's (problematical) history of his design contains the following quaint remarks:—

"In executing the task devolved upon him by the will of the deceased, the editor has felt, in its full force, the truth of the adage, 'that no duty is more irksome than arranging the papers of a deceased friend.' They consisted of a voluminous manuscript on medicine, which was at once deposited in the hands of Messrs. Longman and Co., and which has since met the public eye in the shape of two goodly octavos;—an endless collection of letters, that would have made three handsome quartos, in accordance with the custom of the

present day, which leads editors of posthumous works to sacrifice the reputation of their deceased friends to the debased appetite of the public for private gossip and scandal;—a few unfinished fragments of poetry, that will rest quietly in the vault of the Capulets;—the sketch of a rejected tragedy, which the author believed to be too classical to please the sophisticated taste of a modern audience;—a plan for a history of medicine, which the editor laments his friend did not live to execute;—and the diary, of which this volume is a fragment."

The description of the dressing apparatus of an antiquated beau is a fair sample of the amusing:—

"The table at which the old beau was seated was of rosewood, inlaid with lacquered brass-work in the most classical taste. The looking-glass, which stood upon it, was in a massive, antiquated, carved frame, partly silvered, partly gilt, and apparently an old family relic, as the glass was panelled Dutch-plate: on each side of it lay a small oval, handled glass, intended to aid the examination of every part of the head; and, before it, a handsome crimson velvet pincushion, in which were two brilliant pins, attached by a small gold chain, four rings, and a splendid topaz brooch, which the baronet had worn that evening at Lady Fancourt's. The dressing-box, of chased silver, was open, and displayed the soap-glass and other appendages, with gilt, chased covers, embedded in the richest purple velvet. The table was, besides, spread with a profusion of scent-bottles, tooth-brushes, pots of cosmetics, bottles of washes, and pill-boxes. Behind the glass, raised upon stands, were two handsome wigs, of deep auburn, of Robinson's most natural make; one of which had, only a few minutes before, left the cranium of its possessor, and yielded place to a deep-green velvet cap, trimmed with gold lace. The washing-stand was a pure white marble slab, supported upon a richly carved frame of the same wood as the dressing-table; whilst the basins, soap-boxes, and covered jars of various kinds, were of the most valuable china; and the water-bottles and tumblers of the richest cut-glass. On the opposite side of the room stood a large swing looking-glass, adapted to exhibit the entire person; and, close to it, a boot and shoe stand, on which hung as many of these articles as might have sufficed for setting up a ready-made shoe shop. The slippers that now incased the feet of the baronet were dark-red satin, embroidered, and trimmed with fur, to correspond with the dressing-gown, which was of Indian shawl, lined with white satin, and furnished with a deep fur collar. The old beau, as I said, had just laid his glass-eye into clean water; and was in the act of examining, in the looking-glass, a new set of French teeth, which he had that evening worn for the first time; whilst Louie, his valet,—I believe, doctor, I should call him gentleman, should I not?—In my time, by Gad! the term valet was thought good enough for these fellows: but times are altered, and they are now called gentlemen. Well; Mr. Louis, who was the faithful chronicler of all the scandal of the neighbourhood, whilst folding up his master's clothes, was also busy in amusing him with some scandalous gossip. On opening the door to the tap of the groom, Louis received the epistle of Lady Fancourt, which he handed to his master. The poor old beau thought it unfortunate—most unfortunate, indeed,—that the note had not arrived sooner, as he might have been spared the trouble of being again made up: but he

consolated himself with the idea of his own importance, and the conviction that it arose from his having the reputation of sound judgment. A note was, therefore, quickly despatched, in reply to Lady Fancourt's; and, with the aid of Louis, the eye being replaced, and every thing made right to the satisfaction of the baronet on viewing himself in the swing-glass; and his shoulders being covered with a Spanish cloak, he was assisted by Louis into a hackney-coach; and, in a few minutes afterwards, was safely landed in Portland Place.

"He (the old beau) was left to brood over his disappointment, and to tranquillise himself, as he had done on a score of similar occasions, by letting loose his imagination, and drawing his consolation from the ideal future; the contemplation of which had ever been the counterpoise to all his actual griefs. 'By Gad! Doctor,' continued the veteran, 'the old beau was right; to do him justice, he was a philosopher; for what else can we term him who sinks the practical part of life in the visionary—who finds, that if the world has many evils, it contains also many comforts; and that, if joy be fleeting, misery is not immovable?'"

No bad specimen of the philosophical reflections with which the author seasons his work. His observations in a brief colloquy on phenology display equal acuteness; and, indeed, on many points connected with science, and particularly medical science, there is much intelligence and instruction evolved within very small compass.

The story of Minstrel Willy and his idiot follower, Tam, is one of fine natural pathos; but we find it impossible to make any extract which can illustrate either the affecting or the imaginative portions of these narratives; so we will conclude with bits of a rencontre with a Cockney citizen's family-party in the Highlands, and a single anecdote:—

"The other division of the party, which we had time to reconnoitre, consisted of a squat, or rather dumpy, round-faced, consequential little man, dressed in a green frock-coat, white trousers, and a hat with an unusual breadth of brim; a lady of a similar calibre, richly attired, but without the smallest attempt at elegance, who screened a broad, red, shrewish face from the sun with a white silk parasol; and a tall, slender, sharp-faced, sarcastic-looking female, evidently, from the plainness of her dress, some dependant or humble friend: a footman, in a handsome livery, with a gold-headed cane, which would have been in place in Grosvenor Square, followed at a respectful distance. As we approached the last group, my astonishment was excited in recognising, in this trio, the father and mother of my brother officer and worthy friend Wetherell, and his maiden aunt, Miss Mary Stapleton, his mother's sister. Miss Standard was remarking, in a whisper, on the stately strut of the little man and his companion, when he suddenly stopped, shook off his womenkind, and, advancing towards me, put out his hand, and exclaimed, 'Dr. Mc Alpin, or I am much mistaken?' and, without waiting for a reply, continued, 'how happy I am to see you; who would have thought of meeting you in this wild place?' 'I was about to make the same remark, Mr. Wetherell,' said I, shaking the little man by the hand, and bowing to the ladies, who now came up; 'I did not expect to meet you so far from the Exchange.' 'True, Doctor! true—a fool's errand—dragged here by my daughters to see an island and a cave—could have gone to the Isle of Wight for half the money—know nothing about the cave—I dare

say the Thames Tunnel is a better thing—but women will have their way. Did you not speak to the girls? Hoa! hoa! Kitty.' Kitty was beyond hearing; and Mrs. Wetherell pronounced nothing to be so vulgar as bawling after people. 'Well, well, my dear! suppose it will soon be vulgar to eat or sleep. Snubbed more than ever, Doctor! since we got to Russell Square.' Mrs. Wetherell tossed up her head; 'Dr. Mc Alpin,' said she, in the most pompous and measured strain, 'you must excuse Mr. Wetherell; nothing will ever alter his manners.' I assured her I saw nothing to excuse. 'That's right, Doctor! that's right!' replied the little man, 'manners! eh—humbug!'

"I attempted to change the conversation, and asked whether he had brought any news from the metropolis. 'Metropolis! why it is a month since we left town—foolish thing to travel with one's own horses—much better to come in the mail—but women will have their way. I haven't seen a paper since I left town—stay! there I am bouncing—I saw the paper in the Tontine at Glasgow—nice room that there news-room. I told my clerk to send me the price current there; and so I saw the room and read the papers.' 'And what do you think of the Highlands, madam?' said I, addressing Mrs. Wetherell. 'Think, Doctor! how can you ask such a question?' replied the little man before his wife could open her mouth; 'women never think at all—if they did, they would not spend so much money on dress and nonsense—beg pardon, ma'am!' addressing himself to Miss Standard, who continued hanging on the arm of her father during this dialogue. Mrs. Wetherell, however, was not to be put down. 'I beg,' said she, 'Mr. Wetherell, that you will speak on your own account. The Highlands!—why, sir, I think the inns very inconvenient—that there one at Callander is the dirtiest I ever was in—no service at all. My two daughters aver that, if they hadn't brought their own maids, they couldn't 'ave survived—and I can't tell what we should 'ave done without John.' 'And the charges are most tremendous,' said Miss Stapleton, curling up her sarcastic lip. 'Hold your tongue, Mary Stapleton,' said her sister: 'you are not to pay for the journey. Mr. Wetherell can very well afford the money; and the girls ought to see the world.' Miss Stapleton was mute. 'You ask us about the Highlands, Doctor!' again chimed in Mr. Wetherell; 'why, d'ye see, they are more than a hundred years behind us in improvements—great capabilities, but nobody to suggest. I would have had a papermill in this here valley: water the clearest I ever saw: casting his eye upon one of the limpid, little runnels, which crossed the road; 'plenty of it for either undershot or overshot wheels: eh! Doctor? eh?'"

And now for our anecdote—it is of the poor idiot Tam, who in 'reply to the schoolmaster, who foolishly enough asked him, one day, how long a man could live without brains, Tam, laying hold of the dominie's button, and gazing for a few moments in his face, replied, 'How long has ye lived, dominie?'"

P. F. Tytler's England, &c.

[Continued.]

We stated in our last, that some of the principal historical events illustrated in these volumes were connected with the fall of Seymour, which paved the way to the destruction of his haughty brother; and we proceed to offer a few extracts on the subject:—

"The examinations of the principal witnesses against the admiral are preserved at Hatfield, in the noble collection of manuscripts belonging to the Marquess of Salisbury. Many of these have been printed by Haynes; but others, perhaps still more curious, exist in the State Paper Office. They leave no doubt upon the mind, that he was engaged in a plot to gain possession of the king's person, supplant Somerset, and install himself in his place; and, as they throw new light on an obscure portion of our history, the reader may be pleased with some extracts."

These are indeed curious, as for instance:—

"The next paper, which contains a conversation between Russell, the lord privy seal, and the admiral, as they were riding to the parliament, is not only important in the light it reflects upon the plots of the admiral, but interesting from the dramatic form into which it is thrown. It is difficult for those who have seen the beautiful apostolic-looking head of Lord Russell, by Holbein, its mild eye and venerable expression, to believe it should belong to the swearing old lord, who, under the name of 'Father Russell,' figures in the following dialogue. It is entitled

"*Certain Communications between the Lord Privy Seal and the Lord Admiral.*

"Orig. St. P. Off. Domestic. 1548.

"'Riding one day together with my lord admiral, as we followed my lord protector towards the Parliament House, I said unto him, 'My lord admiral, there are certain rumours bruited of you which I am very sorry to hear.' My lord admiral demanded what the same should be. I shewed him I was informed he made means to marry either with my Lady Mary or else with my Lady Elizabeth. And touching that I said, 'My lord, if ye go about any such thing, ye seek the means to undo yourself and all those that shall come of you.' He asked me who informed me thereof, desiring earnestly to know the authors of that tale to me. I shewed him I heard it of divers of your near friends, and such as bear you as much good-will, and wish you as well to do, as I do myself. At that time he seemed to deny that there was any such thing attempted of his part, and that he never thought to make any enterprise therein. I answered, 'My lord, I am glad to hear you say so;' and, giving him exhortation not to attempt the matter, we finished our communication in that behalf for that present."

"*Certain Communications betwixt us at another time.*

"Orig. St. P. Off. Domestic. 1548.

"'Riding in like sort together, within two or three days following, from my lord protector's house unto the Parliament House, my lord admiral said unto me, 'Father Russell, you are very suspicious of me; I pray you tell me, who shewed you of the marriage that I should attempt, whereof ye brake with me this other day?' I answered, he should not know the authors of the tale, but that I understood it by such as bare him right good-will; and said, 'therewithall, my lord, I shall earnestly advise you to make no suit for marriage that way.' He replied, saying, 'It is convenient for them to marry, and better it were that they were married within the realm than in any foreign place and without the realm. And why might not I, or another, made by the king their father, marry one of them?' I answered, 'My lord, if either you, or any other within this realm, shall match himself in marriage either with my Lady Mary or with my Lady Elizabeth, undoubtedly, whatsoever he be, shall

procure unto himself the occasion of his utter undoing; and you especially, above all others, being of so near alliance to the king's majesty.' And he being desirous to know the cause, I alleged this reason:—'You know, my lord, that although the king's majesty's father was a prince of much wisdom and knowledge, yet was he very suspicious and much given to suspect. His grandfather also, King Henry the Seventh, was a very noble and a wise prince, yet was he also very suspicious. Wherefore it may be possible, yea, and it is not unlikely but that the king's majesty, following therein the nature of his father and grandfather, may be also suspicious. Which, if it shall so prove, this may follow, that in case you, being of alliance to his highness, shall also marry with one of the heirs of the crown by succession, his highness may, perhaps, take occasion thereof to have you hereafter in great suspect, and, as often as he shall see you, to think that you gape and wish for his death; which thought, if it be once rooted in his head, much displeasure may ensue unto you thereupon.' I added also, 'And I pray you, my lord, what shall you have with any of them?' He answered, 'that who married one of them should have three thousand a-year.' I answered, 'My lord, it is not so; for ye may be well assured that he shall have no more than only ten thousand pounds in money, plate, and goods, and no land. And therewithal,' I asked him, 'what that should be to maintain his charges and estate, matching himself there?' He answered, 'They must have the three thousand pounds a-year also.' I answered, 'By God! but they may not.' He answered, 'By God! none of you all dare say nay to it.' I answered, 'By God! for my part, I will say nay to it; for it is clean against the king's will.' * * * Riding together another time, in like sort together, toward the Parliament House, my lord admiral said unto me, 'What will you say, my lord privy seal, if I go above you shortly?' I answered, 'I would be very glad of his preferment; and, concerning going above me, I did not care, so that he took nothing from me.' Which my lord admiral's saying, and my answer, I declared to my lord chancellor immediately the same morning.

'J. RUSSELL.'"
The following needs no remark beyond Mr. Tytler's:—

"Its domestic tone, and the light it throws on the mode of *posting* in England in 1548, render the following letter interesting. Of the facetious writer himself, or the errand upon which he was sent by Cecil, I can discover no traces; still less of his old friend, Mr. Trigg.

"Thomas Fisher to Cecil.

"Orig. St. P. Off. Domestic. 27th July, 1548. Stamford.

"Sir,—After all hearty commendations; albeit I have been but ill-favouredly handled hitherto of post-horses, and specially on the post at Royston, who played a very lubberly part with me (tho' too long to write, but understand it, I prithee, to be very lewd), I therefore promised him, and that not without some melancholy terms, that I would signify part of his forwardness, and trusted, as I said to him, that he should hear somewhat thereof from the Master of the Posts; wherefore I beseech you require Mr. Mason that in some [of] his next despatches it will please him to take occasion of a quarrel of this said post on my behalf. And unless that he, and such others as he is, he sometimes remembered by the master, in faith, neither I, nor any other that shall pass in post, can be able to make such speed as might be required of them in

cases. Well, sir, I am at the last here arrived, about two of the clock this afternoon, with much ado, I assure you, because of store of rain fallen this last night in these parts (as the devil would), which hath so [endangered] the way—I mean, made it so slippery—that a better gelding than any of these post-horses might scant be able to hold his feet. Well, I swat for fear; and, as we rode by the way, both my back and sides, with also my man and the guide, did full well mark the chafes, and now and then with head and shoulders. And at our being within four miles of this town, we were so intrapt with a short shower of rain and great hail, of no less than three hours' length, that my lord privy seal's hedge at Thornhaws, not able to hold out, we made a hole to [squeeze our way thro'] from thence hither, as our garments and skins can witness; for here I am enforced to shift me, and my servant likewise, who is so pitifully arrayed with rain and plain dirt (saving your reverence), that, as I [hope] to be saved, I fear I shall leave him behind me, either here or at Grangemouth. As for thunder, hail, rain, and lightning, your country lacketh none; I pray God continue it, so as I were rid out of it, as presently I am ready to my saddle with a lame jade. And so assuring you that your father and mother, with your son, are merry and in good health, as my old friend Mr. Trigg telleth me, God keep you. At Stamford, this Friday, at four in the afternoon, 1548, 27th July. I remembered an old housewife's proverb, that of an hard beginning cometh, I trust, a good and merry ending.—Yours, assured to command,

"THO. FISHER.

"I pray you let this make my hearty commendations to your bedfellow, and also Mr. Steward Jenkin; and, amongst the rest, at your leisure, I pray you to my old wedlock Wenefield.

"To the Right Worshipful Mr. William Cecil, Esquier, Master of the Requests, attendant upon my Lord Protector's Grace."

The fall of the protector is accompanied by some singular matters. For example:

"The next paper in illustration of this conspiracy is not a little curious. It is a proclamation, or hand-bill, written by a friend of the protector, dropped in the streets of London, and having this inscription on the back: 'Read it, and give it furth!' Its account of the causes and object of the plot will, of course, be read with caution, as proceeding from a quarter where we cannot look for impartiality. Its indignation against the new nobility,—'men,' as it terms them, 'come but of late from the dunghill, more meet to keep swine' than to sit as councillors,—and its concluding allusion to Merlin's prophecy, mark strikingly the feelings and superstitions of the time.

"Orig. St. P. Off. Domestic.

"Most loving and true Englishmen, which love God and your king, unto such do I write. Remember with yourselves your loyal obedience, and be not carried away with the painted eloquence of a sort of crafty traitors, which draw at one mark and shoot at another. Weigh their devilish policy. First: whereas they have, like bribers, undone and murdered the king's true subjects; and now fearing that the lord protector, according to his promise, would have redressed things in the Court of Parliament, which he shortly intended to have set, to the intent that the poor commons might be godly eased, and things well redressed; to defeat him of the said good purpose, they now, of mere malice, have conspired his death; which done, they will find the means, shortly after, to dispatch your most noble liege lord; partly for

their insatiate covetise and ambition, and partly to plant again the doctrine of the devil and anti-Christ of Rome. Wherefore, let not their persuasions, nor their proud proclamations, move your hearts any thing at all; but think and know this for a surety, that in case the lord protector hath done any thing contrary to truth and justice, without all doubt they were partakers and of counsel in the same, altho' now they would pluck their heads out of the collars, and put him headlong into the briers. But if ye will diligently ponder and weigh what they be, and what their accustomed conditions be also, ye shall easily perceive what they intend. And here also note, how they be come up but late from the dunghill; a sort of them more meet to keep swine than to occupy the offices which they do occupy; and now [conspire] to the utter impoverishing and undoing of all the commons of this realm. Wherefore I desire you, for the tender mercy of God, give not hasty credit unto their doings and sayings, but stick fast unto your most godly and Christian prince and king; for tho' they traitorously call them the body of the council, yet they lack the head: then may ye call it a monstrous council, for truly every body is nothing without the head. But the Lord shall destroy such a body at his pleasure! And as for London, called Troy untrue, Merlin sayeth that twenty-three aldermen of hers shall lose their heads on one day, which God grant to be shortly. Amen!—By the king's true and loving subject to his power,

"HENRY A—,"

"At the same time that the proclamation which we have just given was dropped in the streets of London, the protector dispersed the following short hand-bill amongst the commons in the different counties.

"Orig. St. P. Off. Domestic.

"Good People,—In the name of God and King Edward, let us rise with all our power to defend him and the lord protector against certain lords and gentlemen, and chief-masters, which would depose the lord protector, and so endanger the king's royal person; because we, the poor commons, being injured by the extortions of gentlemen, had our pardon this year by the mercy of the king and the goodness of the lord protector; for whom let us fight, for he loveth all just and true gentlemen which do no extortion, and also the poor commonalty of Englonde."—God save the king and my lord protector, and all true lords and gentlemen, and us the poor commonalty."

"Endorsed, 'The copy of the bill sowed amongst the Commons.'"

"In the MS. Privy Council Books of Edward the Sixth, under the date of the 9th of October, is this passage:—'The lords (meaning the faction of Warwick), thinking it to be expedient to communicate their proceedings with the Lady Mary's and the Lady Elizabeth's graces, wrote to the same, letters of the whole discourse, as aforesaid.' These letters do not appear in the MS. Books of Privy Council, but I have found them in the State Paper Office; and they will form an interesting conclusion to the original documents, in which we have traced the history of this remarkable conspiracy from its origin to its consummation.

"To My Lady Marie's Grace, and My Lady Elizabeth's Grace."

"Orig. St. P. Off. Domestic. 9th October, 1549.

"It may please your grace, with our most hearty and humble commendations, to under-

* "This hand-bill of the protector supplies a hiatus in the MS. privy council books of Edward the Sixth, where an allusion is made to it; but the words 'Good people' are all that are given."

stand, that where some trouble hath chanced between us of the king's majesty's council and the Duke of Somerset, because the same may be diversely reported, we have thought it our parts to signify to your grace briefly how the matter hath grown, and by what means it is now come to some extremity. We have long since, and daily more and more, perceived his pride and ambition, aspiring further than became a good governor, or a true subject. We have travelled with him, the number of us together, and in manner every [one] of us apart, to stay himself within reasonable limits, ever hoping to do good; but all hath not prevailed: for, as we have devised with him for the preservation of the king's majesty's person and honour, so hath he (from time to time, as he durst) covertly laboured to bring his majesty, who God long preserve! and his whole estate, to such confusion as he might of both dispose at his pleasure; declaring in his continual proceedings, that he meant never to account with any superior. When we saw that no counsel could prevail, and that his pride grew so fast as to do what he listed, [that] he would hear nothing spoken by the council for his majesty's affairs, but either he would contemptuously reject it, or, doing nothing, would pass it over in silence—we thought we could suffer no longer, well weighing with ourselves the state, and remembering therewith our duties, unless we would in effect be parties with him; and so resolved friendly and quietly to have treated the matter with him, and, if we might by any means have brought him to reason, to have avoided all trouble and slander, and to have appeased all things without extremity. But we had not a few of us dined above twice together, but immediately he took the Tower, and raised all the country about Hampton Court, bruiting and crying out that certain lords had determined to repair to the court to destroy the king's majesty, whom we pray to God on our knees to keep and make as old a king as ever was any of his progenitors. And, when he had thus gathered the people and commons together at Hampton Court, then he brought his majesty into the base-court there, and so after to the gate to them that were without; and after he had caused his highness, good prince, to say, 'I pray you be good to us and our uncle,' then began he his oration; and, among many his untrue and idle sayings, declared that one special cause of our displeasure to him was, that we would have him removed from his office, and that we minded to have your grace to be regent of the realm, and also to have the rule and government of the king's majesty's person: dilating what danger it should be to his majesty to have your grace, next in succession and title to the crown, to be in that place; and that therein was meant a great treason, which, as God knoweth, we never intended, considering all laws touching government to provide to the contrary; neither any of us all at any time, by word or writing, hath opened any such matter to your grace, as your honour knoweth; [and] concluded, like a most irreverent and unkind subject, that if we should attempt any thing against him, the said duke, 'Here he is,' quoth he, pointing to the king's majesty, 'that shall die before me!' which was the most abominable saying that ever passed the mouth of a subject towards his prince and sovereign lord.* When we understood this his manner of proceeding, we thought

it neither meet to go to the court, as we had determined, neither to rest so unfurnished as he might use his will first upon us, and after the more easily proceed in his purpose; and so have in quiet sort both gotten the Tower for the king's majesty from him, and furnished ourselves, with the help of the good city of London, who have showed themselves most loving and faithful subjects in this great matter, content to serve his highness, even when the Tower was not in our order for his majesty, as it now is, as we should command and appoint them, in such sort as we trust in God to deliver our sovereign lord from his danger, and to establish a better order for his grace's surety than he hath used. Beseeching your grace not to conceive any lack to be [in] us, that we have not advertised the same hitherto of our doings, for the matter was so much to us unlooked for, and so quick, that we were fain to travail almost night and day since the ruffie, to keep him from advantage, and put ourselves in order for him. He hath now carried his majesty to Windsor late in the night, in such sort as may declare that he maketh no great store of him; but God, we trust, will help us to deliver his majesty out of his cruel and greedy hands; wherein, if it should come to an extremity, as we trust it shall not,—and for our parts we shall do what we can to manage it so, if it can be possible, as no blood be shed on the occasion of it,—we trust your grace, in our just and faithful quarrel, will stand with us; and thus we shall pray to Almighty God for the preservation of your grace's health. From, &c. It will be scarcely necessary to observe, that we must receive with much caution this account of the revolution, written under the dictation, if not by the hand of Warwick, and with the express object of enlisting the feelings of Mary and Elizabeth upon his side. The original papers and letters which have been given above, will enable any reader to correct its partial statements, and to detect the craft and hypocrisy of Warwick, the treachery of Hoby, the duplicity and desertion of Paget and Cranmer. I may add, that the detailed account now given of the progress and termination of this remarkable conspiracy, is new to English history. Nothing of it is to be found in our most popular general historians, or even in the pages of Burnet, Strype, or Fuller; another proof that historical truth is progressive, of slow attainment, and to be found, if anywhere, in the original letters of the times."

With this we conclude for the present, intending to take up another era in our next (from the downfall of Somerset to the death of Edward); and we need hardly add, after these extracts, how high we think the work entitled to rank in the historical library.

MISCELLANEOUS.

Medical Notes and Reflections. By Dr. H. Holland, F.R.S. &c. &c. 8vo. pp. 628. London, 1839. Longman and Co.

As far as an extra-professional critic may have a right to pronounce an opinion on a work like this, we should venture to say that a more valuable contribution of practical skill and experience to science has rarely been given to the medical world. The notes upon twenty years of extensive practice, and, consequently, intimate acquaintance with every class of disease which can assail the human frame, are here collected and arranged with great judgment; and we are convinced that their study may not only supply very important information and correct views, but, what is no less

essential, lead to the correction of many errors of an afflicting and fatal nature. We cannot speak too highly of the work.

A Manual for the College of Surgeons, &c. &c. By J. Steggall, M.D. and M. W. Hilles, &c. 12mo. pp. 327. London, 1839. Churchill, Edinburgh, MacLachlan and Stewart; Carfrae and Son. Dublin, Fannin and Co.

THIS is another desideratum in medicine—a most useful compendium for students, and an excellent manual for reference on almost every interesting subject connected with anatomy and surgery. The reasons assigned for the opinions given are as satisfactory as the state of the faculty in 1839 renders it possible for them to be.

The Banished; a Swabian Historical Tale. Edited by James Morier, Esq. author of "Hajji Baba," &c. 3 vols. 12mo. London, 1839. Colburn.

WE understand that the editor's brother is the translator of this tale, which is taken from the German of Hauff, an author who is far too little known to English romance readers. Mr. Hauff flourished about the same time as Sir Walter Scott, whose works he took for the models of his own; he could not have selected a better master, on whose style to graft the legends of Germany. The present tale is very freely translated, but always adheres to the subject-matter of the original. The style of writing is good, and there is enough of love, feasts, battles, &c. to content the most ravenous appetite for such themes. The historical portion is admirably interwoven, and illustrates an important epoch in Swabian history—the entrance of the confederates into Ulm, in 1519.

Lady Cheveley; or, the Woman of Honour. 12mo. pp. 47. London, 1839. Churton.

A SEVERE castigation of the author of "Cheveley," in verse; and written with much force and feeling.

Speech of Sir George Sinclair, Bart., M.P. April 19, on Lord J. Russell's Motion respecting the Government of Ireland. Pp. 41. London, 1839. Fraser.

THIS is a speech rather peculiar in itself, and different from the ordinary run of the Commons' House. With argument it mingles much humour, and hits straightforward on so many points, that it exhibits more of legislative politics than is usually suffered to escape from either side. Without offering any opinion upon its party views, we can say that we have been much pleased with its perusal as a composition.

Reasons for becoming a Roman Catholic; addressed to the Society of Friends. By Frederick Lucas, Esq. of the Middle Temple, Barrister-at-Law. Pp. 109. London, 1839. Booker and Dolman; Lumley.

THE extraordinary fact of a Quaker being converted to the Roman Catholic faith is here acknowledged, and the author enters at length into his reasons for joining that church. There are some curious views in this pamphlet, and especially Mr. Lucas's attempt to reconcile the leading principles of Quakerism with those of the Romish religion; and maintaining that there is less essential difference between them than between the Quakers and the Protestants.

Nature Displayed, &c., by W. Pincock. Pp. 141. (London, Cornish and Co.)—A little school-book, in which the subject of natural theology is exemplified in the useful way of familiar conversations.

Bible Story-Book, by Bourne Hall Draper. 3d and 4th Series. Pp. 254. (London, Darton and Clark).—One of those little lesson-books devised for the instruction of youth. It is a good selection of Scriptural stories, and is neatly ornamented with wood-cuts.

Lockhart's Life of Scott, 2d Edition. Vol. II. (Edinburgh, Cadell; London, Murray).—A portrait of Anne Rutherford the poet's mother, is a very interesting prefix to this volume. She is a gauchy-looking good wife, with

* "This sentence is first written thus in the draft: 'Concluding in the end, like an irreverent and unkind subject, that, or he would be destroyed, his majesty should die before him. Oh, what abomination!'"

strongly marked features, indicative of sense, kindness, and shrewdness. A charming vignette, by Turner, of Sandy Knowe, or Smørholm, is the other appropriate embellishment—picturesque and poetical even beyond the natural beauties of the spot, striking as they are. *Elements of Zoology*, by W. Rhind. Pp. 119. (Edinburgh, Fraser and Crawford; London, Smith, Elder, and Co.)—A very useful little elementary book, in which the organisation and functions of all orders of animated creation are sensibly and clearly expounded for the instruction of the student.

ARTS AND SCIENCES. GEOLOGICAL SOCIETY.

APRIL 24. Rev. Dr. Buckland, President, in the chair.—Several communications were read.—1. 'On the climate of the Newer Pliocene Period,' by Mr. Smith, of Jordan Hill. An examination of the shells contained in the newest tertiary deposits on the shores of the Clyde, has convinced Mr. Smith that the climate of this part of the globe, during their accumulation, was colder than it is at present. His attention was first called to the subject by observing that the shells found at Uddevalla, and described by Mr. Lyell in his memoir on the change of level in the Baltic, agreed with some of those most common in the raised shelly beds of the Clyde; and his views respecting the northern aspect of the peculiar or most abundant of the Scottish fossils, have been confirmed by Mr. Gray, Mr. G. Sowerby, and Mr. Deshayes.—2. Remarks on some fossil and recent shells collected by Captain Bayfield, R.N., in Canada, by C. Lyell, Esq., V.P.G.S. Several eminent conchologists having observed that in the English crag there are certain shells which indicate a somewhat colder climate than that which now prevails in our latitudes, and it having been supposed that a similar inference may be deduced, but with greater certainty, from shells found in the newer pliocene strata of Scotland and Ireland, Mr. Lyell has been induced to examine, with great care, a collection of shells sent to him by Captain Bayfield, consisting partly of fossils procured from the most modern tertiary deposits bordering the Gulf of St. Lawrence, and partly of recent testacea from the gulf itself. The shells were found principally at Beauport, about two miles below Quebec, in a deposit similar to that now forming in the bed of the St. Lawrence; and the uppermost stratum, nearly one hundred feet above the level of the river, is almost exclusively composed of bivalves. Similar shells occur at a still higher elevation in the valley of the St. Charles, three miles from Beauport; and at Port Neuf, forty miles above Quebec, at heights varying from fifty to two hundred feet. Numerous boulders of primary rocks are imbedded in the strata at different levels, and appear as if they had been dropped there from drifted masses of ice, at widely distant intervals of time. Though some of the shells are broken, yet many are perfect, and it is impossible to imagine that the clay, sand, and gravel, composing the strata, could have been forced together by the boulders and testacea into their present position by a violent current, as the fragile *Terabratula psittacea* is found with both valves united, and their long, brittle, interior appendages entire. The shells bear a strong resemblance to those found in the newest tertiary deposits at Uddevalla, in Sweden, and some of the most abundant at each locality are common to both. The Canada fossils, however, so far as they have hitherto been examined, do not agree, as a whole, with the testacea now inhabiting the Gulf of St. Lawrence, many of the species ranging, in a living state, from the gulf, to the border of the north polar circle, or are

now only known in high northern latitudes, as in the seas of Greenland, Iceland, and Norway; or agree with shells found in the newer pliocene of Scotland and Sweden; on the contrary, many of the shells most conspicuous in the Gulf of St. Lawrence have not been found in a fossil state. As the climate of Canada is now excessive, it is natural that many northern and arctic shells should exist in the Gulf of St. Lawrence, without any mixture of tropical forms: it is very probable, also, that in the period immediately antecedent to the present, the climate of Canada was even more excessive than it is now; and that the shells resembled still more closely that small assemblage now found living in high northern latitudes. It is likewise evident, from the manner in which the large fragments of rock are interspersed through the shelly strata near Quebec, that while these deposits were forming, blocks of ice were annually transported, as at present. Among the fossil shells near Quebec, not one has yet been found which can be affirmed to be extinct. They relate, therefore, to an extremely modern period; and though the climate may then have been more excessive than at present, a more equable one may have preceded, and the alterations may have been connected with the geographical changes which upheaved the shelly deposits of Canada 200 feet above their former level.—3. An extract from a letter addressed to Dr. Fitton, by Herr F. A. Roemer, dated Hildesheim, 20th March. The Wealden formation, including the Purbeck stone, is very extensively developed in the north of Germany, and is overlaid by a great argillaceous deposit, containing marine shells, similar both to the oolitic and the cretaceous systems. Of the fossils found in the Wealden of England, almost every species occurs in Germany, including even the minute *Cypris tuberculata*, *C. granulosa*, and *C. Valdensis*. Last autumn, Herr Roemer discovered the Wealden with its characteristic shells near Bottingen, in the High Alps. He possesses also the *Lepidotus mantelli* of the English Wealden, from Saxony. The Portland sand occurs in the north of Germany, but the Portland stone and the Kimmeridge clay are so intimately connected by their fossils, that the intermediate sandy beds cannot be considered as a separate deposit. The chalk with flints occurs possibly in the Hartz. The green-sand series is extensively developed, the Flammenmergel of Hausmann being the upper green sand of England, and the quadersandstein the lower. Herr Roemer also believes that the gault exists in Northern Germany.

ZOOLOGICAL SOCIETY. (Anniversary.)

VISCOUNT BRAYBROOKE in the chair.—Satisfactory accounts for the past year were exhibited; the total income for that period was stated to be 14,094l. 2s. 9d.; the expenditure 12,588l. 12s. 1d.; leaving a balance in favour of the Society of 1505l. 10s. 8d. Our regular monthly reports throughout the year have made our readers acquainted with details. The Earl of Derby, a great patron of the Society, and strongly attached to zoology, though very infirm, was again elected President: a just compliment to the noble earl. The Rev. Mr. Barton was elected Secretary. Members of the council were chosen.

ROYAL INSTITUTION.

FRIDAY, 19th April.—Mr. Cottam, 'On the Manufacture of Bricks and Draining Tiles by Machinery.' The invention holds forth ad-

vantages to the bricklayer and the agriculturist, and, possibly, benefit to the pa-tantee; but, without taking the last possibility into consideration, we have pleasure in making known that a machine has been perfected for the manufacture of bricks and tiles, far superior to those of the olden method of moulding by hand. Where the latter process completed 7000 bricks a-day of sixteen hours, the machine works off 20,000 in a day of ten hours' length; and of draining tiles, 10,000, where only 700 could be heretofore worked under similar circumstances, namely, the difference of time and by hand. The productions of the machine, the secret of which is "mouse cloth," to prevent the clay sticking to the rollers, a cloth with a nap like out velvet, are far superior to those of the common method, especially with regard to solidity and absorption of moisture. A working model, unconnected with the well-known pug-mill, with which, for extensive operations, the new machine is combined, and worked with water, horse, or steam power, illustrated the newly invented process, which also manifested several other ingenious contrivances. At the conclusion of this subject, Mr. Faraday filled up the time with remarks upon photogenic drawings, several of which in the library attracted great attention. He dwelt more particularly on the process of Mr. Taylor, who prepared his paper with ammonio-cyanide of silver, and fixed his objects with hypo-sulphate of soda. This compound of silver, he observed, is an explosive mixture, and he cautioned persons not to keep it in any quantity together after being prepared.

INSTITUTE OF BRITISH ARCHITECTS.

ON Monday week, an ordinary meeting of this Society was held at their chambers in Lower Grosvenor Street, when the president, Earl De Grey, took the chair. The Marquess of Northampton, Sir Jeffery Wyatville, Mr. Barry, Sir Henry Ellis, and many distinguished members, were present. After routine business had been transacted, presents acknowledged, &c., Mr. Poynter read a paper 'On the Pointed Style of Architecture,' as it was successively developed in France and England, and shewed the different forms it had assumed.—Mr. Godwin informed the meeting of the establishment of the Society at Oxford for promoting the Study of Gothic Architecture, and expressed his good wishes for its success—a feeling which was responded to, apparently, by the whole meeting. Earl De Grey then proceeded to present three medals which had been awarded by the council for certain essays for drawings which had been sent in; and, in so doing, addressed himself eloquently to the several successful candidates. His lordship afterwards invited the members of the Society to an entertainment to be given at his house in St. James's Square, on Monday evening. [This meeting, we are informed, was brilliantly attended.]

UNITED SERVICE INSTITUTION.

MONDAY, 22d April. Major James Waller in the chair.—Several presents were announced and exhibited. The papers read were, 1st. 'Continuation of a Paper on the Longitudes of the principal Maritime Points on the Globe,' by Lieut. H. Raper, R.N.—2d. 'On the Origin and Progress of the Relief of Shipwrecked Persons,' by Capt. R. Saumarez, R.N., who brought up the history of this subject to the present times, reserving the merits of the various contrivances for the relief of shipwrecked persons to a future paper. He exhibited, however,

practically, the contrivance of the kite and messenger, invented by Capt. Dausey, R.A. The kite is to be flown from the ship, and as soon as it is over the land, with which it is desired to make a communication, the messenger is sent up, and is carried along by the wind with sufficient force to disconnect one of the fastenings of the kite. The kite immediately turns on its edge, and falls, carrying with it the line, to which afterwards hawsers may be bent, and communication kept up with the shore. The meeting was thinly attended; this is the more remarkable, because these evening meetings of the members of this Institution afford such facilities for the explanation to brother-officers of the inventions for the advantage of either service.

LITERARY AND LEARNED. UNIVERSITY INTELLIGENCE.

OXFORD, April 24th.—The following degrees were conferred:—

Bachelor in Divinity.—Rev. J. Carter, Fellow of St. John's College.

Masters of Arts.—J. J. Plumer, Balliol College, Grand Compendium; Rev. J. A. Ashworth, Fellow of Brasenose College; Rev. M. Matthie, Pembroke College; Rev. J. Dodson, Christ Church; S. A. Pears, J. M. Wilson, Scholar, J. T. White, Corpus Christi College; Rev. J. Brownell, Rev. F. Brown, Exeter College; Rev. C. Sanger, E. M'Leod, Worcester College; Rev. W. S. Thomson, Jesus College.

Bachelors of Arts.—H. Maister, New Inn Hall; J. W. Beumeld, Lincoln College; W. H. Hughes, Christ Church; G. H. Pedlar, Magdalen Hall; G. A. Buller, Queen's College; H. Bathurst, Merton College; B. H. Adams, J. M. Bennett, Exeter College; J. R. Alsop, Scholar; W. Mathias, Brasenose College; J. Dixon, Trinity College.

SOCIETY OF ANTIQUARIES.

MR. HAMILTON, V.P. in the chair.—Mr. Akerman exhibited (from the Rev. T. V. J. Arundell) a sword, probably Italian, and of the sixteenth century, found at Tralfis, in Lydia; and a sheath, found in a tomb at Thebes: the latter appeared to have been broken, with its sword, over the deceased owner. A further portion was read of Mr. Bond's communication 'On the Banking Transactions of the Italians, in the reign of King John; and subsequently chiefly taken from the Liberate Rolls; and the remainder postponed.

THE CAMDEN SOCIETY.

THE first annual meeting of this Society took place at the Freemasons' Tavern on Thursday, Lord F. Egerton, President, in the chair.—Mr. Thoms, the secretary, read a very gratifying report of the council, from which it appeared that the Society was, every way, in the most flourishing condition. The whole number of members, a thousand, is complete; and it was moved and agreed to, to increase them to twelve hundred. A council of fifteen were elected for the ensuing year; and, in returning thanks for a vote of compliment from the assembly, the noble chairman stated that several interesting MSS. in his own possession, would be among the forthcoming publications of the Society.

ARCHÆOLOGY.

[CONTINUING our report of the ARCHÆOLOGICAL Meeting at the rooms of the Royal Society of Literature, we now insert Dr. Lepsius's paper 'On the Obelisk of Philæ,' which possesses much interest for the Egyptian antiquary. At the adjourned meeting on Tuesday, Mr. Birch read some remarks on a very curious papyrus, considered to be of the age of Trajan. It is the oldest caricature in the known world; and every one acquainted with the memorial paintings of Egypt, in tombs or on

temples, will readily recognise in it a ridicule of their religious rites. To exemplify it for our general readers, we have caused a tracing to be made of several of its most ludicrous groups, and a wood engraving facsimile is appended to this article.* Animals of various kinds are represented in actions such as are usually assigned to gods and priests; and games and sports take the place of ritual ceremonies. The whole scroll is about a yard in length, and nearly four inches in width. The drawing, it will be seen, possesses much humour and spirit; and is not unworthy of the Cruikshank of that distant day.]

THE OBELISK.

England has just cause to be proud of possessing monuments which are unquestionably of the utmost importance in the history of Egyptian literature and science. She possesses several of the most ancient on record, viz. of the time of the pyramids; and historical deductions of the greatest moment have just now been drawn from them. She possesses the tablet of Abydos—the end of the cord which conducts us to these earliest periods of Egyptian history; and the Rosetta stone—the foundation-stone of the whole science, which has enabled us to decipher the cartouches of the tablet. But the Rosetta stone would not have been sufficient of itself to have pointed out the way to the attainment of this new, but already most important science, if in the great and wonderful chain of events which have favoured its founders, one of the first links had been wanting, namely, the Obelisk of Philæ, concerning which I have a few remarks to offer. To justify my previous observations, I must again call your attention to the commencement of Egyptian science, the subject of which has so long been an object of national rivalry between France and England. To this dispute I hope to add some data which are not known, and which have been only lately communicated to me by the discoverer of the tablet of Abydos, and possessor of the obelisk of Philæ, Mr. Bankes.

It is generally known that Dr. Young first published, in 1819, an analysis of two hieroglyphical names, viz. Ptolemy and Berenice; but it is not so well known that Young had made this discovery two years before he published it; this is, however, proved by a note from Dr. Young to Mr. Bankes, while he was at Constantinople, in 1817, after his first travel in Egypt. He could already decipher the names of Ptolemy and Berenice, and this was neither a mere conjecture nor a discovery made accidentally, but a most ingenious process, which, after great study, and many judicious combinations, led him to form this analysis: and I regret that there is not sufficient time for a detailed account, which would of itself prove the extraordinary genius of Dr. Young; even if his renown had not been established by successful researches of a very different kind known to all the world.

One might, however, declare, that Dr. Young's discovery would never, of itself, have led to these remarkable results, which are deduced from it, into the hands of Champollion, who published his first hieroglyphic alphabet in 1822. It seems evident that Champollion was acquainted with Young's discovery; but it is no less certain that Champollion took a totally different road to Young's; and that it was by an entirely new and very happy com-

bination that he was enabled to profit by Dr. Young's discovery.

His process was as simple and equally favoured by circumstances, as that of Young's was complicated and embarrassed with difficulties. He made a comparison between the cartouches in the Rosetta stone, containing the name of Ptolemy, and analysed by Young, and another cartouche, which he presumed to be that of Cleopatra. Both names, by a fortunate accident, contained five known letters, and a sixth, which occurred twice in Cleopatra. The comparison of these hieroglyphical names, once tried, must immediately banish all doubt of the reality of the discovery itself. Indeed the confirmation of these six letters ought, moreover, to establish with perfect certainty the real value of nine different letters, a number more than sufficient to lead to the deciphering of all the Greek and Latin names in the other cartouches, which necessarily soon furnished an alphabet much more extensive, and, to a certain degree, even complete. It is this alphabet which, on the one hand, conducted him quickly to the reading of the whole series of the ancient Pharaohs, serving for a base to the chronology of ancient Egypt, such as we do not possess of any other nation of antiquity, neither in regard to extent nor authenticity; and which, on the other hand, placed him in the position of not only reading proper names, but the greatest part of all the language, and thus laying the foundations of an Egyptian philology, whose rapid and all-astonishing progress can be examined by all the world, in the posthumous work which he had fortunately finished before his premature death. I refer to his "Hieroglyphical Grammar."

But it might be asked, Where did Champollion obtain his previous acquaintance with the meaning of the Cleopatra cartouche, a name which was so evidently calculated to confirm that of Ptolemy?

Now the Obelisk which is at this moment erected at Mr. Bankes's seat in Dorsetshire, formerly stood on the right hand of the entrance of the great temple of the island of Philæ. On searching about some paces from this spot, he found the pedestal with a Greek inscription, which was copied by him,* and afterwards by

* The three Greek inscriptions on the pedestal of this obelisk are translated by Mr. Bankes as follows. The first two are only painted in red letters upon the surface, the lowest is cut into the stone:—

The uppermost Inscription.

Epiphane . . . of the gods Euergetes . . . gods
of the god Eupator, and of the god Philo-
metor, and of the god Euergetes, greeting. We have
submitted to you the copy of the letter written to Locust
our cousin and general, and we permit to you the setting
up the monument which you apply for . . . Pacon 22.

The second Inscription.

King Ptolemy, and Queen Cleopatra the sister, and
Queen Cleopatra the wife, to Locusts their brother,
greeting . . . to us . . . from the . . .
a copy . . . you shall make . . . not
to trouble them . . .

The third Inscription.

To King Ptolemy, and Queen Cleopatra the sister,
and Queen Cleopatra the wife, beneficent deities, the
priests of the great goddess Isis in Abaton and Philæ,
greeting. Whereas those frequenting Philæ, as generals,
and prefects of the frontier-guards, and all other func-
tionaries and constituted authorities, and the rest who
are in office, compel us to make contributions to them
against our will; and out of this it results that the temple
is deteriorated, and that we are in danger of not having
what is appointed for the sacrifices and libations to be
made for you and your children: we request of you,
great deities as you are, if it shall seem good, to order
Noumenius your cousin and secretary for correspondence
to write to Locusts your cousin and general of the The-
baid, not to trouble us in these things, nor to suffer any
other to do the same, and to give us the necessary de-
crees to that effect, and in them to permit us to set up a

* These cuts represent a lion tearing a sacrifice on the altar, a cat driving ducks, an ass and a lion playing at draughts, a pig-shepherd with his wallet on his back, playing on a double pipe, and two other animals in marching order.—See p. 282.

M. Cailland, whose copy was published by Mr. Letronne. No attention had been paid to the Obelisk itself, until Mr. Bankes, considering the high interest which would be attached to the collation of the Greek inscription upon the base, with the hieroglyphics upon the shaft, undertook, during his second voyage to Egypt, to transport this monument, of more than 21 feet high, with pedestal of 6 feet high, from the isle of Philæ to England. It arrived at Deptford in 1821, and was there copied for the first time by Mr. Bankes himself, who immediately had the drawing lithographed, and a certain number of copies printed off to distribute among his friends and other *savans*. [Here are some copies, which Mr. Bankes has had the goodness to allow of my placing before your eyes.] It was him, also, who, by a series of very judicious observations, as striking as they were independent of the analytical method of Dr. Young, was convinced at first of the reality of the discovery of Young (which he had at first received with considerable distrust); and had obtained, in the second place, the conviction that the cartouche which he had found upon many Egyptian temples, and which is repeated upon the obelisk, ought to contain the name of Cleopatra: so much so, that he wrote, with his own hand, the name of Ptolemy and that of Cleopatra beside the two cartouches of the lithographed copy of the Obelisk which he sent to M. Champollion. One thus sees, that all the elements upon which M. Champollion founded the induction which he published a year after that he had received the drawings of Mr. Bankes—viz. in 1822—had been furnished him by discoveries already made by the English upon monuments in England.

I think what I have already said will be sufficient to draw your attention to the Obelisk of Mr. Bankes, which bears a remarkable part in the history of the deciphering of the hieroglyphics, although it has been, up to the present moment, forgotten. But besides the historical interest which I have just claimed, the monument is yet distinguished, by many other circumstances, from the great number of Egyptian monuments which have ever been brought into Europe; and I beg your attention, for a few minutes, to allow me, in a few words, to lay before you what I think most remarkable upon it, and what the inscriptions on the four sides contain. I have had the advantage of seeing, about eight days ago, this interesting object; and the extreme kindness of the proprietor has allowed me to take even impressions upon paper of it with every facility, such as I have the honour of now laying before you.

The first question is, Whether the Greek inscription on the base is not, perhaps, a translation of the hieroglyphics on the obelisk? But we must deny that.

The great inscription on the pedestal contains a letter from the priests of the temple of Isis, at Philæ, to King Ptolemy Evergetes II., to his sister Queen Cleopatra, and to his wife Queen Cleopatra, in which they complain of

monument on which we may inscribe your kindness to us upon these points, that your favour may be perpetuated upon it to all time: when this shall be done, we and the temple of Isis shall hold ourselves obliged. Fare ye well.

The height of the three plinths (in one block), 2 feet 10 inches; of the lower member of the pedestal, 3 feet 4 inches; of the upper member of ditto, 2 feet 5 inches (the whole pedestal in one block); of shaft, 22 feet 11 inches (in one block also). Total height, 30 feet 8½ inches.

Lowest plinth, 12 feet 9 inches square; upper plinth, 8 feet 10½ inches; lower member of pedestal, 3 feet 5½ inches; upper member of pedestal, 3 feet 1 inch; bottom of shaft, 2 feet 2 inches; top of shaft, 1 foot 5½ inches. The material of the whole monument is red Egyptian granite.

the contributions exacted from them unjustly by the military and civil authorities of Thebes and the frontiers, and demand to be freed from them; they wish also to erect a monument, which they call a *stèle*, and on which they wish to inscribe the benefits they expect to receive from the monarchs. This was the only inscription which had been seen and copied by other persons. One day, one of Mr. Bankes's workmen told his master that he could see some letters of another inscription. On examining the higher part of the pedestal, just above the known inscription, Mr. Bankes was much astonished to find it exactly correspond with what the workman said. Indeed he found several letters traced in red paint; and on continuing his researches by different lights, mirrors, and also by the light of torches, he succeeded in deciphering the greater part, and found that the space between the obelisk and the great inscription contained two other inscriptions on the same subject, namely, the answer of the king to the priests of Philæ, according to their demand; and the letter from the king to Lochos, the commandant of the Thebaid, informing him of the king's pleasure. This discovery, which was perfectly unknown to the public, is of the utmost importance; for it would be difficult to imagine what interest the priests could have in perpetuating, by a sculptured inscription, the letter which they had sent to the king, unless they added the king's reply, confirming them in the future enjoyment of their rights. This was, undoubtedly, their intention, when they asked permission to erect a monument to the king's kindness. And it may justly be supposed, that the two first letters, which contain this precious guarantee, had been placed above the third, in order to attract the greatest attention. It may be objected, that the two first letters are not sculptured like the third, but only painted, which may appear opposed to my preceding observation. But on this point, I believe, Mr. Bankes has already made the only sustainable conjecture, namely, that the characters of these precious documents were originally in gold, which must naturally strike the eye more than any other mode of inscription. This discovery alone, indeed, enables us to resolve another difficulty: Where is the monument asked by the priests, in order to inscribe the king's benefits? So long as the hieroglyphic inscriptions were unread, the most natural supposition was that this must be the very monument mentioned in the Greek inscription. But it will soon be seen, that the content of the inscription on the obelisk has no connexion with the Greek inscriptions; and we should even reject the opinion of their identity were we unable to decipher the hieroglyphics of the obelisk. In the first place, the word *stèle* was opposed to this opinion—a word which is not applicable to an obelisk, but only to monuments similar to the Rosetta stone; and the second objection was the destination, now well known, of obelisks in general, which were always erected by kings, in honour of the divinities of the temple to which they belonged, not in honour of kings, by the priests. Finally, the poor priests of the temple of Isis, who, in their letter to the king, lament that they soon shall not have wherewith to make sacrifices and libations, would certainly not have imposed on themselves so great a sacrifice as the labour, transport, and erection of a granite obelisk.

But let us examine the contents of the obelisk itself, as the easiest method of settling this question. I am ignorant of the reasons by which Mr. Bankes was guided in his arrange-

ment of the four faces on the lithograph before us; but I believe that it is just the same arrangement in which the obelisk ought to be read, when it was still standing before the temple of Isis at Philæ. For on the first three faces we only find the titles and attributes of the king without a *verb*, while on the fourth face the subject has its proper complement. It may consequently be presumed that the first face of the lithograph was that towards the spectator entering the temple, and that the Greek inscription was placed beneath it. Here are the translations of the four faces, such as I can now prove and establish. Many passages cannot be interpreted at this time, but they are happily unimportant, and their omission does not embarrass the very clear purport of the whole. Omitting, then, the titles either of kings or gods, which I cannot translate, the following text remains:—

1st Face.—The Horus . . . upon the throne of his fathers . . . the lord of Upper and Lower Egypt . . . the king (descendant of the god Epiphaneis, approved by Phtah, the son of truth) . . . the god Soter, beloved of Isis, the great mother-goddess, the giver of life, mistress of Manouab [Egyptian name of the Abaton upon the isle of Philæ], directress and mistress of Manlak [Egyptian name of Philæ], mistress of the countries to the south, queen of the north . . . manifesting, the gods Philadelphie, the gods Evergete, and the gods Philopatores, cherishing the gods Epiphaneis, giving all life and power, all force, and all joys of the heart, like the sun for ever.

2d Face.—The Horus of gold, the greatest of chiefs, the lord of panegyries, like his father Phtah, the father of the gods, the king like the Sun, the son of the Sun Ptolemy, the ever-living beloved of Phtah, with his wife the queen, mistress of the two Egypts, Cleopatra, the two gods, Soteres—beloved of Osiris Ounofre the great god, the lord of Philæ, the king of the gods residing in the Abaton, the king gracious in the towns and districts, beloved by his divine father and by his divine mother, giver of all pure and established life, like the sun for ever.

3d Face.—The Horus . . . on the throne of his father . . . approved by Atmou . . . the king, descendant of the gods Epiphaneis, approved by Phtah, son of truth . . . the gods Soteres—beloved of Amon-ra, king of the gods, lord of the thrones; resident in Thebes . . . the great support (?) of the heaven, earth, and the stars, of the waters and lands . . . the great god, the lord of the Abaton, giver of all power and victory on the throne of Horus, resident for ever among the living.

4th Face.—The Horus . . . ruling over the barbarians, the son of Osiris, born of Isis, has assumed the royal power in the place of his father, the son of the Sun Ptolemy, ever-living beloved of Phtah, the god Soter, he has erected . . . to the goddess Mout . . . the giver of life, mistress of Philæ . . . residing in the Abaton, two obelisks of good red granite, to her . . . he has made . . . during his great reign, upon the throne of Horus, residing among the living for ever.

If this pompous language of the Egyptian priests could be followed, it would be seen that the inscription of each face is divided into two compartments, one containing the epithets of the king, the other the titles of the divinity cherishing the monarch. Omitting all the particular qualifications, the purport of the four faces is reducible to this very simple phrase:—

1st. Ptolemy the king—beloved of Isis.

2d. Ptolemy the king, and Cleopatra the Queen—beloved of Osiris.

3d. Ptolemy the king—beloved of Amon-Ra.
4th. Ptolemy the king—erected these Obelisks to the Goddess Mout.

This division of each face has been expressed in a very extraordinary manner by the sculptor; of which I do not know another example in all Egyptian antiquity, and which must in itself be regarded as a violation of the ancient laws of calligraphy, which were religiously observed in former times by the sacred scribes; namely, as soon as the sculptor came, in each face, to the name and titles of the divinity, turned, in the middle of the column, the direction of the hieroglyphic signs: a proceeding which now enables us to seize the partitions of the phrase at a single glance, but which must have looked scandalously in the eyes of the priests, who had not yet entirely forgotten the ancient sacred customs.

It may be further remarked, that in the sole hieroglyphic inscription, no mention is made of the king's benefits towards the priests. It was the king, on the contrary, who erected the monument to Isis, and the other deities worshipped in the same temple. Nor is any mention made, in the same inscription, of a single monument, as in the Greek inscription, of two obelisks. And, indeed, it was the variable custom to erect two obelisks before the principal entrance of a temple.

To my knowledge, the public know nothing of this second obelisk; but it did exist, and Mr. Bunsen also brought over the remains of it, which he found near the second base, on the right hand of the entrance to the temple. It is, unfortunately, impossible that we should ever possess the second obelisk entire. The upper part is gone, but the lower part is of great importance: it shews that the inscription of the second obelisk was precisely analogous to that of the first; it still preserves to us the titles of four deities friendly to the king; and it enables us to replace the last sign of the four signs of the first obelisk, which is destroyed, but not necessary in order to comprehend the meaning of the phrase; for it is the very sign expressing "beloved," which attaches the name of the deity to the name of the king which it precedes.

We have further observed, that in the hieroglyphic inscription there is only *one* Cleopatra named, while in the Greek there are *two*, sister of the king, and widow of his father and predecessor; and the other, daughter of his wife and Philometor (whom he succeeded shortly after he repudiated his first wife). It is known, that in the twentieth year of his reign he was reconciled to his first wife, and that he reigned in peace with both of them. It must therefore be concluded that the Greek inscription was added after this time, about 126 years before Christ. But it must also be concluded, with equal certainty, that the obelisk which only mentions one Cleopatra—his wife, and not his sister—was erected previous to this time, and before his reconciliation. Thus, instead of having the Greek and hieroglyphic inscriptions, it is certain that the obelisk had already existed perhaps twenty years previously to the time when the priests to the king.

It only remains for me to prove that the enemy of the hieroglyphic inscription is nevertheless the same Ptolemy Evergetes II. of whom the Greek inscription speaks. This is proved at first to be drawn from the obelisk itself, in which his predecessors, Philometor, Evergetes I., Philometor, and Epiphanes are mentioned, himself being called the son of Epiphanes. His brother Philometor, after his succession he usurped, by assassinating

his little nephew Eupator, is not mentioned; and what is very remarkable, the inscription states that he received the royal power, not from his brother, but directly from his father.

There are two modes of explaining this fact, which is the more curious, as in the Greek letter, written by the king in reply to the priests of Isis, mention is made at the beginning among the king's predecessors, of the king Philometor, and even of the infant Eupator, who, in fact, reigned some months before his uncle returned from Cyrene. It must be thought that Evergetes, after having usurped the throne, endeavoured to obliterate the remembrance of his brother and nephew, by attributing to his own reign the thirty-five years which had elapsed from the death of his father, and that afterwards he threw aside this foolish idea; or else,—and this appears the most probable to me,—it was only in the official and sacred language of the priests, regulated on old customs, that the regular succession from father to son was mentioned, and all the years that elapsed from the death of the father were counted in the reign of the last reigning son. This is a custom, indeed, which was observed in very remote antiquity, in all the series of kings which are found on public monuments, and it is a custom which explains many facts which have hitherto always appeared very strange.

One of these two suppositions must be admitted, because in no case can the name of Philometor, brother and predecessor of Evergetes II., be recognised in our cartouche; for on other monuments we find our cartouche united to that of the *two* Cleopatras, and this perfectly distinguishes Evergetes II. from all the other Ptolemies; as also the portrait which accompanies this cartouche, and which has been published by M. Rosellini, declares distinctly to all the world, and brings back to you, by a single glance, the whole history of that Ptolemy called Physcon by the people, on account of his large belly; and of Kakergetes, instead of Evergetes; of that monarch, the most execrable of that perverse race, so unworthy to sit upon the throne of the Pharaohs, their illustrious predecessors. "Erat enim (says Justinus) et vultu deformis et statura brevis, et saginâ ventris non homini, sed belluæ assimilis."

The other papers and lectures submitted at the meetings, were 'On the Invention of the Arch, and Pelasgic Monuments,' by Dr. Lepsius; 'On the Origin of the Alphabet,' by the same; 'On Honorary Medals,' by Mr. Hamilton; and 'On the late Discoveries at Rome,' relative to the age of the kings, and the beginning of the republic; of all which we shall give such reports, as the nature of the subjects require, so that the reader may have a complete account of them.

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Entomological, 8 P.M.; British Architects, 3 P.M.; United Service Institution, 9 P.M.
Tuesday.—Linnæan, 8 P.M.; Horticultural, 3 P.M.; Medical and Chirurgical, 8½ P.M.; Civil Engineers, 8 P.M.; Electrical, 7 P.M.

Wednesday.—Society of Arts, 7½ P.M.; Geological, 8½ P.M.; Medico-Botanical, 8 P.M.; Graphic, 8 P.M.

Thursday.—Royal Society, 8½ P.M.; Antiquaries, 8 P.M.; Royal Society of Literature, 4 P.M.

Friday.—Royal Institution, 8½ P.M.; Astronomical, 8 P.M.

Saturday.—Royal Asiatic (Anniversary), 1 P.M.

FINE ARTS.

SOCIETY OF PAINTERS IN WATER-COLOURS.

[Second notice.]

THIRTY-FIVE years' growth and improve-

ment have invested this attractive exhibition with claims to high and original distinction, in a department of art raised, by the persevering efforts of the Society, to a degree of perfection beyond that of any other school in the world; for whatever excellence of a similar kind may have elsewhere appeared in contemporary art, may be said to have been incidental, and to have emanated from its example.

160. *King Charles the First conveyed a Prisoner from Newcastle to Hornby House, Northamptonshire, by the Parliamentary Army.* Frederick Taylor.—The character of the subject and the skill of the performance, unite in directing our earliest attention to this picture; and cold must be the heart and fastidious the eye in which are not to be found sympathy for the one, and attraction towards the other. We hear of an "iron-bound coast;" here is an iron-bound king, surrounded by guards armed to the teeth, inflexible in purpose and invested with power. But the tale has frequently been told, pictorially and historically; and, in the present instance, with so much novelty of treatment, and with expression of such dignified submission in the royal captive, as must win for the talents of the artist high and just commendations.

317. *Wanderers Entertained.* G. Cattermole.—Those who have not visited this gallery of art, or have not been informed of its contents, can form no idea of the interest concealed under so unassuming a title. We are at some loss in what class to place this beautiful production; whether in the romantic or in the imaginative. To whichever it may belong, the usages which it depicts are of a far country and of a remote period. It embraces character, costume, and persons, of interest sufficient to attract the attention of the poet and the novelist. The magnificent style of architecture of the interior, and the spectacle of the wanderers regaling at the ample boards, are objects which it is delightful to contemplate.

84. *The Rustic Toilet.* W. Hunt.—Though similar in subject to other works by this able and entertaining artist, we are inclined to give this the preference, for the magic of its effect of light, which seems fixed as a sunbeam, and partaking of its splendour. The comedy of art, abundant in variety, and represented with all Mr. Hunt's accustomed skill, will be found in 92. *Interior of a Stable*; 117. *All-Fours*; and 270. *A Cricketer*. In this last, Mr. Hunt has, indeed, "made a hit." So determined in look and gesture is the young aspirant of the game, that, should his bat meet the ball, it is impossible to calculate the probable extent of its flight.

159. *After the Storm.* S. Prout.—We feel much inclined to find fault with the arrangement which placed this interesting picture so much above the eye. The stupendous bulk of a stranded vessel occupies nearly the whole space. Its shattered fragments have become objects of interest to the mariners and others collected around; who seem impressed with an idea of the weakness of human might when opposed to the mightier powers of the elements. A nearer view of the details of this magnificent performance, we feel assured, would shew still more distinctly its merits.

82. *The Devil came Fiddling through the Town*, and 102. *The Vale of Idleness.* J. M. Wright.—We bring these together, as shewing the versatile powers of the artist. In the first, he has met the spirit and humour of Burns with what may be called a kindred feeling; and in the latter, the grave morality of Doctor Johnson's allegory with nearly the tact of the

her himself, and illustrated in a composition which thought and character want nothing a little more time and a little more labour the execution to have made a perfect work of art.

15. *A German Lady, with her Nurse, coming to Church.* Mrs. Seyfarth. — We hardly know which to admire most, the lively colouring or the lively expression of the old nurse, who leads the way in the little domestic group. Her truth and individuality do great justice to the skill of the fair artist, whom we are also to thank for introducing us to a view of the *Public Garden at Charlottenburgh, near Berlin*, which, but for the stiff formality of military and other male costumed figures, would have the qualities of Rubens' "Garden of Elysium."

But other views await us in the extraordinary talents exhibited in the landscape variety of the rooms. Here the display is so various, and abundant, as makes it difficult to choose. We cannot be wrong, however, in pointing out 132. *Cooking, on the Moselle, and the River—Lago di Garda*, J. D. Harding. The qualities of clearness and brilliancy of the choice, and of careful execution, in the two views by this truly gifted artist, cannot be surpassed. 107. *Afternoon*, G. Barrett. Such a sun, such a warmth, and such a peace, with leisure to enjoy them, would make the east winds and chilling atmosphere which trench upon our comforts in the springs of our uncertain climate. At any rate, we can anticipate the enjoyment held out to us by his beautiful Claude-like picture.

12. *View on the Rhine*; 88. *A Hay Field in Montgomeryshire*; 329. *On the Thames, near Wint.* We select these examples from among the lesser productions of the artist, as exhibiting the sparkling effect, energy of penmanship and natural character of his scenery. His *View of Lowther*, 110; and 162. *A Fen Mill, in Dorsetshire, in the distance*, embrace more massive objects, and a wider field in which to lay his powers.

107. *Tenby, South Wales.* C. Bentley. — Truly this is a fearful scene! Will that boat with her little crew ever effect a landing? Such the ideas conjured up by this vision of grey. We would recommend pictures like this to decorate the rooms of any castle of defence, made such by its lazy proprietors, so they might reconcile to the inflictions of any chair and a warm night-cap!

138. *Versailles, from the Bois de Statory.* Mackenzie. — A splendid view from the pen of one of our most careful and efficient artists. Seen from a distance, it might fill the contemplative mind with reflections on the plutonic crowd within its precincts, and awake with a desire always to keep them at bay. Yet again, it might call associations of joyous, or tender, which deserve to be cherished. As a work of art, it would enrich any collection.

(To be continued.)

NEW SOCIETY IN WATER-COLOURS. (Conclusion.)

2. *The Student.* B. R. Green. — The care and study employed on this performance are manifest in the character and effect so skillfully produced.

1. *A Little Bit of Rustic Courtship.* H. Jones Riviere. — Every thing must have a meaning, and "a little bit of rustic courtship" thus simply displayed, is worth all the artificial refinements connected with other beings of the same character.

To these we shall add, 6. *Camellias*, and 196. *The Garden*, by Mrs. Harrison; with 144. *Wild Flowers*, by Mrs. Chase: — studies which, in colouring, composition, and execution, appear to give light and life to the collection. We regret to say, that our limits will not allow of our noticing the works of the following artists: T. A. Firminger, W. N. Hardwicke, T. Kearnan, W. Oliver, T. Lindsay, Miss Laporte, T. Malsey, W. Robertson, J. Abeolon, and W. Telbin; all of whom have much contributed to the value and interest of the exhibition; and who, like the rest of the members, appear like men engaged in an undertaking of vital importance, each in his way exerting his powers as if success depended upon individual effort.

Mikrotypopurogenetion. — Take a page, or any other definite portion of printed paper (for instance, the advertisements appended to the magazines), cut it into two pieces, note the size of the type, and place one piece aside as the muster, or test. Thrust the other piece between the bars of a lighted grate, or ignite it in any other manner which may be preferred; place it gently on the hearth, and let it burn away till entirely consumed. Take up the paper so charred, carefully, and, holding it to a good light, the size of the print, which is perfectly legible, will be found to have become considerably reduced, while the sharpness, or purity of the impression, will have been singularly increased.

NEW PUBLICATIONS.

Her Majesty Queen Victoria. Painted by Thomas Sully; engraved by C. E. Wagstaffe. Hodgson and Graves.

THE etching for this fine print was some months ago noticed in the *Literary Gazette*. A finished proof of the plate now lies before us; and a most beautiful performance it certainly is. The resemblance appears to us to be wholly unexceptionable. Her Majesty, with the imperial diadem on her brow, and her ermine and embroidered robe falling gracefully over her shoulders, is represented as on the point of ascending the throne: but, although her figure is consequently seen only *en profile*, her head is turned round, and her eyes, full of animated expression, are directed towards the spectator. Near the Queen is a cushion, with the crown and sceptre; and the whole is finely relieved by a fluted column, and a deep-toned curtain. The rich, powerful, and sparkling execution of the engraving, does Mr. Wagstaffe the highest credit.

Portrait of Her Majesty. Painted and Engraved by Henry Pidding.

OUR columns have frequently borne testimony to the fact that Mr. Pidding is a very clever artist. We regret, however, that we are unable to say a word in praise of the present performance.

A Camaldolese Monk showing the Relics in the Sacristy of his Convent at Rome. Painted by W. Simson, R.S.A.; Engraved by W. Giller.

THIS is the first of the series of prints which the Association for the promotion of the fine arts, called "The Art-Union of London," have intimated that it is their intention to publish annually; and we think it a very auspicious commencement. Of the finely composed, and powerfully and broadly executed picture, we spoke, at the period of its exhibition, with the praise which it deserves. It appears that Benjamin Bond Cabbell, Esq. F.R.S., a member of

the Art-Union, having drawn a prize of a picture of the value of twenty-five pounds, with equal taste and liberality added the difference between that sum and a hundred and fifty guineas, and purchased Mr. Simson's performance. Mr. Giller has engraved it with corresponding vigour and spirit.

A Lancashire Witch. Painted by William Bradley; engraved by Thomas L. Grundy. Moon.

WITH the exception of the mouth, which is grossly sensual, a fine, animated, Sir Joshua-like head. The bold and broad style of stipple in which it is engraved does Mr. Grundy great credit.

The Shores and Islands of the Mediterranean. A Series of Views from Nature, comprising Sicily, by W. L. Leitch, Esq.; the Barbary Coast, by Major-Gen. Sir Grenville T. Temple, Bart.; Calabria, Gibraltar, Malta, and Ionian Isles, by Lieut. Allen, of the Royal Engineers. With an Analysis of the Mediterranean, and Descriptions of the Plates, by the Rev. G. N. Wright, M.A. Parts I. to VIII. Fisher, Son, and Co.

"THE Shores of the Mediterranean," says the able editor of this pleasing publication, "embracing a littoral of 5000 leagues, present the most splendid subjects for graphic illustration in the whole range of the olden world." Of the truth of this statement, the numerous and beautiful plates before us afford abundant proof. The work is "a natural continuation of Fisher's Syria, Holy Land, and Constantinople;" and will evidently be a valuable addition to the various and excellent topographical publications, domestic and foreign, which Messrs. Fisher and Co. have from time to time brought out, at prices which render them accessible to all classes of the community.

BIOGRAPHY.

THOMAS HAYNES BAYLY, ESQ.

THIS sweet lyrical poet died at Cheltenham, on Monday the 22d, after a severe illness and long struggling and suffering. He has been, we fear, another example of the sad and unfortunate lot of literary men. Born to good expectations, and married to a beautiful and accomplished woman, who brought him a considerable fortune, Mr. Bayly began the world under the most favourable auspices, and mixed with the best society of the day. His expectations were, however, disappointed; and he could not fall back into a sufficiently economical course, till the pressure of circumstances impoverished him beyond a remedy. For it is hard and difficult, if not impossible, for a person so situated to disentangle himself, and again enjoy a fair field for the exercise of his abilities. In England, poverty is the worst of crimes; and punished more unrelentingly than the deepest guilt. So did Mr. Bayly find it. Demand would not wait for the fruits of exertion; and no sooner was his head raised above the stormy waters to breathe for a while, than it was ruthlessly plunged down again, and he was doomed to perish, as we have said, another sad instance of the miserable fate of genius, when once involved in pecuniary embarrassments. Mr. Bayly, besides his many beautiful songs, has written, we believe, thirty or forty pieces for the stage; and from these a comfortable provision might have been drawn. But, alas for the author in want! He must sell for what he can get to supply immediate necessities; and sacrifice his birthright, indeed, for a mess of pottage!

The public go nightly to theatres to laugh at "Tom Noddy's Secret," to see "Perfection," or witness other popular productions;—the Drawing-room is redolent with the touching melody of "Oh, no, we never mention her," or the playful strains of "I'd be a Butterfly,"—whilst the writer is pining in sickness and distress, dying oppressed and unpitied. It is a thoughtless, a heartless, and a gloomy picture; but so it is, and rare is the occasion when struggling talent is taken by the hand and lifted above the wrongs of life—or even allowed to lift itself. The avenger is quick, the saviour slow; until, as here, an early death releases the victim, and he sinks into that grave "where the wicked cease from troubling, and the weary are at rest."

Mr. Bayly has left a widow and two children to bewail his premature loss.

ORIGINAL POETRY.

SIR JOHN FALSTAFFE.

SIR JOHNNY was a noble soul,—

Oh, sing unto his praise;

And though he was a gallant knight,
He had seen better days.

He never ran away, except,

When he was in a fright;
And never was the least afraid,
But when he had to fight.

How handy were his legs to him,

In battle's fierce alarms;
Or else what deeds he might have done
By glorious feats of arms.

How often did he proudly say,

My comrades, never fear;
For I myself will lead you on,
By bringing up the rear.

His heart would rise up to his mouth,

And almost make him choke;
From which one wood in-fir, no doubt,
It was not heart of oak.

Oh, were all soldiers just like him,

In battle none would die;
For, as all armies have their wings,
Of course they're meant to fly.

C. DE LA PRYNE.

THE DRAMA.

Her Majesty's Theatre.—On Saturday, Donizetti's *Anna Bolena* introduced Ernesta Grisi to the public, in the character of *Smeaton*; her voice is a good contra-alto, somewhat coarse in the lower tones, but flexible and cultivated, and possessing considerable power. Such a voice was much wanted on this stage; and from the applause bestowed on her on Saturday, and on Tuesday (when the opera was repeated), we may consider the place (so effectively filled last season by Albertazzi) very fairly supplied. Madame Monani is utterly incapable of executing the music allotted to *Jane Seymour*. It is painful to witness her vain efforts. In *Giovanni*, on Thursday, the absence of Albertazzi was still more felt.

Covent Garden.—On Thursday Mr. Rooke's new opera, entitled *Henrique, or Love's Pilgrim*, was produced here. The cast was exceedingly strong, embracing every musical voice in the company, with the addition of a most agreeable tenor in the person of Mr. Harrison, who made his *début* on the occasion. The overture is not so striking as that of *Amilie*; being altogether of a lighter character, and consisting of short disjointed movements, rather than the usual connected strain of such compositions. These movements are, however, en-

livening and musical, and prepare the audience for the same light character of music which pervades the whole of the first act. Miss Rainforth and Mr. Harrison were warmly encored in a lively duet, which they executed delightfully. A sweet air—*Bright-eyed Moorish Maiden*—by Mr. Harrison, received the same compliment. The second act is infinitely too long: recitative followed by air upon air, with perhaps some eight or ten lines of melody to redeem a mass of cleverly composed, but wearying music. In this act Phillips, Miss P. Horton, Leffler, and Manvera, have all good songs, which would be advantageous to the singers, and charming to the hearers, if shorn of the tedious parts, which "mar, not grace, an honest English air." The necessary curtailing will, no doubt, bring them into this desirable position. The finale to this act is spirited. The third act has like merits and faults. Oh, weep not, sweet *Maiden*, a sweet song, sung by Mr. Harrison with great feeling, was most rapturously and deservedly encored, although at half-past ten o'clock. Mr. Phillips was taken hoarse in the middle of the second act, and apologized for not doing justice to the composer: he had, however, no need to excuse himself, and acquitted himself admirably. The choruses are all good—one answered from behind the scenes, and another very original of the *Zingari*, are striking. No expense has been spared in "getting up" the opera. The scenery is beautiful, and the dresses are new and handsome. The whole is doubtlessly successful—a fact, we opine, which might be demonstrated without the violent shriekings, jumpings, &c., of injudicious admirers. It is, indeed, a credit to the English school.

On Monday, we observe, *Coriolanus* is announced for the last time, and for the benefit of Mr. Macready. The largest theatre in Europe could not contain a tenth part of the reward which his exertions in the cause of the drama deserve from a grateful public.

It is rumoured, that some musical gentlemen have offered for Covent Garden, next season; and that Mr. James Wallack is likely to have Drury Lane.

Societa Armonica.—The third concert was, on Monday, as fully attended as the two previous. Madame Stockhausen, one of our old favourites, made her first appearance these four years. Her voice is beautiful as ever; and we wonder, as we listen to her pure tones, how we have been able to spare her so long. Mr. N. Mori, jun., played a fantasia on the violin in first-rate style, and was much applauded.

Madame Sala.—We perceive that Madame Sala has announced a morning concert at Willis's Rooms for Monday week, to the success of which we wish much to contribute. From the length of time this lady has been known, and from the circumstances of her long and severe illness, added to the loss of sight for many months, which has forced her to abandon her profession, we trust her friends and the public will need little persuasion to rally round her on this occasion, and prove their estimation of her talent in this her hour of need.

VARIETIES.

The Literary Fund Anniversary, on Wednesday, being the *fiftieth*, and to be observed as a jubilee year, with H. R. H. the Duke of Cambridge in the chair, promises to be not only the most numerous, but the most distinguished assembly of the kind ever witnessed. A number of individuals of high rank, of foreign ministers, of learned foreigners, and of

eminent native authors, have signified their intention to be present; and altogether it may fairly be anticipated that it will be a memorable day for the Fund, and a bright one in the general annals of our literature.

On Friday, that excellent Medical Charity, so zealously sustained by Mr. Salmon, holds its anniversary dinner; and

The Artists' Fund anniversary is on the following day. This is the full season of humane and charitable feasting.

The late Mr. Vendramini's fine pictures, and splendid collection of rare prints, engravings, and other works of *veris*, are, we observe, in Messrs. Christie and Manson's catalogue for sale. To the lovers of such interesting objects of art we would recommend a visit to the private view on Wednesday and Thursday, for many of them are equally rich and curious.

The Copyright Bill.—Mr. Serjeant Talfour's Copyright Bill passed partially through a committee of the House of Commons on Wednesday, after one of the most obstinate and vexatious struggles to defeat it ever witnessed in parliament. No fewer than twenty-four divisions took place, in which a clique of seven, eight, or nine members, led by Mr. Warburton, tried to throw out this wholesome measure. Authors, like eels, in the estimation of these gallant opposition, must love to be skinned alive, and have no right either to their own heads or tales.

LITERARY NOVELTIES.

LIST OF NEW BOOKS.

Winds, N.W. and S.E.
Except the 24th, 25th, and 28th ult., and two following days, generally cloudy; rain fell on the 18th, 20th, 21st, and 23d. Two Parusellene between 2 and 3 o'clock on the morning of the 25th.
Rain fallen, '85 of an inch.
Edmonton. CHARLES HENRY ADAMS.

TO CORRESPONDENTS.

* To make room for the Egyptian Antiquities, with which we have continued to enrich this No. of the *Literary Gazette*, we have deferred some of our usual Reports; and, as there has been little novelty in publishing since our last, have been able to abridge our Review without injury to that department.

"The Foreign Monthly Review," No. I., is received and acknowledged. There seems to be a variety of articles, and one of them, "Lappenberg's History of England," is a clever piece of criticism.

Part I. of "The Illustrated Shakespeare," with designs by K. Meadows, engraved by Orrin Smith, also demands our acknowledgments. Twenty illustrations of "The Tempest," are extremely characteristic and good.

ADVERTISEMENT,

Connected with Literature and the Arts.

STAGE of the OPERA HOUSE, on Friday Evening next, May 10th, at Eight o'Clock, at which Mesdames Grisi and Persiani will sing a grand Duett together, her first appearance at Public Concert; Albertazzi, Stockhausen, Ernesti Grisi, Monami, and De Riviere; Signori Rubini, Ivanhoff, Tamburini, Lablache, P. Lablache, Tati, and Brizzi (Signor Marie, the celebrated Tenor, will be offered an engagement); Miss Birch, Miss P. Wyndham, and Mr. Phillips, Solo on the Violin by Mr. David, the German Violin-player; on the Piano-forte, by M. Döhler; on the Harp, by M. Labarre; and on the Flute, by Mr. Richardson. A Grand Concertante Duett for Two Violins, by M. David and Mr. Mori. The Orchestra will be on the grand scale of former years, will comprise 100 Performers, and be directed by the Master.

Leader, Mr. Mori; Conductor, Signor Costa.
Programmes, Boxes, Stalls, and Tickets, to be had of Mori and Laveau, 58 New Bond Street; at the Box Office of the Opera; and of all Music-sellers.

MRS. ANDERSON'S GRAND CON-

CERT.—G. Grisi, Persiani, Stockhausen, Signor Rubini, Tamburini, and Lablache, Madlén, De Riviere, Blüstein, and Miss Hayes, Mrs. Anderson, Mons. Labarre, Messrs. Mori, Blagrove, Carl, Dragonetti, and all the principal instrumental Talent, will perform at Mrs. Anderson's Morning Concert, in the Opera Concert Room, on Wednesday next, at Two o'Clock. Grisi and Persiani will sing a Grand Duett together; Stockhausen and her Niece will sing a new Solo Duett. Leaders, Messrs. J. Cramer and Mori; Conductor, Sir G. Smart. Her Majesty's Private Band will perform on this occasion only. Tickets, 10s. 6d. each, and Boxes and Stalls, may be had of Mrs. Anderson, 51 Manchester Street, Manchester Square; and at the principal Music Shops.

PIANOFORTES.—Extensive Reduction in

Cash Prices.—R. WORNUM, Inventor and Manufacturer of Patent Selection Pianofortes, at the Music Hall, Store Street, Bedford Square.

The Piccolo:	Guineas.
Plain, in Mahogany.....	30
Elaborate, with Traces.....	40
Plain Resonance.....	48
Elaborate.....	58

Cottage and Cabinet:

From 40 Guineas to 105 Guineas.

Pocket Grand Horizontal:

From 55 Guineas to 90 Guineas.

Imperial Grand Horizontal:

From 75 Guineas to 125 Guineas.

The above Instruments are all equally well manufactured and prepared for extreme climates. The Piccolo stands 3 feet 8 inches high, and the Pocket Grand is only 3 feet 4 inches long. A liberal Allowance is made to Exporters and Dealers. This extensive Reduction has been drawn from the Advertiser as a measure of protection to his New Piccolo Pianofortes, the success of which has induced certain manufacturers to announce and sell instruments of a different character under the same name, by which the public are deceived and the inventor injured.

BOOKS IN THE PRESS.

CAREY'S NATIONAL HISTORIES.

This day is published, price 7s. 6d. cloth, by C. Tilt, of Fleet Street,

THE HISTORY OF FRANCE,

FROM THE EARLIEST PERIOD.

By EMILE DE BONNECHOSE.

The Two Volumes of the French Edition comprised in the One of the Translation.

Historians must have their prejudices; and a consideration of this fact has given rise to the posed Series. For what is a History of France by an Englishman, but another version of History of England? Has not the success of the one been the defeat of the other? must be sought for by comparing the respective Histories as written by the National Hist. It is therefore proposed to translate and publish, at such prices as will bring them the reach of all classes, a Series of these truly National Histories.

THE HISTORY OF THE UNITED STATES OF AMERICA,

By JOHN FROST, of Philadelphia,

Is already published, and may be had done up in cloth, price 5s. 6d.

The HISTORY OF GERMANY, and others, in due course, will follow.

BENTLEY'S NEW PUBLICATIONS, new ready.

MR. G. F. R. JAMES'S NEW NOVEL. Charles Tyrrell.

Post 8vo. with Portrait of the Author, 18s. novel possesses more energy in the relation, and more interest, than perhaps any of the preceding notions Mr. James's "Alders."

NEW VOLUME OF BENTLEY'S STANDARD LIBRARY, containing Trollope's "Domestic Manners of the Americans."

with numerous Additions, and Fifteen Illustrations, Portrait of the Author, complete for Six Shillings.

Goodman's History of his Own Time. Being Memoirs of the Courts of Queen Elizabeth and King James I.

contains Letters from the most Eminent Personages of the time. The whole now first published from the Originals. Edited by the Rev. J. S. Brewer. 3 vols. 8vo. with Portraits.

Births, Deaths, and Marriages. By Theodore Hook, Esq. 3 vols.

And, in a few days,

Naval History of the United States.

By J. Fenimore Cooper, Esq. of "The Pilot," "The Red Rover," "Homeward Bound," &c. 3 vols. 8vo. with Portraits.

Richard Bentley, New Burlington Street, Publisher in Ordinary to Her Majesty.

URES on the CRITICISM and INTERPRETATION of the Bible, with Two Preliminary Essays on Theological Study and Theological Arrangements. Two new added, Two Lectures on the History of Interpretation.

2 vols. 8vo. with Portrait. (Now ready.)

HENRY COLBURN, PUBLISHER, 13 GREAT MARLBOROUGH STREET.
TO BE HAD OF ALL BOOKSELLERS, AND AT ALL THE LIBRARIES.

REVIEW OF NEW BOOKS.

The History and Antiquities of the Parish of Hammersmith. By Thomas Faulkner, author of "The Histories of Chelsea, Fulham, and Kensington." London, Nichols and Son. 1839.

THE well-known story of Oliver Goldsmith's recommendation respecting a dish of old peas has so indelibly fixed in the mind of all literary readers the precise locality of Hammersmith, as the way to Turnham Green, that it is unnecessary for us to explain the exact situation of the parish of which Mr. Faulkner has now presented us with the history, thus completing an account of the western suburbs of London.

As our taste, however, for meddling with parish matters has been very much on the decline since rose-water has gone out of fashion, we will not enter into the discussion of various grave and important subjects which, however, well become the character and dignity of parochial history, but proceed at random to make such selections from Mr. Faulkner's volume, as will best exemplify to those unacquainted with Hammersmith the manner in which various curious and amusing particulars are brought together, concerning this extensive outlet of our great metropolis.

The origin of the name of Hammersmith, which has puzzled former historians so much, and about which old Bowack in his "Antiquities of Middlesex," gives what he is obliged to admit to be a "fantastic relation," Mr. Faulkner derives from the Saxon words *ham* and *hythe*, i.e. the village creek, or harbour; which he would no doubt modify into Hamerhyth, and so on into Hamersmythe, and Hammersmith, but of these changes no evidence is offered, as in the earliest Court Rolls inspected by Mr. Faulkner, and which he states to be about the reign of Henry VII., "the name is written Hamersmith, being nearly the same as the modern spelling."

The population of this parish appears to have about doubled within the last thirty years, so wonderfully is London extending itself; stretching out its gigantic arms of brick and mortar in all directions, and covering the green fields, where in days of yore the worthy citizens were wont to rusticate, with rows of houses denominated "places," and "crescents," and "villas," which "dust boxes," as the latter have been termed, when "to be let or sold," are usually described as "charming rural retreats, delightfully situate in an improving neighbourhood, and within a convenient distance of the metropolis." It is true, that with these improvements—if the substitution of villas that spring up like mushrooms and look like what they are not, by means of stucco and cast-iron, can be so called; other improvements have taken place. How wonderful would a paragraph now sound, which announced that the Duke of Devonshire, in proceeding to his seat, at Chiswick, from London, was stopped by a highwayman and robbed close to the entrance of the Horticultural Gardens!

* Why not derive it from the obvious action of a smith hammering on his anvil? the distance from London and the mode of travelling in the olden times rendering such a locale not unlikely for such a trade.—*Ed. L. G.*

What a sensation would this intelligence create in the fashionable world! Yet, in the history of Hammersmith, we find Mr. Faulkner recording that, little more than half a century ago, viz. on the 3d September, 1776, "The lord mayor of London was robbed near Turnham Green in his chaise and four, in sight of all his retinue, by a single highwayman, who swore he would shoot the first man that made resistance."

A mighty revolution is in progress; "gas, steam, and lithography," are changing the world. The two former appear to have nearly destroyed the fishery of Hammersmith, "which branch of commerce," to use Mr. Faulkner's words, "in former times, yielded much profit and gave employment to a great number of hands, but it is lamentable to observe it in its present depressed state, arising chiefly from the agitation of the waters, caused by the daily passage of the steam-boats, which frighten away and destroy the fish."

At Hammersmith we are told that

"Flounders are taken all the year, and were formerly caught in great abundance; but since the completion of the docks below London bridge, they have almost disappeared, owing to the spawn being carried by the tide into the docks, where it is destroyed by the water being impregnated with the copper with which the bottoms of the vessels are covered, as well as by the agitation caused by the numerous steam-boats, which destroy the spawn and cast it on shore. Smelt-fishing begins on the 25th of March, above London Bridge; but so very few have appeared here during the last five years, that the product scarcely pays the fishermen for their labour in catching them. Salmon-fishing begins on the 1st of January, and ends on the 4th of September. The salmon formerly caught here were highly esteemed, and sold for from five to twelve shillings a-pound; but they also have abandoned these parts of the Thames from the above-mentioned causes, and now frequent the Medway, where they are considered merely as salt-water fish. It is more than ten years since a salmon was seen either at Fulham or Hammersmith; and the poor fishermen have been obliged to sell all their expensive salmon drags. Barbel was formerly taken in great abundance in the season, which begins on the 11th of July and ends on the 1st March: this branch of the fishery still continues, but in a very depressed state. Sturgeons are sometimes taken hereabouts; they are considered as royal fish, and are claimed by the lord mayor as conservator of the river Thames: it is about four years since the last was caught here, and for which the lord mayor gave the fishermen three guineas, previously to its being presented to the king. Eels are caught hereabouts very large and fine. The principal method of taking them is by pots made of basket-work, laid at the bottom of the river. A great quantity was also caught by bobbing; but the large eels have entirely disappeared, and small ones only are now taken, in diminished numbers. The season for blennetting for roach and dace, which is performed with a small drift net with boards, begins on the 1st of July. They are caught

here in great abundance, especially after a heavy rain. Their scales are sold to the Jews for the purpose of making false pearls, and were once worth from twelve shillings to a guinea per quart; but now they are sold for about eight shillings. Lamprey-fishing begins on the 24th of August, and ends on the 30th of March. Between Marlow Lock and Battersea, which is a distance of about fifty miles, in all the deep waters, the lampreys were frequently caught in great plenty, and were sold to the Dutch, as a bait for their turbot and other fisheries. In one season, it is said there have been sold not less than five hundred thousand. The price of the lampreys was forty shillings per thousand; but the Dutch having contracted for an increased quantity at sixty shillings, it rendered them so scarce, as to raise the price for our own use to nearly six pounds. The Thames has sometimes furnished upward of a million; but the steam-boats have driven them higher up the river; and now none, or but few, are caught at Hammersmith."

Mr. Faulkner gives a long and interesting account of the Benedictine Convent, which has existed at Hammersmith since the death of Charles II.; and which was established there by Mrs. Frances Bedingfield, a relation of the first baronet of that family. A school which was opened in this convent for the education of young ladies accounts for some otherwise very scandalous entries to be found in the parish register, viz.: "1672. Mrs. Bedingfield's child buried. Nine shillings." Again, in "1705. A child from the nunnery. Eighteen shillings." And in the following year, "A child from the nunnery." While speaking of the parish registers of Hammersmith, we may add that upon the burial entry "1683, Lucy Walters, June 5," Mr. Faulkner observes: "The coincidence of this name with the unfortunate mother of the Duke of Monmouth has led to its extraction; though the death of that person is said to have taken place in Paris."

Our limits prevent us making further extracts from Mr. Faulkner's volume, which our readers will readily perceive that we are tempted to do, when we mention as among the distinguished residents of Hammersmith, at various times, who are particularly noticed, the queen-dowager of Charles II.; Caroline, the queen of George IV.; Lady Craven, afterwards Margravine of Anspach; Mrs. Billington; Mrs. Mountain; Cipriani, De Louthenberg, and Hoffman, the painters; Worlidge, the engraver; Arthur Murphy, &c. From among other anecdotes of less celebrated parishioners, we select the following, with which we must conclude:—

In a house not far from the Broadway "resided Mr. Speer, ironmonger and smith, who was born on the 4th of June, 1738, the birthday of his late majesty, George III., and nearly at the same hour; he was also married on the same day, and died nearly at the same hour as the king, viz. on Saturday evening, January 29, 1820, at about nine o'clock, aged eighty-two. This family have been resident inhabitants of the town ever since the reign of Queen Elizabeth. Richard Speer was in possession of lands

near Bradmore in the reign of James I., as appears by a deed appertaining to Pallingswick manor. The last descendant of this family is Mr. Richard Speer, who resides in the town, and enjoys good health, at the age of seventy-eight. He still lives in the same house in which he was born, and sleeps in the same room in which he drew his first breath, and has here carried on business for fifty-four years."

The work is illustrated by several wood engravings; which, although unequally executed, convey sufficiently the notion of the objects they are intended to represent.

Thirty Years in India; or, a Soldier's Reminiscences of Native and European Life in the Presidencies from 1808 to 1838. By Major H. Beran, late 27th Reg. E. I. C. Madras Infantry. 2 vols. 12mo. London, 1839. Richardson.

THIRTY years of varied experience are here thrown into the form of casual reminiscences, and largely interspersed with sporting adventures and anecdotes: for the gallant major seems to have been a very Nimrod in every jungle of "the Presidencies." Wherever he came, wo betide the *fera natura*; and fish, fowl, and beast of every kind that inhabited water, air, and earth, felt the mortal energy of his cunning and prowess:—

"A villager (he tells us in one of his earliest marches in India) informed me that some animal had taken up his quarters in a betel tope, from which he could not be expelled, and that he used at night to commit great havoc among their goats, and he requested my assistance to dislodge him. I took the necessary precautions to prevent escape, and, accompanied by some volunteers of my detachment, whom I posted at intervals round the place, entered it myself with a sepoy. We came suddenly on the object of our search, which rose up and snarled, displaying a formidable set of teeth, at no great distance. My fire was instantly given with effect, and it turned out to be a very large she-wolf, with two cubs, which we speared. A dreadful accident occurred to me near Gingee, when out snipe-shooting. While in the act of reloading, the powder-flask exploded in my hand, by which I was very much torn and burnt on the breast, face, and neck, and my eyes much injured. The cotton clothes I wore had also taken fire; on feeling this (as I could not see), I rolled in the wet morass, by which means the flames were extinguished. Two inches of the muzzle of the barrel, that had the flask in it, was burst open. As I was about forty miles from the nearest station where medical aid could be procured, I despatched a servant to Pondicherry on my arrival at my tent, to which I had to be led. I thought at times this mishap would have cost me the loss of sight, as all power of vision was gone for nearly a week. The natives most kindly eased the tortures and dreadful pain, by anointing the lacerated and burnt parts with cocoa-nut oil, and picking out the particles of powder that could be removed. All the benefit I derived from the European medical man at Pondicherry, was some goulard-water, of little or no use. I attribute the explosion to some of the paper having remained ignited in the barrel, as it was of that fuzzy description commonly used in bazaars, all my good wadding being at the time expended. It was a most providential escape that the large powder-flask did not fracture my head or hand, as it was blown out of sight!"

This is a fair specimen of the hunting ex-

ploits, of which, however, we must indulge our readers with a few further examples:—

"On his return from Bombay, Lieut. C. had a still more singular adventure near the same place. He entered the jungle in search of game, preceded by a favourite powerful dog, that had courage to seize any thing. The dog ran a little a-head, and suddenly made a noise as if choking. 'Run, master! a cheetah has caught your dog,' said the natives. Lieut. C. advanced cautiously, and saw a large heap, just the colour of a royal tiger, black and orange. In a few seconds he beheld the head and neck of an enormous boa-constrictor slowly uncoiling itself, and gliding towards him. He waited until half of the snake was out of the coil or lump, and then fired both barrels. One ball entered immediately behind the eye, the other about four inches from the head. The whole coil instantly fell, and revealed the poor dog crushed to death within the folds. In the meantime, all Lieut. C.'s followers had fled, and he was forced to go to a village for assistance. Having with some difficulty mustered a little band, he returned and brought out the snake, the dog, and a spotted deer, that the snake had killed, the scent of which had probably tempted the unfortunate dog. The carcass of the deer was so bruised, that even the lowest caste in the village refused to touch it, declaring that it was full of *sakar*, or venom of the *ashgur*, as they called the snake. The boa was twenty-three feet eight inches long, and about six feet in circumference. There was a large cake of fat all the way inside from the head to the tail, and of this the natives shewed great anxiety to obtain possession, declaring that it was an infallible cure for all diseases. The body was hung up on the banyan tree opposite the choultry, or inn of the village. People flocked from all parts of the village to see the monster, and many of the natives used to try whether it was possible to cut through the monster with a blow of a sword; but even after it was skinned, no person was found who could penetrate more than half-way at a single stroke.

"During my tour of command at Ryacottah, I had shooting of every description in its vicinity, as there was hardly a spot from fifteen to twenty miles round that I did not explore. In the hot weather, when most of the tanks and streams are dried up in the jungle, I used to shoot hog and deer at those springs which retained some moisture, by lying in wait behind a small screen, during moonlight nights, for the animals as they came to drink. One circumstance connected with this sporting will probably be novel to English readers, and will certainly be useful as a hint to those who practise fowling by night in India. I tried the experiment of fastening a fire-fly on the sight of my gun, and found it of the greatest value in directing my eye along the barrel, and enabling me to cover my object correctly."

Could one try a bit of phosphorus, or a farthing rushlight in England? But we proceed:—

"Having heard of some elephants that made their appearance in the neighbourhood of Ryacottah, and had committed great havoc among the gardens and frightened the natives, I went in pursuit, and overtook one after a chase of twelve miles, but he made off on the first shot, at such a rate as to baffle all hopes of coming up with him again. Night closed in before we could return, and we were obliged to sleep in a small village near Kistnagherry, from which we obtained some pillau, rice, &c. from my friend Golaum-Ally. This supply

was rendered more delicious by the fatigue and hunger we had undergone, and we were thereby so much refreshed as to be able to ascend the hill early next morning, when, with the assistance of a few natives, we unharboured some elk. I shot a fine buck, but the doe that was in company escaped by taking a most desperate leap down a rocky precipice of about sixty feet, after which, much to our astonishment, she went off unhurt. She had no other way of evading her pursuers than by this extraordinary bound; but, it must be observed, that elks possess great bone, strength, and agility."

"I had a most providential escape this day from a ball fired by one of the party at a hog, but the shot fortunately lodged in the tree behind which I was stationed. One night on the hill of Nundidroog, the sentry placed over a European prisoner confined in a solitary cell, was disturbed by his cries. On entering the cell he found he had been much alarmed by a cheetah springing up to the bars of the grated window, to which he clung, staring at him for some time. This circumstance, as also some other complaints of the loss of cattle belonging to the sepoys in the fort, where they used to graze them, determined some of the officers to try our luck on the approaching moonlight nights. Having made all the preliminary arrangements, namely, a pit, dug and fenced, and a bullock picketed to entice the tiger, several nights passed without any animal making its appearance, owing to the abundance of food which the ravenous beast obtained by the destruction of some village bullocks. Two of our party then lost patience, and would sit up no longer; however, Lieutenant B. and I resolved to make out the week, though we got rather drowsy towards the latter part of it. On the sixth night, about eleven o'clock, it being my watch, I heard the distant growl of a tiger, which, as he approached, became too distinct to be mistaken. I therefore immediately awoke my companion. Just then, the moon emerging from a cloud, shone brightly on one of the largest royal tigers I ever saw; he slowly and majestically kept pacing backward and forward several times, eyeing askance the bullock, which had become greatly alarmed and bellowed most lustily. I had some difficulty to prevent my friend from firing, his anxiety was so great; but he restrained it at the request of an experienced old native, who told us that the distance was too great and the time not yet arrived. Nearly half an hour elapsed in the most breathless suspense, ere he contracted his distance from us (which was about forty yards), disappearing at times in the shade of the trees and surrounding shrubs, as if some suspicion lurked within him of our proximity. Tigers are at times equally cautious and timid to attack, as they are bold and savage on other occasions. At last, by a side-long spring, he knocked over the bullock with a single blow on the haunch, and seizing the throat, lay across the body sucking the blood, growling and lashing his tail most fearfully. Now was the time! and we fired two barrels with such good effect, and so simultaneously, that he hardly ever moved; this tiger measured nearly twelve feet in length, from the nose to the extremity of the tail. Shortly after we killed a cheetah, and caught two others in traps baited with a kid. I recommended the leaden plugs used on this occasion, as they produce a most severe wound, smashing bone, and all before them. They are made to fit the gun, about two inches in length, containing three ounces of lead, and a quarter of an ounce

pewter. In one of our shooting parties, Colonel W., who was a most worthy man, and ardent admirer of field sports, became ill, from over-excitement, heat, and fatigue, in ascending Colarum-droog, which is the most steep and difficult peak of this range. Fortunately, a little water was procurable in the cleft of a rock, of which Lieutenant B. brought me in his hunting-cap, and thereby so novated the colonel, that he was in a short time able to get on his legs, though too weak to follow any sport; he was therefore obliged to turn home. This day was one of those that our during the rainy season, when occasional moods partly appear in contrast to the general arid sky of India, through which the sun's rays strike with greater intensity, as being more condensed; they thus render all exertion men exposed to their influence most oppressive. My constant excursions to most parts of the neighbourhood of Nundidroog, I found a rough black Scotch terrier most useful; particularly the commencement of the snipe season, when birds are scarce and difficult to find. His power of winding the birds was truly extraordinary; he generally led me to the exact spot where the snipe lay. This is not a solitary instance of the like faculty being exhibited by the Scotch terrier; at a subsequent period I and a dog of the same description remarkably for making a steady point; but I think it right to mention the circumstance, as sportsmen generally are not aware of the full value of terriers."

So much for Indian sports, and if the author had been sent to the East to do nothing else than shoot, he could not have painted them better. In his graver parts we are rather annoyed by the use of initial letters instead of names, where there is nothing that need be concealed. Sir A. B., Mr. C. D., Captain E., Lieutenant F., and Colonel G., are nonentities, and the loss of personal interest is a defect in a work of this kind. But, speaking of names, come now to an anecdote or two:—

"The amount of pay is now the general criterion by which the natives measure the relative ranks of European officers; whoever has the best pay is called *Berah-Sahib*, or the big gentleman, and a person of inferior pay is called *Chota-Sahib*, or the little gentleman." This curious nomenclature sometimes induces whimsical misapplications of epithet; remember two gentlemen of the same name, one six feet four, and the other four feet six, and the latter having the larger stipend, was always called the big gentleman, while the former was sentenced to bear the diminutive name."

A fatal mistake:—

"The extraordinary death of the doctor, some years after, by his own hand, is worthy of notice. On his removal to another regiment, having been falsely accused of taking or using improperly part of the medical stores, he was for a short time (till cleared of the charge by the opinion of a court of inquiry) suffering under a depression of spirits. Soon after, an officer of this regiment, one morning, sent to borrow a sword from another; but the servant, making a mistake, went and asked the doctor for his; who, on giving it, thought it was for the purpose of placing him under arrest again (as is the usual mode), and while under this erroneous impression, he blew out his brains." Mentioning the Pindarries, Major Bevan dates:—

"It would be impossible to give an adequate notion of the craft and perseverance displayed by these robbers in ascertaining the amount

and the exact position of any property they may covet; and the almost incredible deceptions they practise on the possessors. Precautions are almost useless for the contrivances employed. Horses ever so securely picketed and guarded, have been stolen from the midst of the camp; the whole property in a room or tent has been swept away without awakening the sleeping owner; nay, the very mattress has been removed by a skilful thief, without disturbing the slumbers of the officer by whom it was occupied. I witnessed the performance of this last-named feat when in camp at Trichinopoly, by one of the Colliries, a class of persons noted for their expertness and adroitness as thieves. It was then performed for a wager, to convince an incredulous officer of the surprising dexterity of Indian thieves. When the officer's breathing gave proof of his being in a sound sleep, the Colliry entered the room stealthily as a cat, taking with him a small chafing-dish on which he burned some intoxicating herbs, especially the seeds of the bang or hemp-plant, which is nearly as powerful a soporific as opium. He allowed the officer to inhale some of the stupefying fumes, and then gently tickled him with a feather; as he mechanically shrunk from the tickling, the thief adroitly pulled away the mattress, until he succeeded in removing it altogether, when he went out of the room without being detected."

In describing the ignorance of the natives of Hindustan of the chemical arts, especially as applied to manufactures, and, indeed, in noticing how far they are behind Europe in many arts, &c., which might turn their produce to most important commercial purposes, and the interchange of commodities of extreme value to both hemispheres, Major Bevan says:—

"Since my return to Europe I have seen with great pleasure and surprise the copies from the Egyptian monuments, published by Rosellini, Champollion, Wilkinson, and others. Had I been ignorant of their origin, I should have supposed that those which represent the condition of Egyptian manufactures in the age of the Pharaohs were pictures of Hindoo artisans at the present day. The most remarkable feature in Asiatic civilisation, as has been frequently observed, is its stereotype character: in the arts especially, there seems to have been an early limit set to invention, which the system of caste rendered fixed and inviolable. A friend of mine, some years ago, who devoted much of his attention to the intellectual improvement of India, maintained that instruction in the arts was far more likely to accomplish this object than scholastic education: it was a favourite aphorism with him, that 'an improved plough is an excellent missionary, and a box of carpenter's tools worth a dozen schoolmasters, because the value of education, whether secular or religious, cannot be appreciated by the uneducated unless its connexion with material improvement be distinctly shewn.' I fully agree with him in these views; they have, indeed, a wider range than India, for they are applicable to the uninstructed in every part of the globe. His reasoning appears to me so conclusive, that I think I shall confer a benefit on my readers by transferring a portion of his paper on native education to these pages. 'What, then, is the proximate cause of the want of improvement and nearly stationary condition of India? What can it be but the comparative indolence and want of enterprise characteristic of the people? But whence comes this indifference? Does it exist where a certain and immediate prospect of advantage lies open to their perception? This can

scarcely be said. The inactivity complained of must therefore originate, in a great measure at least, in the want of a full and distinct understanding of the advantage of pushing enterprise into other than the customary channels. And how is it that such perception is wanting? Custom, long and deeply rooted, prejudice, and ignorance (connected no doubt, in part, with the physical character of the people, but attributable still more to the nature and effects, which have been operating for ages, of the religion they profess, and the civil institutions arising from it) have obscured the reasoning powers of the nation, and blunted the measure of ingenuity which they undoubtedly possess, so as to debar them from the attainment of just principles in philosophy, from the discovery of truth in the sciences; and as a consequence, in some degree necessary, from a knowledge of the simplest and most effectual processes in the mechanical and other arts. In the meanwhile, the almost total want of intercourse with more enlightened foreigners, until a recent period, rendered it impossible that the valuable knowledge, of which, as long experience had shewn, there were no indigenous germs, could be introduced from other quarters. The ultimate principle, it appears, then, to which we are conducted by this analysis, is the ignorance of the people, which disables them from perceiving, and profiting by, those means of bettering their condition and augmenting the national wealth, which their interest would otherwise render them quick to seize upon and turn to advantage."

In the like sensible manner the author indicates the remedies for these evils; but our limit is exceeded, and we must conclude with recommending a very entertaining, and, when serious, a very intelligent publication. In doing so we must omit all details about the ghosts of tigers, legends of the country, management of the army, traditions, state of India, moral and political, and other topics of interest; all which will be found in these volumes, treated in the manner we have shewn by the mixed character of our extracts.

Ignatia, and other Poems. By Mary Ann Browne, author of "Mont Blanc," &c. 12mo. pp. 176. London, 1838. Hamilton and Co. Liverpool, Marples.

BUT few things afford us so much pleasure in this "matter-of-fact" age as to alight unexpectedly upon a volume of true poetry,—one which has perchance been buried for weeks beneath the pile of volumes that contain verses, and comes forth at last uncontaminated from all the dullness amongst which it has so long slumbered. Such a volume are we about to bring before our readers: and that, too, without endeavouring to persuade them to place implicit faith in our assertions only; for the passages which we have marked for quotation must of themselves be the proof on which we rest our own judgment, and appeal to the opinions of others.

We have but seldom seen of late the rich descriptive talent of poetry, accompanied with so much deep and earnest feeling, and stirring passion, as in the present work; and, without further remark, or even selection, give the following, which is the opening of the poem:—

"Summer and sunshine! The rich rose is wreathing
Around the porches of my father's hall,
Wild incense from the jasmine flower is breathing.
The fountain's waves in silver plashes fall
Beneath the broad old chestnuts, and the trees
Of blossomed times are all alive with bees;
Green are the boughs where the young orange blazes,
And the low vines upon the mountain's sides

Already have their wealth of living gold
And amethyst, beneath the shadowy fold
Of their green leaves. Sunshine and summer days!
The earth its festival time of gladness hath,
Yet not a flower-scent comes upon my path,
Save when some long-lived breath mournfully strays
On the chill sea-wind, from the smiling land,
And pauses lingering on this island strand.

"O glorious Ocean! well
It fits my weary heart near thee to dwell;
Thou chapest not—and yet art full of change;
The tempest chafes thee, the wild winds may range
Across thy crystal fields, and yet again
Thou art the same, the salt and tasteless main;
Thou hast a voice—a strong, eternal tone,
A low, deep burden, an unvarying moan,
Heard even amidst thy calm; and when the wind
Whistles and raves above thee, still that voice
Doth with the louder sound accord and blend,
And in my lonely heart an echo find
Unto its moan; and therefore make I choice
Of thee, cold Ocean, for my latest friend."

The following is also very beautiful:—

"My mother, my dear mother! how we met
In thought and feeling! I was reconciled
To all the tasks thou didst so sweetly set,
Whilst thou to pleasure me wast half a child;—
Still lingering near me in my play-time hours,
Helping to feed my birds, to rear my flowers,
Telling me tales, to please my childhood planned,
Yet full of the romance of thy far land.
Then how thine eye would kindle! how thy cheek
Would glow—thy form grow statelier at the tale!"

There are some fine natural touches in the adjoining lines—a simplicity and a feeling that all can appreciate:—

"Ere long, one summer night
I watched beside her, the full moon shone bright
Into her chamber, and the lamp gleamed faint
Amidst that lustre. On her couch she lay
So beautiful, we might have deemed some saint
Had paused to rest there on her pilgrim way.
She slept—my father, sad and overworn,
Retired and left me; till the breaking morn
I sat in the deep window, nor would stir,
Lest I should chase that blessed sleep from her;
But when the sunshine filled the quiet room,
I put aside the curtain's purple gloom;
Still did that face its calm expression keep,
But oh! I saw at once this was not sleep!
And so my mother died."

The following description of recovering from delirium, and the sensations produced, belong to a very high order of poetry: it may remind the reader of some of those dark passages which Byron was too fond of brooding over; but it will lose nothing if even compared with some of his best and similar pieces:—

"Once methought I lay
Upon a mountain top, clouds drifted o'er me,
The wild flowers choked the mountain's upward way,
And far below the blue sea lay before me;
I heard the winds so whispering around,
I heard the sea—breeze murmuring to the wave,
I heard it rustling in the echoing cave,
I saw its ripple on the blue profound;—
I longed to feel it on my burning brow,
But that was charged, so that it could not feel;
I longed to plunge into the waves below—
My limbs were held with unseen bonds—the reel
Of the bright waters maddened me—in vain
I strove and struggled with my viewless chain,
And the dream vanished. I was in a dell,
Walled in with many a rocky pinnacle,
Clear drawn against the sky; that sky was gray,
It was the evening of an autumn day,
And on one range of mountains the black pines
Heaved 'gainst the leaden sky, like the dark lines
Of stormy ocean waves; and far beneath
There rolled a torrent, deep and still as death;
Noiseless as moveless giant phantoms on,
It poured into the forest; there was one
Huge tree that bent above it, spreading wide
Its aged arms, yet not in summer pride,
But wintry majesty—from that vast tree
There came a heavy moan, and suddenly
'Twas full of faces that did jeer and jibe;
And then, as if to answer every mock,
From the thick waters, and the o'erhanging rock,
And waving pines, came forth a fearful tribe;
All the dark clefts, and rifts, and secret places,
Gave up a myriad of fantastic faces;
Then a strange concert rose, the trees began
To bend as with a sudden hurricane,
And the black waters roared, and yet through all
The fearful din came the delicious fall
Of soft, sweet music, separate and apart;
With those wild sounds it came, but did not blend;
It seemed to melt into the very heart,
Like the low, soothing voice of some kind friend,
And then, methought, the scene less dreary grew,
The heavens had sudden streaks of wavy blue;

And a soft breath, which I had panted for
Through all those fantasies in vain, was now
Breathed freshly on my faint and feverish brow;
The vision melted—was it dreaming, or
Only delirium? On my couch I lay
In mine own chamber—'t was the hour when day
Awakens—pleasant air was softly streaming
Over mine eyes—I raised my languid head,
'T was cool, 't was clear; the early light was beaming,
And through the window fell its radiance red,
And the crisp tendrils of the jessamine
Peeped through the open lattice, where they crept
Mingling with roses many a graceful twine;—
For very love of those sweet flowers I wept
In my relief and weakness. Only those
On whom the fever's parching power hath been,
Can tell how, when the weary eyes unclosed,
To life returning, one doth love the rose,
Or any flower, or leaf of living green!
I had a longing to my heart to clasp them,
Yet was I far too weak to rise and grasp them;
I was alone—ah, lonely then indeed."

The annexed extract is a little gem, the last ten lines of it would do honour to the name of any of our greatest poets. Reader, look over it, and if thou hast a love for the memories of the dead, it will find its way at once to thy heart:—

"Sometimes, when sunset fell, I sought the place
Where lay the ashes of my noble race;
Where, underneath a yew-tree's solemn gloom,
Couched the pale marble of my parents' tomb:
In childhood I had felt a shrinking fear
When that lone spot my careless feet came near,
A strange averting of the startled eye,
When in the twilight hour I passed it by;
But now it seems a refuge for my heart,
A spot where my affections had a part;
Oh how the grave doth lose its strangeness, when
Our loved are lying there! 't is like a land
Divided from us by the mighty main,
When kindred go to dwell upon its strand.
A land whose name scarce an impression made
Before they went there; but becomes possessed
At once with deep and thrilling interest;
Imagination doth its shores invade,
Passing with viewless wing the pathless sea,
And picturing what its hidden scenes may be."

The following description of the feelings accompanying a first confession of love, are very graphic; and if our memory serves us right, want but the feminine substituting, to realise what we ourselves have dreamed over some forty years ago, when neither gout nor gray hairs troubled us. But as Falstaff says, "We are old now, and inquire not what stuff they will have a kirtle of." But here are the extracts, and such as we cannot offer every day to our readers:—

"How different were our meetings from that time
Unto the former ones—when I would look
For hours upon the pathway he must climb
Up the green mountain-side, yet seize a book
The moment he appeared, nor lift mine eyes
Until he stood beside me, and then seem
Awakened suddenly from some deep dream,
As if his presence were a vast surprise:
But now with bounding gladness, forth I went
To meet him half-way up the steep ascent;
And now I dared to lean upon his arm,
And look into his face, and talk, and smile:
And now I wandered with him many a mile,
Unwearied, listening to the gentle charm
Of his low voice; and in some green retreat
We lingered oft, and when he found a seat
Upon some fallen tree, how at his feet
I have reclined, up-looking in his face;
Whilst he entwined fresh blossoms in my hair;
No wreaths I ever wore had such a grace
As those my Leon's hair had twisted there.
I never thought such hours could tire or cloy—
I was a very child amidst my joy.
But most, when evening fell, I loved to go
Unto the spot where first our love was told,
And, gazing on the watery waste below,
With all its heaving waves of living gold,
To ponder on my love till thought grew dim,
Confused in bliss—then turn, and gaze on him.
Oh, those deep hours of silent happiness!
It was enough for me to know and feel
We loved: 't was joy that nothing may express,
To feel the same cool wind-breath softly steal
Over my forehead, that o'er his had swept,
Over my lips, that o'er his own had crept!
One beautiful evening, long we stood and gazed,
Yet spake not:—lightly resting on his arm,
I watched the intense and burning west, that blazed
So gorgeously, and would not break the charm,
Even by seeking in his eyes to find
If the same thoughts were passing through his mind;
I felt, that moment, that a look, a touch,
A whisper, or a breath, would be too much;

And still I gazed until the thick mists dimmed
My dazzled eyes, and my full heart o'erbrimmed
Found the relief of tears, for its excess
Of cloudless joy and yearning tenderness."

Here we must halt, without endeavouring to unravel the story of this beautiful poem, which is throughout well sustained. Twenty years ago, such a work as this would have made a great sensation in the world of letters; but a great change has taken place since then in the taste for poetry, and we are sorry to add, in too many instances, for the worse. We will not say that our fair authoress ranks amongst the very highest of English poets, but we do think that our extracts will fully justify us in asserting that she leads the way by many a long league, and far outdistances the general class of modern poets.

Lady Chatterton's South of Ireland.

[Conclusion.]

THE legend omitted in our last, and well worthy of the charming volumes to which it belongs:—

"A little lower down (says our fair authoress) I saw, to the left of the road, at the distance of three or four fields, a circular stone fort, apparently resembling those of Cahir-Gal and Steague, but inferior in preservation. The piper shewed me a very curious building in a field some way to the right of the road. It consisted of two circular mounds of stones, one within the other, but not at equal distances, the inner circle being nearer to the outer one on the northern side. There is an entrance to a subterranean passage and chamber in the centre of the inner circle. The piper said it had been explored some years ago by a gentleman, who found the passage ran eastwards for some distance. The tradition of the place is, that it extends as far as another building of the same kind, which the piper pointed out to me, on the side of a mountain about half a mile distant, near which stand four large high stones, which I could plainly discern. 'How strange,' I observed, 'that none of these stones should have been removed; that these old altars and edifices should have remained for so many centuries, when nothing would be easier than to take them away, and to build cottages or walls with them.' 'Faix thin,' said the old man, 'it would be aisy enough to do that same; but sure, there's anould spirit o' the place, that do be always guarding every stone. It takes different forms, and, maybe, 'tis in that big black crow, that's perched upon the top of the stone this blessed minute, looking for all the world as wise as a Christian, and hearkening, perhaps, to every word we're sayin, the Lord save us! I'll tell you,' he continued, in a lower tone, when we had reached the bottom of the field: 'I'll tell you about a man that offended the spirit ont upon a time; 'twas Mick Purcell, as likely and nate a boy as you'd see in your day's walk, and married to the purtiest girl in the county of Kerry. He lived in a little cabin down in that village ye see yonder: the habitation was not so illigant as it might be, but 'twas there his father lived afore him, and he had been born and bred in it himself. Now Mick Purcell had two fine cows that fed in the commons out there, and two beautiful pratee fields up here; so says his wife to him, one fine morning, 'Mick, dear, suppose you were to build a nice new little house up near the pratee fields above; there's plenty o' stones close by in those old buildings, all convaynient to your hand.' 'God forbid,' says Mick, 'that I should do the likes o' that, or lay a finger on ere a stone of theould buildin.' 'An' why so?' says she; 'sure what better use in life could they be put to, than to

build a house, a nice little dawning house, like Jim Ryan's, the boy who wanted to marry me afore I took you, Mick?" "I'll have nothing to do with them stones, good nor bad," said Mick; "so don't be coaxing me now, woman. They say that there's life in them; don't ye remember hearing tell what happened near Dingle, the Lord save us! how the boy grew as big as the house in one minute, for having taken away the bell-stone on the top o' the ould chapel?" "That was the holy ground, and consecrated by the blessed St. Patrick himself," said the wife; "no wonder he suffered for his audaciousness: but I see how it is; ye won't stir a step for my axing, or do the last hand's turn to content yer own Jenny, after her leaving all the other boys that was coorting her, to marry a spalpeen like you. 'Twasn't that way Jenny Ryan would have served me.' With that Jenny begins to cry, and to rock herself to and fro, and wipe her eyes with the blue apron. So Mick saw there was no use in going contrary to her; he was a tinder-hearted gossoon, and next morning up he gets and begins taking down the stones from the side o' the ould building. Just as he was going to carry them to the place where his wife wanted to have the new house built, a beautiful bird came and perched on the top of the ancient edifice. Its feathers shone like gold, and its two eyes peered into Jim's face with such a tindher beseeching look, that it melted the heart within him, and made him stand stock-still. "Arrah what's keeping you, Mick, dear?" calls Jenny, from the other end o' the field; "and why don't you bring the stones to me, jewel?" Mick felt quite ashamed like, at being knocked of a heap that way by a dumb creature's eyes; so he takes courage, and was going off with his hands full, when the bird flutters out before him, and looked at him with the most threatening angry look ever you see. "A plague on you," cries Mick, "for all your fine gold feathers! Why, what is it that ails ye at all, an' can't ye let me go in peace?" With that the bird fluttered nearer, and seemed fairly to block up the passage, while its eyes shone upon him like the fire o' hell. Mick's blood was up, for he thought Jenny would make game of him for being such a born fool and omedhaun, as to be hindered by a bit of a bird; so he ups and he throws one o' the stones at the craythur, but though 'twas close to him he missed it, and the two eyes blazed out with more anger than ever. With that, my dear, Mick seizes a larger stone, and, holding it up with both hands, aimed a desperate blow at the beautiful bird. This time he succeeded; the stone struck the golden wings with a sound as if all the plates and dishes in Ireland, and the rocks and the valleys, were striking together, and Mick fell all along upon the ground as if he had been shot. Even Jenny, at the distance she was standing, fell on her face quite stunned, and 'twas long afore she recovered her senses enough to get up and look after her husband. At last she come to, and went sarching about for Mick. She found him sitting on the heap o' stones, the very picture of wo. "What's the matter with you, avourneen machree?" says she, looking in his face as coaxing as possible, and putting on a smile as sweet as the best lump sugar, as if to make up for the mischief she had done with her fine vagaries about the new house. "What's the matter indeed!" cries Mick; "why 'tis ruined I am, woman alive! Bad luck to yourself for putting me up to disturb those blessed stones; taking liberties with them, sure, like a cow with a haystack in winter. See what a holy shew you've

made o' me. I can't stand, no more than a trout or a salmon. 'Tis crippled for life I am entirely.' And so it was, sure enough; the moment Mick hit the golden bird, that moment he lost the use o' his legs, and never recovered them to his dying day."

MISCELLANEOUS.

Faust; a Tragedy. By J. W. Von Goethe. Translated into English Verse, by J. Birch, Esq. Embellished by Twenty-nine Engravings, on Steel, after Retsch. Large 8vo. pp. 276. London, 1839. Black and Armstrong. Leipsig, Brockhaus.

It is with regret we see another laborious and painstaking effort to translate *Faust*, and especially into the most unfit medium, English rhyme. Even had we been without the previous versions of this drama, the attempt could not, in our opinion, have been successful. As it is, it is a literary curiosity, and a few lines will shew of what quality:—

"Fourth Journeyman. Let's all to Burgdorf—we're sure of there

The prettiest girls, and the best of beer,
And bang-up battling!

A Fifth. What, madcap! Hast forgotten thy thruppling?

Does the hide itch again, for—thou knowest what!
The name's enough for me—it makes one hot.

First Servant Girl. Marry come up! And what th' better should I be,

To see him coaxing of you, and slighting me?
He'll dance with none but you upon the deals!

Fine sport, indeed, to see you kicking up your heels!

A Student. Zounds, how those buxom wenches step it out!

Come let's o'ertake, and toddle 'em about;
A flagon of strong beer, good pungent tobacco,
And a tny lass, is pastime comme il faut.

There once was a Rat made her nest in a cellar,
She lived upon nothing but fat bacon and butter—
By dint of such living she waxed quite oecular.

One should not with the fair in love affairs love-joke."

We have said enough for so much toil of authorship; we should be sorry to dwell on the failure. *Parturiunt montes, nascitur ridiculus mus.* We are told that Mr. Birch is really a very clever German scholar, and feel annoyed that our critical duties oblige us to condemn his present translation. He is, however, no poet; and we think it would be advisable for him to stick to humble prose.

The Metropolitan Pulpit; or, Sketches of the most Popular Preachers in London. By the Author of "Random Recollections," &c. &c. 2 vols. London, 1839. Virtue.

THESE sketches bear a close resemblance to the writer's preceding publications. With as much observation as his opportunities have afforded, he dashes away his pulpit portraiture; and if frequently in error, and often guessing as well as he can instead of being able exactly to ascertain his facts, he, we believe, fairly tries to have his statements as correct as possible. His present subject is a popular one with the multitude who run after popular preaching; and we dare say, without venturing on its examination, that it will answer the purposes of the very industrious author.

England and its People, &c., by Emily Taylor. (London, Houlston and Co.)—A familiar review of our history for very young folks, and with very droll woodcuts, from which they could learn little correctly.

The Ladies' Flower Garden, by Mrs. Loudon. No. IV. (London, Smith.)—Continuing in freshness and beauty, this sweet illustration of Oriental Annuals wins its way wherever the natural charms of these rich and lovely flowers are admired and cultivated.

The Journal of the English Agricultural Society, Vol. I. Part I. (London, Murray.)—We are glad to see a publication of this description, as every thing which tends to the diffusion of agricultural knowledge must have a good effect. We know how slowly improvements march, and hail any means to expedite their movement.

A Brief Survey of Physical and Fossil Geology. Being Two Lectures delivered at the Marylebone, &c. Institution, by F. J. Francis. Pp. 175. (London, Hatchard and Co.)—These

lectures having been popular in their delivery, Mr. Francis has been requested to put them into a more permanent form, in which they are well calculated to inform a more numerous class than in their original shape.

A Popular Treatise on the Diseases of the Eye, &c., by George Corfe. 8vo. pp. 304. (London, Baines; Kennerly.)—This is a curious book, with considerable novelty of observation, but it treats of subjects more fit for medical readers than for our varied classes, and therefore we must content ourselves with recommending it to their notice. Its treatment of the oils, which form part of the human system, is well worthy of attention.

A Manual of the Diseases of the Eye, &c., by S. Littell, M.D., revised, &c. by H. Houston. Pp. 307. (London, Churchill.)—A very clever treatise, in which the diseases to which the eye is liable are acutely investigated, and suitable remedies proposed.

ARTS AND SCIENCES.

ROYAL INSTITUTION.

FRIDAY, May 3. Mr. Solly 'On the Structure of the Bird, in relation to its Habits of Life, and Position in the Animal Kingdom.' In the study of the medical profession, Mr. Solly observed, it is as useless for its votaries to confine their attention to the vital phenomena of the human being, as it would be for the investigators of geological science to the small and limited portion of the crust of the earth. The most extended views and examinations of the animal creation, in all its complicate and wonderful structure, are requisite to the former; not by experimental cruelties on the living or dying creature, but by an intimate and practical acquaintance with its organisation. The day is gone by for the confined views of those who think that physiology can be studied without the aid of comparative anatomy. He then proceeded to offer a few general observations on the organisation of the bird, dwelling on its perfection, as marking the most exquisite design. He also alluded to those organs which (and instances are to be found in the whole animal kingdom), though useless to the animal itself, termed rudimentary, are carried out in another species, as proving that the whole must be the result of general laws, ordained by Almighty Power,—regulating not merely individual, but universal organisation. With regard to the habits of the bird, the first phenomenon which presents itself to the general observer is its power to elevate itself against the power of gravity. Is there other than the bird possessing this power? After adverting to the bat, Mr. Solly referred to that species of lizard which springs and flutters in the air for a short time, but does not raise itself against gravity. The skeleton of this lizard (*Draco volans*) is principally interesting from the fact, that all its ribs are not bent forwards, as in other creatures, for the protection of its vital organs; but some of them are spread out, and covered with a membrane, like an extended wing, by which it sustains itself for a while. Amongst fossil animals of this kind, the pterodactylus has excited great attention, and some have questioned whether or not it was a bird. It did not, however, possess an instrument to dress feathers essentially necessary for this whole class, and therefore the question is easily solved. The principal point in the organisation of birds, in reference to the power of flight, is the air-cells they possess; the trachea, or windpipe, communicating not only with the lungs, but also with the bones, which are firm and unyielding cylinders, permeated with air, and thus are almost as light as paper. These air-cells are likewise found in the cavities of the abdomen, chest, &c., and their number and extent are in proportion to that power. Thus the apteryx, a bird without external wings, one of the interesting links between the bird and mammalia, has all its bones solid, not one permeated, whereas the bones of the crested horn-

bill are all hollow. This beautiful provision, though peculiar to this division of the vertebrata, has its parallel in the organisation of the insect, which likewise has its body furnished with air-vessels. The general anatomy of the bird was then illustrated by numerous diagrams, and by a skeleton of the adjutant, or gigantic crane;—the arrangement of the bones of the neck to prevent injury to the spinal cord in all the turnings and twistings, to which it is liable when acting as an instrument of prehension and protection, as also the construction and adaptation of the bones and muscles of the lower extremities. One most striking peculiarity in the formation of the skeletons of birds is the projection from the sternum, or breastbone. The plain surface, as in man, would not be sufficient for the attachment of those enormous muscles which move the wings, and therefore the breastbone is projected in all birds that fly, but not in the ostrich, cassowary, &c. The collar-bones of birds, familiarly called the merrythought, are of great strength in birds enjoying powers of high and continued flight; and the coracoid bone, which, in the human being, is merely a short process from the scapula, in the bird is prolonged to the sternum, performing, as explained by Mr. Owen in his interesting observations on the apteryx, the most important part in the dilatation of the chest through the action of the serratus magnus on the scapula. The muscular system is also beautifully adapted to the habits of the bird. The pectoral muscles in the human subject consist of two parts, one proceeding from the clavicle down, the other from the sternum directly up to the os humeri. That which passes up and inserted near to the centre of motion, is called into action when a rapid movement of the arms is required; the other, when power is to be gained in the action, as in lifting. In the bird, where great force is necessary to depress the wing, no portion of the muscle is folded, or inserted above the other, but all in the same line, into the os humeri. Mr. Solly then demonstrated, by means of a diagram, that when the larger pectoral muscle is turned back the second pectoral is exposed, which acts through a pulley to elevate the wing; and that these two muscles, arising from the same point of the sternum, are placed there, like ballast, to balance the floating bird. The provision of a muscle, with its tendon running in front of the knee-joint, and then attached to the flexor muscles of the toes, by which the bird is enabled to roost without muscular exertion, was described. Mr. Solly eulogised Hunter, and agreed with him that, although the diaphragm, as a septum dividing the chest from the abdomen, with one exception, does not exist, still in all birds there is something more or less analogous to it. The rudimentary appearance of the diaphragm in the raven, and the perfect septum it forms in the apteryx, were demonstrated. He then cursorily alluded to the nervous system, as the best guide for the divisions in the animal kingdom, and general form in the birds, and passed on to the organs of digestion and the parts connected therewith, directing attention to the curious points, like brushes, at the base of the tongue in graminivorous birds, and surrounding the aperture of the larynx. Mr. Solly considers these points do really brush down small portions of food which it would be difficult for the oesophagus to clasp. This inability of the oesophagus to grasp a small body is frequently experienced in swallowing a pill. When the food is swallowed it is pushed into the crop, where it is more or less dissolved, and passed on to the gizzard to be ground down.

This operation of grinding is performed in other vertebrata in the mouth, by means of strong massy teeth; but if that of birds were supplied with teeth, great difficulty would be experienced to support, during flight, the consequently weighty head. Therefore, the graminivorous bird picks up teeth in the shape of stones, gravelly pieces of brick, &c. The stomach of the crocodile curiously resembles in appearance the gizzard, shewing one, out of numerous alliances, between the bird and the reptile. The organs of circulation and respiration, so highly developed in the bird, concluded this interesting illustration. Mr. Solly treated the subject with great ease and skill; and although he made the best and utmost use of the space allotted for these illustrations, the facts developed by the comparative anatomists are so numerous, that it was impossible for him in that time to give the general reader a perfect idea of all the proofs of exquisite and benevolent design. Our own limits of necessity preclude us laying before our readers all the proofs which were demonstrated by Mr. Solly.

GEOLOGICAL SOCIETY.

[Continued from our last.]

APRIL 24.—4. 'Classification of the older Rocks of Devonshire and Cornwall,' by Professor Sedgwick and Mr. Murchison. In a communication read in May 1837, the authors explained their general views respecting the older rocks of Devonshire and Cornwall, but having recently been induced, on zoological evidence, not then obtained, to make a change in the lower part of their classification, they give in this paper their reasons for doing so. With respect, however, to the geological age of the culmiferous strata occupying the greater portion of Devonshire, they adhere to their first opinion, and consider them the equivalents of the true coal measures of other parts of England. In the grouping, succession, and lithological characters of the great series of beds underlying the culmiferous strata, they likewise make no alteration; and used, in reading the paper, the same section which they exhibited to the British Association at Bristol, in 1835, when they first explained the true position of the culm deposit. On their first examination of Devonshire and Cornwall, they were induced to consider the great slaty and sandstone districts forming Exmoor and the Quantocks on the north, and a large portion of southern Devon and the whole of Cornwall, as the lower part of the Silurian system, and the upper part of the Cambrian, having been misled by the slaty character of the rocks, and its supposed proof of geological antiquity. A recent examination, however, of the fossils collected by the authors, or kindly sent to them for examination by the Rev. R. Hennes and the Rev. D. Williams, has proved that the strata immediately subjacent to the culm series (shewn on a former occasion to contain true coal-measure plants), enclose fossils resembling those in the lower carboniferous strata of the north of England; that the great mass of intermediate beds are characterised by peculiar fossils; and that the lowest strata contain some which partake of the same type, and others which belong to the upper Silurian formations. On these grounds, therefore, the authors have been induced to remove the slates and older sandstones of Devon and Cornwall from the position they first assigned to them, and to place them on the parallel of the old red sandstone, the intermediate series of strata between the carboniferous and Silurian systems.

Had, however, the whole of the evidence derived from organic remains been before the authors in 1836, the geological age of the strata could not then have been determined, as the fossils of the Silurian system, one of the terms of comparison, had not been fully ascertained. In the gradual passage of the strata from one group to another, and in the recurrence of the same groups north and south of the great culmiferous or carboniferous series of central Devon, there is the most decided stratigraphical evidence of the whole of the country belonging to one geological epoch. The marked difference between the slates of Devonshire and Cornwall, and the sandstones of Herefordshire with the adjacent counties, hitherto considered types of the old red system, the authors shewed can be no valid objection to the proposed classification, as lithological characters have been long proved to be of little or no importance in connecting deposits at even very limited distances. The absence of the true carboniferous limestone, was also shewn to be no argument against the arrangement of the authors, as in the western extremity of Pembrokeshire that formation is entirely wanting, and the culm or coal-measures rest immediately on older rocks. Lastly, the authors proposed, in consequence of the strata in Devonshire yielding the best zoological type, to substitute the term, Devonian system, for old red; and they expressed a hope that the determination of these fossils would assist in filling up the sequence of geological formations, and enable observers to discover in other parts of the world a series of deposits hitherto supposed almost peculiar to the British isles. The authors acknowledged the assistance they have received from Mr. James De Carle Sowerby; and that Mr. Lonsdale first suggested that the limestones of South Devon would prove to be of the age of the old red sandstone. The paper was illustrated by the large index map of the Ordnance Survey, coloured by the authors, and it exhibited the range of the several systems through North and South Wales; the border counties of England, Devonshire, and Cornwall.—5. 'A Notice on the general Relations of the various Bands of Slate, Limestone, and Sandstone in South Devon,' by R. A. C. Austen, Esq. F.G.S. Commencing with the oldest deposits east of the Teign, there appear, 1. Slates; 2. A band of black limestone, containing corals and shells, and sometimes thin seams of anthracite. It ranges from Staple Hill through Bickington, Ashburton, Buckfastleigh, and Dean. 3. Fine-grained schistose shale and slates. 4. The limestones of Plymouth, Dunwell, Shilstone, Ugborough, North Huish, Little Hempston, &c.: they are associated with schistose rocks. 5. A great arenaceous deposit, often coarse, and resembling old red sandstone, sometimes conglomeritic, when it resembles the new red; it ranges from Plymouth Sound and Bigbury Bay, across the central part of South Devon, by Modbury and Blackdown, cutting the Dart below Totness, and ranging thence through Marlton, Cockington, and Barton; in some places it contains thin bands of limestone. 6. The limestones of Torbay. Mr. Austen says the carbonaceous rocks of central Devon form no part of this series, but rest upon it unconformably.—Lastly, a notice by Mr. Miller, of Cromarty, 'On the exact Position in the old red Sandstone of the bed containing Fossil Fishes, and exposed in the Cliffs of the Moray Frith.' It is overlaid by a yellow sandstone, and rests upon a deposit of red sandstone, chocolate-coloured conglomerate,

and impure limestone. The base of the whole is stated to be granitic gneiss.

ASTRONOMICAL SOCIETY.

'ON the method of determining the Longitude by Moon-culminating Stars,' by Mr. Epps, late assistant-secretary to the Society. The author remarks, that the advantages of moon-culminating observations, for the purpose of determining the difference of longitudes, particularly in the case of distant meridians, are now universally admitted, every other method being found subject not only to greater trouble and difficulty, but to errors far exceeding the limits of those to which the results of moon-culminating observations are liable. But although this method, the merit of introducing which belongs chiefly to Mr. Baily, is justly regarded as the best known, yet the result of a single observation, or of a few observations, is liable to a considerable amount of error, even when the observations are made by the best instruments and the ablest observers; and the object of the present communication is to shew the extent to which the error may be expected to reach. The moon's proper motion, on which the method entirely depends, is such, that an error in the observation is necessarily greatly augmented in the resulting longitude; in fact, the error in longitude will always be from 21 times to 35 times the amount of the error of observation. If, then, it be assumed that 0.2 of time is the probable error of an observed transit, and that the observed interval between the transits of the moon and star is liable to an error of 0.4, the resulting difference of longitude will be in error from 8 to 14 seconds of time. This is the probable effect, from observations made at one station only; and as it is quite possible that the effect may be doubled by an equal amount of error, in a contrary direction, at the other station, the author thinks he will be within limits in assuming ten or twelve seconds of time as the probable error of longitude, resulting from the comparison of a corresponding interval observed at two stations, admitting that the best means of making the observation exist at each. In order to shew that the probable error is not overrated, by assuming it to amount to ten or twelve seconds, the author refers to two lists of results given by Professor Henderson, in the introduction to the first volume of the "Edinburgh Astronomical Observations." One of these lists contains the computed differences of longitude between Edinburgh and Greenwich, and the other between Edinburgh and Cambridge; each contains thirty-six combined results, some of which differ by a much greater quantity than the probable error above assumed. The mean of all the results as deduced by Professor Henderson, likewise shews the degree of approximation which the method may be considered as capable of giving, in the most favourable cases. Each of the lists referred to consists of a mean of the differences of the observed intervals at the two places on the several days stated, so that each series of results contains about 100 corresponding intervals; and, consequently, the final difference of longitude, deduced from each list, is the mean result of thirty-six mean quantities, deduced from about 100 corresponding intervals, observed at both stations. In fact, there are 136 corresponding transits made at Edinburgh and Greenwich, and 133 at Edinburgh and Cambridge; and from all these the difference of longitude between Greenwich and Cambridge comes out = $13^m 5^s 5 - 12^m 44^s 4$, or $21^m 1$. But the difference of the longitude of the two

places, ascertained by other means, and, doubtless, with scrupulous exactitude, is $23^m 54^s$; so that the final result of the moon-culminating observations is wide of the truth by more than two seconds of time. The author concludes by observing, that the results here referred to, instead of tending to depreciate the method, may be considered, on the contrary, as affording proof of its excellence; for, in respect of distant meridians, an error of two seconds is undeserving of notice. It is however evident, that, considering the inferiority of instruments, and other sources of error incident to a temporary station, a tolerable degree of accuracy can only be expected from an extensive series of corresponding observations.

BOTANICAL SOCIETY.

FRIDAY, 19th April. Dr. Willshire in the chair. — Read, 'Observations on the Genera *Potentilla* and *Tormentilla* of Linnæus,' by Mr. W. H. White. Smith, in his English "Flora," insists on the distinctness of the genus *Potentilla* from *Tormentilla*. Mr. White's observation and examination have, however, led him to conclude that the name given to the plant or plants, in Dr. Macreight's "Manual of British Flora," *Potentilla Tormentilla*, is more suitable, and preferable to Smith's keeping them as distinct genera. — Read, also, a 'Catalogue of the *Orchideæ* of Essex, with Remarks on their Localities,' &c., by Mr. Arthur Wallis. After giving an outline of the geological character of the country, so far as related to the exterior layers, Mr. Wallis observed, that though it is well known, that the orchis tribe more especially delight in a calcareous soil, yet he had found them in all the varied habitats which the country presents, from the light rich soil to the loam and chalk. Indeed, it appears (however important, may be the influence of soil) that their existence depends almost as much on the nature of the locality with respect to the surrounding vegetation. And he has been led to conclude that most of our *Orchideæ* may be termed epiphytical; inasmuch as they generally flourish in districts where the ground is studded with roots. He had never found specimens of any of the genus that were not either growing in the vicinity of woody vegetation, or surrounded by dense patches of grass. He had frequently removed several species with a view to cultivation, but, unless the roots were taken up with a mass of their native soil, which is invariably intersected with roots, the plants died after the first year. The specimens of the *Sisteria nidus avis* which he had gathered have been usually growing on the underground stems of the hazel or elm; and, from other facts, he is led to consider this species as a true parasite. Certain it is, Mr. Wallis further observes, that not only the *Sisteria nidus avis*, but the whole of the tribe require the aid of other plants to promote their more perfect development; and it appears to him a subject well worthy attentive consideration, as to whether they absorb nutrition directly from the soil, or indirectly through the medium of other vegetation. The *Orchis moris*, or meadow orchis, *O. mascula*, the early purple orchis, *O. ustulata*, dwarf orchis, *O. pyramidalis*, the pyramidal orchis, and *O. latifolia*, the marsh orchis, and their several characteristics and habitats, were described. This interesting paper is to be continued.

Friday, May 3. Mr. J. E. Gray, President, in the chair. — Read 'Remarks, Geographical and Historical, relating to some Exotic Cryptogams,' by Dr. Lhotaky. The principal object of this paper was to rectify an assertion of

Humboldt regarding the most striking example of social plants occupying large areas. He instances the *Thalassaphyte*, *Sargassum*, and omits the *Eucalyptus* of New Holland, which, according to Dr. Lhotaky, really occupies the largest extent. This latter genus spreads over the whole of "Terra Australis," and is so abundant as to form at least four-fifths of its forests. Dr. Lhotaky's conclusions may be thus expressed, almost in his own words: — "Neither the Pampas of South America, nor the Ericeta of Africa, nor the *Thalassaphytes* of the Atlantic, present the greatest accumulation of social plants, but by far the greatest mass of generically identic plants is to be found in Australia." A specimen of *Sargassum*, collected on the west side of the Azores, and two other Cryptogams, Australian Fungi, accompanied the paper, for the Society's collection.

ELECTRICAL SOCIETY.

TUESDAY, 7th May. — Read, a paper detailing experiments made by Mr. Mason, and repeated before the Society, with his constant battery, consisting of thirty elements. First, the vegetation of carbon, on the positive pole with the water battery, was reversed with the constant, and produced on the negative. The deflagration of mercury with both the electrodes followed; the positive producing a red light and a chattering noise; the negative, a bluish light, throwing off dense fumes of the oxide. One-eighth of an inch of flame was gained on making contact with the charcoal electrodes, after having been placed for a second or two in bichromate of potash; and it obeyed the same law of rotation on the poles of a magnet, as under the ordinary circumstance of simple charcoal points. Mr. Mason considered that thus the flame may be assisted for experiment without in any way diminishing the accuracy of the results. In an attempt to procure an amalgamation of chromium and potassium, or a triple compound of chromium, potassium, and mercury, the two latter combined, but the former appeared to be at the positive electrode, and scintillated as iron. An amalgam of mercury and potassium was next procured. After this experiment, on taking the negative electrode out of the mercury, and throwing that which adhered to it into water, it instantly took fire, proving, according to Mr. Mason, that a portion of the potassium must have passed through the mercury without combining with it, and attached itself to the negative electrode. In carrying out experiments with the constant battery, Mr. Mason recommends that one solution should be exhausted before another is supplied.

LITERARY AND LEARNED.

UNIVERSITY INTELLIGENCE.

OXFORD, May 2d. — The following degrees were conferred: —

Masters of Arts. — Rev. C. R. Hall, Christ Church. A. Waddilove, Trinity College, Grand Compounders; Rev. S. Stead, Brasenose College.

Bachelors of Arts. — J. L. Thomson, Exeter College, H. Smith, Queen's College, Grand Compounders; W. J. Braikentidge, Exeter College; J. Williams, G. Talbot, St. Mary Hall; G. D. Guille, Scholar, W. H. Biedermann, Pembroke College; E. W. Garrow, Brasenose College; J. W. Routh, Demy of Magdalen College; C. H. Walker, Worcester College; H. W. Steel, Jesus College; W. Fanson, C. Bewicke, University College; W. N. Richards, Wadham College (incorporated from Trinity College, Dublin).

CAMBRIDGE, May 2d. — The following degrees were conferred: —

Honorary Master of Arts. — T. L. Yeman, Trinity College, grandson of the late Earl of Zetland.

Masters of Arts. — W. Kipling, Trinity College; C. R. Hoare, S. Jenner, St. John's College; F. Fisher, E. Crow, Catharine Hall; H. F. Bacon, Christ's College.

Bachelors of Arts. — A. H. Stogdon, J. F. Hore, Trinity

College; J. H. Austen, Jesus College; W. Yates, L. Deedes, Emmanuel College.

ARCHÆOLOGY.

WE continue our report of the discourses of Dr. Lepsius and Chevalier Bunsen, though the nature of the later papers renders it unnecessary for us to go into their details.

Dr. Lepsius, after having finished reading his paper upon the 'Obelisk of Philæ,' made a communication upon the discovery of eight rolls of historical papyrus, which he had made last year, in the rich collection of Egyptian antiquities of M. d'Anastasi, at Leghorn. He entered into a short explanation of historical papyri in general, instancing those of M. Sallier, of Aix in Provence, having contents entirely analogous with those of M. d'Anastasi. It is known, that the most celebrated papyrus of M. Sallier contains, according to the mature examination of M. Champollion, the recital of part of the military expedition of the great conqueror, Rameses Sesostris, into Asia. The papyri of Anastasi contain, according to the hasty inspection which Dr. Lepsius was able to make during his journey through Leghorn, and according to the more careful examination of some specimens which he had traced, certain *true literary compositions, of a purely historical content, relating to the life or actions of Rameses Sesostris, and drawn up during the very epoch of that celebrated dynasty to which the greatest of the Pharaohs belonged.* One papyrus, whose commencement he had traced, was dated in the reign of the king Menephtah III., second successor of Rameses Sesostris, who flourished about the close of the thirteenth century before Christ. After having gone through all the other historical papyri brought to Europe, that had come under his notice, amongst which he especially mentioned certain fragments which he had recently recognised at Leyden; at London, in the collection of Dr. Lee; and at Oxford, in the Bodleian library, he announced to the meeting the good news, that the English government had just authorised the British Museum to purchase the entire collection of M. d'Anastasi, as well as the papyri of M. Sallier, by granting for that purpose 40,000 fr. (1,700*l*).

Mr. Hamilton now read his paper 'On Honorary Medals,' the argument and object of which are already known to our readers.

The last memoir of the first meeting was by Dr. Lepsius, upon the invention of the arch in ancient architecture, principally among the Egyptians and Romans, and relative to some other deductions which proceed from it, for the history of the art in general. After making some observations on the intimate relations which formerly existed between ancient Egypt, Greece, and Italy, and recited the proofs which he had given in other places upon the Egyptian origin of the Greek column, he demonstrated that the construction of the arch was known to the Egyptians from the earliest antiquity, especially after the commencement of the eighteenth dynasty, in the sixteenth century before Christ. He, however, rested upon the fact, that all the concentric arches in Egypt, till the era of the Ptolemæi, were constructed of brick, and that they constructed at the same time stone arches, not cut concentrically in blocks, but joined by horizontal layers, forming a vault, by their approach above; and that the first arch in stone, constructed upon the true principle of the concentric arch, according to the researches of the celebrated traveller, Mr. Wilkinson, dates about the commencement of the sixth century; that is to say, precisely at the

same time when the first introduction of it among the Romans may be proved. Dr. Lepsius then entered into some details relative to the Cloaca Maxima and the Carcer Mamertinus at Rome, the two most ancient works exhibiting the concentric arch; the last of which encloses, in its lowest part, the remains of an ancient arch constructed by horizontal layers, and consequently belonging to an epoch anterior to the introduction of the true arch. He finished his paper by concluding, that generally all edifices, where the arch is found formed by horizontal layers, whether in Egypt, Asia Minor, or Greece, may be placed anterior to the sixth century before Christ, and that this especially applies to the great number of tombs constructed in this manner, recently discovered at Cæré and other parts of Etruria, as well as to all the objects found in those tombs, if they were still unopened. The last excavations at Cæré appeared to him to open a new road to the desired researches upon the ancient civilisation of the Pelasgians.

At the adjourned meeting Chevalier Bunsen, after having, in a few words, mentioned the most interesting single archaeological facts which have occurred during the last year, relative to the city of Rome and its neighbourhood, laid before the Society the results of the late excavations and researches respecting the Capitol and the Forum, as most particularly connected with the Eternal City and its history. He shortly adduced the proofs for placing the Temple of Jupiter Capitolinus on the western summit of the hill, where the Palazzo Caffarelli stands, and then explained the topography of the Forum Romanum, according to its different epochs, and likewise that of the Imperial fora grouped around it. This led him naturally to the questions respecting the *ancient history of Rome*, and to an explanation of the principles of the system of historical criticism, as exemplified in the immortal works of Niebuhr. He established these principles with particular reference to the history and topography of ancient Rome, but illustrated them also by examples taken from similar periods of history. The development of this discussion is scarcely capable of an extract, especially as it was accompanied by plans and maps; and we abstain the more from attempting to give an analysis, as the whole lecture will soon, we understand, be before the public in a printed form. The conclusion was very eloquent.

[Having devoted so much of our journal to the interesting subject of Egyptian Antiquities, we have much pleasure in giving place to the following communication from (as evidently appears) an extremely well-informed correspondent. We have no doubt but that both our archaeological visitors, and our readers in France, Italy, and Germany, will bestow upon it the consideration it so well deserves.—Ed. L. G.]

To the Editor of the Literary Gazette.

SIR,—Will you allow me, through the medium of your *Gazette*, to offer one or two brief remarks touching the matter of a recent address to the Society of Literature, an epitome of which appeared in your last week's number.

Then *Cheops* is an epithet composed of two nouns in regimen, which in Græco-Coptic characters may be written χ -EWQ. χ means *possessor*, and EWQ means *business*, business of any kind whatever; and when a pyramid is found added to the words, nothing more is intended than a specification of a particular business, namely, that of building a pyramid. The epithet χ -EWQ may be, word for word, rendered in Arabic *عِلّو* *ilw*, in common mo-

dern Persian *صاحب* *sahab*; whilst in Greek, Eratosthenes has very fairly translated it *χρηματιστής*.

I own I was much surprised to find two such scholars as Messrs. Bunsen and Lepsius still at this day upholding the pretensions of *King Shesô*; and still more astonished to perceive that although χ , in the sense I have used it, acts a very prominent part in very many of the names of each of the lists of Egyptian sovereigns, still its power or meaning has hitherto passed entirely unnoticed.

If χ occurs as the former of two nouns in regimen, it may be almost always translated *possessor*; if it occurs alone, it means nothing more than the individual great man, the sir or seigneur, or what the Greeks translated *ναύαρχος*; and if it is used as the former of two nouns not in regimen, it then has little more force or power than the definite article. In the hieroglyphic writings it is often to be seen, but oftener it is to be supplied by the reader. We find, for example, such words as

●  Egypt, whilst oftener we meet

●  Egypt; in the

one case the ● χ being given, in the other omitted.

And here I will avail myself of the opportunity to observe, that I purposely refrained from putting the proper vowel Δ I or OI to χ -EWQ, in order that I might more pointedly remark, that, if the word to which χ is prefixed begins with a consonant, χ is $\chi\alpha$, pronounced like our English letter K; if the word begins with a vowel, it is $\alpha\chi$ or $\alpha\chi$, pronounced like the syllable *ek*. Or, in a word, χ is pronounced both ways, and hence $\alpha\chi$ -EWQ-*es*, Egypt, and hence $\chi\Delta$ I-EWQ, $\chi\Delta$ I-EQW, or, if our northern tastes like it better, $\chi\epsilon$ -EWQ, Cheops. With the knowledge of this χ we easily get at the meaning of a great variety of such words as *χρηματιστής*, *χίμαρα*, *χὺς χίτης*, *Αρχιεγὴς Ἐγυπτῶν*, &c. &c., and also we can readily identify such words, sculptured on the monuments, in their proper hieroglyphic characters.

The foregoing, Mr. Editor constitutes one remark. I will only add another, and that is, that judging from Champollion's "I'Égypte sous les Pharaons," and Quatremère's work of the same kind, also from the recent address of the two eminent German gentlemen I have named, I much fear that our continental friends are still exerting themselves unprofitably as regards ancient Egypt. Owing probably to the early period at which it was written, Champollion's work is a series of errors of all kinds from beginning to end; whilst the very recent address to the Society of Literature may be placed on a level with the knowledge of Egypt contained in the Bishop of Peterborough's "Sanctioniatho," a work published more than a hundred years ago. Eratosthenes was in his day, no doubt, a very able man in many respects; but he himself proves that he knew next to nothing of the Egyptian language, and about as much of the chronology of the Pharaohs. If we call Joseph's canal in part *Menes*, or in the whole *Mæris*, neither name has anything to do with the name of the, doubtless, early sovereign, whoever he was, or whatever was his name,

who caused the canal to be formed, or who led the waters of the Nile into the Fai-ma district. But, Mr. Editor, I must end abruptly, having no wish to occupy too much space in the columns of the *Literary Gazette*. My object has been to solicit attention to a word in the Egyptian language of much importance, and, secondly, to suggest to parties interested, both here and on the continent, that the best—nay, the only—way of arriving at a true knowledge of all matters incident to Ancient Egypt, the series of her sovereigns inclusive, is by a careful and continued study, I think I may say *thorough re-examination*, of her monumental remains, as contained in the various museums of Europe or *in situ*. A fragment of basalt not a foot square shews me the land of Psammetichus and the Delta of Egypt, strictly according to Herodotus, together with the correct name of each principal branch of the Nile; another records the names of *Λχμυς* and *Ψαμμαχτις*; another, *Μετς*, shewing, respectively, their small territories, lands dependent on *χους* and *Pepremis*: and so on, either as regards sovereigns of an earlier epoch, or those comparatively of a modern date, or any thing else of interest incident to Egypt. With many thanks, Mr. Editor, to you if you can allow space for my note, I beg to subscribe myself faithfully yours, C. S.*

London, May 3, 1839.

ROYAL SOCIETY OF LITERATURE.

ON Thursday, Lord Bexley in the chair.—Dr. Lepsius favoured the Society with some observations on the cartouches, &c. in the Temple of Karnak; and by a comparison of these remains with those on the tablet of Abydos, the monuments at Turin, and the inscriptions of Beni Hassan, endeavoured to supply more correct and ample lists of the Pharaohs than any former catalogue of the kings which we have seen from ancient authors, or other documents. Where there are hiatuses in one place, they are partially filled from others; and the corroboration of one by another leads to more satisfactory conclusions than hitherto reached. Thotmes III. offering to his ancestors, indicated by a multitude of cartouches, is an important representation; and we only regret that, without the figures, we can supply but a poor idea of this curious inquiry.

THE LITERARY FUND.

THE Jubilee Anniversary (fiftieth year) on Wednesday, was, as we anticipated, very numerously attended. Between two and three hundred sat down to dinner; H. R. H. the Duke of Cambridge in the chair, and surrounded by the Bishop of Llandaff, the Mexican Minister, Lord Ripon, Lord Ellenborough, the Right Hon. H. Ellis, Sir C. Lemon, Col. Wood; Messrs. Gally Knight, Milnes, Hope, &c., M.P.'s; Sir W. Chatterton, Sir D. Wilkie, Sir H. Ellis, Mr. Hallam, Major Sabine, Captain Beaufort, and other distinguished guests. At the other tables, the Rev. Mr. Maxwell, Mr. Barrow, Mr. Croker, Mr. Colley Gratian, Major Bevan, and many other popular writers, were seated; whilst the great publishing houses furnished their representatives, in Messrs. T. Longman and J. Murray, jun., Colburn, Bentley, R. Fisher, Baily, &c. &c. There were not so many of our most eminent literary characters as might be expected on such an occasion, where

the cause of their less successful brethren is at stake; but, altogether, the Press shewed well in every part of the hall, and there was no lack of sympathy for the unfortunate and distressed.

Between 600*l.* and 700*l.* was announced as the subscription for the evening, by the treasurer, Mr. W. Tooke.

After the usual loyal and patriotic toasts, "Prosperity to the Literary Fund Society," was given by the Chair, and drank with acclamations. Mr. Tooke, in his succeeding report, referred to a brief address written and distributed "on the fiftieth anniversary," from which it appeared that, since the Society was formed, no less a sum than 25,000*l.* had been carefully distributed among 892 cases, whereof were—

Of Families	534
Females	113
Widows and families	195
Foreigners	60

Many of these (528) had been relieved only once, but others from twice to above twenty times, as their necessities required: the former demonstrating how effectual the aid had been—the latter, how perpetually the fountain of benevolence had flowed, where circumstances,—old age, growing infirmities, and the like,—had made the later calls more imperative than the earliest. On this tabular return, the Address alluded to, observes:—

"The brief tables annexed, in their few figures, tell the tale of a multitude of wounded spirits—of the dearest ties rent asunder—of the finest chords in nature stretched on the rack to madness—of forlorn age—of destitute widowhood—of helpless orphanry—of human sighs, and tears, and groans innumerable;—alas, who can estimate the statistics of the brain and heart? They are here before our eyes, but our minds cannot comprehend and contemplate the amount of endurance and the horrors they involve. Nearly nine hundred of our fellow-beings have here sought for help, nor sought in vain. Time after time have the unfortunate come to us, and time after time have their homes been gladdened by our answer to their call. The religious and moral writer has received proof that the precepts of religion and the duties of morality were acknowledged to be obligatory on us; the sons of science and art have had their toils lightened and their griefs lessened; the imaginative have been taught, that whilst there existed real woes, there were also real humanities; the historian of the past, that there were present charities; and every cultivator of every deserving and honourable branch of literature, that a kindred and living sense of their merit glowed brightly and permanently in the breast of the British people, whose willing and devoted agents in this dispensation of gratitude and mercy, are the directors of that Fund intrusted to their care, and in whose behalf are penned these few lines of a jubilee appeal."

The Earl of Ripon proposed the health of the illustrious chairman, after an eloquent eulogy upon his public and private virtues; and the toast was drank with great enthusiasm. Other tributes of respect to the Bishop of Llandaff, and the Church; Lord Ripon, and the Royal Society of Literature, of which his lordship is President; Sir David Wilkie, and the Royal Academy; Sir C. Lemon, and the Statistical Society; Dr. Lepsius, and the Archaeological Society of Rome; Mr. Hallam, and the Historians of England; Mr. Milnes,

and the Poets; Mr. Gally Knight, and other travellers who have adorned our literature—called up suitable responses from the parties, and kept the meeting in activity till the close of the day.

The musical department, under the direction of Mr. T. Cooke, assisted by Messrs. Francis, Chapman, and Masters Martin and Chip, was most pleasingly filled; and a song by Miss Hawes, admirably sung, and encored, very sweetly varied the entertainment.

Before concluding, we may notice that Dr. M'Henry, author of "The Antediluvians," &c. &c., very kindly printed "An Ode to Britannia,"* and presented it to the Fund, for whatever profit might accrue from its sale. The following lines are apposite, and full of good feeling:—

"And let my song that generous hand proclaim,
In heart and deed, Britannia, truly thine,
Who seek the sons of genius where they pine
The wo-struck victims of that very flame,
Which, while it scorches, causes them to shine
Lights of the world, unfading stars of fame!—
In Want's drear hovel, on the bed of pain,
Writhing in all the pangs of hope deceived,
Too oft the impassioned bard of noblest strain,
Is friendless laid;
And he whose soothing song has oft relieved
Full many a sorrowing heart,
In his own adverse hour finds none to aid:—
Alas! in winter's storms how summer friends depart!
But not in Britain now
Need bards or sages long despair,
Glad justice will their claims allow,
And zealous hands the wrongs of fate repair.—
'Tis yours, Associates in that holy cause,
Which now to generous league so many good men draw,
To find where suffering genius lies,
Chase thence the fiend of Want away,
Cause fallen hopes again to rise,
Relume the darkened soul's ethereal ray.
And bid the joyless heart with gladd'ning pulses play."

On the whole, the anniversary passed off as the friends of the Society could wish; and the tempest which flamed around, detained some of the convives about a second chair till midnight.

ROYAL SOCIETY.

THE Marquess of Northampton in the chair.—The continuation of a paper by Dr. Carson, of Liverpool, 'On the Blood,' was read. In this paper the author very scientifically contends for the superiority of his plan of killing oxen, as compared with the old method of bleeding. The conclusion of Professor Airy's paper on magnetic experiments, made by him and others on board the iron-built steam-ship, the *Rainbow*, was likewise read. Professor Airy suggests several rules to be adopted in reference to iron-built vessels; the chief of which is a constant and careful examination of every part of the ship; as its independent magnetism will change in time, observations ought to be frequently made. A remarkable result is stated, viz. the great intensity of permanent magnetism in those parts constructed of malleable iron. The noble marquess read a message from the Grand Duke of Tuscany, inviting the learned of this country to a literary and scientific *r  union* at Pisa, to take place about the middle of October next. The senior professor at Pisa will preside, and every facility and kindness is warmly proffered to visitors by the Grand Duke, the treasures of whose famous library and sculpture gallery will be thrown open on the occasion.

ROYAL ASIATIC SOCIETY.

* Will C. S. oblige us by giving an address where we can send to him? We are not sure as to perfect correctness in printing his letter.—Ed. L. G.

* The Chevalier Bunsen, we are sorry to say, was prevented from attending, by sudden indisposition.—Ed. L. G.

* Published by W. Stephenson, Parliament Street.
† The Literary Fund Society.

establishment of law and religion, the genealogies of great families, and the dynasties of kings. The importance of some analysis of this nature will be evident from the fact that the Puranas contain nearly 1,600,000 metrical lines, which would seem calculated to damp the ardour of the most laborious orientalist. The 'Analysis of the Brâhma Purana,' the first in order of the whole, has appeared in the Journal of the Asiatic Society; and the professor has announced his intention of going through the whole series. The Padma Purana is so named from the lotus plant (in Sanscrit, *Padma*), whence Brâhmâ issued in order to create the world. It contains above 50,000 slokas, or stanzas, and is divided into five principal heads, the first of which treats of the primary creation; the second, of the formation and division of the earth; the third, of the regions above the earth; the fourth treats of the genealogies of princes; and the fifth of the practice of devotion, and the means of obtaining final emancipation. These are the divisions set down in the first chapter of the work, although they do not entirely correspond with its contents. The work is so voluminous that the paper read, although extending to a great length, was a closely condensed abstract, which we cannot pretend to give any analysis of in the little space allowed us, but must limit ourselves to the mention of a few striking points. Among other curious matters, we find it mentioned that the Puranas altogether contained a thousand million of stanzas; but that the gods, in compassion to man's weakness, had imparted to him only the *small* portion found on the earth, keeping the remainder to themselves. We find also here the usual legends of the birth of Lakshmi from the churning of the ocean, and the wars of the gods and *Asuras*, and some other matters which remind the classical readers of the Greek mythology. A subject that pervades the greatest part of this Purana is the sanctity of Pushkara, or Pokhar, a lake near Ajmere, to which Siva was compelled to repair in order to expiate his wickedness in tearing off the fifth head of Brahma, to which he was excited by the jealousy of the gods, who were envious of its superior lustre; since that time, Brahma has been able to boast of only four heads. This is evidently typical of the struggle for superiority between the followers of Brahma and Siva, in which the latter triumph, although at the expense of some humiliation. There are several curious tales in illustration of the principle that persons, as well as places, may be objects of pilgrimage and veneration; shewing in what instances a parent, or child, or spiritual teacher, may be found worthy of such homage. Another story relates the marriage of a king's daughter with a handsome youth, instead of the hunch-backed son of a king to whom she was destined; a tale which reminds us of the "Arabian Nights." A good deal is said of the efficacy of sectarian marks; of the merit of fasting on the 11th lunation; on the sin of eating on a day sacred to Vishnu, sufficient to point out this Purana, as eminently sectarian: also of things lawful and unlawful to be eaten; the times of dressing and anointing the body; the proper posture of sitting and lying on various occasions; lucky and unlucky omens; and similar matters. Much of the work is taken from the "Rajhuvansa," and "Ramayana," and the compiler appears to have had before him the Vaja, Vishnu, and Bhagavat Puranas; but it is a peculiarity of this Purana that the sectarian of the legend of Pushkara is rather the worship of Brâhma than that of Vishnu. Pokhar

is still a place of pilgrimage; but it was probably not much resorted to during the Mahomedan ascendancy in its vicinity; and the worship of Brâhma had not been popular for some centuries at least. The sectarian feeling, in every other respect, is that of Vishnu's; it increases as the work advances, until, at last, the worship of any other than Vishnu is absolutely prohibited. The Professor, in conclusion, brought forward much internal evidence to shew that the "Purana" could not be the production of a remote period; and that, in all probability, the greatest portion, could not pretend to an antiquity greater than that of the fifteenth century.—Mr. E. Solly read a report 'On Indian Silk.' He stated that, specimens of silk having been received from India, he had placed them in the hands of Mr. H. Soper, a silk manufacturer, requesting from him a report on the quality of the samples of silk. He had in consequence received a report from that gentleman. In this report Mr. Soper described one of the specimens (from Colonel Frazer, resident at Travancore) as being of very superior quality, and much better than any of the silk usually imported from Bengal. The sample was not prepared in such a manner as to be marketable; having been wound on too small a reel; but if silk of that quality, wound on reels of the required size, could be imported from India, it would find a ready market in this country, and its introduction would be of great benefit to the silk manufactures.—Mr. Solly also read 'An Account of a New Resin,' for specimens of which he was indebted to Dr. Babington. He stated that it was wholly unknown in this country; the only author, he was acquainted with, by whom it had been mentioned, was Dr. Ainslie, who in his "Materia Medica of Hindostan," described it as a substance similar to myrrh, and employed in native medicine under the name of cumbi-gum. Mr. Solly described at length its properties and nature, and the difference between it and gum myrrh; he stated that it was a resin, and not a gum-resin, and dissimilar to all the resins now known. In the state in which it had been brought over, it was mixed up with a considerable quantity of impurities, amounting to nearly seventeen per cent: when purified, it was of a deep amber colour, brittle, easily fusible, and combustible; easily soluble in alcohol, and insoluble in water and caustic potassa. From the virtues attributed to it in India for various purposes, and amongst others, in various diseases of cattle, he thought it reasonable to expect considerable medicinal powers, and stated that experiments on its medical properties were in progress.

SOCIETY OF ANTIQUARIES.

MR. HALLAM in the chair.—Sir W. Betham communicated some observations on the inscription on a bronze arm, engraved in the *Archæologia*, but which had never yet been deciphered. He said the inscription was decidedly Irish, and that part of it has been damaged and rendered illegible; he reads the remaining part, "pray for the souls of" several persons, by name. Also a drawing of a carving on stone in Llandavaelog churchyard, about two miles north of Brecknock, which Sir W. supposed to be of the fourth century.* A further portion was read of Mr. Bond's account of the Italian money-lenders, in the reigns of Edward I., II., and III.; and the remainder postponed.

* We think this carving must have been of a later date, from a large cross over the head of the figure.—Ed. L. G.

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Geographical, 9 P.M.
Tuesday.—Civil Engineers, 8 P.M.; Zoological, 8½ P.M.; Society of Arts, 8 P.M.
Wednesday.—Society of Arts, 7½ P.M.; Noviomagiens, 4½ P.M.
Thursday.—Royal Society, 8½ P.M.; Antiquaries, 8 P.M.; Electrical (Anniversary).
Friday.—Royal Institution, 8½ P.M.; Botanical, 8 P.M.

PINE ARTS.

EXHIBITION OF THE ROYAL ACADEMY.
AGAIN the crowning wonder of the pictorial season is exposed to the public gaze. The Exhibition of the Royal Academy opened on Monday last. With its general character, and the greater part of its contents, we feel ourselves well inclined to be pleased; and for the best of all possible reasons—because we came with a knowledge of the talents of most of the contributors to it, and with a desire to look at the results of those talents in a favourable point of view: for we think with Sterne, that to give up the reins of our imagination into the hands of those who cater for our amusement and pleasure, is the best way to satisfy them and to gratify ourselves. And now for some samples.

65. *Sir David Baird discovering the body of the Sultan, Tippoo Saib, after having captured Seringapatam, on the 4th of May, 1799.* Sir D. Wilkie, R.A.—In all subjects of this character, the wail and the triumph are necessarily brought together, but the circumstance which gives, perhaps, the greatest interest to this picture, will be found in the concluding part of the quotation, by which it appears that with the victor and the vanquished, the wheel of fortune has come full circle. Such an incident is of itself sufficient to call forth the powers of the artist to embody the fact. As a work of art, its merits will principally be found in the group which surrounds the body of the sultan; but the upper portion of the picture is so much in the skylight, that it is impossible to judge of it. But we descend from the elevated to the familiar, in

49. *The Rencontre, or Much Ado about Nothing.* W. F. Witherington, A.—Such rencontres are not unfrequent in country villages and farm-yards. A goose is defending her gosling, who is menaced by a dog, and the children of the hamlet are taking part in the contest. But the charm of the picture is the pastoral beauty of the scenery, and its careful and brilliant execution throughout.

57. *Who can this be?* and 82. *Who can this be from?* C. R. Leslie, R.A.—The first we consider the original thought, the second would follow of course, and to the "Who can this be?" we principally look, and to the three personages of this pictorial drama. Here, then, is a staid consequential old gentleman, with a buxom damsel hanging on his arm; he just touches his hat to a gorgeously dressed stranger, who is bowing to this slight civility, while the female (who, we suspect, is in the secret) is carelessly talking to a little dog. The scene, a rich and cultivated spot; the costume, such as we find in the pictures of Metzu, Gonzales, &c. So that in taste, character, and expression, we can hardly imagine any thing more interesting. The companion, "Who can this be from?" is an interior, and in every respect worthy the pencil of the artist.

6. *Scene from the Burletta of Midas, &c.* D. MacIse, A.—We are glad to see in the representation of this old and favourite burletta a more mellow and subdued style of execution, than in some others of the artist's pictures. Its treatment is rich in character and costume,

bringing the days of Garrick and Hogarth to the mind's eye. We think a little more grace and dignity might have been given to the head of Apollo.

20. *The Broken Heart*. J. P. Knight, A.—With all deference to the talents of the artist, his skilful arrangement, and powers of execution, we cannot compliment him on the choice of his subject. By a singular coincidence a picture of a similar character, and a quotation from the same writer, meet the eye, in 58. *The Pride of the Village*. J. C. Horsley. They are both works of great merit; and we cannot but lament should so much labour be unrequited in speculation—if they are such.

13. *River Scene, Devonshire*. F. R. Lee, R.A.—If any thing in the way of the pastoral and the picturesque can serve as an antidote to gloomy scenes and dismal prospects, it is such an assemblage of sparkling objects as those which here enchant the sight; all is freshness and light.

12. *Luxuriating in the Pleasures of Memory*. Mrs. C. Aders.—A pretty Guido-like head, and a compliment to Mr. Rogers, are seen in this performance: but this is not all—it is in a manner, we believe, entirely new; and such are the powers of the process, that, from copies which we have seen by the hands of this lady, after Hamelinck, Albert Durer, Lucas Von Leyden, &c., we think it capable of accomplishing any thing in art, with advantages of clearness and durability, perhaps beyond any other.

42. *A Study of Moonlight*. J. H. Millington.—But that the picture so called is a work of talent, and in a pure historical style of art, we should pass it over, as a mistake in the catalogue. The scene is a field of battle, a dead body, foreshortened, is on the near ground, and cannon and other implements of war are scattered around. In the horizon, and towards the right, something like the rising moon may be discerned: at all events, whether a moonlight study or not, it is a clever picture.

43. *The fighting "Téméraire" tugged to her last berth, to be broken up*, 1838. J. W. Turner, R.A.—We have seen nothing of late so much to our mind, from the pencil of this artist, as this performance, treated as it is historically and allegorically. The sun of the glorious vessel is setting in a flood of light, such as we do not remember ever to have seen represented before, and such as, we think, no one but Mr. Turner could paint.

86. *Jack Sheavehold's Return to his Father's Cottage, after a Ten Years' Cruise*. T. Clater.—The subject is taken from a humorous poem in "Bentley's Miscellany," and, we think, illustrated to the life by the hand of the artist. Glee in its highest pitch—provisions in meat and vegetables duplicated to make plenty, and joy and happiness in old and young. Such is the general character of the picture, while its details would not discredit the pencil of the best Flemish masters.

109. *Constancy*. J. R. Herbert.—The subject illustrates the following lines:—

"Love out-watched the drowsy guard,
And stealthily between the storm-worn bars
Conveys forbidden succour."

The hands are seen through the prison bars, and the anxious looks of the female conveyancer (if we do not spoil the pathos by introducing a law phrase), give a touching interest to the scene.

138. *Rising of the Pleiades*. H. Howard, R.A.—Although this is one of the most beautiful of the artist's floating fancies, and one of his most graceful groups, it is still a repetition of

the same forms, perhaps, too long remembered; and should he be inclined after this to let the Pleiades set, their present pictorial rising will be thought of with *éclat*.

124. *The Second Adventure of Gil Blas*. D. MacIise, A.—Oh, the sunshine of that novel! what young and gay associations are connected with its name! Thus lit up by the pencil of this able artist, it is like life renewed. What a lesson for the incautious and credulous does it convey, chiefly indeed bought by the simple Gil Blas: but, query, Did not the caustic hoax give a spice of the rogue to him in after life? As a work of art, in its characters of host, sharper, and dupe, we cannot speak too highly of its merits. It is the deepest and best in tone and colour of any, even of the most admirable, productions from this artist's hand; and shews that his execution may be equal to his genius, his style to his invention.

[To be continued.]

SOCIETY OF PAINTERS IN WATER-COLOURS. [Third and concluding notice.]

70. *Sir Walter Raleigh witnessing the Execution of the Earl of Essex in the Tower*. G. Cattermole.—The subject described in the title of this clever picture is, properly speaking, but an accessory to the rich display of horse and foot armour, in which the artist's powers always appear to so much advantage. Still, as an event in history, the incident is one which communicates great interest to the performance.

50. *The Opening of the Letter-Bag*. J. W. Wright.—A family group can hardly be exhibited to greater advantage than under such circumstances. From the exalted station of the personages here represented, the emotions and passions take a more subdued aspect than might in other cases be expressed; but there are enough of them shewn in the youthful part of the family to attract attention. In the mean time the artist has not been wanting in gay and brilliant colouring to set off and enliven his subject.

122. *In Windsor Park*. W. A. Nesfield.—All the objects, animate and inanimate, that fill the scene, are of the most picturesque and pleasing kind that can meet the eye, and are no less richly and harmoniously coloured than skillfully designed.

172. *Chingford Church, Essex*. W. Scott.—Another equally pleasing and varied example of the picturesque is furnished by the pencil of this able artist.

170. *Long Gallery, Haddon Hall, Derbyshire*. Joseph Nash.—This beautiful scene of light and life is rendered doubly attractive by the cheerful way in which its inmates are employed. The little lordling and his fairy partner, figuring in the dance with all the grave solemnity of future greatness, is an agreeable and appropriate incident; while the rest of the figures in their picturesque costume are equally apposite and in keeping with the splendid interior.—203. *Terror: Bramshill, Hants*, by the same artist, exhibits also a lively picture of the olden times and their localities.

202. *Monastery at Newton, near Trim, County Meath*. H. Gastineau.—Of such remains we have hardly ever seen a more beautiful example, or one in which the taste of the artist and the qualities of art were more happily united.

226. *Interior of the Ruins of Netley Abbey: Autumnal Morning*. Frederick Nash.—The spectre-like atmosphere thrown over the grassy ruins (if the expression may be allowed), is at once judicious in its character, and skillfully executed; while the figure employed in de-

lineating the abbey, and the objects in the foreground, give additional value to this admirable work of art.

210. *Ulverston Sands*. W. Evans; and 10. *Market People crossing Lancaster Sands*. D. Cox.—These performances, similar to each other in character, afford a striking contrast to the above, but require no less skill to bring into view objects in themselves monotonous and sterile. Such, however, is the power of art, that interest is excited, and effect given to the least promising form, where level and distance are the only materials on which to work.

11. *Red Deer*. W. A. Nesfield and R. Hills.—The study of this noble and graceful animal, its form, character, and habits, wild and domestic, make a prominent feature in Mr. Hills' practice. It is here represented in its free, natural, and independent state, and a background suitable to its haunts and range has been ably furnished by the pencil of Mr. Nesfield. Other varieties of the animal, by Mr. Hills, will be found in 227. *Fallow Deer*; and in 307. *Beech in Knowle Park, with Fallow Deer*.

101. *Corrick-a-Rede, or the Rock in the Road, County Antrim*. H. Gastineau.—One of the most awfully sublime scenes we ever saw represented, and treated in a style becoming its fearful character.

116. *An Apartment in Bolsover Castle, built by John, duke of Newcastle—Scene during the Civil War*. Lake Price.—The preparations of the inmates of the apartment sufficiently shew what is expected without; but the subject is chiefly valuable as a relic of the olden times.

281. *The Gentle Teacher*. F. Stone.—Never was a title more truly or more beautifully illustrated. Of its colouring, its composition, and its character, we can only say, they might belong to the "golden age."

63. *A Tournament—Fourteenth Century*. One of a series intended to illustrate the Customs and Manners of the Olden Time. J. Stephanoff. 261. *Cosensiers—Seventeenth Century*, by the same artist, and for the same purpose. In both instances (especially the Tournament) there are very favourable examples of such characteristic scenes.

46. *Cynthia, with her attendant Dews and Zephyrs*. J. Cristall.—The subject classical, and the idea beautifully and tastefully illustrated; and to which the lines of the poet are justly applicable:—

"A kind, a philosophic calm,
The cool creation wears;
And what day drank of dewy balm
The gentle night repairs."—J. Cunningham.

316. *Fruit*. V. Bartholomew.—The French hold our flower painting, and we, presume, our fruit, in great contempt, as the following will shew. "As for flower painting, English artists are not worthy to grind up the colours and prepare the palettes for the French; and there's the truth."—"Exhibition of the Louvre," *Literary Gazette*, No. 1158. We would ask the French critic, Whether he had seen studies of hollyhocks and of dahlias by this artist, paintings of flower by the late Hewlet of Bath, T. Baxter, &c. &c.? and, lastly, Would he say the same of this example of fruit? Should he stick to his text, we can only exclaim with Hamlet, "Have you eyes?" and think, like the fox in the fable, "not able to reach them, he would call them naught."

We must now quit this richly fraught and diversified field of art, and merely mention, among other of its attractive works, *Salisbury Plain, with a View of Stonehenge*, Copley

Fielding; *Burlington Pier*, by the same artist; *Broad Stairs*, *Anchor-boat going off*, G. Chambers; *Evening Composition*, J. Varley; *A Saw-pit*, D. Cox; *Retirement*, O. Finch; *A Water-mill*, Frederick Nash; *Setting Sun*, G. Barret, &c. &c., as affording the lover of nature and the admirer of art materials for contemplation, in every varied character of subject and style of execution.

THE DRAMA.

Her Majesty's Theatre.—On Thursday, Pauline Garcia made her *début* as *Desdemona*, in *Oello*. She possesses an extraordinary voice of immense compass; the high and low notes appearing to the listener to be equally natural and easy, costing her no effort, and so powerful as to fill the house without trouble to the organ whence they are poured forth. To these qualities we may add those of sweetness, clearness, and flexibility; but yet all are so immature, that we feel sensible regret at her appearing so early upon the boards: she is only eighteen. Her acting, like her singing, though wanting in energy, is full of promise; and her conception, consequently, superior to her execution. Four or five years of hard study and constant practice, and she will be able to accomplish any thing—every thing. Her face is not of the beautiful order, but expressive; and her figure is pretty good, and will be better. The house was indifferently filled.

Drury Lane, with its miserable *Valentinos*, has completely fallen out of the rank of theatres.

Covenant Garden.—On Monday, *Coriolanus* was attended, as we anticipated, by a numerous audience, though the upper slips (as they are called) were not crowded. The reception of Macready was worthy of the occasion; and such as has seldom, if ever, been witnessed in a theatre. The public voice echoed most enthusiastically, and with long-continued plaudits, the sense universally entertained of his services to the stage; and we have only to express our hope, attended, we regret to say, by an anxious fear, that the effects of his splendid efforts and example may not be thrown away and lost to the profession and the country.

St. James's.—In addition to the Canine and Simian attractions to this house, we have, this week, had introduced to us six Spanish dancers, whose national and picturesque execution of a bolero and an Aragonese dance in the striking costume of their country, is rewarded by unanimous applause.

Queen's Theatre.—We paid a visit to the little theatre in Tottenham Street on Thursday evening, to witness the *début* of a young lady, Miss Vivian, in the character of *Caroline Grantley*, in the *Beulah Spa*. Madame Vestris has made this character so peculiarly her own, that the *débutante* must have possessed considerable fortitude to fix upon it for her first appearance. Her courage, however, wavered considerably when she came to make her courtesy before a very numerous audience; and her nervousness was so evident, that we cannot fairly judge of her abilities until we see her more at her ease upon the stage. She possesses a good face and figure, and towards the end of the second act warmed a little into her part, and delivered the last few lines with great *naïveté* and archness. She was encircled in the Tyrolese, "By the Margin of Zurich's fair Waters," and called for at the termination of the piece. Altogether, her reception was a very kind one; and we trust that, as she grows familiar with her audience, she will become a delightful "stage companion." The

piece was produced in a style that would have been highly creditable even to the Olympic.

We stated, in a former *Gazette*, that Mr. George Wild had become the lessee of this house; we may now add, that he possesses humorous powers of a very high order, and has never, as we think, met with the encouragement to which his activity and talents, during a long theatrical career, both as actor and manager, have justly entitled him.

Strand Theatre.—The active proprietor of this house gives his visitors novelty enough. On Monday last a new piece, entitled *Lodgings to Let*, met with unqualified success, but certainly not more than it deserved, were it only for an Irish jig danced by Miss Daly. It was one of the best and most characteristic things we have seen, and the audience seemed to be of the same opinion, for they laughed till the "roof rung again."

Sadler's Wells.—We have been negligent to this house of late, but propose paying it a visit early in the week, anticipating much amusement from two domestic dramas, in both of which Mrs. Honner plays the heroine.

Mlle. Henrietta Roedel's concert, at the Hanover Square Rooms, on Thursday, was fully attended, although there were not any of the great names announced in the bills. Miss R. herself was the principal attraction. She is only ten or eleven years of age, and exhibits signs of great promise. A Russian family sung some glees, one of which met with a tremendous encore; and Mr. Balfe warbled his own beautiful ballad, "A home in the heart." The instrumental music was generally good, particularly a fantasia on an Indian air, by Mr. Edward Roedel; and a duet for two pianos, by the *Bénéficiaire* and Mr. Louis Werner. Mr. Eliason was the leader, and Mr. Dumon the conductor.

VARIETIES.

Mr. Hayler's Portrait of the Queen, exhibited during the week at Messrs. Hodgson and Graves', has attracted much attention. It represents her majesty in the "imperial Dalmatic robes," with the crown upon her head, as seated on the throne in Westminster Abbey, and is extremely like the royal original. The figure is well disposed, and the general air expressive of the solemn occasion. This fine national picture is to be engraved by S. Cousins; and those who have read our frequent notices of the productions of that artist need not be told that it could not be in better hands.

The Artists' Benevolent Fund, which meets to-day, to hold its anniversary, at Freemasons' Hall, bids fair to be a gratifying assemblage, notwithstanding the political agitation of the times.

The Wheel Rifle.—A gun, invented and patented by Mr. Wilkinson, of Pall Mall. Its novelty consists of a wheel, containing seven complete charges, revolving on a centre, which, when discharged, can be replaced in an instant by other wheels, carried in the belt, so as to keep up a continuous firing. As rapidly as the command, "load, cock, fire," can be uttered, can this rifle be discharged, several hundred times, without missing fire, or requiring to be cleaned.

Patent Pedometer.—Mr. Payne, of New Bond Street, has favoured us with one of these pretty instruments, which has been continually in and out of our waistcoat pocket since we received it. We can bear testimony to its general correctness, and recommend it to all pedestrians as a useful and amusing article.

It requires no attention beyond the first regulation, and is accompanied by full directions; it is withal so simple in its ingenious construction, that these were hardly required. Being handsome in its external appearance, it looks a very fair substitute for a watch, and "pro hac" any dandy might sport it.

W. H. Burgess, Esq.—This amiable gentleman and accomplished artist died this week, in Sloane Street, at the early age of 48. His publications of trees, &c., are very beautiful and interesting. These ancient and picturesque occupants of the British soil never had a more feeling nor a more accurate observer.

LITERARY NOVELTIES.

In the Press.

Memoirs of the Life and Correspondence of Robert Morrison, D.D., F.R.S., M.R.A.S., &c. &c. Compiled by his Widow.—A Critical Essay on the Literary Labours of Dr. Morrison. By the Rev. Samuel Kidd, Professor of Chinese in the University College, &c. &c. &c.

Messrs. Hatchard and Son, Piccadilly; and Messrs. Hamilton, Adams, and Co. Paternoster Row.

COMPANION to the "DIARY of an INVALID." Crown 8vo. price 2s. in cloth.

NOTES on NAPLES and its ENVIRONS, and on the Road to it and Rome.

By a TRAVELLER.

"This is in many respects an uncommon book on a common subject. One much fuller of meaning and real feeling than any work of the kind we have met with in English this many a day. . . . We consider the author's descriptions of scenery, and all material objects, as not only lively and beautiful, but wonderfully correct."—*Metropolitan*.

"This more than clever book.—Full to brimming over with the poetry of Italian life, and nature and antiquity. . . . The author, in addition to his power of appreciating works of art, approaches Horace the imitator in the gusto with which he tells an anecdote. The book is like a beaker, full of the warm south."—*Athenaeum*.
James Bohn, 12 King William Street, West Strand.

In 8vo. price 4s. Part II. of

A FLORA of SHROPSHIRE.

By W. A. LEIGHTON, B.A. Fellow of the Botanical Society of Edinburgh, Honorary Corresponding Member of the Worcester Natural History Society. The Work will comprise the Flowering Plants indigenous to the County, arranged on the Linnaean System, and will be completed in three parts.

Carefully and critically executed, as might be expected from so assiduous a practical naturalist as Mr. Leighton."—*Athenaeum*. No. 579.

London: John Van Voorst, 1 Paternoster Row; and John Davies, Shrewsbury.

NOVEL, BY MISS MARTINEAU.

DEERBROOK. A Novel.
 By HARRIET MARTINEAU.
 "It is a village tale, as simple in its structure, and unambitious
 in its delineations, as one of Miss Austen's; but including charac-
 ters of a higher order of mental force and spiritual attainment
 than Miss Austen ever drew."—*Athenæum*.
 Edward Moxon, Dover Street.

DISIARIEL ILLUSTRATED!

2d edition, post 8vo. 7s. 6d.
NEW CURIOSITIES OF LITERATURE.
 By BOLTON CORNEY, Esq.
 "This very smart and cleverly written volume is a thorough
 dissection of Mr. D'Israeli."—*Edinburgh Post*.
 "We do not know that we were ever more amused with a
 critical combing."—*Dublin Evening Post*.
 "Every reader of the 'Curiosities of Literature' should possess
 himself of this little book."—*Palmersham Packet*.
 Richard Bentley, New Burlington Street,
 Publisher in Ordinary to Her Majesty.

Maunder's Biographical Treasury. 2d edit.
 with considerable Addenda.
 "A work worthy of great and lasting favour."—*Literary Gazette*.

Second edition, price 14s. in cloth,
AN APOSTOLICAL HARMONY of the GOSPELS; founded upon the most Ancient Opinion respecting the Duration of our Saviour's Ministry, and exhibiting the Succession of Events in close accordance with the order of the two Apostolic Evangelists. With Dissertations, Notes, and Maps.

By LANT CARPENTER, L.L.D.
 This Harmony is founded upon the principles that the Ministry of Christ included one year; that the Passover in John, vi. 4, was that of the Crucifixion; and that, of the first three Evangelists, the order of Matthew is commonly to be preferred. These principles are maintained in the Dissertations, which also include a Descriptive Survey of Palestine at the time of our Saviour.
 Longman, Orme, and Co. Paternoster Row;
 Smallfield and Son, 69 Newgate Street.

In one volume, medium 8vo., printed to correspond with the Authors' Peerage and Baronetage, with a Portrait of James I., and illuminated Title-page, price 22s. bound in cloth.

 London: Scott, Webster, and Geary, Charterhouse Square.

In 18mo. with 324 Woodcuts, price 5s. 6d. bound,
COMSTOCK'S NATURAL PHILOSOPHY; in which the Elements of that Science are familiarly explained, and adapted to the Comprehension of Young Pupils; with appropriate Questions on each page for the Examination of Scholars.
 By JOHN L. COMSTOCK, M.D.
 Revised and Enlarged, with Additions on the Air Pump, Steam Engine, &c.
 By GEORGE LEEB, M.A.
 Lecturer on Natural Philosophy, &c. Edinburgh.
 "We feel confidence in stating that the work cannot fail of being highly appreciated wherever it may be introduced."—*G. Leet, M.A.*
 "This is by far the best elementary work on the subject which I have seen; it is clear and concise, and is admirably suited to the younger medical student; that I have strongly recommended it to my own pupils."—*Marshall Hall, M.D.*
 London: Scott, Webster, and Geary, Charterhouse Square.

FOR THE USE OF SCHOOLS.
 In fcap 8vo. cloth and lettered, price 5s. 6d.
A PRAXIS on the LATIN POTENTIAL and SUBJUNCTIVE MOODS; being an Attempt to illustrate their Nature and Construction in the way of exercise, with Notes, in which are examined the Doctrines of Farr, Crombie, Zumpt, Carsson, and Greenlaw.

BOTANY.
 Publishing Monthly, large 8vo. 6d. small 1s. 6d.
THE BOTANIST.
 Conducted by R. MAUND, F.L.S.
 Assisted by the Rev. J. S. HENSLOW, M.A. F.L.S.
 Regius Professor of Botany in the University of Cambridge.
 It contains the most highly finished coloured Engravings of the best Greenhouse and other Flowering Plants, and more ample scientific and popular Descriptions, than will be found in any similar Publication. Portions of a descriptive Guide to Botany, and a Botanical Dictionary, written by Professor Henslow, with Diagrams and many Woodcuts, are given in each Number.
 Volumes I. and II. contain Fifty Plates each; gilt boards, large, 32s.; small, 20s.; or elegantly half-bound, large, 37s.; small, 25s.

Also,
 At 1s. 6d. large, and 1s. small,
The Botanic Garden; or, Magazine of hardy Flowering Plants. By B. MAUND, F.L.S. Each Number contains Four finely coloured Figures of Ornamental Plants, suitable for the Open Flower Garden, with popular Descriptions, and instruction for their Culture. Added to each Number is a Floral Register, with Sixteen Miniature Cuts of the rarest Plants, and a detailed account of each; also, an Auctioneering, being a Register of desirable information on Garden Cultivation, &c.
 Seven Volumes are completed, each containing Ninety-six Plants; in boards, large, 57s.; small, 25s.; or elegantly half-bound, large, 42s.; small, 20s.
 These are the only two Botanical periodicals which contain entirely different flowers; all interesting plants of recent introduction are given in them; and whether regarded as works of science, art, or pleasing information, on a moral basis, they are esteemed as pre-eminent to every other.
 London: Simpkin, Marshall, and Co.; Sherwood and Co.; and R. Greenbrier.

8vo. price 1s. sewed.
A REPLY to the Rev. SIDNEY SMITH'S
 Third Letter to Archbishop Singleton, in a Letter to the Venerable Archdeacon Weibull, Prebendary of Gloucester.

FISHER, SON, AND CO. LONDON.

MONSIEUR LEPAGE'S FRENCH SCHOOL.

4th edition, 4s. each Part, or the Three Parts bound in One Volume, price 11s.

L'ECHO DE PARIS, PART I.

BEING A SELECTION OF PHRASES A PERSON WOULD HEAR DAILY IF LIVING IN FRANCE,
WITH A VOCABULARY OF THE WORDS AND IDIOMS.

The general and spontaneous adoption of Monsieur Lepage's "Echo de Paris" has encouraged him to publish two new Works, which he confidently trusts will, in conjunction with "L'Echo," give a thorough knowledge of the French language, as regards speaking it fluently and well, writing and translating it easily and elegantly, and a thorough grammatical knowledge, based upon the firmest principles; thereby obviating entirely all necessity of "leaving England to learn French."

LEPAGE'S FRENCH SCHOOL, PART II. 4s.

GIFT OF FLUENCY IN FRENCH CONVERSATION.

A Set of Exercises for the Learner of the French Language, calculated to enable him, by means of practice, to express himself fluently on the ordinary Topics of Life. With Notes.

LEPAGE'S FRENCH SCHOOL, PART III. 4s.

THE LAST STEP TO FRENCH;

OR, THE PRINCIPLES OF FRENCH GRAMMAR.

Displayed in a Series of Short Lessons, each of which is followed by Questions and Exercises, with the Versification.
London: EFFINGHAM WILSON, 18 Bishopsgate Street Within; of whom the full allowance to Schools and Private Teachers may be had.

Price 1s. 6d. or cloth boards, 2s.
DR. CHANNING'S NEW WORK ON SLAVERY.
REMARKS ON THE SLAVERY QUESTION,
in a Letter to Jonathan Phillips, Esq.
By W. E. CHANNING.
Charles Fox, 67, and Wiley and Putnam, 35 Paternoster Row.

Published in Numbers, price 3d. each,
AN Authenticated Report of the Controversial Discussion now in progress between the Rev. J. Cumming, M.A., and Daniel French, Esq. Barrister-at-Law. Held in the British School Room, Hammersmith.
London: P. and M. Andrews, 3 Duke Street, Little Britain; and all Booksellers.

Just imported from Calcutta, in 1 vol. fvo. price 6s. boards,
THE SUNYASSEE, an Eastern Tale; and other Poems.
By JAMES HUTCHINSON, Esq.
Surgeon on the Bengal Establishment.
Wm. H. Allen and Co. 7 Leadenhall Street.

Price 4s. 6d. neatly bound,
EXCERPTA OF WIT; or, Railway Companion. Being a Collection of Laconic Sentences, from a great variety of Sources.
Pelham Richardson, 23 Cornhill.

In 18mo. price 2s. 6d. half-bound, the 4th edition, with Frontispiece, of
A PLAIN AND SHORT HISTORY OF ENGLAND, for CHILDREN, in Letters from a Father to his Son. With a Set of Questions at the End of each Letter.
By the Editor of "The Cottager's Monthly Visitor."
Printed for J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

In 8vo. price 10s. in boards,
DODSLEY'S AND RIVINGTON'S ANNUAL REGISTER, for the year 1837.
Printed for J., G., and F. Rivington: Longman and Co.; J. M. Richardson; Jeffery and Son; J. Booth; Hamilton and Co.; Whittaker and Co.; Simpkin and Co.; G. Lawford; J. Dowding; J. Rodwell; Sherwood and Co.; Haaker and Co.; H. Renshaw; W. H. Reid; and W. Waller.
* * The Vol. for 1838 is in the press.

NEW BARONETS.
Corrected to the Present Year,
DEBRET'S BARONETAGE of ENGLAND: with Alphabetical Lists of such Baronets as have merged in the Peerage, or have become extinct. Also, the existing Baronets of Nova Scotia and Ireland.

Stamped Edition, 9d.

REVIEW OF NEW BOOKS.

Travels in the Trans-Caucasian Provinces of Russia, and along the Southern Shore[s] of the Lakes of Van and Urumiah, in the Autumn and Winter of 1837. By Captain Richard Wilbraham, 7th Royal Fusiliers. 8vo. pp. 477. London, 1839. Murray.

THOUGH the region traversed by our countryman between the Caspian and Black Sea, and parts of the Caucasian Chain, possesses much interest, and has, at this time, peculiar attractions for the English reader, the critic need not be long detained by these pages. For they very slightly skim matters of the chiefest importance, and are more the remarks of a gentlemanly tourist upon the surface of society and superficial things, than the researches of a person bent on investigating the usual and graver objects which obtain the attention of travellers.

When the Persian army marched to the siege of Herat, Captain Wilbraham sought the opportunity to make this autumnal excursion, and, previous to his departure from Tehran, had an audience of leave of the new Shah. As we have not met with any account of him since his accession, we copy it; and also the description of his prime minister:—

“His majesty was seated near the window supported by a pile of cushions, while a single attendant knelt behind him, waving a broad fan of feathers above his head. His dress was, as usual, perfectly simple, the rich-jewelled handle of his dagger alone betokened his rank. His age does not exceed one or two and thirty, but his thick beard and heavy figure make him appear an older man: his countenance is rather handsome, and, except when his anger is excited, of a prepossessing and good-humoured expression: his manner, especially towards Europeans, is extremely affable: he generally speaks Turkish, the language of his tribe, but, both in that and in Persian, his enunciation is so rapid that it requires some practice to understand him. Compared with the generality of Asiatics, the shah is a man of considerable energy, and by no means deficient in information: he is well versed in the history of his own country, and has a tolerably correct idea of the geography and political state of Europe. His army is his hobby, and to his thirst for military fame he sacrifices both his own ease and comfort, and the welfare and prosperity of his country. His court is far inferior in style and splendour to that of his grandfather and predecessor, the principal offices of state being occupied by men of low origin, deficient in that magnificence and courtliness of manner which formerly distinguished the Persian noble. The late king was always attended by a numerous and gallant retinue of princes of the blood, and officers of state, besides a crowd of inferior retainers; the present monarch often rides out with a few ill-mounted and worse-appointed followers. The shah is a strict and conscientious Mussulman: he never indulges in the forbidden juice of the grape, an abstinence rare in the royal family, nor does he follow the universal practice of smoking. His harem, unlike that of his grandfather, the number of

which exceeds all credibility, is within the limits prescribed by the Mahomedan law. Well would it have been for Persia had Fattah Ali Shah been as moderate, for every government, however insignificant, was conferred upon one of his countless sons, who drained the very heart's blood of the country. Since the accession of the present monarch the greater part of these have been removed, and many of them are now reduced to the utmost distress, living from hand to mouth by the sale of shawls and jewels, the relics of better days. Some of the late king's wives have passed into the harems of private individuals: others, who had amassed some property, live in their respective villages. Mahommed Shah has two sons; the eldest, his destined successor, is now at Tabreez, under the care of Suleiman Khan, his maternal uncle. The mother of the boy was of the royal tribe. The second, who resides at Tehran, is a chubby little fellow, about three years old, the son of a Koordish woman. Having answered some questions put to me by the king on military subjects, and recommended to his majesty's notice several of the officers who had been under my command, I quitted the royal presence and repaired to the tent of ‘Haji Mirza Aghassi,’ the grand vizier, which communicates by a private door with the Nigaristan. The haji, or pilgrim, as this important personage is always called, from his having performed his devotions at the shrine of Mecca, is the most remarkable man that I have ever met with. He is by no means destitute of talent, but his words and actions are strongly tinged with real or affected insanity. He is said to be deeply versed in the mysteries of Soofeism, the wild theories of which, though incompatible with the religion of the prophet, are daily extending the number of their votaries. The extraordinary degree in which he has possessed himself of the confidence of his sovereign, both as political and spiritual adviser, has rendered him almost omnipotent, and emboldens him to treat the ancient nobles, and even the princes of the royal family, with the utmost hauteur and coarseness, doubly galling to them from the lowliness of his origin. The whole business of the state is transacted by him, and the other ministers of the shah are mere instruments in his hands. It is impossible to introduce any subject, but the haji immediately assures you that he understands it more thoroughly than any man alive; and I have heard him utter the most consummate nonsense about military matters, while the whole assembly, with imperturbable gravity, agreed with all he said. On one occasion, some one having ventured to praise the generalship of Napoleon, the haji sharply interrupted him, saying, ‘Napoleon! whose dog was Napoleon?’ The good sayings attributed to the haji would fill a volume, but unfortunately few of them would admit of repetition to ears polite. His tent was as usual crowded: on either side of the great man, with the most punctilious regard to precedence, sat a long row of ministers, priests, and soldiers, whilst several secretaries, seated behind him, were writing despatches, or presenting them to him for perusal

and signature. The approaching departure of the army occupied every mind; and gholams, or couriers, ready booted for the journey, stood in readiness awaiting their orders to proceed to the different provinces from whence new levies were to be summoned. The vizier is a short but athletic man, of about sixty, with a shrewd gray eye and a thin scanty beard,* the cause of much witty remark in a country where that appendage is cultivated with so much care. Until the accession of the present shah, the haji filled a subordinate station in the household of the prince royal, and had something to do with the education of the reigning king. He was raised to his present dignity in 1835, when his predecessor, a bold and clever man, having excited, by his ambition, the jealousy of the monarch, met with the fate of the bowstring. He affects a great friendship for the English, overwhelming us frequently with expressions of regard, such as ‘My life,’ ‘My soul,’ ‘My ancient friend;’ but it is almost hopeless to transact any business with him; for, whenever the subject becomes disagreeable, he turns the conversation to some other topic, and his ready-made promises are as readily broken.”

Capt. W. estimates the population under the rule of these two personages at seven millions. The army is in a sadly disorganised state, and two or three years in arrear of pay. The consequence is, that wherever the soldiery march, they devastate the land and villages worse than if they were in an enemy's country.

From Tehran, Capt. W. went to Tabreez, crossed the Arras (ancient Araxes), now the frontier of the Russ-Georgian province, performed a short quarantine, and advanced to Erivan, the capital of Russ-Armenia. He notices here a patriarchal habit:—

“As I rode along the plain (he says) where the reapers were at work on either side of me, many of them brought sheaves of corn to the road-side, and laid them down before my horse's feet. It is an ancient custom, and one that I reverence: it is, at least, a graceful way of begging.”

From Erivan he proceeded to Tiflis, the capital of Georgia, and finding impediments thrown in the way of the route which he wished to take, the emperor being on the eve of visiting his Georgian provinces, and certain jealousies existing with regard to British officers, he made a sort of provisional trip to the baths of Pelligorsky, and returned to Tiflis in time to join in the imperial reviews, fêtes, and entertainments. Nothing very worthy of observation occurred; but we select a few passages:—

“Now that I was fairly established in Tiflis, I began to enter into the society of the place, and there were several houses where I could always reckon on a good dinner and a cordial welcome. In the evening, too, many were glad to see their friends; and, as the dinner-hour was early, and there were no public amuse-

“A Persian noble, in describing the haji to the ambassador, who had never seen him, completed his picture by saying, ‘He has five-and-twenty hairs in his beard;’ and, making the incredulous look of his listener, he added, ‘by your head, it is true—I counted them myself.’”

ments in Tiflis, I often availed myself of this custom. Many of those whose houses I frequented were foreigners, who form a very large portion of the class of Russian *employés*. An adventurer, who styled himself the Baron Dieskau, who had the impudence to pass himself off for an English Elchee among the Affghans, and the knavery to procure money in that character, expressed himself desirous of making my acquaintance—an honour which I declined, knowing rather more about him than he reckoned upon. He is an officer in the Russian service, into which he has been admitted since his doings in Afghanistan. Any one, indeed, who has been in India, whatever may have been the cause of his quitting the country, is received by Baron Rosen into the Russian service."

The author says elsewhere:—

"It is almost as difficult to obtain any correct information in Georgia, regarding the war in Circassia, as it is in England. I have spoken on the subject with many officers who have served against them, and can only learn that it is a complete guerilla warfare. All agree that these mountaineers are as brave as steel, and that there is no prospect of a speedy termination to the contest.

"The Georgians (he also tells us) have the reputation of being the greatest drinkers in the world: the daily allowance, without which the labourer will not work, is four bottles; and the higher classes generally exceed this quantity: on grand occasions the consumption is incredible."

One of these fellows should come to us and try for the *whistle*.

Leaving Tiflis again, not without witnessing a striking act of justice by the czar,* Capt. W. passed into Turkish Armenia, and visited Anni, its ruined and ancient capital, of which the description is touching:—

"Over the gateway are some curiously sculptured figures. The walls and towers are built of irregular masses of stone cemented with mortar, but they are faced with well-hewn blocks of sandstone. The sacred symbol of Christianity is introduced in various places. Huge blocks of blood-red stone, let into the masonry of the tower, form gigantic crosses, which have defied the hand of the destroying Moslem. The only buildings which are now standing are the Christian churches, a Turkish mosque, several baths, and a palace, said to have been the residence of the last Armenian monarchs. All these display much splendour and architectural beauty, and the fretwork of some of the arches is very rich; but it is

evident that the public buildings alone were on this massive scale, and that the private dwellings were always very humble. The hollows in the ground, and the mounds of loose stones scattered over the whole area of the city, would lead me to suppose that they were much of the same style as those now in use. Throughout the whole of Armenia and Georgia I have remarked, that while the villages are scarcely raised above the level of the ground, the churches are massive structures visible from a great distance. There are a vast number of inscriptions at Anni, some in Turkish, but the greater part in Armenian. The churches are precisely of the same architecture with those of Etchmiadzin, and some of them are still in perfect preservation. In one, the walls are covered with rude paintings, in some of which I recognised subjects from the Scriptures; but the miracles of St. Gregory, and other saints of the Armenian calendar, occupied the large share. The Oriental Christians appear always to have had a fancy for building their churches in the most inaccessible situations; and of this there is a curious instance at Anni. On a narrow ledge of rock, washed on three sides by the Arpachai, stands a little chapel, accessible only by a steep and dangerous footpath. Tradition says that it was erected by the daughter of some old Armenian king, famous for her piety and beauty, who used to spend the greater portion of her days in this isolated spot. As I rode among the mounds of stones, several covies of the rock partridge rose from beneath my horse's feet, so seldom are they disturbed in the once crowded streets of the capital of Armenia. One solitary Koordish shepherd, with his white felt cloak, was standing beneath the shelter of a ruined porch, while his small flock of mountain-goats were perched upon the crumbling arches of an adjoining bath. Shepherd and flock were both in keeping with the desolation of the surrounding scene, and would have furnished a subject worthy of Salvator's pencil. In one of the old roofless churches, a scanty fire, still smouldering among the blackened ruins of the fallen altar, marked his cheerless bivouac. My guide dismounting allowed his horse to stray within the gateway of the sacred pile, and, sheltered from the raw and piercing blast by the massive buttress of the vaulted aisle, vainly attempted to fan the dying embers to a flame.

"The city of Anni was built in the early part of the sixth century, and continued for several hundred years to be the capital of Armenia. It fell several times into the hands of those fierce conquerors who during the middle

tion is so general an offence, that there are few, if any, whose conduct would stand a close investigation. The emperor spoke most kindly to the poor old baron; and, by way of affording him some consolation, named his eldest son one of his aides-de-camp. Since the emperor's arrival in Tiflis, the number of petitions that have been presented amounts to upwards of two thousand; and if they should be read, they will probably unfold an extent of corruption and injustice for which his majesty is not prepared, and which will implicate some of the highest officers in the country. An aide-de-camp stands at the palace gate, and receives every paper with his own hand." (Different governments, different principles, different customs,—there are good and evil in all nations; and it is the grossest of absurdities for any one country to try others by its own standard. In England, people talk of "the Russian despot," "the tyrant," &c. &c.; but what a commentary it was to see the despotic son of this despotic monarch, by the generous and noble disbursement of a sum of base money, give freedom to a number of the citizens of this our land of boasted liberty, whose freedom had been valued at less than from five paltry pounds to twenty shillings a-piece. Let us cease to shout patriotic songs and toasts, and declaim about the glorious blessings we enjoy, when a Russian Prince, visiting us, can read such a lesson to our national boasting and vanity; and liberate a hundred British prisoners at the cost of hardly more than as many Muscovite roubles. It was a gracious and princely act,—Ed. L. G.]

ages overran the East, and experienced the most cruel treatment from them. The old historians inform us that, when Anni was captured by Alp Arslan, the slaughter was so great, that the streets were choked with bodies, and the river crimsoned with the blood of the slain. The feelings excited by the sight of this deserted city are very melancholy. The forsaken churches remind you that a powerful Christian nation here sank beneath the repeated attacks of the most barbarous tribes of Asia, the bitterest foes of civilization and Christianity. The very preservation of the buildings heightens the impression of loneliness, and you involuntarily look around for signs of life. Amid the utter ruin of more remote antiquity, very different feelings are excited. The shapeless mounds of Babylon are like the skeleton; but the deserted yet still standing city resembles the corpse whose breath has fled, but which still retains the semblance of life."

Hence by Kars and Erzeroum, and passing the Euphrates by a stone bridge, and the Kara Su, or Black Water, by fording, our travellers arrived at Moush, and from Moush journeyed to Bitlis, among Turks and Koords. Of the lake of Van we are told, "The waters are exceedingly bitter to the taste—far more so than those of the Caspian. A species of herring is taken in great abundance at some seasons of the year; but I tried in vain to procure a single fish at any of these villages. At noon I halted for an hour, and the sun was so powerful that I preferred breakfasting in the open air. At sunset we quitted the shores of the lake, whose waters looked as black as ink, and ascended a steep and winding road which led across a high mountain-pass. It was very late when we reached the wretched Armenian village of Narnigas; and during the last hour the snow fell thick and fast. I thought that we should never reach the end of our stage, and had fully persuaded myself that my guide had mistaken the path, when the welcome bark of dogs proclaimed that the village was at hand. Our accommodation was most miserable, for we were crowded into a stable which resembled a Noah's ark. Children were squalling the whole night through, and two young buffaloes, mistaking my lair for their own, walked over me in the dark.

The lake (he adds) appeared to me to be about five-and-thirty or forty miles in length, and from fifteen to twenty in breadth. During the two days that I skirted its shores, I did not desecrate a single sail, nor even a fishing boat."

His road eastward into Persia led him by the salt lake of Urumiah, the waters of which "are so salt that no fish can exist in them: several large streams of bitter brackish water flow into the lake from the northward, and it doubtless contains numerous subaqueous saline springs."

There is an interesting account of four American missionaries who are here devoting themselves to the reclamation of Nestorian worshippers, and who are represented as succeeding with the rising generation. "Their labours (says Capt. W.) are exclusively confined to the Nestorians, of whom there are many villages in the vicinity of the lake, although, as I have before mentioned, their principal seat is among the almost inaccessible mountains of Koordistan, into which none of the missionaries have as yet succeeded in penetrating. Hitherto they have devoted the principal share of their time to the task of mastering the languages of the Nestorians: I say languages, because the written and the spoken Syriac are almost distinct tongues. They have

* "After the parade had been dismissed, a terrible act of justice was performed: the officers were called to the front, and Prince Dadian, the colonel of the grenadiers of Georgia, the son-in-law of the governor-general, and an aide-de-camp of the emperor, was conducted into his majesty's presence. I saw that all was not right, and walked towards the other end of the parade with Colonel Rauch. I did not hear what was said, but saw the military governor step forward, unbutton the prince's coat, and tear off his aiguillettes. His sword was taken from him, and, within a few hours, he was on his way to a distant fortress to await his trial by court-martial. It was so unexpected, that I am told several of his nearest relations were looking on from the balcony of his own house, without a suspicion of what was about to take place. I could scarcely believe my eyes, for I had seen him the preceding day at the emperor's table. A charge had been brought against him for employing large numbers of the men of his regiment in his own private concerns; and an aide-de-camp of the emperor had been sent to the station of his corps to inquire into the truth of the statement: he had only returned the preceding night. I was very sorry for the poor prince, who had only been married to him a twelvemonth. I have since heard that the military tribunal sentenced him to serve in the ranks, and that in despair he committed suicide. This example, which proves that no amount of interest is able to screen the offender, has naturally alarmed the officers commanding the different regiments: for pecu-

made great proficiency, and are now able to instruct the children, who attend their school in great numbers. I regretted very much that I had not an opportunity of witnessing the result of their exertions; but during the few days that I remained under their roof, the children were all absent with their parents."

Of Capt. W.'s return to Tabreez and Tehran, and subsequent ramble through the province of Mazanderan to the shore of the Caspian, we shall say nothing; having, we trust, done ample justice to his volume by the extracts we have already selected.

The Gentleman of the Old School: a Tale. By G. P. R. James, Esq. author of the "Huguenot," &c. &c. 3 vols. 12mo. London, 1839. Longman and Co.

We do not know how to treat this tale, for its chief attractions as a work of fiction are in its dramatic construction, incidents, and *dénouement*; and if we were to interfere with these, as specimens of the author, we should preclude our readers from a pleasure which it is our rule never to prevent their enjoying. The style we do not think quite so good as in some of Mr. James's productions; probably because we found the word talented used by him (vol. i. p. 232), an offence in a sterling English writer, which we do not overlook, and which we daresay made us more fastidious with the rest. The Old English Gentleman is a fine character, and well opposed to Mr. Forrest, a consummate villain; as is Capt. Trafford, his nephew, to Young Forrest, a relative of the latter. Of the ladies, Lady Mallory is the most original; love and honourable feeling struggling in her for superiority. The heroine, Edith, is a charming creature; and Lucy Williams, in a lower degree, another. There are others of some note, such as Castle Ball, a stout honest yeoman; but in this class, Meakes, a retired serjeant, landowner and poacher, is by far the most prominent and entertaining.

Having said so much, we must try to give two or three separable passages by way of example. A sketch:—

"There is in all ages and at all times a class of young men, of whom John Forrest was but a type; and perhaps there is not a class so deservedly to be detested upon the face of the earth. He had considerable talents of various kinds, and the possession of those talents made him idly fancy that he possessed genius—that most rare of all jewels. The belief that he possessed genius, based upon natural self-conceit, and stimulated into activity by egregious vanity, induced him to have recourse to every means for the purpose of forcing the same opinion of his merits down the throats of other people. As self-conceit, from the impossibility of its being always gratified, is generally a pugnacious quality, he, like many others, soon learned to believe that the strongest proof of genius was to assail the opinions which the good and the wise have received and promulgated; and, with a natural turn for speculation, which he called philosophy, considerable powers of sophistry, which he called logic, a supercilious smile and a sarcastic expression of countenance, he had convinced a great many soft persons that he was what he pretended to be—a man of real and sterling genius, who was to be courted, feared, and admired. Though he was thus far successful, and had gathered round him in the capital a circle of small idolaters, who adopted his philosophy, spread his fame, and talked him into notoriety, John Forrest was nevertheless a disappointed man. The credit he obtained,

though far more than he deserved, did not satisfy the greediness of his self-conceit. In the first place, he found that, although flattered and caressed, he was by no means generally loved or liked; and he was shrewd enough to perceive, that even amongst women his success and favour was [were] principally, if not altogether, with those who had neither minds, nor principles, nor hearts; that they gratified his vanity to gratify their own; and that there were very many, who, though they might not be able to combat his arguments even if they had tried, viewed him with coldness, reprobation, and contempt. All this spread a bitterness through his mind; and that weakest of small ambitions, the love of saying a smart thing, was mingled with a sneering virulence from the disappointment of egregious vanity."

Another sketch will readily be recognised as drawn from the life, and a highly gifted barrister of our day to have sat for one of an older time. In a case of great trouble and difficulty, Sir Andrew Stalbrooke (the gentleman) says:—

"I have got down here Sir Frederick Polaxe, to give us his advice upon your case. You have heard of him often of course, my dear boy, and know that his eloquence and his knowledge and his judgment are not to be equalled in the senate or at the bar, while, to all the rest, he adds a heart which gives the depth of personal feeling to all that he undertakes in the cause of others. I have also here our good friend and solicitor, Samuel West, whose eagerness in behalf of those to whom he is attached seldom fails to find the means of serving them. They arrived late, but we set to work upon the business immediately; and though of course you must now, my dear boy, make your abode in a prison for some time, yet with the evidence of Meakes and Lucy there cannot be the slightest doubt that an instant verdict of acquittal will be pronounced in your favour. Two almost distinct contradictions have already been discovered in the evidence of this unfortunate young man's servant. The last words were spoken at the library door, and the next moment Sir Andrew and Trafford entered. With one of the gentlemen of the law who were sitting there consulting, Trafford was already well acquainted, and shook hands with him warmly, as well as with his uncle's fellow-magistrate, Sir Arthur Brotherton. The third gentleman was unknown to him except by the voice of fame. But he found in him those mild and graceful manners which have such inexpressible charms, although want of health, at the time, had rendered his demeanour somewhat grave, perhaps we might call it languid, except when the fire of genius blazed suddenly up, and all was light and energy."

When the trial came on, his legal acuteness was found fully to bear out this encomium. But we must add a bit of our friend Meakes, who has pumped Mr. Forrest out of one of his dearest secrets:—

"If Mr. Forrest had possessed any means of shooting Meakes upon the spot, and any security that he would not be discovered, there can be no doubt of what would have been the fate of the old soldier at that moment. He once more started up, with uncontrollable rage expressed in every line of his countenance, and replied fiercely, 'I came neither to hear you defend a murderer, abuse my murdered nephew, or give me your wise counsel to let a felon escape. All I have to ask of you is, after all your professions, will you, or will you not, do what I require?' 'Pon my soul,' replied

Meakes, rising quickly also, 'I wonder you have the impudence to ask me. If you won't do what I ask, why should I do what you ask? But come, come, Mr. Forrest, be persuaded; listen to good advice. If I were you, the moment the cause came on, I'd drop the prosecution, call no witnesses, and leave the matter as it is. Now pray do be persuaded, and do what is just and right for once in your life.' 'If I did what was just and right,' said Mr. Forrest, 'I should knock you down.' 'Those that have tried it,' answered Meakes, coolly, 'have neither found it easy, pleasant, nor profitable. Tim Meakes is a tough bait for any fish to gorge. But, putting aside such stuff as that, do let me persuade you; and if you do, I can assure you you will spare yourself a great deal, and say, years hence, perhaps, that I was the best friend that ever you had in your life.' 'You are a cursed, treacherous scoundrel,' replied Mr. Forrest; 'and I doubt not will go and swear to-morrow that I have come to bribe you, and tamper with your evidence, after first having sent for me yourself.' 'If I did,' answered Meakes, 'you know very well that I should swear nothing but the truth. But I shan't do that, either, Mr. Mason, or Mr. Forrest, as the case may be. No, sir, about all that, I shall hold my tongue; and they shall not make me say a word. I am not a grass-cat,* to squeal like a young baby at the first pinch. But as to Captain Trafford, sir, I shall tell the truth, the whole truth, and nothing but the truth: you may make yourself as sure of that as if you had heard it. Then, touching my having sent for you, and held what the outlandish folks call a palaver with you, and all that,—you see, Mr. Forrest, whenever we find a fox out of his earth in the hunting season, we stop all the earths round about, so that he must run for it. Now hang me, Mr. Mason, if we have not stopped all your earths for you, and I do not think you will find a hole to get into in the country; so you had better take to your legs and make a burst of it; for I'll be shot if the dogs are not after you.' 'I do not understand you, sir,' exclaimed Forrest, turning somewhat pale; 'be so good as to tell me what dogs you mean. I do not understand such fine allegories.' 'No, no, Mr. Forrest,' exclaimed Meakes, with a shrewd look; 'I am an old fox myself, and do not easily say more than I like; but I have given you a fair warning, as I told the folks I would; and I have tried to persuade you to do what is right; but if you will neither take the warning, nor do as I say, why it is your own fault, you know. We should give every beast a start. You have a fair start now, and if you do not make the best of it, I cannot help you any further. No man can do more than he can do, in the situation he may be in. I may have wings and a broad back, like other birds, but it is only a stork that can carry his grandfather over a style, as I have seen them do many a time. So now I have done, and no more to say."

We now conclude with a touch at our own genus, which, however, we do not take as a personal insult:—

"After riding on for some way, he came to a place where three or four roads divided, and where a tall old finger-post reared itself in the angle of one of the hedges, pierced with worms, covered with green mould, and bearing not the slightest vestige of those directions which it once afforded to the weary wayfarer. It was the image of a conceited critic holding up its dull straight head, as if it were the only source

of information upon earth, yet affording none to any one, and possessing in reality none itself."

Tytler's History, &c.

[Third and concluding notice.]

HAVING already devoted two papers to these valuable historical volumes, and having "Goodman's Reminiscences" of a similar character before us, we must be content with a shorter winding up of Mr. Tytler's publication than, even with our limits, we intended.

Before we proceed with this, we may be allowed to offer a remark on the author's plan of changing the ancient spelling of the documents he has quoted, upon which system a difference of opinion is, we know, entertained. For ourselves, we would say that Mr. Tytler has our entire approbation. If he addressed only scholars and antiquaries, the zeal of having every old letter literally printed, it is true, gives a relish to the transcript, but when he (or any one) publishes for the general mass of readers, whom he wishes to understand him, it would be worse than affectation to retain antiquated and often unintelligible forms, when the sense can be exactly preserved by substituting equivalents in the common language in use at the day.

The second period, embraced in this work, is from 1549, i.e. from the deposition of the Protector Somerset, to 1553, the death of Edward VI. A return of the prisoners in the Tower in October 1549, when Somerset was conducted thither, is a very curious paper. From among many of its items we select the following examples:—

"Anthony Foster, late marshal of Ireland, committed to the Tower because he was minded to sell his said office, and to have gone with Geoffrey Poole, being his father-in-law, as is supposed.—To be examined touching the king's supremacy. Mr. Wotton, Mr. Gage, and the lieutenant."

"Julius de Carcano, Italian, committed to the Tower for bringing of counterfeit testoons; which matter hath been divers times examined, and he denieth it, and no witnesses to prove the offence.—By Mr. Wotton. To be convicted, and upon submission to be pardoned."

"William West, cousin to the Lord Delaware, which intended to have poisoned the said lord."

"James Noble, a Scot, brake Colchester Castle, and was taken on the seas; and hath lands and goods.—Northampton."

"Patrick Baron, merchant and Scot, taken in the wars, and brake the said prison of Colchester; and hath goods, but to what value is not known.—Lambert."

"Richard Coole, of Mynny, in the county of Somerset, mariner, was a pirate by the space of one year, and took divers prizes; and at last he sued to the lord deputy of Ireland, Mr. Bellingham, by five supplications, to come in and submit himself to the king's mercy; which lord deputy commanded him to go to a castle in Straugham, in Ireland, which the Scots had taken; and so he did, and took the castle from them, and restored the owner to the castle; and, after this, examine did help the said lord deputy's servants against one Savage, a rebel in Ireland, and the said lord deputy promised to sue for his pardon; and, after this, examine went to the Isle of Man, and there sent to land his mate, in pledge to submit himself; and shortly after he was taken by Cornelius and other, of his own good will, and hath been in prison since May last.—To

be examined, and ordered by the admiral's officers."

A letter from Bishop Hooper to Cecil, in April 1551, possesses, in our opinion, a singular value, were it only for the anti-plurality-of-livings' sentiment with which it sets out: but the rest is very interesting:—

"As for the success and going forthward of God's word, praised be his holy name! every day the number doth increase; and would so do more and more, in case there were good teachers amongst them for the furtherance and help thereof. I pray you, and in God's name require you, that ye stay what ye may, that no man obtain license to have two benefices, which is a great destruction to this country,—dangerous before God, as well to the king's majesty that giveth it, as to the person that receiveth. For the love and tender mercy of God, persuade and cause some order to be taken upon the price of things, or else the ire of God will shortly punish. All things be here so dear, that the most part of people lacketh, and yet more will lack, necessary food. The body of a calf in the market 14s.; the carcass of a sheep at 10s. White [wheat] meat so dear, as a grot is nothing to a poor man to be sowing any kind of victuals. All pastures and breeding of cattle is turned into sheep's-meat; and they be not kept to be brought to the market, but to bear wool, and profit only to their master. Master Secretary, for the passion of Christ take the fear of God and a bold stomach to speak herein for a redress, and that the goods of every shire be not thus wrested, and taken into few men's hands. If it continue, the wealth and strength of the realm must needs perish. What availeth great riches in a realm, and neither the head nor the greatest part of the members to be the better for it? You best know.* . . . apud Justinian. non prosunt . . . quoniam non ad commodum reipublice sed ad labem detrimentumque pertinent, inquit. So much as have more than enough, buyeth when things be good cheap, to sell afterwards dear. God amend it! It is my bounden duty, and all other true men's, to persuade and teach obedience unto the people; and, thanks be to the Lord! I can perceive none other here but love and reverence among the people to the king's majesty, and to the laws; but, Mr. Secretary, it is the magistrates, and their own doings, that shall most commend them, and win love of the people. Ye know what a grievous and extreme—yea, in manner unruly—evil hunger is. The prices of things be here as I tell ye; the number of people be great, their little cottages and poor livings decay daily; except God by sickness take them out of the world, they must needs lack. God's mercy give you and the rest of my lords wisdom to redress it, wherein I pray God ye may see the occasion of the evil and so destroy it."

The worthy bishop goes on to plead that the king may give him leave to eat flesh upon fish days, as "his stomach is not as it hath been;" and so we mingle small things with great, individual with national, the state of our stomach and the stomach of the state!

Mr. Tytler's researches go far to shew that Somerset was not guilty of the crimes or treasons (for any thing seems to have been treason in those times) with which he was charged by his political enemies; and that Edward VI. was as hard-hearted a young gentleman as ever

wore a crown. The only excuse that could be suggested for him is, that, like all young, and most old, sovereigns, he was coerced by circumstances, and had not moral courage to resist, and, perhaps, overcome them.

Sir R. Moryaine, our ambassador to Vienna, in one of his despatches, gives a characteristic account of the emperor, from which we select a small portion. He said:—

"He had not forgot the amity that so many years had lasted between the realm of England and the house of Burgundy; he trusted the king, his brother, had in these, his young years, found friendship, and no . . . , at his hands; and that he had seen a desire in him perpetually to preserve this ancient amity, using this sentence, 'that old amities, which had been long tried and found good, are to be made of;' and this he spake a little louder than he did the rest, as though he would, indeed, have me [think] that he did earnestly mean that he said: and yet hath he a face unwont to disclose any hid affection of his heart, as any face that ever I met with in all my life; for where all white colours (which, in changing themselves, are wont in others to bring a man certain word how his errand is liked or disliked) have no place in his countenance, his eyes only do betray as much as can be picked out of him. He maketh me oft think of Solomon's saying, 'Heaven is high; the earth is deep; a king's heart is unsearchable.' There is in him almost nothing that speaks beside his tongue; and that at this time, by reason of his leaf and soreness of his lip, and his accustomed softness in speaking, did but so-so utter things to be well understood, without great care to be given to his words; and yet he did so use his eyes, so move his head, and order his countenance, as I might well perceive his great desire was that I should think all a good deal better meant than he could speak it."

An offer of the bishoprick of Rochester to John Knox in October 1552, the year before Edward died, is clearly stated in a letter from the Duke of Northumberland to Cecil. The paragraphs relating to this are worth quoting:—

"I would to God it might please the king's majesty to appoint Mr. Knocks to the office of Rochester bishoprick; which, for three purposes, should do very well. The first, he would not only be a whetstone, to quicken and sharp the Bishop of Canterbury, whereof he hath need; but also he would be a great confounder of the anabaptists lately sprung up in Kent. Secondly, he should not continue the ministration in the north, contrary to this set forth here. Thirdly, the family of the Scots, now inhabiting in Newcastle chiefly for his fellowship, would not continue there, wherein many resorts unto them out of Scotland, which is not requisite. Herein I pray you desire my lord chamberlain and Mr. vice-chamberlain to help towards this good act, both for God's service and the king's."

"Knocks," however, had a different game to play, and would not have it at *sec-saw*.

The catastrophe of Lady Jane Grey has much additional light thrown upon it in the letters rescued from their dusty shelves by Mr. Tytler, and we regret that we have not room to go into their particulars. The sham illness of the crafty Cecil to keep out of the dangers he foreaw at this crisis, is of a piece with all his subtle character. And it is amusing to find Lord Audley, really believing the cunning statesman indisposed, thus hastening to give him the best medical advice:—

* "Here the original has been injured by fire."

* "The MS. here is illegible."

† "Truth (says Mr. Tytler, in remarks upon a confession of Lord Arundel, in 1551), has been said to be the daughter of Time, but in England it would be more just to call her his victim."

"9th May, 1553.

Good Mr. Cecil.—Be of good comfort, and pick up a lusty merry heart, and thus shall overcome all diseases: and because it pleased good lord admiral lately to praise my sic, I have written to you such medicines wrote unto him, which I have in my book my wife's hand, proved upon herself and me; and, if I can get any thing that may do any good, you may be well assured it shall be a joy to me to get it for you.

A good medicine for weakness or consump-

—Take a sow-pig of nine days old, and him and quarter him, and put him in a latory with a handful of spearmint, a handful of red fennel, a handful of liverwort, half a handful of red nepe,* a handful of celery, nine clean picked and pared, a handful of raisins, and pick out the stones, and a quarter of an ounce of mace, and two sticks of cinnamon bruised in a mortar; and distil together, with a fair fire; and put it in a glass and set it in the sun nine days; and drink nine spoonful of it at once when you

A Compost.—Item.—Take a porpin, other called an English hedgehog, and quarter in pieces, and put the said beast in a still with these ingredients: item, a quart of red wine, a pint of rose-water, a quart of sugar, rhamon and great raisins, one date, twelve raisins. If there be any manner of disease that he be aggrieved with, I pray you send me knowledge, and I doubt not but to send you a proved remedy. Written in haste at Greenwich, the 9th day of May, by your true friend,
JOHN OF AUDLEY."

That Lord Burleigh acted with great treachery to the poor Queen Jane is evident. The intrigues and perjuries of her council are sad proofs of policy.

The third period embraced by our author from the accession of Mary, 1553, to her death, 1568, five years. There is much in it to deserve attention, but, for the causes we have assigned, we can only recommend it, like the whole work, to the best consideration of critical readers.

Pencilings by the Way. By N. P. Willis, Esq. 2mo. pp. 452. London, 1839. Macrone.

A new edition of Mr. Willis's *Pencilings*, in its now favourite form of a single volume. A few corrections seem to be all the alterations made; and, in justice to a foreign writer, we must say his preface, of which the only part we have seen is a sort of unmeaning bravado threat to fight across the Atlantic, as people used to do in London about meeting with pistols in the Serpentine.

In putting forth a second edition of *Pencilings by the Way* I cannot but express a surprise (which, I doubt not, is shared by the critics) that a work so hastily written and published with such doubt and unwillingness, should have met, I will not say with such decided success, but with so extensive a sale. Having staked no feeling on it, its failure in this respect would have given me no pain than the treacherous criticism with which it is now distinguished; while the rapid disposal of a very large edition, and what little kindness it has met from reviewers, have given me, I may say, almost a gratuitous gratification. Having thus, however, like the traveller in the abandoned my cloak to the lion, I have stood aloof from any interest to see how it would be torn in pieces. From my book (numerous from its very nature) have been skillfully detected; and I sincerely thank those to whose judicious comments this new edition will be indebted. To those who have thought it necessary, in reviewing the book of a stranger, to attack his parents, country, and his private character, no reply is necessary—none any where indeed, except when the reviewer is responsible for his words in some other character than that of a critic. Public opinion in England, while it punishes the offence, punishes with sufficient severity the offender. It is only those who are removed from the

fountains of literature who imagine that the inventive hirelings of such reviews are either seen or named among the honest men with whom they claim fellowship. Among the more respectable reviewers, I notice a disposition which I comment upon, because I think it the main fault even of the higher school of criticism in this country. It is that of finding fault with a book on points to which it never pretended excellence. In a notice of these volumes in the 'Edinburgh Review,' for instance (a notice written unquestionably in a kind and just spirit, and which I quote as a strong example for that very reason), there is the following passage (the reader will remember that the title of the book is *Pencilings by the Way*): "In those more important matters which unfold to us the condition of a people, and which are learnt by inquiry, study, and reflection, let not the reader hope to be enlightened. The work is eminently superficial. Its author is observant, but the character of his mind is not reflective. He is not prone to speculate and philosophize; and an abstract sentiment rarely escapes him." I ask. Would any reader, buying a book called *Pencilings by the Way*, require to be put on his guard lest he should expect to find in it 'study,' 'reflection,' and 'abstract sentiments'? The object of my letters was simply and unambitiously to amuse. For instruction, the reader does not go to a book of *Pencilings*. With this object in mind, I recorded nakedly and faithfully my first impressions; and they were as correct, and as deep, and 'abstract,' as first impressions usually are. They were written, as I have elsewhere mentioned, with every species of interruption, and despatched, 'unshrived,' by the post; and to re-write them by my subsequent observation would be to write a new book. It will be seen, by the dates added to this edition, that there were considerable intervals of time between some of my letters from the Continent, and (a circumstance which I wish particularly to be understood) that, though I have been in England nearly two years, these letters end with the first four months after my arrival. My impressions of England then ceased to be first impressions, and therefore were unfitted to the previous design of my letters; and I found occasion so often to correct my *Pencilings by the Way*, that I ceased to write altogether. Why it is more difficult to write hastily of England than of other countries, will be apparent to those who have travelled. In other countries, the objects of interest are classic or physical, and reducible to known standards; in England, they are social or moral, and require diligent observation and study. I commit my letters once more to the public, with a strong impression of the truth of Southey's remark, that the best book (and, *a fortiori*, the worst) does but little good to the world, and much harm to the author."

Practical Treatise on Bridge Building, and on the Equilibrium of Vaults and Arches. By Edward Cressy, Architect, C.E., F.S.A. London, 1839. Williams.

"THE object of the above work is to condense all the valuable information on the history, theory, and practice of bridge-building, contained in Perronet, Gauthey, Bruyère, Sempie, Smeaton, Ware, Telford, &c., &c.; and to illustrate the subject by full and accurate representations of those bridges, erected by the most eminent architects and engineers in this and other countries. The history, so fully contained in the works of Gauthey, &c., will be carefully condensed; and the theory of the science, as treated by Hutton, Gregory, Ware, and others, will be exemplified by sections of some cathedrals, drawn and measured expressly for this purpose; as well as to shew the principles adopted by the most eminent architects employed on the buildings of the middle ages—the which, time has acknowledged to be admirably adapted for their purpose, and also in themselves to form a theory for any future construction. The practical part of the essay will describe the strength, properties, and value of the different materials employed—the various machines called into action by the different architects and engineers in their several constructions—the method of forming coffer-dams, centering, &c.—together with descriptions of the whole art, as contained in the practice of bridge-building, as adopted by Rennie, and other eminent men."

Although in our time we have built many castles (in the air), our knowledge of bridge-building is rather limited, being principally restricted to poetical structures; such, for instance, as the bridge of life, in the "Vision of Mirza;" or the ancient and celebrated bridge—we suspect it is still in existence—

described by one of the greatest architects in that branch of the profession, as having been erected anno mundi 1:

"A broad and beaten way
Over the dark abyss, whose boiling gulf
Tamedly endured a bridge of wondrous length,
From hell continued, reaching the utmost orb
Of this frail world; by which the spirits perverse
With easy intercourse pass to and fro,
To tempt or punish mortals."

Having made this candid confession, all we can further say is, that, judging from Mr. Cressy's high character, and from the numerous, elaborate, and beautifully executed plates, we have no doubt that this will prove a very valuable work; and when we consider the vast amount of bridge communication in every district of the empire, and when we recollect the immense sums that have been wasted, and the perils that have been incurred, by the failure of bridges, owing to their unscientific and defective construction, we cannot but feel the national importance of a publication, the object of which is to establish such principles as may prevent the occurrence of similar disasters.

MISCELLANEOUS.

The Romancist, and Novelist's Library. 4to. Pp. 412. London, Clements. 1839.

THE work before us is an astonishing example of what may be accomplished by enterprise and industry. It contains above fifty complete works of fiction, selected principally from among the works of romance writers of established reputation; though many are derived from other sources, such as popular American authors, translations, &c. To those on their voyage to far countries, this volume will be a fund of endless amusement, as its very abundant and various supplies can always be resorted to in hours of weariness and ennui. To those visiting watering-places, it will also form a pleasant companion, either on the green hills, the sandy beach, or when the weather in its untoward fits may prevent their accustomed rambles. Need we say more in praise of so deserving a compilation? Yes! Its price is six shillings and sixpence.

A History of Greece. By the Rev. Connop Thirlwall, &c. Vol. VI. (Lardner's "Cabinet Cyclopædia," Vol. 114.) Longman and Co.

THIS volume is occupied with the period between 346 B.C. to 327, and relates to the struggle between the Macedonians and Athenians, and the deeds of Philip and his glorious son Alexander, to the time when he put Calisthenes to death. An appendix treats of some points of geography connected with Alexander's marches. The whole illustrated with notes, drawn not only from ancient but from recent sources, and tending greatly to render the text more explicit and clear.

Irish Stew. Pp. 64. (London, Southgate.)—A collection of political *jeux d'esprit* and parodies; and, consequently, out of our literary purview.

Lady Cheveley.—We noticed this poem a fortnight ago, and would hardly return to it, were it not for the very preposterous report which we observe is circulated by some of our literary quidnuncs, that it might be written by Sir Edward Bulwer; and, like other equally absurd rumours when often repeated, obtain some credit among the ignoramuses of the gossip school. The internal evidence (such as not being aware that there were more than two brothers) is so decisive against this silly notion, that it might be left alone for its refutation; but as we possess, of our own knowledge, the means of positively denying its truth, we take upon ourselves to disabuse the public ear on

the subject, or rather the ear of those who have been credulous enough to fancy the possibility of such a folly. Sir E. Bulwer has shewn too sincere an attachment to his family, and, as a man, must have felt too severely the affliction of such a production as *Cheveley*, not to be most desirous to suffer the whole to sink, as soon as idle curiosity and the love of scandal would permit it, into oblivion.

ARTS AND SCIENCES.

AMERICAN GEOGRAPHY.

We copy the following letter from the "Times." It contains an interesting account, of the farthest progress of an expedition, under the direction of the Hudson Bay Company, to advance the survey of the northern shores of the American Continent. After the main body had reached the sea, and the boats were prevented from proceeding. Mr. Simpson set out on foot, and accomplished the journey here described; by which, in ten days, he has added the knowledge of about 120 miles of this country to our previous stock, and visited 68°43' N. lat., in long. 106°3' west.

"On the 20th of August, the date appointed for the return of former expeditions from these desolate shores, I left our boats, still hopelessly beset with ice, to perform a ten days' journey of discovery on foot to the eastward, and my companions were five servants and two Indians: we carried a wooden-framed canvass canoe, and nearly the same other baggage as on the journey to Point Barrow last year, with the addition of a tent for the nightly shelter of the whole party, on a coast almost destitute of fuel. Each man's load at starting weighed nearly half a cwt., and our daily progress averaged 20 geographical miles. About the middle of the first day's journey we passed the furthest point to which Sir John Franklin and his officers walked in 1821. Beyond that the coast preserved its N.N.E. trending to the encampment of the same night, situate on the pitch of a low cape, which I have named Cape Franklin. From the west to the north-east a new land, or crowded chain of islands of great extent, in many places high, and covered with snow, stretched along at the distance apparently of thirty miles, and led to the apprehension that we were entering a deep sound or inlet. The main land now turned up to E.N.E., which continued to be its general bearing for the three following days. It is flat, its outline or path leading alternately over soft sand, sharp stones, and swampy ground. At the distance of from one to two miles the coast is skirted by a range of low stony hills, partially clothed with dull verdure, which sends down to the sea numberless brooks and small streams; none of the latter at that season reached above our waist, though the deep and ragged channels of them shewed that in the spring they must be powerful torrents. Two leagues inland a hill, which I have named Mount George, after Governor Simpson, rises to the height of 600 feet, and forms a conspicuous object for a deep journey; on either side the ice all along lay immovably aground upon the shallow beach, extending in every direction as far as the eye could reach. The great northern land still stretched out before us, and kept alive doubts of our having explored an immense bay; which, however, the increase in the tides, the quantity of sea-weed, and the shells, and the discovery of the remains of a large whale and of a polar bear, could not altogether dispel. These doubts seemed almost converted into certainty as we drew near, on the fourth evening, an elevated cape, and saw land apparently all around, with feelings of

bitter disappointment. I ascended the height, from whose summit a splendid and unlooked-for view suddenly burst upon me. The ocean, as if transformed by enchantment, rolled its free waves beneath, and beyond the reach of vision. To the eastward, islands of various shape and size overspread its surface, and the northern land terminated in a bold and lofty cape bearing north-east, at least forty miles distant, while the coast of the continent trended away to the south entrance of an ice-skirted strait. The extensive land to the northward I have called Victoria Land, in honour of our youthful sovereign; and its eastern extremity I called Cape Pelly, after the Governor of the Hon. Company. To the promontory where we encamped I have attached the name of Cape Alexander, after an only brother, who would give his right hand to be the sharer of my journeys. The rise and fall of the tide there was about three feet, being the greatest observed by us in the Arctic Seas. The coast here changes its character; the water becomes deep, and the approach easy; and I have little doubt that the islands contain secure harbours for shipping. Next morning, at the distance of eight or nine miles, we crossed another high cape, formed of trap-rocks, in latitude 68°52'18"5 N., the variation of the compass being 63 E. The travelling had become more and more toilsome, our road now passing over some miles of round loose stones, and then through wet mossy tracks sown with large boulders and tangled with dwarf willows. At our usual company hours we opened a large bay studded with islands, which ran on five miles to the S.S.W., and then turned off in a bold sweep of rounded granite hills, like those near Melville Sound and Cape Barrow, dipping to the sight in the E.S.E. at the distance of thirty miles. The walk round even this portion of the bay would have consumed three days; the time allotted for outgoing was already expired, and two or three of my men were severely lame from the fatigue of their burdens, the inequalities of the ground, and the constant immersion in icy cold water. I besides cherished hopes that by making the best of our way back we might, agreeably to my arrangements with Mr. Dease, meet him bringing one of the boats, in which case, with an open sea before us, we could have still considerably extended our discoveries before the commencement of winter. I may here remark, that we were singularly fortunate in the five days of our outward journey, the weather being so moderate and clear that I daily obtained astronomical observations; whereas, before our departure from the boats, and during our return to them, we had continual storms, with frost and snow, rain and fogs. Close to our furthest encampment appeared the site of three Esquimaux tents of the preceding year, with a little stone chimney apart. We passed the remains of a larger camp, and the remains of several human skeletons near Cape Franklin, but throughout the journey we found no recent traces of that few and scattered people. The morning of the 25th of August was devoted to the determination of our position, and the erection of a pillar of stones on the most elevated part of the point; after which I took possession of the country, with the usual ceremony, in the name of the Hon. Company, and for the Queen of Great Britain. In the pillar I deposited a brief sketch of our proceedings, for the information of whoever might find it. The situation is in lat. 68°43'39" N., long., reduced by C. T. Smith's watch, from excellent lunars at the boats, 106°3'11" W., the

magnetic variation being 60°38'23" E. The compass grew sluggish and uncertain in its movements as we advanced eastward, and frequently had to be shaken before it would traverse at all. Two miles to the southward of our encampment a rapid river of some magnitude discharges itself into the bay, the shores of which seemed more broken and indented than those along which we had travelled. Independently of Victoria Land, and an archipelago of islands, I have had the satisfaction of fully exploring 100 miles of coast, and of seeing thirty miles further, making in all, after deducting Franklin's half-day's journey already mentioned, about 120 miles of continental discovery. This is, in itself, important; yet I value it chiefly for having disclosed an open sea to the eastward, and for suggesting a new route along the southern shore of Victoria Land, by which that open sea may be traversed, while the main land, as was the case this season, is yet environed by an impenetrable barrier of ice. Whether the open sea to the eastward may lead to Ross Pillar, or to the estuary of Brack, Great Fish River, it is hard to conjecture, though the trending of the most distant land in view should rather seem to favour the latter conclusion. The same evening, on our return, we met the ice at Trap Cape, driving rapidly to the eastward; as we proceeded, the shores continued inaccessible. Several bands of buck reindeer were tracked to the southward, along the hills; two which we shot were in far superior condition to those in Bathurst Inlet and near the Coppermine; a few musk-oxen were also seen, and numerous flocks of white geese (*Anser Hyperboreus*), in general officered by large gray ones (*Anser Canadensis*), were seen assembling on the marshes, and taking their aerial flight to more genial climates. At dusk, on the 29th of August, our tenth day, we regained the boats, and found them still enclosed in the ice, which the north and westerly gales seemed to have accumulated from far and near towards Point Turnagain. THOMAS SIMPSON."

"Port Confidence, September 15, 1838."

GEOLOGICAL SOCIETY.

MARCH 27. Rev. Dr. Buckland, President, in the chair.—A paper was read by Mr. Owen 'On a Tooth and part of the Skeleton of the Glyptodon, a large Quadruped of the Edentate Order,' to which belongs the tessellated bony armour, figured in Mr. Clift's description of the megatherium, and been supposed by some naturalists to have belonged to that animal. The first notice of the remains of a large fossil edentate mammal associated with fragments of a tessellated bony armour, is an extract from a letter by Don Damasio Larrañaga, curé of Monte Video, inserted at the end of Cuvier's description of the megatherium ("Oss. Foss." tom v. Part I. 1823). The bones noticed in that communication were found in the alluvium of the Rio del Sauce, a tributary of the Solis Grande. The next observations bearing on the question are contained in "Weiss's Geological Memoir on the Provinces of San Pedro do Sul and the Banda Oriental" ("Berlin Trans." 1827.) The bones were collected by Sellow, the Prussian traveller, and were obtained in part near the Arapey Chlico, in the province of Monte Video, and partly in the proximity of the Rio Janeiro. These remains were not described by Weiss; but after the death of Sellow, they were confided to Professor D'Alton, who has given an excellent account of them in the "Berlin Transactions for 1833;" and he states that the bones

did not belong to the megatherium. In 1832, Mr. Clift described part of the fossil remains brought to England from Buenos Ayres by Sir Woodbine Parish; and the remainder, found at Villaneuva, south of the Rio Salado, form the subject of Mr. Owen's memoir. They consist of the extremity of a jaw, with three alveoli; also, of portions of a humerus and a scapula, nearly a perfect radius, and parts of a fore and hind foot; likewise of fragments of a thick tessellated shell or armour, found about twelve inches below the mass of bones. On the first inspection of these remains, it was evident, both to Mr. Clift and Mr. Owen, that they did not belong to the megatherium, and that the grooves in the alveoli of the fragment of the jaw also exhibited a mode of dentition differing more widely from that of the existing sub-genera of armadillos than their respective dental characters differ from one another. Mr. Clift, therefore, in his description of the megatherium, gave no account of the tessellated bony covering brought to England by Sir Woodbine Parish, or of the bones associated with it. Soon after the arrival of these remains, casts were made by the College of Surgeons, and sent to different museums, including that of the Jardin du Roi, at Paris, where they attracted the attention of M. Laurillard and Mr. Pentland. These naturalists were also induced to conclude, that the shell and bones were not portions of the megatherium; and they inferred, from an examination of the portion of the foot, that the fossils belonged to an extinct animal allied to the armadillos. More recently, Sir Woodbine Parish received intelligence of the discovery, in the bank of a rivulet near the Rio Matanza, twenty miles south of Buenos Ayres, of an entire skeleton, including its tessellated coat of mail; and with the account there were transmitted to him one of the teeth, and a sketch of the animal itself. On examining the tooth, Mr. Owen did not hesitate to pronounce that it indicated a new sub-genus of the armadillo family, for which he proposed the name of Glyptodon, in reference to the fluted or sculptured character of the tooth. Subsequently, on comparing it with the fragment of the jaw before alluded to, he perceived that the peculiar longitudinal ridges in the socket precisely corresponded with the characteristic flutings in the tooth; and thus the shell, with the other remains found at Villaneuva, were ascertained to belong to the same species as those of the perfect animal discovered in the banks of the Matanza; and the bony mail proved not to be a portion of the megatherium, but of the glyptodon. Mr. Owen then pointed out some peculiarities exhibited in the sketch of the animal, and which demonstrate that the glyptodon is distinct from any of the existing armadillos; but he confined his anatomical details to the remains which have been brought to England, and were exhibited on the Society's table. The tooth is a fragment, but the grinding surface and upwards of an inch of the crown are perfect. The whole length was probably about four inches, and there is no indication of a diminution in any of its diameters, from the grinding surface to the opposite fractured end; in this respect it agrees with the abrupt termination of the socket in the fragment of the jaw. The teeth are much more compressed than in the megatherium, and they differ still more materially in their intimate structure, which corresponds with that of the armadillos. The teeth of the glyptodon differ in a marked degree from those of any known species of armadillo, being traversed through their whole length, both on the inner and outer sides, by two broad and deep angular grooves, so as to divide

the grinding surface into three portions, joined together by the contracting isthmus interposed between the opposite grooves. In the lower jaw the sockets turn inwards as in the toxodon, and the teeth, from their complicated form, indicate a transition from the edentata to the pachydermous toxodon. The modifications in the locomotive extremities also bespeak a similar tendency in the glyptodon to the multungulate pachyderms. Mr. Owen then proceeded to explain, with his wonted skill, the points in which the remains of the glyptodon agree or differ from those existing or extinct mammals with which it is most closely allied; but we cannot attempt to give more than the general inferences at which he arrived. Of all the edentata, recent or fossil, the glyptodon approaches most nearly to the species of dasypus in the structure of the ungual phalanges; but in their shortness, as compared with their breadth and depth, they resemble still more the ungual phalanges of the pachyderms. The short broad terminal phalanges of the glyptodon must have been encased in corresponding short and strong hoof-like claws; and "I would ask," observed Mr. Owen, "if we have not here a modification of the base of the anterior column of support which relates immediately to the necessity of carrying so ponderous a cuirass as that which undoubtedly covered the body?" There cannot be a greater contrast than is presented between the short, broad, and flat phalange of the glyptodon, and the long compressed claw-bone of the megatherium, which, with its bony ungual sheath, bespeaks an instrument, the employment of which, in scratching, digging, perhaps defending its possessor, were of more consequence in the living economy of the individual than mere subserviency to support and progression. Mr. Owen, however, does not deny to the glyptodon the power of applying its stout fossorial anterior extremities to all the purposes to which the armadillo, his nearest congeners, apply theirs. The bones of the hinder extremities, when arranged in their natural juxtaposition, present a foot of such singular proportions, as to be without a parallel in the animal kingdom, but expressly modified to form a base to a column destined to support an enormous superincumbent weight. From the examination of these bones of the feet, Mr. Owen also infers that the glyptodon cannot be called an armadillo without using an exaggerated expression, still less can it be considered a species of megatherium; but that it offers the type of a distinct genus which is much more nearly allied to the dasypodid than to the megatherioid families of edentata. Mr. Owen afterwards shewed that the portions of armour described by D'Alton, in the "Berlin Transactions," and those obtained by Sir Woodbine Parish near Villaneuva, present the closest resemblance in point of structure; but that, from the agreement alone, it could not be satisfactorily inferred that the animals were specifically the same, in consequence of the near resemblance which different species of armadillo present in the structure of their tessellated armour. The parts of the skeleton, however, obtained both by Sellow and Sir Woodbine Parish, prove that they are positively identical in species; and, therefore, that the only portions of tessellated armour transmitted to Europe testify to their having formed part of the structure of an edentate animal widely differing from, and, as proved by the comparative measurements, much smaller than, the megatherium. He then proceeded to the inquiry, Whether the megatherium had a bony coat of

armour?—a question which at present must rest on arguments afforded either by modifications of the skeleton analogous to those which, in the armadillos, have relation to their osseous coat of mail, or by other peculiarities indicative of a similar relation. In reasoning from the analogy of the armadillos, the only quadruped which possesses a carapace, there is presented to our observation a skeleton, which affords throughout that family a constant and unvarying series of well-marked modifications in direct relation to such a carapace as the megatherium has been supposed by some naturalists, and De Blainville more particularly, to possess. The modifications of this nature in the armadillo are the following: 1. The ankylosis of a great number of vertebrae forming a very large sacrum. 2. The great antero-posterior development of the spines of the sacral vertebrae, which thus constitutes a continuous vertical ridge of bone bearing immediately the superincumbent weight by the corresponding development of a ridge from the median line of the under surface of the armour: this weight is further transferred from the sacrum to the thigh bones by two points on each side; one of these—the ischium—is ankylosed to the posterior part of the sacrum,—the second, and more characteristic mode, is by the conversion of the iliac bone into a stout three-sided beam, passing straight from the thigh joint to abut against the anterior part of the sacrum, where the weight of the shell is greatest. In the pelvis of the megatherium, the sacral vertebrae do not exceed four, the spinous processes are small, and are not locked together as in the armadillos, but are separated by intervals as in the sloths. In no species of armadillo is the ilium expanded, while it is greatly developed in the megatherium; and among the edentata the nearest approach to this structure is exhibited by the sloths. Another, and still more striking character in the skeleton of the armadillo, in connexion with its armour, is the remarkable production of a part of the vertebrae from above the anterior articular process on each side in a straight direction upwards, outwards, and forwards, to nearly the level of the extremities of the true spinous processes. Now these oblique processes, which are thus developed in no other quadruped, except in the loricated edentata, precisely correspond in position and use with the tie-beams in the architecture of a roof. In the megatherium, these oblique processes—these tie-beams, are wanting, and this part of the vertebral column corresponds with that of the hair-clad sloths and ant-eaters. The broad ribs of the megatherium have likewise been supposed, by some naturalists, as indicative of a bony armour, but the ribs of the sloths and the ant-eaters are broader and stronger than those of the armadillos. Again, the prodigious strength of the bones of the leg of the megatherium has been urged as a proof that the animal had a bony armour; but Mr. Owen shewed that this great strength was requisite for the support of the enormous pelvis, which, as already stated, is unprovided with any apparatus for bearing a weighty coat of mail.—A description was then given of some remains of the glyptodon deposited in the museum at Monte Video; and the author, in conclusion, expressed a hope that the anatomical descriptions, embodied in the paper, would fully establish the glyptodon as a distinct genus on both dentary and locomotive organs; and he trusts that he has vindicated the opinion of Cuvier, with reference to the megatherium, by demonstrating it to be, in reference to its tegumentary covering as in its osseous system, more nearly

allied to the ant-eaters and sloths than to the armadillos.

ROYAL GEOGRAPHICAL SOCIETY.

MAY 13. Mr. W. R. Hamilton, President, in the chair.—Read extracts from the following papers and letters:—1. 'An Account of the recent Arctic Discoveries,' by Messrs. Dease and Simpson; * communicated by the governor and committee of the Hudson's Bay Company. The narrative of this spirited enterprise, which has already been laid before the public, was illustrated by a map, on a large scale, shewing the track of the discoverers; also a map of North America, by Mr. John Arrowsmith, on which the 120 miles of coast have been engraved, and the whole coloured, to distinguish the discoveries of Franklin, of Ross, of Dease and Simpson in 1837, and also in 1838: from which it appears that only 160 miles have to be explored to connect the late discoveries with those of James Ross, in 1832, and Back, in 1834, and thus to complete the outline of the northern shore of America.—2. 'A Letter from Captain Sir George Back, R.N.," dated Hastings, May 12, 1839:—

Dear Sir,—I am not sufficiently recovered to attend the meeting of the Geographical Society, which, for obvious reasons, I would gladly do, to-morrow evening; but I cannot deny myself the satisfaction of writing a few lines, and of congratulating the Society on the additional information procured for it by the persevering efforts of my friends, Messrs. Dease and Simpson. Without referring to the systematic and admirable plan on which these enduring and pains-taking individuals have acted,—without dwelling on the obstacles and privations which must have been patiently encountered, though modestly concealed,—without recapitulating details so clearly narrated by themselves, I would bestow on them that high meed of praise which their exertions so richly merit, and pass at once to the interesting question of the year's operations. Supposing the boats left in the "woody bluff," on the banks of the Coppermine River, to be uninjured by the Esquimaux, and the season to be no worse than that experienced last year, the expedition, by keeping a good offing and skirting along the south shore of Victoria Land, would be enabled to gain what, it is to be hoped, would then be an open sea, leading to the eastward. It is, however, scarcely to be expected, that this favourable circumstance will continue, comparatively, for any great distance, though it might do so; and in that event the solution of the question will be of easy performance; but if not, the low, shelving shores will be impacted with drift ice, while the immediate vicinity of the alternate high bluffs will be dark with open water. The result of such a state of things would, most likely, be the impracticability of pursuing, along the main shore, a channel so shoal as to be blocked up by ice, which would frustrate all attempts in that direction, and leave the question of an inshore passage as perplexed and doubtful as ever. Though this may apply to the coast near to and west of Point Maconochie, it would hardly hold good further north; by which another passage will, I think, be found to the Thlew-ee-choh. Looking to the eastward of the river round Cape Hay (though nothing more has been elucidated, and every thing must be conjectured), I cannot help drawing your attention to the coinciding appearances observed off there, by myself, in 1834, and recently by Mr. Simpson, at Cape Alexander. How far the resemblance may be

borne out hereafter will, I hope, be determined by the skill and intrepidity of our countrymen, Messrs. Dease and Simpson; to whom, and to the spirited liberality of the Hudson Bay Company, the country at large, and the Geographical Society in particular, must feel deeply indebted. Ever faithfully yours,

GEORGE BACK.

To Captain Washington, Royal Navy.

3. 'Notes on a Journey from Constantinople, by Heraclea, to Angora, in the autumn of 1838.' By W. Ainsworth, Esq.

LITERARY AND LEARNED.

ARCHÆOLOGY.

In laying specimens of the curious EGYPTIAN CARICATURE in the British Museum, which appeared in our *Gazette* of the 4th, before our readers, we very briefly noticed their general character; but having since been indebted to Mr. Samuel Birch for a copy of his interesting paper, explanatory of the subject, we have very great pleasure in giving it insertion here.

The papyrus (said Mr. B.), of which a tracing accompanies the present paper, formed part of the collection of Egyptian antiquities purchased of J. Sams by the British Museum, in 1834, and was unrolled by Mr. Hogarth, who made an accurate drawing and coloured facsimile of the same, in 1838. It is not complete, having formed portion of a larger roll; but it may justly be considered as one of the most extraordinary with which the National collections are enriched. From the style and execution, compared with Egyptian monuments whose epochs, through their Greek inscriptions, are fixed beyond the power of a doubt, it must have been executed about the period of the reign of Trajan, and certainly not later than the epoch of the Antonines; while the general freedom of the execution, the boldness of the subject, and the sarcasm conveyed by this religious caricature, evidently indicate the hand of an artist seizing the weakest and most ridiculous points in the religion and delineations of the Egyptian race. It is scarcely credible that any native Egyptian artist would have dared to conceive and execute so hardy a flight of the imagination; and it would have been interesting to know the precise locality where it was found,—a fact, unfortunately, little cared for by the mere dealers in collections. The delineations are not taken from the purely religious scenes, such as figure in the various rituals, of which I hope, at a future opportunity, to offer some analysis to the public; but are derived from the paintings and subjects with which the sides of the tombs themselves are covered, or the walls of the temples are adorned. If the object of the caricature be to represent animals in a future state of existence, as is far from improbable, the jest assumes a still more direct character against the opinions of the Egyptian psychology; and an antithetical juxtaposition, the very light and shade of the ridiculous, runs through the whole, considered in whatever view it may be. An interpretation of its meaning can only be offered provisionally, and assumes the shape of a collation of the comic with the serious, rather than a definite explanation of the subject itself. Following the usual analogy of Egyptian paintings, the scenes should proceed from right to left. The whole represents animals in various occupations.

I. A lion in the act of cutting up a victim placed on a long tressel with lion-clawed feet, called in the texts *gal*, or "bier," written in hieroglyphics  $\Delta\lambda$; being

the transcription of the equivalent Coptic expression $\Delta\Delta\lambda$, "to deposit" as upon a bier. The lion stands erect on its hind legs, and holds with its right fore-paw the hoof of the inverted victim, apparently cutting off the thigh with the other. In the scenes of slaughtering (bas-relief, B. M., Rosellini, M. C., No. lxxiii. 1), the thigh was always the first part

removed, and called the $\text{C}\Delta\text{N}\text{T}$ or $\text{C}\Delta\text{N}\text{T}$ $\sqrt{\Delta} \equiv \parallel$ the "chosen" portion; and, along with the head, always appears on the altars before deities, and the viands offered to the deceased. The head of the victim has been torn off, the papyrus here being deficient.

II. A cat, in the act of conducting along a flock of geese. Grimalkin stalks along upon her hind legs with as much gravity as puss in boots. In her left fore-paw she holds a crooked stick, like the pedum or crook placed in the hands of Osiris pethempamentes. The geese are in two rows, two in the first and four in the last one. The bird in the hand of the cat is probably meant for a lame one, which are generally transported by this means. Goose-feeding, an occupation of the lower classes, is frequently represented in the paintings of the tombs. (Rosellini, M. C., No. xxx. 4.) The driver conducted them with the koncoupha sceptre, called gom, catching hold of a required bird by the head. Under the Roman government the goose-feeders, called $\chi\eta\sigma\tau\epsilon\sigma\iota\varsigma$, were Egyptians. The cat, of course, must have been considered a very proper guardian for the goose.

III. The next figure in succession may belong either to the preceding group or the one which follows. It represents a jackal walking on its hind legs, holding in its right fore-paw a baton or stick; and in the left paw, turned down in a peculiar manner for that purpose, a stick across the shoulder, to which is suspended a bag or basket, of trapezoidal form, by a strap. Immediately after this figure is a herd of gazelles, two in the first row, one to the extreme left followed by two other animals apparently of the goat species; they are accompanied by a wolf walking as all the other animals do, upon their hind legs, and playing upon the double flute. The wolf also bears a basket, suspended upon his shoulders across a pole. The feeding of goats or gazelles is also a favourite subject in the tombs (Rosellini, M. C., No. xxxi. 2), and the various species of this animal appear to have had their peculiar names. The Egyptian shepherds, however, a low and degraded class, do not appear to have been addicted to, or educated for, the acquirement of sweet sounds, if we may judge from the paintings of the tombs, while the flute was the constant companion of the Greek rustic.

IV. The most amusing and spirited scene of the whole papyrus. It represents a game at latrunculi or draughts, between a lion and a gazelle. The lion is seated to the right upon a stool with four legs, holding in the right paw a latrunculus, and in the left a purse, or some indistinct object. The gazelle is also seated upright upon a camp-stool, and holds a latrunculus in the right hoof. The board, which is placed between them, is on a long four-legged stool, and each party has four men upon the board, the heads of the pieces of the different parties being of a different shape. From the expression of the lion's attitude, he is apparently winning the game, to the great horror of the gazelle, who expresses unequivocal marks of fright. The game of draughts is not of rare occurrence, either in the bas-reliefs or the

* See article "American Geography," p. 310.

of the tombs. (Rosellini, M. C., No. At Medinet, also, the Pharaoh R-IV., or Sethos /Egyptus, is depicted at this game with one of the sultanias; mention is made in Herodotus, b. ii., e, of the monarch Rampsinitos having at draughts with the goddess Isis. The of the draughtsmen in Burton's "Ex- are of similar shape, but the different vary in Rosellini's work, and are d green and yellow. Immediately be- scene is a basket of fruit, probably and a crow helping itself liberally from tents of the same.

The scene following this represents a or hyena, standing erect, holding in its w a draughtsman, which it has probably from the table of the players. The upper the animal is imperfect, owing to a rent papyrus. After this is a sow and hippo- s, standing erect. The sow holds in its w a patera, in which is some viand; and popotamus dips both fore-paws into a tier ræ, placed upon two large vases. The the sow is turned back towards the im- figure first mentioned. I am not aware scene parallel to this among those already ed.

erto the papyrus has presented one con- roll; the rest consists of detached por- whose arrangement is only conjectural. A cat standing on its hind legs, making ring to a rat seated on its hind legs, and erect upon a high-backed chair. t holds in its right fore-claw the stem d of some flower, and in its left a snake. n them are various offerings of bread, ced upon a rectangular four-legged stool. et of the rat's chair are lion-clawed. e the chair stands another rat, erect upon legs, holding in its left fore-paw a mir- fly-flap, and in its right a bag. This detached piece. This refers to the fu- honours represented upon the steles, the commencement of the ritual, as paid junior surviving branches of a family to ceased ancestor.

A lion seated as before, on a seat or before a stand or table. The action in he is engaged is very indistinct, and portion only of a scene.

f. A cat and jackal, or dog, carrying a cross their shoulders. From the pole is led a bag or basket by straps. The cat back to the dog. This mode of transport- acts seems to have been commonly used the Egyptians: milk, water, &c., was carried by pole and strap across the er, as at the present day.

last fragment represents a swine standing and legs; behind it are the fore-paws of animal holding a palm-branch. The rer of the scene is imperfect. Owing to ence of Mr. Hogarth, who had intended nd some observations on the different used in this composition, I am unable cate the various materials and shades ed; as also to lay before you the very ely coloured facsimile which he has made ame. The composition may be consi- s either representing animals in a future f existence, or glancing at the doctrine metempsychosis. A similar papyrus, ntng the combats of cats and monkeys, I believe, in the Royal Egyptian Museum in; but it has never been published: e fact of its existence had been notified by M. Dulaurier, in a preface to the cal canon of the same museum, which t me to copy; and by Dr. Lepsius.

Until lately, I had conceived the account to be apocryphal, when the discovery of the MS. in the museum fully confirmed the existence of similar efforts of art. It may justly rank as the oldest known caricature; and whether the hand of an Egyptian, or one of the hybrid Græco-Egyptian race, pencilled the production, the feeling which dictated it is self-evident, and the era at which it was drawn equally apparent. The religion of Egypt, under the domination of its foreign masters, had already begun to exhibit all the elements of decay. The plant spirit of polytheism, as it is called, tolerated her superstitions with a sneer; and no opportunities were lost by the philosophic or profane to treat with contempt, and to hold up to sarcasm and ridicule, those objects of worship, which the efforts of its last votaries endeavoured to term philosophical allegories, or astronomical truths. Instances of similar literary compositions occur among the Greek writers, in the "Batrachomomachia" of Homer, and the "Galeomnomachia" of Aristobulus.

THE ALPHABET.

AFTER this interesting memoir, Dr. Lepsius, as we have previously stated, entered into a detailed exposition of the origin of the order of letters in our alphabet; and, after making mention of the different opinions upon the subject from the time of Plutarch to M. Seyffarth, who beheld in the alphabet only an astronomical constella- tion, he established his own opinion in demon- strating a principle at the same time organic and historical. He commenced by proving that in all languages the sibilants and the letter r are the last developed, and that these letters must, with the exception of the *samech*, be eliminated from the Semitic alphabet, in order to retrace its primitive form; also that the *jod* and the *kaf*, of which he proved the later in- troduction, must be cut off, and that thus there only remain the following sixteen letters:—

A	B	G	D
E (I)	F	CH	TH
L	M	N	S
O (V)	P	Q	T

The constituent principle of which is readily perceptible by abstracting at once the inter- posed semi-vowels. It is then seen, that in the horizontal lines the *medials* commence after the most feeble aspiration, viz. *alef*; then fol- low the *aspirates* with a stronger breathing, *he*; and the third line contains the *tenues* with the strongest aspiration, viz. *ain*. In the verti- cal lines the three breathings begin; then come the three labials, then the three gutturals, and finally the three dentals. The interposition of the semi-vowels is explained by the observation, that in languages in general the *tenues* are the last developed, and that there was a time when the alphabet finished with *samech*, and only had twelve letters. Dr. Lepsius added, finally, some remarks upon the arrangement of the four letters of each line, and finished by the comparison of the alphabetic order of the De- vanagari, which is mentioned by the ancient Indian grammarian Panini, and is attributed by him to the god Siva himself. This alpha- betic order, which differs from the ordinary arrangement of the Devanagari, coinciding perfectly with that of the Semitic alphabet, proves, consequently, a resemblance extremely ancient between these people; also the highest antiquity for the alphabet itself, and writing in general.

[The following explanation and corrections of our able correspondent, C. S., are also neces- sary to the due illustration of these Egyptian researches.]

To the Editor of the Literary Gazette.

SIR,—When I wrote my note, of date the 3d inst., I am sorry I did not advert to what might be the facilities which the printing de- partment of your establishment possessed for readily putting to press occasional words writ- ten in Coptic or Arabic characters; and I feel, in consequence, under additional obligations to you for the difficulty and trouble you must have experienced, from so readily and politely acceding to my request.

The Arabic words used by me to translate Cheops may be written *zu-aml*, which words (very common, well-known words) mean nothing more than "he who is engaged in any affair," the doer, performer, or maker of any thing; or, I may repeat, *zu-aml* is an epithet equipollent with one of the two Greek words hazarded by Eratosthenes as conveying the meaning of Cheops.

The other principal mistake which has oc- curred through my inadvertence, may be thus noticed: The Greeks had no H, the Egyptians had one, which they called Hori; I inserted this Hori, this consonant H, immediately after the Che of Cheops, and the Sa of Saophis, to give the epithet its correct reading, and to shew its real import; and, moreover, as *hoph*, the second of the two words composing *Che- oph*, is variously written in the Coptic lan- guage, I pointed to such being the case in the ovals under review; by giving the reading in three forms, as it occurs, a little varied.

Permit me to add that Wilkinson, at page 278 of the third vol. of his classic work, "Manners and Customs of the Ancient Egypt- ians," gives, in succession, the ovals contain- ing the popular names of the builders of the three greater pyramids. The first oval contains nothing more than *Cheops Primus*; the next, *Cheops Secundus*; and the third, *Shomish Cheops*. We know the real prenomen of this third Cheops; and I may add that, as in the oval of Wilkinson, so by the side of the preno- men, on the fragments in the Museum, *Shom- ish* is given in phonetic characters. Kemran, another name by which he was known, and apparently better known, is also to be seen on the fragments of his coffin; and this compels me to notice that the fragments do not, as has been conjectured, contain any address to Net- phé; on the contrary, Netphé is made to ad- dress Mycerinus by the honourable title of Kemran. The words are, "*Why, O Kemran, do you traverse the skies, tread the milky way?*" This title or epithet refers to the popularity enjoyed by Mycerinus as a sovereign prince, a fact not passed unnoticed by Herodotus. As to who were the builders of these pyramids, if not of all, of some of them at least, I think it may be answered, that the village of Bon sirs points to who they were; I myself judge by the form in which this village is given in hiero- glyphics, whilst Bouairis and Osiree-s en differ nothing at all in meaning.

And now to conclude entirely. As a decided John Bull, I deemed it but fair and just to write my note of the 3d instant; but now, at parting, to make amends, I will ask the atten- tion of the friends of phonetic hieroglyphics, to the sarcophagus of the Queen of Amasis, which may be very fairly termed quite an encyclopædia for that epoch. It is one of the most valuable treasures in the Egyptian Sa- loon of the British Museum. Memnon, too, when acting under the auspices of Baba-
Google

challenges much notice, especially regarding the eastern part of Egypt, bordering on Syria. Yours, Mr. Editor, very faithfully,
C. S.
London, 14th May, 1839.

ROYAL SOCIETY.

MR. CHILDREN in the chair. — A letter from Mr. Cooper to Mr. Faraday was read. It treated of the visibility of those rays to be found beyond the usual red rays of the solar spectrum. The paper is merely introductory; the writer notices the fact mentioned by Sir D. Brewster, that the greatest solar heat is found where the greatest rays are produced. Part of a communication from Professor Daniells to Mr. Faraday was likewise read, being the fifth letter by the same author 'On Voltaic Combinations.' The details and results of several experiments are given. Plates $\frac{3}{4}$ inches in diameter are mentioned as the best. The heating power of the battery, condensed and passed through a lens, readily burned a hole in paper. Professor Daniells and his colleagues were severely injured about the face and eyes by the electric discharge. The conclusion of the paper was deferred till after the Whitsun holidays.

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Friday. — Linnean (Anniversary), 1 P.M.; Royal Institution, 8½ P.M.

PINE ARTS.

PHOTOGENIC DRAWING.

VARIOUS have been the methods detailed for the preparation of paper which can be acted upon with facility by the powerful agency of the light from the sun; yet, notwithstanding all that has been written on this interesting subject, the practical student in this art finds that great difficulties occur in every department of photogenic drawing.

In the first place, he finds that the paper which he has prepared the preceding evening is by no means equal in its qualities, as sometimes he may have two or three sheets very excellent, so that, when they are exposed to the light, they become in every part of a uniform dark colour; sometimes, on the contrary, he finds that the paper, after it has been similarly acted upon by the solar rays, becomes black over the greater part of its surface, yet numerous white spots occur throughout which detract much from the beauty and effect of drawings made with it; and, lastly, it occasionally happens, that some sheets are not affected by the most powerful light, except, perhaps, at a few points.

Indeed, should the paper be good, and the drawings made, yet, without the greatest care in the fixing of them, they may be found to have a ground of an irregular tint, or they may be imperfectly stopped, and even the colour may be altogether removed.

To surmount with certainty these various difficulties, numerous experiments have been performed in every department of the manufacture of photographs, which we shall now describe; first as regards the chemical substances, then the paper, and, lastly, the most efficient stopping solution.

The various compounds of silver have been long known to be acted upon powerfully by the solar rays: this property is possessed by far the

greater number of the preparations of that metal, yet not by all; and upon the former, the effect of light differs materially in its degree of sensitiveness.

The two soluble salts of silver with which we are most acquainted, are the nitrate and sulphate, both of which communicate to organic textures and substances made from them a black stain when exposed to light; but these, neither on paper nor in combination with albumen, gelatin, gums, or glues, have sufficient delicacy to be applicable for the manufacture of photogenic drawings.

The ammonia-nitrate of silver will be found considerably more delicate than either the nitrate or sulphate, and may be used where rapidity of action is not required, particularly as it lessens the trouble, by the application of only one solution to the paper.

The chloride of silver is the substance to which we principally look for the ready action of the solar rays, and the modes of its application to the paper are numerous. It is by itself very insoluble in water, and, on the contrary, easily dissolved by ammonia; but, unfortunately, the ammonia-chloride of silver cannot with good effect be used for the preparation of this paper, and thus we are compelled to form a chloride upon it by a more circuitous process. This object may be effected by the application of either chlorine, chloride of an oxide, chloride of metal, or hydro-chloric acid, first to the paper, and afterwards a solution of nitrate of silver.

When a nearly saturated solution of chlorine is used, it should be applied lightly with a sponge to the paper, taking care that every part is moistened by the liquid: the paper should then be allowed to dry, and the solution of nitrate of silver applied also with a sponge, in a similar way.

This form of chloride is not quite so delicate as some others, and requires a long time to become quite black. It has its advantages from enabling the most highly glazed papers to be prepared with great facility and certainty; and it becomes of a beautiful brown, which is but slightly altered by the stopping agents.

The chlorides of oxides, such as the chlorides of soda and of lime, may be advantageously applied in some cases where the chlorine is useful. * * * The chloride of soda, however, must not be used for absorbent papers, such as those used in printing; but with the glazed papers it becomes very delicate and sensitive to light, whether it be applied before or after the solution of silver. The strength which was found most useful was that usually employed for medical purposes.

The solution of chloride of lime was made by adding twelve grains of chloride of lime to an ounce of water, and allowing any insoluble part to subside. This is found applicable both to printing and to glazed papers, but is more certain when used prior to the nitrate of silver.

The chlorides of metals, as common salt, require more care in their proportions than the foregoing substances; and an experiment which was tried, shews the absolute necessity of using an excess of nitrate of silver.

A weak solution of nitrate of silver (twenty grains to the ounce) was treated with excess of chloride of sodium, when an insoluble chloride was precipitated; this was exposed to the direct rays of the sun, without the slightest change; the supernatant liquor was then poured off, and the precipitate well washed two or three times with distilled water, to remove any superfluous salt which might perchance be present; the chloride of silver was again

exposed to the light for many hours, when only a slight brown tint was produced. On the contrary, when the nitrate of silver was treated with such small quantities of salt, that part of the solution of silver remained in excess, the light speedily blackened the chloride exposed to its action. * * *

Similar experiments were tried with chlorine, chloride of lime, and chloride of soda, when excess did not prevent the blackening; but when muriatic acid was used the same phenomenon was observed. * * * Without endeavouring to explain the difference of the action of light under these different circumstances, an important practical inference is to be drawn from them; for if any circumstance prevents the nitrate of silver being in excess, no action will be produced.

The proportions given by Mr. Golding Bird are evidently so designed, that an equivalent proportion of each substance should be used; for although he employs only a twenty-grain solution of nitrate of silver to the ounce, with a twelve-grain solution of salt, yet, by using the silver twice, it becomes equal to the single application of a forty-grain solution. To ensure success, the ratio of the chloride of sodium to the nitrate of silver should be about one to five. As the relative proportions of these two substances are of importance, great care must be taken in the application of the salt in the first place to the paper. A ten-grain solution of salt should be sponged over one surface of the paper, and all superfluous moisture carefully removed by the sponge wrung dry; the paper ought then to be allowed to dry, but taking care that the salt does not settle in any part, and thereby cause an excess; when the paper is dry, the solution of nitrate of silver is to be applied in a similar way. An advantageous mixture can be made of the chlorides of oxides and chlorides of metals: thus, a very excellent paper may be made by a solution containing ten grains of salt and twelve of chloride of lime to the ounce of water.

Dilute muriatic acid may also be used for the manufacture of the photogenic paper, in the proportion of about twenty-four drops of the distilled acid, S. G. 1.12, to an ounce of water. It may be used either on the glazed or absorbent papers, but for the latter it should not exceed half the strength. The same observations apply to any excess of muriatic acid as were noticed to apply to the chloride of sodium. This forms a delicate paper, and becomes of a very even colour.

A more sensitive paper may be prepared by using the bromide of silver instead of the chloride; but the expense of bromine and its compounds is an objection.

A solution of bromine in water cannot be used in a way similar to a solution of chlorine with any good result, and recourse must be had to the bromide of potassium, of which 12 grs. to the ounce, applied in the way described when treating of the chloride of silver, and afterwards conjoined with a solution of nitrate of silver (fifty grains to the ounce), will be found a suitable proportion.

Other salts may be used besides the chloride and bromide, such as the phosphates, chlorates, &c., but have the disadvantage of not being so sensitive to light. A benefit, however, attends the use of the phosphates, &c., for while any excess of the chlorides must be so carefully avoided, an undue proportion of the latter salts is attended with no inconvenience.

The expense of the nitrate of silver renders it desirable to reduce the quantity used; but if a dark ground is wanted, a smaller quantity

than fifty grains to the ounce cannot well be employed.

Having considered the chemical substances which may be used for the photogenic paper, the different kinds of paper, and those suited to each particular preparation of silver, next demand attention.

Papers may be divided into three classes, the bibulous, the absorbent, and the highly glazed papers. Of the bibulous papers, blotting paper and tissue papers are examples; but none of them will be found at all applicable to the purposes of the photogenic art. These papers are made from rags, but there are papers made from other substances, such as old sacking, &c., which possess great strength, as well after they have been moistened as before.

The finest paper of this sort is called "double small ends." That which I employed, when sponged over, seemed to be equally moistened in every part, and was found well adapted for the intended purpose, as there was not, after being prepared with the solutions, a single spot that resisted the action of light in any one of the sheets. There are, however, disadvantages attending the use of this paper, for it is not so smooth as others more highly glazed, and therefore not so well adapted for every description of photographs.

The absorbent papers, or the papers used in printing, possess a finer texture than that last described; and when they can be obtained good, they answer very well for photogenic purposes.

Of the various papers which have been tried of this description, a thin paper used for printing newspapers, called "double copy," was found the best; for the thicker papers, that have much plaster of Paris added to increase their substance and weight, do not answer so well, as they are apt to absorb the solutions unequally. These papers are fittest when the common salt and nitrate of silver are used.

The highly glazed papers, or writing papers, require no particular observation, for if either chlorine, chloride of lime, or chloride of soda be used, the colour will be found uniform; and the finer and more highly glazed the paper is, the better will it suit the intended purpose. These will be found advantageous, not only from possessing a smooth and uniform colour, but also from a smaller quantity of the solution of nitrate of silver being used in their preparation, as it is applied only on the surface, and does not penetrate any distance into the texture. For this latter property, paper such as the satin post, may be prepared on both surfaces, should that be deemed advisable.

The modes of applying the chemical substances to the paper have been already noticed, and the sponge was mentioned as being the agent employed.

The extent to which the paper should be moistened is, that such a quantity of solution should be used, that it may, as artists term it, "bear out" in every part of the surface; that is, that a slight layer of moisture should appear at every point after the usual absorption has taken place, and that all superfluous moisture is to be carefully removed by a pressed sponge.

After the paper has been prepared, it will be hardly necessary to state that it must be kept carefully from the action of the light.

The mode of making the drawings has been sufficiently detailed in various publications. When prints are to be copied, the printed side must be pressed by a piece of flat glass close to the prepared paper, and exposed to the light of the sun. When drawings of feathers, or other irregu-

lar bodies are desired, a piece of the photogenic paper is to be laid upon any yielding substance, as folded linen, flannel, or, what is perhaps better, a layer of sand, or bran; the object is then to be covered with a square of flat glass, and, if necessary, pressed down by weights, and is to be finally exposed to the light of the sun.

The paper will be found to be most rapidly acted upon by the direct rays of the sun, but this is by no means indispensable, as a clear sky is very effectual, and even on a very cloudy day a delineation is produced, only it requires a longer time. The circumstances which appear most to retard the photogenic properties of the solar beam, are those dense collections of smoke which hover over the metropolis when the wind has not sufficient power to disperse the deleterious particles of which they are composed.

Most of the modes of preparing the paper, which have been described, are applicable to the camera obscura with a short focus, and those prepared with the chloride of soda, chloride of lime, and bromide of potassium, do extremely well. Its use in this department will for ever be limited, for a portion of an object only can be represented accurately; as, for every distance, the camera requires a different adjustment of its focus, so that to take a landscape, a hundred different foci would scarce suffice. For this reason, it certainly appears that the results of M. Daguerre's experiments must be exaggerated.

The fixing of the drawings after they have been made is completely a chemical action, and requires as much care as the preparation of the paper. The substances that may be employed for this purpose, are dilute muriatic acid, chloride of sodium, hydriodic acid, hydriodate of potash, iodic acid, hyposulphites, sulphocyanate of potash. Before using any of these substances, the drawing ought to be soaked in common water for a few minutes, to remove any excess of the salt of silver; the stopping solution is then to be applied with a sponge to every part of the surface equally.

No particular advantage attends the use of the muriatic acid, but it will be found to stop pretty well when in the proportion of about twenty-four drops of the distilled acid to an ounce of water, but it is not quite permanent. The chloride of sodium, or common salt, is very effectual in stopping any further action of the light, as drawings fixed by this agent have not undergone the slightest alteration from many hours' exposure to the brightest sunshine. When the impressions are very dark they do not change colour, but lighter drawings become altered to a yellowish brown; the addition of a little sesquichloride of iron corrects this, and gives a pink tinge to them. The solution recommended by Mr. Bird answers very well, it contains two ounces of salt and one ounce of the sesquichloride of iron to the pint of water. The hydriodic acid, and the hydriodate of potash, are also very effective in preventing any further action of the solar rays; they turn the white parts to a pale yellow, and are very apt, if the solution be too strong, to remove the colour of the dark ground, especially if the drawing had been exposed to the light for only a short time: for this reason, the solution of hydriodate of potash ought not to exceed ten grains to the ounce of water. A solution of iodic acid, fifteen or twenty grains to the ounce, is very excellent for stopping photogenic drawings; it is particularly applicable to delicate drawings of feathers, when it is desirable not to allow them to remain long in the light; and

at the same time the contrast of black and white heightens the effect. Care must be taken not to apply too strong a solution, for that is apt to whiten the dark ground, but it never turns it to any other tint.

The hyposulphates of potash and soda have been much used for the fixing of drawings, but, if exposed to the sun, they do not appear quite so effective as the common salt, or hydriodate of potash; they have the advantage, however, of stopping them a darker colour. The sulphocyanate of potash is also found to stop these drawings; it changes the colour of the ground to a brown, and has no particular advantage.

The different effects of these several fixing solutions can be turned to good account by suiting the colour of the drawings to the fancy of the artist, or the nature of the subject; and a still greater alteration of tint may be produced by varying the duration of time which the light is allowed to act upon the paper.

Many other chemical substances have been tried for fixing the drawings, but none attended with success. The following are the principal:—Chlorine, chloride of soda, chloride of lime, tincture sesquichloride of iron, chloride of manganese, chloride of tin, chlorate of potash, solution of iodine in water and in alcohol, carbonate of potash, hydrocyanic acid, dichromate of potash, biborate of soda, oxalate of ammonia, fluato of ammonia, benrouxate of ammonia, succinate of ammonia, phosphate of soda, gallic acid, arsenite of ammonia, sulphite of soda.

Should it from any cause be thought desirable to remove from the paper the colour which it acquired by light, this may be performed either by a strong solution of corrosive sublimate, which will render the paper quite white, or by a strong solution of hydriodate of potash, which gives it a yellow tint. If to the saturated solution of corrosive sublimate a little gum be added, it may be used with a quill pen, either to prevent the action of light, or to make white lines or marks after the action of the solar rays. Drawings may be made with great effect in this way, on paper previously exposed to the sun; and this is by far the best mode of proceeding, when naturalists or others are desirous of circulating a few copies of any delineation among their own friends; for, as the white parts are exceedingly diaphanous, and the black impervious to light, the drawings made by this means are much more distinct than those made by the ordinary described processes. This mode will be found exceedingly valuable where a few copies of any drawing of machinery are suddenly wanted for estimates of prices or other causes; and the strongest light will never affect the original drawing.

By the common method of making photogenic drawings, should any be imperfect or otherwise damaged, it will be better to expose them freely to the action of the sun; by which means a uniform black ground will be produced, which will be suitable to the use of the corrosive sublimate: and thus any waste will be prevented. A thin paper, which should be slightly moistened before use, is most applicable to this mode of drawing. The photogenic paper may be blackened either by a dilute solution of proto-sulphate of iron or by hydro-sulphate of ammonia.

The principal points in every department of the photogenic art have now been described, and if the minutiae which have been detailed are strictly followed, and the preparation of silver suited to the kind of paper as here laid-

down, the student in this interesting and new field of science will be enabled not only to prepare his paper, but also to make and fix his drawings with ease and certainty.

ALFRED SNEE.

Bank of England, May 14th, 1839.

EXHIBITION OF THE ROYAL ACADEMY.
[Second notice.]

NOTHING could have been more appositely chosen then the motto for the catalogue of this year's Exhibition; which goes to establish a fact ever present to our mind, that to cultivate a knowledge of the principles of art is the best means of creating an interest in the beauties of nature. But to proceed with our remarks on what is now before us.

129. *The Sonnet*, and 143. *Open your Mouth and Shut your Eyes*. W. Mulready, R.A.—The first a beautiful pastoral, the second a boyish sport; both rendered interesting by their skilful treatment and the rich and harmonious tone of colour under which they appear.

154. *Grace before Meat*. Sir D. Wilkie, R.A.—A subject much in request with the Flemish painters, and, perhaps, indicative of their sense of the duty. Under the hand of Sir D. its character takes a more graceful and intellectual form. The lines quoted in the catalogue (the penultimate one of which is deformed by a typographical error) are from the pen of Lady Blessington, and convey a perfect description of the picture. The performance is, we think, likely to be transferred to copper, and from its moral influence deserves to become popular; if, as a print, it is not made too expensive to suit the pockets of those it would most benefit.

166. *Gathering Oranges, Capo di Monte*, and 180. *Neapolitans during the Tarrantella*. T. Uwins, R.A.—If Mr. Uwins sometimes raises emotions of pity and regret in some of his works, as in 84. *A Newly-made Nun taking leave of her Friends, &c.*, he is sure to revive pleasant sensations in those who contemplate the two first noticed: warmth and sunshine pervading the first; mirth and hilarity, the latter. But we must now look into the other rooms, and return upon our steps when occasion serves.

MIDDLE ROOM.

293. *Robin Hood*. D. Maclise, A.—We know of no artist in the present day with so exuberant an imagination, or such fertility of invention, as Mr. Maclise. In the present instance, he has directed attention to some of the leading points in his picture, still it baffles the eye with its multifarious matter—repose is out of the question; the spectator must take it piecemeal, as we do, and go to the right and left alternately, though what he sees on the right will most likely fix his regards. Here mirth and revelry, colour and splendour, fill the space; costume and accessories dazzle the sight; and, notwithstanding the crudeness of its tints and hardness of its outline, we are carried away by the beauty of the piece, and can only say with Dominie Samson, "Pro-di-gi-ous!"

Opposite to this mirth-inspiring production is one of a very different stamp, viz—

389. *Lady Jane Grey at the place of her Execution*. S. A. Hart, A.—The character of this picture (which is of ample dimensions) is calculated to excite admiration and win approval; for, often as the subject has been treated, the person of Lady Jane has never appeared under a more saintlike and beatified form, or with an expression of more heavenly

With equal judgment and skill,

the artist has made her figure conspicuous amidst the group by which she is surrounded. The bigoted monk is leaving her to her fate. The constable of the Tower seems unwilling to disturb the last aspirations of her soul; and her sorrowing attendants are about to perform the last sad office to their adored mistress. The figures in the foreground are not, we think, so ably managed. They are in great measure meretricious in costume, and, but for the breadth preserved above, are calculated to disturb, rather than to aid; the effect of the picture.

[To be continued.]

BRITISH GALLERY, PALL MALL.

THE last *soirée*, on Monday week, was crowded with company, embracing most of the talent in and out of the Royal Academy. The rooms were beautifully lighted; and the pictures and sculpture appeared to great advantage.—Saturday last the exhibition closed, after a good season, very many purchases being made by the patrons of the fine arts; such as the Marquess of Lansdowne, Lord F. Egerton, Lord De Lisle, Lord Northwick, Earl of Normanton, Duke of Northumberland, Earl of Tyrconnell, Sir Thos. Baring, — Wells, Esq., J. V. Thompson, Esq., Sir Robert Bateson, Marquess of Ailsa, Lord Lynedoch, Lord Colborne, Robert Vernon, Esq., Thos. H. Hope, Henry Holland, Esq. The latter gentleman was the purchaser of that interesting subject of "Grace Darling," by H. P. Parker, of Newcastle.

The Gallery is to be reopened the beginning of June, with a choice selection of the works of ancient masters.

THE DRAMA.

Her Majesty's Theatre.—On Friday, the 10th, too late for us to notice last week, Mr. Mori's Grand Evening Concert was held. The programme promised a rich treat to the lovers of music—a promise amply fulfilled, in spite of two serious disappointments in the persons of Madame Persiani and Pauline Garcia, from whom letters of apology were read amidst considerable disapprobation. Some delightful music, not named in the programme, was substituted by way of amends. The selection of vocal music was generally from favourite operas. We need scarcely say how it was executed, since Madame G. Grisi, Madame Albertazzi, and Signora Rubini, Tamburini, and Lablache, were the principal singers. Madame Stockhausen enchanted us with a new German ballad and a new Swiss air: in the latter she was warmly encored. She is, indeed, unrivalled in this style of singing; her fine, delicate, high notes, are most exquisite. The instrumental music was light and agreeable: David and Mori on the violin, Döhler on the piano, Labarre on the harp, and Richardson on the flute, all first-rate performers. The pit of this large house was crowded before the commencement of the concert; and parties arriving late were politely accommodated with boxes. Indeed, the whole affair was excellently managed.

Haymarket.—Here Power, supported by Cooper, W. Lacy, Strickland, Flemming, Perkins, Mrs. W. Clifford, Misses Taylor and Mordaunt, &c., contrives to keep the audience laughing at his performance in *King O'Neil*, a comedy we believe formerly acted at Covent Garden, and now played several nights in the week at this theatre. Since writing this, we are sorry to say, that Mr. Power has been obliged to desist from acting for several nights,

on account of severe indisposition. He is now, however, so much better as to be announced for a short renewed engagement next week.

Olympic.—On Monday, a new burletta, called *Meet Me by Moonlight*, met with an excellent reception: it is a mere trifle, bordering on the absurd, but makes one laugh one scarcely knows why. The last scene, which is by far the best, exhibits Keeley in a laughter-provoking disguise; his appearance as well as his acting is irresistibly comic; indeed, the little piece owes its success chiefly to his efforts, assisted by Messrs. Green, Selby, Granby, &c. &c., Mrs. Macnamara, Mrs. Franks, and Miss Murray, who acted with their usual ability, although we must confess we do not comprehend the necessity for the latter lady appearing *en cavalier*, an exhibition we would fain see altogether abandoned.

New Strand Theatre.—During the week, a new burletta, the story founded on Auber's "Le Lac des Fées," has been played at this theatre with success. The music is selected from Auber, Herold, Boildieu, and Marschner, and arranged and adapted by Mr. A. Lee, to whom great credit is due for the able manner in which he has performed his task. Of course, any attempt to get up an opera in so small a theatre, and with so limited a company, would be absurd. Aware of this, Mr. E. Selby and Mr. A. Lee have merely made the fairy lake a vehicle for a few sweet songs, duets, and light choruses. Mrs. Waylett is at home in her part, and sings a ballad song and duet delightfully. Mr. Binge, who plays the hero, also sings one ballad with much feeling. Mr. Cook, Mrs. Selby, &c. &c. play the other characters. The scenery is pretty, and the dresses new and clean.

Società Armonica.—The fourth of these concerts, held on Monday evening, introduced Mr. Hammann, a fine performer on the violin, who was received with favour, and obtained the only encore of the evening. Madame Grisi and Madame Albertazzi sung the favourite duet, "Ebben a te ferisci," in splendid style; nothing could exceed the harmonious blending of the two voices. Signor T. Lablache also contributed much to the gratification of the audience; nor must we forget to mention a delightful duet on the harp and pianoforte, by Messrs. Forbes and J. B. Chatterton.

Willis's Rooms.—On Tuesday, the 7th inst., Mr. G.A. Kollman's second concert was crowded to excess. The vocal and instrumental music was excellent, and detained the company until six o'clock. The fine tone drawn forth by Mr. Kollman, who played a fantasia on his splendid grand piano, elicited much applause.

Madame Sala's Concert at Willis's Rooms on Monday was fully and fashionably attended, and we were glad to see the appeal to the good feelings of her friends and the public met in so proper and kind a manner. The entertainments were very various and very delightful. Among the vocalists we had foreign singers of high repute—Stockhausen and her niece Miss Bildstein, and Madame Balfe; but the muster of native talent was uncommonly strong, including Albertazzi, Miss Rainsforth, Miss P. Horton, Miss F. Wyndham, Madame Pilati (the Miss Stanley of the St. James's Theatre), Miss Birch, and Miss Bruce. In other points, Mori, Bennett, Parry, jun., Balfe, Lefter, Brizzi, M. Stockhausen, and Regondi, strengthened the programme; and the whole, under the direction of Negri, went off with great élat. Miss P. Horton was encored in "Where the Bee sucks."

VARIETIES.

Charterhouse Square Institution.—We rejoice to state that the Anniversary of this most humane and excellent Institution, yesterday week, was attended and supported in a manner befitting its usefulness and the benevolent character of the citizens of London. The lord mayor, Mr. Alderman Copeland, and others, warmly advocated its cause, from individual and careful examination of the benefits it had conferred on a numerous and much-suffering class of our fellow-creatures, the nature of whose maladies too often induce fatal delicacy and lead to irremediable concealment. Due honour was done to Mr. Frederick Salmon, the founder and unwearied friend of the charity; to whose exertions, indeed, the success of the Infirmary is mainly to be attributed. Above 640l. (including 100l. from the corporation of London) was subscribed, and we trust it will be followed by many public benefactions; as, it was stated, the number of applicants for relief far exceeded the capabilities of the hospital.

Artists' Benevolent Fund.—In consequence, we take it, of the great political excitement, the anniversary dinner of this charity was not nearly so well attended on Saturday as was anticipated by all parties interested in its success. The lack of numbers, however, was nearly counterbalanced by the amount of subscriptions collected during the evening. By the treasurer's report, these amounted to between four and five hundred pounds, including liberal donations from H. R. H. the Duke of Cambridge, who presided; Her Majesty; the Queen Dowager; Sir John Swinburne; Mr. Bond Cabbell; Sir P. Egerton; Mr. Sergeant Talfourd; and Mr. Landseer. Toasts peculiar to these occasions were responded to by the various parties present, and the meeting separated shortly after 10 o'clock. The musical arrangements were under the charge of Mr. T. Cooke, and afforded great amusement to the company assembled.

Caricatures.—H. B. will have a new and copious mine opened for him now in the *changeable* nature of the times. His last three performances (Nos. 587, 8 and 9) complete nearly 600 pictures of the Whig ministry and politics (with the not less productive interlude of the brief Peel administration of 1834); and are not unworthy of his prolific pencil. "A Cure for a Broken Head," represents Lord Normanby as the wounded, nursed by O'Connell and be-moaned by Lord Morpeth and the Chancellor of the Exchequer, whilst Lord J. Russell is advancing with an adhesive plaster, "*Majority 22*," to apply to the broken head; Lord Melbourne is leading him, and Mr. Stiel following with a pair of scissors. The grouping and expression are in H. B.'s best style. The next is Peel and Lord John settling an affair of honour; and not remarkable for any striking effect. The last is "A Coroner's Inquest, that was to have been," and founded on a passage in Sir George Sinclair's speech, in which he alluded to a coroner's inquest on the defunct cabinet. Thus as if coming events cast their shadows before, and a different course of caricatures was begun, Mr. Wakley sits as coroner, and the jury are stating their opinions:—"O'Connell, 'wilful murder,'" Peel, "death by wilfully aggravating the wound;" Lord Stanley, "a previously very unsound state of body;" others, "*felo de se*," "natural death," &c. &c.; altogether a very clever and amusing piece.

Lighting the House of Commons.—On Thursday night we witnessed the experiment of lighting the House of Commons with the

oleo-oxygen lights. Many members were present, and a number of ladies. The lights consisted of six circular spaces in the roof, and two others over the reporters' gallery, not so brilliant as those for the body of the building. The general impression appeared to be that the effect was too bright for the eyes, and the dark shadows under the side-galleries contrasted strangely with the dazzling lustre in the centre on the floor; altogether, the character of the illumination seemed more appropriate for lighthouses, than agreeable or convenient for interior lighting.

Con.—When is a man really smoking, not smoking? Do you give it up? When he is smoking a *Meersham* (*Merscham*.)

LITERARY NOVELTIES.

In the Press.

A concise Account of the several Orders of Knighthood and other marks of Honourable Distinction, by N. Carrile, Esq.—Nan Darrell, or the Gipsy Mother, by Miss Pickering.—Recollections of the Departed, and other Poems; together with some Serio-Comic Pieces, by Robert Rose, a West Indian of Colour.

LIST OF NEW BOOKS.

The Gentleman of the Old School, a Tale, by G. P. R. James, Esq. 3 vols. post 8vo. 11s. 6d.—Reignley's History of England, 2 vols. Vol. II. 12mo. 7s.—Barlee's Explanatory Version of the Minor Prophets, fcap 8vo. 4s.—Browning's History of the Huguenots, Vol. III. 8vo. 10s. 6d.—Frank Howard's Science of Drawing, Part I. Trees, fcap 8vo. 4s.—Coleridge's Aids to Reflection, 4th edition, fcap 8vo. 7s. 6d.—Sir J. Maundeville's Voyage and Travels, by Halliwell, 8vo. 3s.—Rev. E. Sidney's Life of Sir R. Hill, Bart. 8vo. 12s.—Butler's Analogy, with Memoir, by Dr. Croly, fcap. 4s. 6d.—Remarks on the Slavery Question, by W. E. Channing, 8vo. 1s. 6d.—A Parting Token, 32mo. 1s. 6d.—Rev. R. J. M'Ghee on the Law of Papacy, 12mo. 4s. 6d.—Engineer's Common-Place Book, by W. Templeton, 12mo. 6s.—Evidence and Authority of Revelation, by R. TO CORRESPONDENTS.

* * We beg to point attention to the practical account given by our correspondent, Mr. Smeo, of the various parts of the process by which Photogenic Drawings are produced. Notwithstanding all that has been published on the subject, we have found even well-informed persons generally at a loss to understand the art.

ADVERTISEMENTS,

Connected with Literature and the Arts.

THE WORKS of MRS. HEMANS, containing a Memoir of her Life, &c. by William Black and Sons, Edinburg; Thomas Cadell, London; and John Cuming, Dublin.

On Saturday, May 25, to be completed in Ten Monthly Numbers, No. 11. 2s. 6d. of
THE LIFE OF THE DUKE OF WELLINGTON.

By Major JACKSON and Captain SCOTT.
 "We are disposed to regard the Life by Major Jackson and Capt. Scott as being on many accounts the best. It has a more decided tone of authorship; it is written with care and a perfect knowledge of the subject; its interest is enhanced by excellent maps; and it promises to embrace a complete and perspicuous account of the whole career of our great captain."—*Atlas*.
 London: Longman, Orme, and Co.

On Wednesday next, with 25 Plates and 60 Woodcuts of undecorated Roman and Ancient Cities, &c. from the Author's Sketches, royal 8vo.

 London: Charles Knight and Co., 25 Ludgate Street.

On the 1st of June, 1839, will be published, in Monthly Parts, price 3s. 6d.
THE FIRST PART OF THE PICTORIAL HISTORY OF PALESTINE.

By the Editor of "The Pictorial Bible."
 The main object of the present Work is to relate every event of interest or importance in the Political, Social, Military, Physical, and Religious History of the Country called Palestine, from the most remote Ages to the Times in which we live. It will thus be, in the largest sense, a HISTORY OF PALESTINE, and not merely of the Hebrew Nation; but seeing that it is only its connexion, and the consequences of its connexion, with the History of the Hebrew People, which has rendered this small Country of historical importance, it is also intended that the present volume should be complete as

A HISTORY OF PALESTINE, and not merely of the Hebrew Nation; but seeing that it is only its connexion, and the consequences of its connexion, with the History of the Hebrew People, which has rendered this small Country of historical importance, it is also intended that the present volume should be complete as

A HISTORY OF THE JEWS; not leaving them, as most Histories do, when they were utterly cast forth from their old possessions; but while, on the one hand, the History of the Country is still continued, on the other pursuing the People into all the places of their dispersion.

THE PHYSICAL HISTORY OF PALESTINE, or an account of the Physical Geography and various Products and Characteristic of the Country, will present a feature peculiar to this Work.

The Wood Engravings, which will be very numerous, and in many instances from original Sketches of the Scenery of the Holy Land, will be executed in the first style of the art. The subjects of these engravings will be strictly illustrative, being representations of actual Scenery, Costume, Manners, Monuments, and objects of Natural History—in some instances combined into a picture or group, but never exhibiting any thing merely fanciful.

The Pictorial History of Palestine will form 8 handsome vols. of the size of "The Pictorial Bible," to which Work it will form a Supplementary companion.

London: Charles Knight and Co. Ludgate Street.

On the 26th instant will be published, in 3 vols. 8vo.
NAN DARRELL; or, the Gipsy Mother.

 Late Master of the French Protestant Academy at Caen.
 Smith, Elder, and Co. 65 Cornhill; and A. Brown and Co. Aberdeen.

2d edition, with additions, 8s. 6d.
O R I E N T A L C U S T O M S, applied to the Illustration of the Sacred Scriptures.

By SAMUEL BURCK.
 Late of Clare Hall, Cambridge.
 "The manners of the East, amidst all the changes of government and religion, are still the same: they are living impressions from an original mould; and at every step some object, some idiom, some dress, or some custom of common life, reminds the traveller of ancient times; and confirms, above all, the beauty, the accuracy, and the propriety of the language and the history of the Bible."—*Morley's Persia*.
 London: Longman, Orme, and Co.

18th edition, with Maps, price 18s. in boards; or 12s. 6d. half-bound in parchment.

BIRTHS, DEATHS, AND MARRIAGES.

By THEODORE HOOK, Esq.

In 3 vols. post 8vo.

"A story of powerful domestic interest, well calculated to sustain the reputation of its clever and humorous author. The characters, which are full of variety, embracing almost every shade of society, from the servants' hall to the aristocratic saloons of their masters, are drawn with the hand of a master, and the spirit of an eye-witness."—*Morning Chronicle*.

RICHARD BENTLEY, NEW BURLINGTON STREET,
PUBLISHER IN ORDINARY TO HER MAJESTY.

REVIEW OF NEW BOOKS.

Memoirs of Sarah, Duchess of Marlborough, and of the Court of Queen Anne. By Mrs. A. T. Thomson, authoress of "The Court of Henry VIII.," "Life of Sir Walter Raleigh," &c. 2 vols. 8vo. London, 1839. Colburn.

It is out of our power to render a complete account of this valuable work in our present Number; for it is not easy within a week (were there really nothing else to interfere) to pay due attention to above a thousand honest pages of historical matter, and much of it attested by correspondence and documents hitherto but imperfectly consulted. We may observe, however, that these *Memoirs* have been very lucky in the time of their publication. No bookseller, that ever ventured a speculation, could have been more fortunate than Mr. Colburn in having an exposition of the court of our last regnant Queen, given to the world at a period when another single Queen reigns over us; and recent political events serve so singularly to connect and illustrate the circumstances of female rule. On many points, it would seem as if party had only changed names and situations;—as if the same persons under other titles had again risen up to shape the destinies of the country;—as if men had reappeared and measures were reacted;—as if household influence and favouritism were to play the same parts in other directions;—and, in short, as if with some unessential changes in the cast of the performers, and unimportant variations in aims and objects, the history of England were to offer, in the middle of the nineteenth, little else than a repetition of the beginning of the eighteenth, century.

It is, therefore, with the accession of Anne that the greatest interest of these volumes will be found to be combined, though there is much in their previous statements which deserves our serious consideration; and to these we must, in the order of dates, pay our first devoirs. Among other particulars respecting her work, Mrs. Thomson tells us—

"A great portion of the duchess's narrative having been delivered in conversation to Hooke, the historian whom she employed to make the book intelligible, the most characteristic portion of the Account, which was suppressed by the prudence of Hooke, is of course wholly lost. In the materials which the duchess collected to form the volume, many minute particulars which were not deemed worthy of insertion in the Account, are, however, preserved; and it has been the good fortune of the authoress of these *Memoirs* to supply, in some instances, the garbled passages from the duchess's papers, and to restore to the Vindication the duchess's own language; those expressive and happy phrases which, as the reader will perceive, described her own sentiments, and portrayed the characters of others, in a manner that no dispassionate historian could imitate. Of such papers as were deemed fit for publication by the Marlborough and Spencer families, Archdeacon Cox, in compiling his elaborate 'Life of John Duke of Marlborough,' had the free use, with the privilege of making copies. In the able work of this indefatigable historian

he availed himself, in some measure, of most of these valuable materials; but in the progress of his heavy task, he never forgot that he was compiling a biography of the Duke, not the Duchess, of Marlborough; that he was dealing with the enterprises, the treaties, the opinions, and the projects of men; and not with the intrigues, the foibles, the feelings, and the quarrels, of women. He has, therefore, but rarely and incidentally referred to the Duchess of Marlborough: hastening from the subject, as if he indeed feared that her formidable spirit might be recalled by the expressions of disapproval which he cautiously bestows upon her, by the hints which he gives of her temper, and the conclusion to which he fails not to lead the reader, that she was the source of all the duke's disappointments and reverses. This determination on the part of the archdeacon, and the manifest prejudice which he had imbibed against the Duchess of Marlborough, may readily be traced, by those who are induced to examine the manuscripts which were placed in the museum by the executors of Dr. Cox. These papers, which formed, in part, the materials for the life of the great general, and also for the duchess's 'Account,' are extremely interesting, and afford a satisfactory basis for a memoir. They contain, amongst other documents, many private letters, from which a selection has been already published, with great success, under the title of 'Private Correspondence of the Duchess of Marlborough.' They comprise also, not only a mass of papers relating to the duke's continental and political affairs, but a discussion upon the reasons for the dismissal of Lord Godolphin, the mode in which it was effected by Queen Anne, some curious correspondence relative to the building of Blenheim, the letters of Lord Coningsby to the duchess, and her grace's long and reiterated remonstrances with the Treasury upon various topics, passages of which develop more of her character than long pages of description could unfold.

"Without the aid of these manuscripts, the memoirs of the duchess would not have had the character of originality to which, in some degree, it is presumed, they may aspire. It is curious that in many instances the authoress has found it desirable to extract from these documents the very passages which Dr. Cox had most carefully rejected. In the few memoirs of the duchess to which he has referred in his work, he has passed his pen across all lively observations as irrelevant; all detail, however illustrative of her character, as unnecessary. Every thing that could cheer the reader during the recital of vexatious politics, and after the enumeration of battles, was discarded, or discussed briefly. Such are some of the sources from which information for these *Memoirs* has been gleaned."

Yet so entirely political was the life of the Duchess of Marlborough that its private details are almost swallowed up in the vortex; nevertheless some of them, now rescued from oblivion, are very interesting. Still the places of her birth and death are hardly verified; though it seems most probable that the former was at Holywell near St. Albans, and the latter in London.

Of her middle life, the following extract speaks:—

"Whilst these minor events were disturbing the peace of the royal household, the first campaign in Ireland called Marlborough away from the home and the wife whom he loved so well. Every letter to the countess which he penned during his absence, breathes a devotion which time and distance seem only to have heightened. In the hurry of military movements, in the excitement of unparalleled triumphs, his heart was ever with her. 'I am heart and soul yours,' was his constant expression. 'I can have no happiness till I am quiet with you.' 'I cannot live away from you.' Again, he beautifully concludes one letter: 'Put your trust in God as I do, and be assured that I think I can't be unhappy as long as you are kind.' So true and elevated was the attachment of that affectionate heart. 'Pray believe me,' he says, writing in 1705, immediately after the battle of Ramilies, 'when I assure you that I love you more than I can express.' These and other innumerable fond asseverations, even when his wife had passed the bloom of youth, and, it appears, no longer possessed (if she ever did) equanimity of temper, speak an attachment not based upon evanescent advantages. With a candour inseparable from a great mind, he generously took upon himself the blame of those contentions by which the busy and harassing middle period of married life, that period in which love often dies a natural death, is, in all stations, apt to be embittered."

The concluding remark is philosophical enough, and from a lady's pen! Nor is the following amiss, when speaking of the disputes between Anne and her sister Queen Mary:—

"There is always something in feminine altercations that is ludicrous as well as painful. Few women know how and where to stay the course of anger; when it once begins to flow, every charm, every grace so fondly prized by the sex, is obliterated, when retort follows retort, and retaliation grows vigorous; and dignity, to assert which the fair sex is oftentimes so valiant, takes its departure immediately we become vociferous in its defence."

We do not deem it necessary to follow Mrs. Thomson either in the historical details of the period, or in the alliances and other concerns of the Marlborough family, with which intelligent readers are well acquainted; but will select, here and there, such quotations as seem to us best calculated to exhibit the spirit of her work. Thus:—

"The Duchess of Marlborough's dismissal from Anne's favour may be said to have commenced, in reality, when that princess ascended the throne of England. The favourite was now wholly devoted to Whig principles; Anne was always, in her heart, a Tory. Lady Marlborough could ill brook opposition from one whose actions she had for years guided, and who had scarcely dared to move except at her bidding. The Queen had, as a monarch, one great failing, which characterised the house of Stuart: she allowed too great familiarities in those around her, and forbore to rebuke insolence, or even to check presumption. No one was so likely to presume upon this want of

dignity as the Countess of Marlborough. Her haughtiness soon grew into downright contumacy. Even whilst holding the queen's fan and gloves, or presenting them to her majesty, in the capacity of an attendant, she turned away her head with contempt directly afterwards, as if the poor harmless queen inspired her with disgust. How long Anne bore with such conduct, remains to be seen. For the first ten years of her reign, Lady Marlborough, however, ruled paramount."

Having ascended the throne, we are informed:—

"Whilst the public were amused with the pageantry of this imposing ceremony, busy cabal occupied the private hours of the queen, and within her palace, a contemporary writer has not hesitated to affirm, there was a very busy market of all the offices of government. 'For,' says Cunningham, 'the queen's own relations being kept at a distance, all things were managed by the sole authority of one woman, to whom there was no access but by the golden rod; and it was to no purpose for the Earl of Rochester to set forth his own duty, affection, and the rights of consanguinity.' This 'woman,' it needs scarcely be stated, was the Countess of Marlborough, whose frank avowal of her exertions to form the queen's household, at this period, in her conduct, was not necessary to establish that which all the world knew. With respect to the grave charge preferred against her by Mr. Cunningham, the consideration of her imputed corruption must be hereafter discussed. The elevation of her royal mistress to the throne brought the countess, as she observes, 'into a new scene of life, and into a sort of consideration with all those whose attention, either from curiosity or ambition, was turned to politics and the court.' Hitherto, whilst her personal influence over the princess had furnished many a topic for the gossip of the day, it had produced no apparent effect upon the affairs of the nation, the princess herself never having been allowed any means of interference in politics, or power in public appointments. But now the countess began to be regarded as one who possessed a great extent of patronage,—that curse and temptation, as it often proves; in short, as one, 'without whose approbation neither places, pensions, nor honours, were conferred by the crown.' The intimate friendship with which she was honoured by the queen favoured this supposition.

One of her letters in the Appendix is a singular proof of the manner in which her influence was exercised. We give it with Mrs. Thomson's note.

"This letter proves that, so early as the year 1707, the good understanding between the queen and her favourite was undermined.

"August 7, 1707.

"Lord Marlborough has written to me to put your Majesty in mind of Count Wratelaw's picture, and in the same letter desires me to ask for one that he sent Lord Treasurer, which came from Hanover, which I have seen, and which I know you would not have me trouble you with; and I have been so often discouraged in things of this nature that I believe nobody in the world but myself would attempt it; but I know Mrs. Morley's intentions are good, and to let her run on in so many mistakes that must of necessity draw her into great misfortunes at last, is just as if one should see a friend's house set on fire, and let them be burnt in their bed without endeavouring to wake them, only because they had taken laudanum, and had desired not to be disturbed. This is the very case of poor dear Mrs. Morley;

nothing seems agreeable to her but what comes from the artifices of one that has always been reported to have a great talent that way. I heartily wish she may discover her true friends before she suffers for the want of that knowledge; but as to the business of calling for the Princess Sophia over, I don't think that will be so easily prevented as she (perhaps) may flatter herself it will, though I can't think there can be many, at least, that know how ridiculous a creature she is, that can in their hearts be for her. But we are a divided nation; some Jacobites that cover themselves with the name of Tory, and yet are against the crown. And whoever comes into the project of that sort must do it in hopes of confusion. Others there are that are so ignorant that they really believe the calling over any of the House of Hanover will secure the succession, and the Protestant religion. And some of those gentlemen that do know better, and that have so many years supported the true interest against the malice of all the inventions of the enemies to this government, I suppose will grow easy, and be pretty indifferent at least in what they think may be of no ill consequence, further than in displeasing the court, not only in this of the Princess Sophia, but in any thing else that may happen; and as Mrs. Morley orders her affairs, she can't expect much strength to oppose any thing where she is most concerned. Finding Mrs. Morley has little time to spare, unless it be to speak to those that are more agreeable, or that say what she likes on these subjects, I have taken the liberty to write an answer to this, which you will say is sincere, and can be no great trouble only to sign it with Morley."

With this extract, and the first volume, we must conclude for the present; only adding, that from Dalrymple, as well as from Cunningham and other able authors, Mrs. Thomson has, with honourable impartiality, culled her public materials. Some repetitions occur in the narrative, but they are of little consequence, and occasionally seem almost unavoidable to complete the sense; a few typographical errors also require correction.*

Fair Rosamond; or, the Days of King Henry II.: a Historical Romance. By Thomas Miller, author of "Royston Gower," "Beauties of the Country," "A Day in the Woods," &c. 3 vols. 12mo. London, 1839. Colburn.

It cannot rain but it pours: this is the third three-volume work we have received within a few days, preluded also by Mr. James's publication, noticed so lately as in the *Literary Gazette* of Saturday. Were we to occupy our whole sheet with them, we could not do sufficient justice to these productions, some of them employing, as they do, the talents of very popular writers; and we fear, in so far as regards their authors, that they will not allow in such cases brevity to be the soul of wit. To any thing from the pen of Mr. Miller, we should feel inclined to do much more than we can, under these circumstances, afford; for he has raised himself a name from his humble beginning, which ranks deservedly high in our living literature. Of his efforts, he speaks very unaffectedly in a preface to *Fair Rosamond*, and says, "The few ill-natured rubs he has had, he regards not, for the man who sits down with the firm conviction that he has had more praise than he deserves, must expect

* See Introduction, p. v. the date 1510 instead of 1710; p. 86, slight treason instead of reason (what a difference to a T!); in p. 443, "Splendidi mexer," for "Splendide mendax," if, indeed, being copied from MS. in the British Museum, the original may not be in fault.

to meet with a few drawbacks. And although his works are open to criticism, yet there are points about them which ought not to call down the whole weight of the lash: to such belong his humble station in life, his short practice in the craft of authorship, and his lack of education; let these be dealt mercifully with, and he will be content to submit to all fair chastisement, for he has not forgotten the old couplet, that says,

'The man who printeth his poetic fits,
Into the public's mouth his head commits.'"

Well for him — his head is as safe there as Van Amburgh's in the mouth of one of his tamed lions, and so far from being in danger, the animal in both instances would wag its tail, and be wondrously pleased with the feat.

As in his preceding publications, Mr. Miller, in the present performance, displays a fine poetical vein, an admirable conception of the historical characters belonging to the period he has chosen, even greater talent than before, in commanding individual portraiture, glowing powers of description, and felicity in making his under and fictitious agents play a consistent part in developing the drama of his principal personages. His Rosamond is a beautiful loving creature; his Henry, noble and chivalrous; his Eleanor, revengeful and implacable; and his Becket one of the most vivid and striking pictures we have seen on such a canvass. Glanvil, the minstrel Pierre de Vidal, and other sketches, are equally true; whilst Ugglethred and Gamas Gobbo (the latter suggested by an idiot in White's "Selborne," and only transplanted to a former age) are excellent specimens of the skill with which fancy may interweave the supposititious with the real. Altogether, *Fair Rosamond* is a stirring representation of the distant date to which the romance refers; and the liberties Mr. Miller has taken, both with the meagre authentic facts handed down to us, and the ideal legends founded upon them, respecting that famous heroine, are such as do credit to his taste and judgment. We will not, however, anticipate them; for the author, having to struggle against long-established belief and actual history, has had enough to do in establishing an interest and creating a sympathy, without our cutting any more of his ground from under his feet.

Henry (we may say) is presented to the reader as privately married to Rosamond Clifford, and we quote a passage thereon:—

"Leaving Henry and his chancellor to discuss the best means for keeping his marriage a secret, and for blinding the keen-eyed and jealous Queen, we will return to Rosamond, who had now become fully aware of her position. She loved Henry too fondly to take any advantage of the situation in which she found herself so unexpectedly placed, and was moreover of a disposition so much inclined to peace, that she never once thought of making use of the secret which she had so unexpectedly obtained. All tenderness and trust, she could not for a moment think of accusing Henry of what he had done, and was at times scarcely conscious of the position in which she stood. Hers was a disposition the very reverse of Eleanor's; she seemed like a lovely landscape, over which sunshine and cloud alike career without injuring its beauty. Eleanor, on the other hand, resembled a jagged and mountainous country, breaking the light of heaven in a thousand ways — whole masses sleeping in shadow, and possessing many an unannounced depth which the eye of man could with difficulty fathom. Rosamond would have been content if her life had glided away like a gentle

river, that rolls along through its own native banks, happy in the music which it throws out from its own bosom, and delighting in the few trees and flowers that are mirrored in its own calm surface. Eleanor was like the sounding sea, ever bearing a wild tumult upon its own bosom, never at rest within itself, and but rolling towards the shore in search of deeper caverns, or waging war with every jutting headland, and trying its strength against every opposing rock. No wonder then, if Henry, after the toils of state, preferred the smooth campaign to the 'hill of storms,'—that he chose rather to glide along the smooth river of peace, than subject himself to the constant buffetings of a rough sea, where every moment his attention was called to the breakers ahead, or the hidden quicksands which were so constantly shifting. He was one of those who mingled enough amongst daring and valorous spirits in the field, without needing their presence constantly around his pillow; who, however much he loved to hear the war-banner rustle and shake its folds above the stormy camp, would choose the flag of peace to droop over his hearth; and who, although mated with the eagle, loved to rest an hour beside the timorous dove; to forget the thunder-cloud which he had pierced, and the giddy regions into which his ambition had prompted him to soar."

A picture of the times gives us, *inter alia*, the following traits:—

"Fighting and feasting followed each other so naturally in these barbarous ages, that it almost appeared as if they won a victory merely to shew after-kindness to the conquered. Numerous are the instances on record of those who were opposed hand to hand in the morning, sitting down by the same festal board at night. Nor did King Henry ever push his revenge to the extent of his power on those who had so stoutly held out their castles against him; but having once conquered them, he endeavoured, by courtesy and fair promises, to retain them as friends. It was his policy also to extend the greatest favours to those who had shewn the most resistance in defending their possessions, rightly judging that such brave warriors were dangerous enemies, and, in that restless age, the friends to be most valued. Acting upon this politic principle, he had prepared a large feast at the palace at Woodstock, and invited the chief knights amongst the prisoners, to share it, together with the different nobles who were leaders of his armed forces, taking care, however, that the numbers of the latter should at least double those of the conquered. Great preparations were of course made for the occasion; the Thames was dragged with nets to furnish its share to the feast; steers and sheep were slaughtered; and many a buck, that had carried his antlers stately enough the day before, fell beneath the shafts of the foresters. The huge hall of the palace was strewn afresh with green rushes; the ponderous oaken tables were removed from almost every other apartment, and brought thither to accommodate the guests. Seats also, each formed of a solid oaken plank, and supported by tressels of the same material, were ranged on each side the tables, and covered with haubergestain, a kind of coarse cloth of mixed colours, for the tables were not so much as smoothed by the plane. The walls of the immense hall were decorated with arms and armour, and sylvan trophies mingled with banners, and lances placed cross-wise over hauberk and helm, and many a shield that bore the dint of former frays. On the doors, and by the upper table, which was

set apart for the chosen guests, stood a rich canopy, emblazoned with the arms of England, two lions blazing in gold; this was set apart for the king. Drinking-vessels of silver and gold also glittered upon every table; yet, amid all this barbaric splendour, there were not those real comforts which the meanest cottager now possesses. The huge loaves of bread were neither half kneaded nor half baked, and bitter as aloe with the dregs of beer with which they were mixed; and also heavy as lead, and not freed from a tenth portion of the bran. Even some of the wine was so thick and full of dregs, that the barons were compelled to filter it between their teeth, and spit out the thick sediment upon the floor. Their repasts seemed to resemble their armour—heavy, showy, and cumbersome; but possessing little or no comfort. Henry entered the hall from a private door, followed by Glanvil, the great law-giver of the age, and Thomas à Becket: the chancellor was seated on the right of the monarch, and the judge on the left. At the sounding of trumpets, the guests took their seats; those at the upper end of the table placing themselves according to their rank, which each one seemed perfectly to understand; those at the lower tables took their places as chance offered, or seated themselves beside their companions in arms. Although there seemed more of chance than order in this arrangement; yet, by some nice stroke of art, it was so contrived that one or other of King Henry's trusty followers sat between the knights they had so recently conquered. The dishes were handed from guest to guest by the attendants, each carving off that which suited his taste. Many a dagger which dealt the death-blow the day before at the siege, was now making deep inroads into boars' heads, barons of beef, and haunches of venison, which they placed upon their wooden trenchers, and having cut it into such mouthfuls as would choke any modern gormandizer, they helped themselves with their fingers; for forks were unknown, and therefore never wanted. A few rather delicate dishes there were at the upper table, where the king was seated; but even these were spoilt to preserve a show; peacocks half roasted, that the beauty of their trains might be uninjured; and cranes served up with their heads and necks raw, and so propped up that they looked murderously on their devourers, and seemed ready to leap off the dishes. Even the boars' heads grinned hideously, and shewed their horrid tusks and deadly eyes (which were thrust into their heads again after they were dressed), as if they were ready to rend every knight who brandished his dagger over them. Wines there were in abundance; but many of these were spiced, and retained none of their natural flavour; even those that were drank in their original state, were drawn from massy hogsheds with a spigot and faucet, much after the manner that an English peasant, in the present day, draws his home-brewed and muddy beer. Hippocras, pigment, morat, and mead, were served up in large vessels, into which each guest plunged his cup as he pleased. Ale and cider were also plentiful, and stood in large open tubs along the sides of the hall. More than one attendant, when a chance offered, knelt down and drank his fill out of these huge wooden vessels; for King Henry was not so plentifully supplied with drinking-cups, but that two or three knights were compelled to drink from the same vessel. One knight at the lower end of the table, who had thrice called on an attendant to bring a drinking-cup, was at last told that there was not one but what was in use, filled his hel-

met from a huge vessel that contained mead, and having drank himself, gave it to his comrade. Although many of the huge joints were not half cooked, yet there were no squeamish stomachs, but what could each bear their two pounds of solid flesh; for, as Peter of Blois says (and he fed many a time at Henry's court), 'their stomachs, by the help of powerful exercise, got rid of every thing.' But the whole scene was in keeping with the characters there assembled. The high-pillared and vaulted hall, with its richly painted windows, comported well with the broad-breasted, deep-voiced, and mail-covered guests, that sat beside the massy tables. Even the ponderous drinking-cups, which they from time to time uplifted to their lips, seemed only made for such strong steel-covered arms to upraise. And when they reached over the table to converse with each other, between the huge mountains of meat, the beholder felt assured that the men who fed on such pastures could fight. Nay, some there were talking apart on the late blows they had dealt, who pointed with their daggers to the immense joints, running lines with the point, and saying, 'An thus were his gorget, thus I brought my battle-axe, as it were, on this point of the haunch, striking his neck as I now separate this joint.' Or, pointing to a round of beef, into which another would stick his dagger, saying, 'So came the point of my lance, cleaving the fastenings of his accoutre through; and I hold it a good stroke, if the head of the lance can enter a-lant in this wise,' again mangling the joint, to shew how he had dealt his blows on the enemy. But deem not that all who met there were alike unfeeling; some there were who conversed together in low voices, and talked over the virtues of those who had fallen in the fight. How nobly they had dealt with the foes they had in their day struck down; how their shields had interposed between their companions, when the death-blow had all but fallen. How they had sheltered their enemies in the late wars, setting at nought the menaces of either Stephen or Matilda, when weighed beside their own honour. How beautiful maidens (whose names have been for ages forgotten) sought out their lovers from amid the slain—how some wept, and others shed not a tear, but buried themselves in the solitudes of their ancient castles, and died broken-hearted. But all are now gone; the mourned and the mourners are forgotten; even the gray and the weather-beaten turrets of their castles have long ago mouldered to dust. Those with whom they fought, and those whom they loved, and wept over, have not left even their ashes upon the earth. Nearly a thousand harvests have been gathered over their graves. Summer and winter, day and night, storm and sunshine, have gathered over and passed away, from their silent beds; and we cannot now point out the spot where they sleep; for even cities have sprung up over the solitudes where they fought, fell, and were interred! A few of their names, worm-eaten and mouldered, are all that we have left to tell that they once lived, that they possessed lands and dwellings in spots which even the scholar is now puzzled to discover,—that they married—and time has even erased the fair name of her they loved; a worm has eaten out what we shall never again discover."

A trial before Glanvil, referring to the "Doomsday Book," is another capital bit of manners, and we regret we can only refer to it; as indeed we must now be content to close this too-brief notice of a very masterly production, reminding us often of Scott but with

features peculiar to the author himself, and to that bent of mind and fancy which has made his writings of another description so deservedly favourites with the public. One or two epithets sound rather harshly to our refined age; but *Fair Rosamond* is altogether so fair that they are scarcely specks even for hyper-criticism to note.

The Court of King James the First. By Dr. Godfrey Goodman, Bishop of Gloucester. To which are added, Letters illustrative of the Personal History of the most Distinguished Characters, &c. &c. Edited, from original MSS., by John S. Brewer, M.A. of Queen's College, Oxford. 2 vols. 8vo. London, 1839. Bentley.

HAVING disposed of Mr. Tytler's publication illustrative of a preceding period, we now turn to Bishop Goodman's MSS. from the Bodleian Collection, which also throw a historical light upon an after-reign of much importance in the annals of our island, and respecting which so much has been said and written.

On the memoir of this chronicler of events and hoarder of correspondence, contained in the first of these volumes, we are not, we confess, disposed to place unqualified reliance. Our deference is shaken by the evident looseness of his religious principles, which, in those days of extreme latitudinarianism, was too much calculated to give a tinge to his personal and political opinions. To change their faith, retract, recant, and change again, were the habits of the rainbow flitters through that age in which Dr. Goodman was made a Protestant bishop (A.D. 1625); and, for aught we can gather from his sentiments, the see of Gloucester would have been quite as agreeable to him under a Romish sovereign and the pope, and under King James as the head of the church. In other respects, he seems to have been a civil, quiet, well-spoken prelate, liberal, charitable, and content to pass through life in an easy and comfortable manner; neither the most acute nor the best informed of men or of bishops, and, therefore, in his testimony to be received merely as a contemporary witness, with opportunities for acquiring a knowledge of certain things, and no disposition to falsify or misrepresent them. Let us, therefore, hear what he states of the king:—

"Sir Roger Aston, whom I had cause to know, was a very honest, plain-dealing man, no dissembler, neither did he any ill office to any man. Let me also say so much for my old master King James, now with God: no man living did ever love an honest man more than he did. This I ascribe not only to his own goodness (for as yet I never knew any man who had so great an understanding, and so great an affection, and such a violent passion of love as he had), but likewise to the lamentable experience of those factious times in Scotland, which continued all his youth, inasmuch that no man durst scarce be in a low room in his own house by night for fear of pistoling; and, therefore, no marvel if the king made much of them whom he found entirely honest."

If such were the condition of the king whilst he lived among his fierce and turbulent nobles in Scotland, what must have been the deplorable situation of his unfortunate mother? History has never, we think, made sufficient excuses for her errors with reference to this point. A lamb in the midst of tigers and lions is hardly more to be pitied and commiserated than poor Mary, in the midst of her wild and fanatical subject-controllers.

The death of Raleigh furnishes a fair example of Goodman's work:—

"That Raleigh should long after be executed for that treason, surely there the king did but follow the advice and counsel of his lawyers: for if he had given him his pardon, yet his offence then committed had deserved death, for him without any commission from the king to seize upon the Spaniard's town where many lost their lives; there being at that time a peace between England and Spain. The king could do no less in honour and justice than either deliver him up to the Spaniard, or else, seeing blood requireth blood, and that so many had been slain in the action, and every one of them their lives as precious in the sight of God as was Sir Walter Raleigh's, surely it was necessary that his blood should pay for it. So to appease the wrath of God, and to preserve the peace and amity with Spain, the breach whereof might have cost much more blood than the life of one man could be estimated at, and the judges being consulted withal, they gave this resolution, that matter of treason was such that it could no way be satisfied or wiped off but by a pardon under the great seal, which Sir Walter Raleigh not having, he might be put to death for his former offence. And so, to save further trouble for his trial, for that an offence committed in the West Indies, whether it were triable in the King's Bench, or rather in the Court of Admiralty, many questions might be made, and, to save all that trouble, he was called to the King's Bench, and there was demanded what he could say for himself, why the former sentence of death should not be put in execution: and he could allege no sufficient reason to the contrary. And so for the form of his trial there, the judges are to be charged with it, and not the king. No man doth honour the memory of Sir Walter Raleigh and his excellent parts more than myself; and in token thereof I know where his skull is kept to this day, and I have kissed it."

Another criminal cause has some curious matter:—

"After the great armada in '88, then O'Rourke, an Irishman, suffered: he was arraigned at the King's Bench, and I was then present. This man had very great possessions in Ireland, and what is proper to some dispositions, they will never learn but one language, so this man did not so much as learn English. The like example we have of the emperor's brother, who, under the King of Spain, was viceroy of Portugal, in the year 1615 as I take it; he would never speak any language but Dutch, and if he had not been taught that in his infancy, and that there was a necessity he should speak some language that he might call for meat and drink, and such things as he wanted, certainly he would have taken no pains to learn that language. This O'Rourke, as it is said, built a house which, as they say, he called a defiance to the English; he did once use the queen's picture very contemptibly; when the Spanish Armada was defeated in '88, some of them being cast upon the shore, it should seem that he in pity and compassion did relieve them: this the deputy took as a capital offence, whereupon warrants were out to apprehend him; he having notice thereof, fled into Scotland; the King of Scots apprehended him and sent him to the queen, and so he was arraigned and executed. His son recovered some part of the land, he did allege for himself that Sir Richard Bingham would acquit him. His grandchild was lately a prisoner in the Tower, who living riotously, I think he died there in a poor condition."

The reasons for acquiring the use of at least one language are dull enough; but we proceed to graver matters, and instance the fall of the favourite Somerset:—

"The true fall of Somerset was this,—that love and affection, though they are the strongest passions for the instant, yet they are not of longest continuance, for they are not grounded in judgment, but are rather fancies which follow the eye; and as beauty itself doth decay, so love and affection abate. Take the wisest man; he loves his own children better when they are young than when they are old: so in the best things there is a glut, a surfeit, and a satiety; men are as mean of their pleasures as they are of their labours, and the chief delight which man hath is in change and variety. A man be glutton with one favourite, as he is feeding upon one food, though it be manna; therefore to have choice of dishes best pleaseth the palate: so truly I think the king was weary of an old favourite."

The correspondence contained in the second volume is by far the most valuable portion of this work; and is not only delightful for its glimpses at truths and traits of personalities, but important as corrective of national history. We shall make a few miscellaneous selections, to exhibit these points:—

The torture of Guy Faux is mentioned with that want of feeling which the frequency of such horrors induced, in a letter from Sir E. Hobart to Sir T. Edmonds, our ambassador at Brussels, in which are other remarkable particulars respecting the gunpowder plot.

"When Johnson was brought to the king's presence, the king asked him how he could conspire so hideous a treason against his children, and so many innocent souls, which never offended him? He answered that it was true; but a dangerous disease required a desperate remedy. He told some of the Scots that his intent was to have blown them back again into Scotland. We say that Sir Anthony Shirley hath been with the emperor, and is at this time employed by him into Spain; and there is further news, that his brother, Robert Shirley, hath been the chief instrument for the Persian to overthrow fourscore thousand Turks. Since Johnson's being in the Tower he beginneth to speak English; and yet he was never upon the rack, but only by his arms upright."

"Sir Walter Raleigh is much suspected to be privy to this action; for White-locke had had private conference late with him. The prisoner's right name is held not to be Johnson, but Faux. He hath further confessed, that there be many gentlemen, which at this time serve the archduke, that have been made privy, that they should be prepared for that day for an insurrection; and that he verily thinketh they will come shortly over by degrees."

"The king's position in England appears in some instances to have been little mended from his Scottish perplexities. The cabals against Buckingham, when in Spain, led to the following from Sir Toby Matthews:—

"My Lord,—I have written to your lordship, this very day, more at large of some things which I conceive to import your lordship's service; but I have humbly prayed my lady marquis that she will be pleased to inclose that letter of mine in a cover of hers. This is chiefly to serve but for a conveyance to this inclosed, from your most worthy mother, who hath required me to send it to your lordship's hands. I forgot in my other to tell your lordship that, howsoever his majesty hath distinctly professed that he would grant no suits

till your lordship came home,—and certainly his majesty's direct intention was such, as knowing that he should be most truly informed by you both of persons and things,—yet I assure your lordship that by importunity men are growing to do their business daily. The king is much disgusted with it, but knows not how to help it; and I am told that he said to somebody the other day: 'You will never let me alone. I would to God you had, first, my doublet, and then my shirt; and when I were naked, I think you would give me leave to be quiet.'"

The duke's munificent patronage of the fine arts is shown by letters from Balthasar Gerbier, his agent, in the purchase of the best works that could be found on the Continent; which letters, by the by, also distinctly prove that Buckingham broke off the Spanish and formed the French match. We will conclude with quoting a few passages on the former subject:—

"I mentioned, in my former letter by Sir James Arthur Long, the large and rare paintings in possession of a person called President Chevallier, who has also some antique heads in marble and in bronze, the whole neither to be sold nor to be given away without some scheme; but I have sworn to myself, as I did about the prelate of Venice, that we must have them, or I lack invention, for, as they are the ornament of a handsome house in France, they must be jewels at York House. These paintings and these heads, five thousand pounds sterling in tapestry, rich with gold and silver and silk, and made after a pattern by Raphael, and one hundred and fifty thousand francs in cash, which make fifteen thousand pounds sterling, are within the centre and circumference of this business; I fear the long recital of it will make your excellency as weary as I am vexed at the sea, that prevents my seeing your blessed countenance. This is the matter. The very day that I had given my last letter to S. James Arthur Long, a stranger came to see me, who had heard that I was in the employ of the Duke of Buckingham, and who, as I very well remarked, had taken notice of the pictures which I had been looking for; he addressed me in these words: 'The marriage concluded, people were now only anxious for the arrival of the Duke of Buckingham, whose virtue and popularity, in a time so extraordinary, could not fail of acquiring for him the power of doing any good service to whom he would; that if it were the will and favour of the duke to shew it to one who cast the anchor of his hopes upon his arrival, that not only he would present him with all the pictures which I had seen, but also 50,000 francs' worth of Raphael tapestry, and a present of 150,000 francs besides.'"

"I think I remark that the president, who has the pictures, has an interest in the business, for he was very complaisant one day when I went to see him, and said to me laughing, 'No, no, sir, they are not to be sold at all;' and I replied only with the word 'But,' without saying any thing more. And I am well convinced, that the man who spoke with me looked that way, and I suspect will not say his name, nor the name of him who employs him, until they know your will; then they will discover themselves. There are many things to say that cannot be expressed in writing, for fear of wearying your patience too much. If it please your excellency to speak in this business, these pictures will come into our hands with all the rest. The tapestries are on the road from Antwerp to Paris; and, for

the other sum, they promise, as I have said, fifteen thousand pounds sterling. I think, my lord, that coming for a week out of the journey undertaken will not retard business; for, now the marriage is accomplished, friendship has its turn, as your excellency knows. At Rome there will be more opportunity and means of having something, and thither I shall hurry post with all speed as soon as I receive your excellency's answer about this business. If your excellency undertakes this affair, I will leave my address at Paris, and will, as becomes me, advise your excellency of every thing. However I will not do as John Tredecant, who asks pardon at the beginning; for as your excellency well replied to him at Newhall, that, for him who has an evil purpose to offend, asking pardon first is not enough: but at the end, on my knees, my lord, I ask pardon, if my ignorant zeal has made me slip into any fault. During the time I have been in Paris, I have not passed one hour without searching after some rarity; and I should have stayed there but four days, had it not been, as I thought, very necessary that I should find out all that there is in Paris; and I never could have thought that they had so many rare things in France, all which are to come into your hands at your happy arrival. I beg your excellency yet to read the other sheet, and you will there see three rare pictures of Michael Angelo Raphael. It is, my lord, because since my last I have found at the house of the bishop of Paris three of the most rare pictures that can be. The first is a St. Francis, a good-sized painting, from the hand of the Cavalier Ballion, as good as Michael Angelo Carazozo; and the other a picture of our Lady by Raphael, which is repainted by some devil who I trust was hanged; but still it is so lovely, and the drawing is so fine, that it is worth a thousand crowns. There is another picture of Michael Angelo Bonnarotta; but that should be seen kneeling, for it is a Crucifixion, with the Virgin and St. John,—the most divine thing in the world. I have been such an idolater as to kiss it three times, for there is nothing that can be more perfect. It is a miniature. I have a hundred thousand things to say, but I offend too much in trespassing so long upon your patience. I have met with a most beautiful piece of Tintoret, of a Danaë, a naked figure the most beautiful, that flint as cold as ice might fall in love with it. I have given twenty crowns in hand; it costs, with another head of Titian, sixty pounds sterling. I have given also twenty crowns in hand for the Gorgon's head; it costs two hundred crowns. I have not yet paid for them, because I was not willing to draw bills until I knew how much I should employ at Paris, which I shall know when I leave. But, my lord, after your excellency shall have made a large collection, I beg of you to attack Mons' de Montmorency, for he has the most beautiful statues that can be spoken of; that is to say, Two Slaves by Michael Angelo, and some others. He is so liberal that he will not refuse them. I beg of you to mention it to Mons' de Fiat, for perhaps he has some friends about him. I hope that your excellency will carry away fine things from France, particularly the sweet lady, of whom the ambassadors command me to say to your excellency, that she esteems herself as happy as if she were to have the monarch of all kings; and she was so transported with joy that she would not speak coyly, but she was forced to confess before all the world, that since it was true that my lord the prince was a prince in all points, so accomplished, and so perfect, and ex-

pert, she had two-fold reason to love and honour him: adding this parenthesis (that if Nature had not been so favourable to him as to give him a good figure, that nevertheless it was necessary she should have him for reasons of state); but since he was so accomplished, her happiness was complete. I hope also, my lord, that your hopes will be accomplished in spite of the Spanish factions, that may now well go to the Château de Crevecoeur. The picture of the Secretary of Titian I send by the bearer, to be delivered at York House to my father-in-law, who will put it in a frame. It is a jewel."

State affairs of the highest importance, the purchase of the finest productions of art, and a little to do with one of the choice productions of nature, must have given M. Gerbier plenty to do. His own letter is indeed a curious picture of the times. A short time after, he thus addresses his patron:—

"Sometimes when I am contemplating the treasure of rarities which your excellency has in so short a time amassed, I cannot but feel astonishment in the midst of my joy. For out of all the amateurs, and princes, and kings, there is not one who has collected in forty years as many pictures as your excellency has collected in five. Let enemies and people ignorant of paintings say what they will, they cannot deny that pictures are noble ornaments, a delightful amusement, and histories that one may read without fatigue, which neither eat beef, nor drink greedily, nor feed on oats (as this horse that Mr. Graymes has given me will do, and for which therefore I take the liberty of begging your excellency that I may have an allowance of oats). Our pictures, if they were to be sold a century after our death, would sell for good cash, and for three times more than they have cost. I wish I could only live a century, if they were sold, in order to be able to laugh at those facetious folk who say, 'It is monny cast away for bobbles and schadows.' I know they will be pictures still, when those ignorants will be lesser than schadows. So much for them! But for Mons. Douet, who like the cat is set to guard the milk, he is a nice man, only he is a joker; and one picture of Raphael's is a trifle, a treasure which the kings, his ancestors, always kept as a holy relic: but I am not content with that, more must be had; this is a good beginning for others."

We have only to notice, in addition, that portraits of Queen Elizabeth, Count Gondomar, James, and Villiers, embellish these volumes; which well merit a place in every historical library.

Stories of Torres Vedras. By the Author of "Adventures of an Irish Gentleman." 3 vols. 12mo. London, 1839. Bentley.

Few persons have enjoyed better opportunities for observation, and few have the power to describe what they have observed in a more agreeable and lively manner, than Dr. Millingen, the author of these *Stories*, whose popularity in various kinds of writing has kept pace with his productions in fiction, the drama, and medical curiosities. The volumes now issued will, we think, meet with an equally favourable reception; for they are very various, well contrived and wrought up where invention is called in, and full of anecdote where real illustrations are introduced. The first volume, after a sensible preface, contains six stories, in which military characters and peninsular events figure in an amusing or interesting manner—the memoir of Major Rumford being particularly piquant.

The second has four narratives of similar merit, and from one of which, "the French Colonel," we select the following:—

"I recollect, when last in Paris, a certain noble marshal was shewing some valuable paintings that he had seized upon in Spain, but which he however had the decency to say he had purchased. One of them, a valuable Murillo, struck the eye of a connoisseur, who observed that the marshal must have given a very high price for it. 'Pardon me, sir,' he replied; 'it is the cheapest in my gallery—for it only cost me two Capuchin friars.' This reply required some explanation; it was as follows: 'When I was stationed at B——, I admired this painting, placed in the sacristy of the convent church. It was in vain that I sought to purchase it from the monks; a holy tradition was connected with its history; and neither bribes nor threats could enable me to become the possessor of this *chef-d'œuvre*. However, my corps marched; guerillas, as usual, hovered around me; some prisoners were made, amongst them two monks of B——. They were, of course, tried as spies, and condemned to immediate death. I then thought of the picture, and felt compassion for these unfortunate miscreants. So I instantly despatched a message to the general of the order, informing him that my two holy prisoners under sentence of hanging, were at his disposal, in exchange for Murillo's production. The following day the painting was mine, and the two Capuchins chanted *Te Deum* in their church.' Can the irregularities of the soldier be restrained with such scenes before their eyes?"

The last volume concludes a tale begun in the second, and adds five other separate pieces; from two of which, entitled "Maurice Quill," and "Marauding," we shall copy the few extracts our limits permit us to offer from these pages.

Maurice Quill was an eccentric Irish assistant surgeon:—

"On his joining the army in Portugal, he remained some time at the dépôt of Belem. There his eccentricities brought him into great popularity. But popularity may become irksome, and so Quill found it. The youngsters of the army would crowd round him, and, to use his own expression, 'bored him like a cullender.' To get rid of them was not so easy, but he hit upon an ingenious plan. Most of these young officers were from the Irish militia, having joined with volunteers. One day, after dinner, Maurice informed them that he also had been in the militia, but he couldn't stand their impertinence, as they had actually turned him out of the regiment. The cause of this expulsion was naturally called for, when Quill told them it was 'Nothing at all at all—only some spoons and forks were missing. One of the waiters swore that he had seen me slip them in my pocket. My barrack-room was searched; and sure enough some spalpeen or other had managed to introduce the plate into my kit!' Our young heroes, of course, felt ashamed of associating with a man turned out of a corps for theft, and invariably 'cut him dead,' expressing their surprise when they afterwards met him walking with superior officers, whom they presumed 'were not aware of what he was.'

"A most amusing circumstance occurred when the second division crossed the bridge of Alcantara, when Quill, although a mere assistant-surgeon, halted the whole column. An arch of this splendid Roman fabric, constructed by Trajan, had been previously blown up by

the Lusitanian legion; and when our troops had to recross the Tagus, a rope bridge was thrown over the breach, of sufficient strength to bear the infantry, but not secure for horses and baggage animals, that were therefore ordered to ford the river. The current was strong; Maurice's baggage was borne by a little donkey, and over his baggage, which was in general very scanty, was a new bridle and saddle. The poor ass, weak and tottering, could not stem the rapid stream, and was gradually losing ground, swept down the river. Quill, on beholding his little all in danger of being carried away, was distracted, and roared out, 'Second division, halt! Pass the word halt! Blood and ouns! my donkey's drowning—with all my kit! and a spick-span new saddle and bridle—murder—murder! will no kind Christian save my *boutro*!' I'm lost and undone—and the saddle's not paid for!—murder!' The ranks were broken—the men on the bridge rushing to the parapet, and shouting as they beheld the poor animal struggling and borne away. The officer in command roared in vain, to fall in, and move forward. The bugles in vain sounded the advance—all was confusion and insubordination, until Maurice's ass had disappeared in its watery grave, when its owner sat down on the bridge, pouring forth the dismal and discordant Irish funeral howl. The interruption to the march had been so amusing, that the anger of the general officer in command soon subsided."

From "Marauding," we copy the following, the lightest examples of the horrors of war:—

"Some men had attained the knack of crowing like cocks, to draw forth a respondent chant from some concealed poultry, well knowing that where there was a cock, most probably there were also hens. Nay, a German soldier of the 60th always carried with him a decoy duck, that he could make to 'quack' whenever he thought proper, to ascertain whether any of his feathered tribe might be kept in bondage. Nor were our allies more safe than the peasants; and the principle of exchange being 'no robbery' was fully applied to practice with a Portuguese brigade. The *Vos Mercês*, as they were called, had fallen upon a store of hidden brandy; but they had no meat—we supplied them. Our people had fallen upon a herd of swine, which they exchanged for the spirits;—this was the morning after we had carried the heights of Garris. The night had been dark, the ascent steep. At every tree a group of the enemy poured a volley upon the assailants with such a compact fire, that many of our officers and men were wounded by several balls. Thus fell poor Fearon, and Clithero. But despite the darkness, and the unseen foe, who could only be perceived as they retired before us, by the flashing of their pieces, the hill was carried by Byng's brigade, led on by their brave commander, and the face of the mountain was strewn with the enemy's dead. What was our surprise at daybreak, when proceeding to bury the slain, we perceived that out of those who had been in good condition, large slices of flesh had been cut off with as much dexterity as a London butcher could have cut out steaks. Here was the herd of swine on which our rogues had stumbled! and they were swilling the Portuguese brandy, while our worthy allies were cooking a *caldo* of Frenchmen in exchange. All might have gone on smoothly, had not some bungling journeyman butcher left a piece of integument hanging to a steak. The discovery was awful. The Portuguese

* "Portuguese for an ass."

rushed in crowds to their officers, displaying this sample of barbarity. They had also seen the mangled Frenchmen. Their shouts and execrations were loud and furious. Those who had eaten the soup endeavoured to disgorge it, with horrible faces and convulsive throes; while others, more fortunate, upset the camp kettles, and cast away their contents, with deep imprecations on all our heads, our fathers and our mothers. The inquiries set on foot to discover the offenders were idle. No one 'peached, although the corps that had committed the disgusting act was well known. For weeks the Portuguese cursed us as they marched past our battalions, while, in reply, our fellows roared out, 'I say, *Vos-messês*, how are you off for *carne de porco*?'"

"One of our drunken chaplains invariably called himself a bishop; and whenever he arrived at a bishopric, or a town with a wealthy monastery, he was quartered in the episcopal palace or the convent, where, of course, despite his heresy, courtesy commanded an ample fare."

Historical Sketches of Statesmen who flourished in the time of George III. To which is added, Remarks on Party, and an Appendix.

First Series. By Lord Brougham, F.R.S., &c. 8vo. Pp. 404. London, Knight.

A CONSIDERABLE portion of this volume has already appeared in the "Edinburgh Review," and elsewhere, as we are informed by the following note:—

"Several of the Sketches contained in this volume have already appeared in print, but as parts scattered throughout other and much larger works. But great additions have been here made to some of them: as George III.; Lord Chatham; Mr. Perceval; Mr. Canning; Mr. Windham; while the following are entirely new: Lords North; Mansfield; Thurlow; Loughborough; Lord Chief Justice Gibbs; Sir Wm. Grant; Franklin; Joseph II.; Catherine II.; Gustavus III.; and the Remarks on Party."

This fact would abridge our Review of the book, even were it not farther excluded from our plan by its political character. Admiring, and even wondering at, as we do, the marvellous talent and irresistible energy of the noble author, we are not sure that we feel him to be the guide to whom we would pin our faith in the estimate of his contemporaries. He has been too closely engaged for and against many of these individuals to be able to divest his mind of prejudices in regard to them. The person with whom he has agreed in discussion he must be apt to think right; the man with whom he has fought the tough battle of debate he must be equally apt to deem in error. It is not in the power of the most vigorous intellect to clear itself of such partialities; and Lord Brougham has occupied so many arduous positions in the turmoil of the period, that there is scarcely an event in which he has not taken a prominent part, so as to be deeply imbued with the prepossessions to which we have alluded.

The memoirs are of George III., Lord Chatham, Lord North, Lord Loughborough, Lord Thurlow, Lord Mansfield, Lord Chief Justice Gibbs, Sir W. Grant, Mr. Burke, Mr. Fox, Mr. Pitt, Mr. Sheridan, Mr. Windham, Mr. Dundas, Mr. Erskine, Mr. Perceval, Lord Grenville, Mr. Grattan, Mr. Wilberforce, Mr. Canning, Sir S. Romilly, and some foreign rulers; with engraved portraits, which add much to the interest of the work.

In the life of Mr. Windham a passage has struck us forcibly. Lord Brougham observes:

"When untrammelled by official connexion, and having his lips sealed by no decorum, or prudence, or other observance prescribed by station, it was a brave sight to see this gallant personage descend into the field of debate, panting for the fray, eager to confront any man or any number of men that might prove his match, scorning all the little suggestions of a paltry discretion, heedless of every risk of retort to which he might expose himself, as regardless of popular applause as of court favour,—nay, from his natural love of danger and disdain of every thing like fear, rushing into the most offensive expression of the most unpopular opinions with as much alacrity as he evinced in braving the power and daring the enmity of the crown."

When we apply this sentence to the present hour, how strange does the constitutional difference appear, merely from the crown having descended on a youthful female head! Who is afraid *now* of the enmity of the crown? or runs a risk in braving its power! There is surely a poise wanting to what we have had before; and the nation appears to be balanced between two parties, instead of being governed by a limited monarchy and two estates. The affairs of the last ten days afford a remarkable proof, however, of a force still inherent in the throne.

In another place, we find the noble author has been led into a historical mistake, though he was himself almost on the spot; and this shows how little we can really depend upon many similar statements. Mentioning the death of Mr. Perceval, his lordship says:—

"On the 11th of May, Mr. Perceval had been later than the appointed time; and, after complaining of this delay, Mr. Brougham, at a quarter before five, had called his first witness, and was examining him, when a messenger despatched to bring the minister met him walking towards the house with Mr. Stephen, arm-in-arm. He instantly, with his accustomed activity, darted forward to obey the summons, but for which Mr. Stephen, who happened to be on his left side, would have been the victim of the assassin's blow, which prostrated Mr. Perceval as he entered the lobby."

We will venture to assert of our own knowledge, that so far from this being the case, Mr. Stephen was not even present at the assassination of his friend.

In order to make some amends for our enforced brevity on the main body of this work, we have pleasure in adding the following very interesting letter, which is from the youngest and only surviving daughter of Lord North, and of a very interesting value:—

"My dear Lord Brougham,—You mentioned to me the other night, your intention of writing the character of my father, to be placed among some other characters of the statesmen of the last century, that you are preparing for the press, and at the same time stated the difficulty of describing a man of whom you had had no personal knowledge. This conversation has induced me to cast back my mind to the days of my childhood and early youth, that I may give you such impressions of my father's private life as those recollections will afford. Lord North was born in April 1733; he was educated at Eton school, and then at Trinity College, Oxford; and he completed his academical studies with the reputation of being a very accomplished and elegant classical scholar. He then passed three years upon the Continent, residing successively in Germany, Italy, and France, and acquiring the languages of those countries, particularly of the last. He spoke French with great fluency and correctness; this acquirement, together with the observa-

tions he had made upon the men and manners of the countries he had visited, gave him what Madame de Staël called *l'Esprit Européen*, and enabled him to be as agreeable a man in Paris, Naples, and Vienna, as he was in London. Among the lighter accomplishments he acquired upon the Continent, was that of dancing; I have been told that he danced the most graceful minuet of any young man of his day; this I must own surprised me, who remember him only with a corpulent heavy figure, the movements of which were rendered more awkward and were impeded by his extreme near-sightedness before he became totally blind. In his youth, however, his figure was slight and slim; his face was always plain, but agreeable, owing to its habitual expression of cheerfulness and good humour; though it gave no indication of the brightness of his understanding. Soon after his return to England, at the age of twenty-three, he was married to Miss Speck, of Whitelackington Park, Somersetshire, a girl of sixteen: she was plain in her person, but had excellent good sense; and was blessed with singular mildness and placidity of temper. She was also not deficient in humour, and her conversational powers were by no means contemptible; but she, like the rest of the world, delighted in her husband's conversation, and being by nature shy and indolent, was contented to be a happy listener during his life, and after his death her spirits were too much broken down for her to care what she was. Whether they had been in love with each other when they married I don't know, but I am sure there never was a more happy union than theirs during the thirty-six years that it lasted. I never saw an unkind look, or heard an unkind word, pass between them; his affectionate attachment to her was as unabated, as her love and admiration of him. Lord North came into office first, as one of the lords of the Treasury, I believe, about the year 1763; and in 1765 he was appointed as one of the joint paymasters.* In 1769 he became chancellor of the exchequer, and some years after first lord of the treasury. He never would allow us to call him prime minister, saying, there was no such thing in the British constitution. He continued in office thirteen years; during the three last he was most anxious to retire, but he suffered himself to be overcome by the earnest entreaties of George the Third that he should remain. At length, the declining majorities in the House of Commons made it evident that there must be a change of ministry, and the king was obliged reluctantly to receive his resignation. This was a great relief to his mind; for although I do not believe that my father ever entertained any doubt as to the justice of the American war, yet I am sure that he wished to have made peace three years before its termination. I perfectly recollect the satisfaction expressed by my mother and my elder sisters upon this occasion, and my own astonishment at it; being at that time a girl of eleven years old, and hearing in the nursery the lamentations of the women about 'My lord's going out of power' (viz. the power of making their husbands tide-waiters), I thought going out of power must be a sad

* "An anecdote is related of his paymastership which will paint, though in homely colours, his habitual good humour. He was somewhat disappointed at finding he had a colleague, who was to divide the emoluments of the office, which was then chiefly prized for its large perquisites. The day he took possession of his official house, a dog had dirtied the hall, and Lord North, ringing for the servant, told him to be sure, in clearing the nastiness away, that he took half of it to his colleague, as it was a perquisite of the joint office.—EDITOR."

thing, and that all the family were crazy to rejoice at it! It is hardly necessary to say that Lord North was perfectly clean-handed and pure in money matters, and that he left office a poorer man than when he came into it. His father being still living at that time, his income would have scantily provided for the education and maintenance of his six children, and for the support of his habitual, though unostentatious hospitality; but the office of lord-warden of the Cinque Ports becoming vacant, the king conferred it upon him. His circumstances, by this means, became adequate to his wishes, as he had no expensive tastes, or love of splendour; but he was thoroughly liberal, and had great enjoyment in social intercourse, which even in those days was not to be had without expense. Lord North did not long continue out of office, the much-criticised coalition taking place the year following, 1783. The proverb says, 'Necessity acquaints us with strange bedfellows': it is no less true, that dislike of a third party reconciles adversaries. My eldest brother was a Whig by nature, and an enthusiastic admirer of Mr. Fox; he, together with Mr. Adam, and Mr. Eden (afterwards Lord Auckland), were, I believe, the chief promoters of the coalition. My mother, I remember, was averse to it; not that she troubled her head with being a Tory or a Whig; but she feared it would compromise her husband's political consistency. I do not pretend to give any opinion upon this subject, having been too young at the time to form any; and since I grew up, I have always been too decided a Whig myself to be a fair judge. This ministry, in which Mr. Fox was at the head of the foreign, Lord North of the home-office, and the Duke of Portland of the treasury, lasted but a few months: in 1784, Mr. Pitt began his long administration. My father, after he was out of office, attended parliament, and sometimes spoke and voted, independent of the opinions of his new allies; but this made no difference in the cordiality of their friendship, which remained unimpaired to the end of his life. I will now attempt to give you my impressions of my father's style of conversation and character in private life. His wit was of the most genuine and playful kind; he related (*narroît*) remarkably well, and liked conversing upon literary subjects; yet so completely were all these ingredients mixed and amalgamated by good taste, that you would never have described him as a sayer of *bon-mots*, or a teller of good stories, or as a man of literature, but as a most agreeable member of society and truly delightful companion. His manners were those of a high-bred gentleman, particularly easy and natural; indeed, good breeding was so marked a part of his character, that it would have been affection in him to have been otherwise than well-bred. With such good taste and good breeding, his railery could not fail to be of the best sort,—always amusing, and never wounding. He was the least fastidious of men, possessing the happy art of extracting any good that there was to be extracted out of any body. He never would let his children call people *bored*; and I remember the triumphant joy of the family, when, after a tedious visit from a very prosy and empty man, he exclaimed, 'Well, that man is an insufferable bore!' He used frequently to have large parties of foreigners and distinguished persons to dine with him at Bushy Park. He was himself the life and soul of those parties. To have seen him then, you would have said that he was there in his true element. Yet I think that he had really more enjoyment when he went into the country

on a Saturday and Sunday, with only his own family, or one or two intimate friends: he then entered into all the jokes and fun of his children, was the companion and intimate friend of his elder sons and daughters, and the merry, entertaining playfellow of his little girl, who was five years younger than any of the others. To his servants he was a most kind and indulgent master: if provoked by stupidity or impertinence, a few hasty, impatient words might escape him; but I never saw him really out of humour. He had a drunken, stupid groom, who used to provoke him; and who, from this uncommon circumstance, was called by the children, 'the man that puts papa in a passion'; and I think he continued all his life putting papa in a passion, and being forgiven, for I believe he died in his service. In the year 1787 Lord North's sight began rapidly to fail him; and in the course of a few months he became totally blind, in consequence of a palsy on the optic nerve. His nerves had always been very excitable, and it is probable that the anxiety of mind which he suffered during the unsuccessful contest with America, still more than his necessary application to writing, brought on this calamity, which he bore with the most admirable patience and resignation; nor did it affect his general cheerfulness in society. But the privation of all power of dissipating his mind by outward objects, or of solitary occupation, could not fail to produce at times extreme depression of spirits, especially as the malady proceeded from the disordered state of his nerves. These fits of depression seldom occurred, except during sleepless nights, when my mother used to read to him, until he was amused out of them, or put to sleep. In the evenings, in Grosvenor Square, our house was the resort of the best company that London afforded at that time. Mr. Fox, Mr. Burke, Mr. Sheridan, occasionally; and Lord Stormont, Lord John Townshend, Mr. Windham, Sir James Erskine, afterwards Lord Roslyn, his uncle, then Lord Loughborough, habitually frequented our drawing-room: these, with various young men and women, his children's friends, and whist-playing ladies for my mother, completed the society. My father always liked the company of young people, especially of young women who were sensible and lively; and we used to accuse him of often rejoicing when his old political friends left his side and were succeeded by some lively young female. Lord North, when he was out of office, had no private secretary; even after he became blind, his daughters, particularly the two elder, read to him by turns, wrote his letters, led him in his walks, and were his constant companions. In 1792 his health began to decline: he lost his sleep and his appetite; his legs swelled, and symptoms of dropsy were apparent. At last, after a peculiarly uneasy night, he questioned his friend and physician, Dr. Warren, begging him not to conceal the truth: the result was, that Dr. Warren owned that water had formed upon the chest, that he could not live many days, and that a few hours might put a period to his existence. He received this news not only with firmness and pious resignation, but it in no way altered the serenity and cheerfulness of his manners; and from that hour, during the remaining ten days of his life, he had no return of depression of spirits. The first step he took, when aware of his immediate danger, was to desire that Mr. John Robinson (commonly known by the name of the Rat-catcher) and Lord Auckland might be sent for; they being the only two of his political friends whose desertion had hurt and offended him, he wished before his death to shake

hands cordially and forgive them. They attended the summons of course, and the reconciliation was effected. My father had always delighted in hearing his eldest daughter, Lady Glenbervie, read Shakspeare, which she did with much understanding and effect. He was desirous of still enjoying this amusement. In the existing circumstances, this task was a hard one; but strong affection, the best source of woman's strength, enabled her to go through it. She read to him great part of every day with her usual spirit, though her heart was dying within her. No doubt she was supported by the Almighty in the pious work of solacing the last hours of her almost idolised parent. He also desired to have the French newspapers read to him. At that time they were filled with alarming symptoms of the horrors that shortly after ensued. Upon hearing them he said, 'I am going, and thankful I am that I shall not witness the anarchy and bloodshed which will soon overwhelm that unhappy country.' He expired on the 5th of August, 1792. Lord North was a truly pious Christian; and (although from his political view of the subject) I believe that one of the last speeches he made in parliament was against the repeal of the Test Act, yet his religion was quite free from bigotry or intolerance, and consisted more in the beautiful spirit of Christian benevolence than in outward and formal observances. His character in private life was, I believe, as faultless as that of any human being can be; and those actions of his public life which appear to have been the most questionable, proceeded, I am entirely convinced, from what one must own was a weakness, though not an unamiable one, and which followed him through his life, the want of power to resist the influence of those he loved. I remain, my dear lord, gratefully and sincerely yours,

CHARLOTTE LINDSAY.

"Green Street, February the 18th, 1839."

Magnetical Investigations, by the Rev. W. Scoresby, B.D., F.R.S., &c. &c. Part I. 8vo. pp. 92. London, Longman and Co.

MAGNETISM, more especially since the discovery of Oersted in 1819, has been, and is, the pursuit of the highest and mightiest minds of all intellectual countries. The source and cause of magnetic influence, the laws of its action, the existence of two or more poles, their motion, the changes in the intensity of the magnetic force, the variations of the dip, and other important inquiries connected with the higher branch of this science, have been followed out to a considerable extent; valuable information gained, and data determined. Yet still so much uncertainty prevails in the magnetic phenomena of the earth, that the results hitherto attained require to be continually corrected by new observations. Why is this? The question is more easily asked than answered; at least, with any degree of certainty. Probably, however, much may be owing to defects in the instruments by which the wonderful phenomena are made manifest to the mind of man. And we are the more strengthened in this opinion, because many magneticians differ even in the method of magnetising a compass needle, and in their use of material for that purpose. Whatever, therefore, tends to remove this defect, by the production of more powerful instruments to determine delicate variations in, and the actual condition of, the earth's magnetism, always meets with our cordial approbation. Such is the aim of the investigations before us, which have been conducted with evident care, and on a large scale. Whether the practical data are

correct, *practical* magneticians can alone determine; and to their notice we especially recommend this Part I. of Mr. Scoresby's work. In the year 1836, at the meeting of the British Association at Bristol, it will be in the recollection, perhaps, of most magneticians (for such we are now more directly addressing), Mr. Scoresby exhibited a new magnetical instrument, with a compound compass, needle, or bar. The principle from which this bar was considered to have its superiority over a single bar of the same weight and magnitude, was, that several thin bars of tempered steel (tempered throughout the mass) had a greater capacity for permanent magnetism than what is afforded by the mere proportional of their mass similarly tempered. This principle has been followed out, and the results are given, as well as those of several new and distinct investigations. They together comprise the "Ready and effective processes for magnetising large bars and their plates; the ready determination of the proportional directive powers of magnetic needles or bars; the determination of the relative strength or tenaciousness of the magnetic condition in each of a series of apparently similar plates or bars of steel; of the ratio of the power of magnets with the augmentation of the thickness or mass, in otherwise similar bars, with the modifications of such ratio by difference of tempering; of the relative degree of hardness or temper of plates or bars composed of the same kind of steel; and of the quality of bars, plates, or instruments constructed of steel." The latter division treating of the determination of the quality of the unmanufactured or raw material; the application of the principle for testing the quality of steel; and the determination, by the magnetic test, of deterioration in the quality of steel in the process of hardening, or by otherwise overheating, hold out a promise of practical benefits, the importance of which will be readily perceived by the steel-worker as well as the magnetician. We conclude with repeating our recommendation of Mr. Scoresby's *Magnetical Investigations* as well worthy attention and examination.

MISCELLANEOUS.

History of Europe from the Commencement of the French Revolution in 1789, to the Restoration of the Bourbons in 1815. By A. Alison, F.R.S.E., Advocate. Vol. VII. Edinburgh, Blackwood; London, Cadell.

THE present volume of Mr. Alison's elaborate work sets out with a view of our Indian Empire prior to the administration of Lord Wellesley, and brings down affairs in that quarter to the victories of Wellington and the year 1806. The next part takes up the continental campaigns in 1808, the wars in Germany, the Tyrol, Walcheren expedition, maritime war and peninsular campaigns of 1809 and 1810. This is a stirring and momentous period, and the author has bestowed adequate pains upon its illumination; for the right understanding of which several modern publications have afforded excellent materials: need we mention the "Wellesley Despatches," "Gurwood Papers," "Pelet," "Thibadeau," "Montholon," "Malte Brun," "Segur," "Las Cases," "Bartholdy," "Bignon," &c. &c. &c., from all of whom he has sought the best intelligence, and, through comparison, elicited the truth?

Of the spirit in which Mr. Alison writes we have nothing to remark, except that his seventh volume, like the six volumes which have preceded it, is in a high Tory tone, and unsparing of every deviation from high Tory principles.

We confess we cannot agree with his extreme judgment, as applied, for instance, to Mr. Canning, whose ministerial crisis we think he misstates. His desertion by the Tories was the greatest political error that party ever committed; and they have to rue its effects to this hour. But these are subjects which we refrain from discussing; and we have only to add, that Mr. Alison displays all the diligence and research which are so essential to genuine history, and deserves accordingly at the hands of the public.

Hints on Horsemanship, to a Nephew and Niece. By an Officer of the Household Brigade of Cavalry. Small 4to. pp. 105. Moxon.

THIS is an elegantly-got-up little volume, and quite the thing for a horse-riding age, when the example is set by the queen of these realms in taking this healthful and delightful exercise. The instructions are as judicious as the outside and embellishments are pretty.

The History of England. By T. Keightley, author of "The Mythology of Greece and Italy," &c. &c. Vol. II. Pp. 600. London, Longman and Co.; Dublin, Milliken and Son; J. Cumming.

As the able author signifies his intention to improve this history from a work chiefly intended for schools and tuition, into the importance of a more general history, all we shall say of the present volume (which completes the work in its first form) is that it is diligently and impartially executed, and well deserves a place among the best productions of its class.

A Hand-Book for Travellers in Denmark, Norway, Sweden, and Russia, &c. &c. With a Map and Plans. Pp. 276. London, 1839. J. Murray: Leipzig, Black and Armstrong.

THE preceding publications by Mr. Murray of works of this useful class, are a sufficient guarantee for the value of this volume to those who have opportunities of extending their travels to the less frequented, but very interesting northern parts of Europe. To us it seems extremely well executed; and we should imagine that tourists in these quarters could nowhere find so good a guide.

A Treatise on the Nature of Club Foot and Analogous Distortions, &c. &c. By W. J. Little, M.D., &c. 8vo. pp. 276. London, 1839. Jeffs; S. Highley. Leipzig, Brockhaus.

THESE subjects, as far as we are aware, have never been separately treated before; and it seems to us that they are handled in a very ample and able manner in this volume.

The Seasons of Life; with an Introduction on the Creation, and Primeval State of Man. By Mary Ashdowne. Pp. 309. London, 1839. Simpkin, Marshall, and Co.

A VERY pleasing and interesting production of an amiable mind, and belonging to a class of reading peculiarly adapted for youthful females. Gracefulness, order, a love of nature, and a mild religion, are its chief features; and when it enters into the domestic circle, its sketches and advice are all directed to improvement and happiness. From some of the opinions we should beg leave to differ—for instance, p. 176, where the fair author says, "What can equal the tranquil home graced by the pensive mood of an amiable wife?" we, for *pensive*, would put *cheerful*; but taken altogether, there is much to create proper and kindly feelings in these pages.

The Poetry of Flowers, &c. &c. London, 1839. W. and H. Rock.

THIS is a very new and beautiful little per-

formance. In a quarto volume, on appropriate paper, is embossed on every page a flower, and a border of pretty embellishments. The effect is pleasing, and, notwithstanding the white purity of the medium, rich. In addition to the art bestowed on these emblems, we have also poetical illustrations neatly printed; and of which the lines to the Tulip may furnish a favourable example:—

"If rainbow tints, or gracefulness of form,
Could chain the sun—blast or resist the storm;
Or if the crowds which hang on beauty's neck,
Were fond and faithful after beauty's wreck:
Queen of the flowers, gay Tulip, thou shouldst be,
And all would bow to beauty and to thee:
But since, when past thy little day of bloom,
Thy fading beauty leaves us no perfume,
We dare not bow before thy beauty's shrine,
Or worship charms which fade so fast as thine.
Ah, no!—the beauty which leaves not behind
Some lasting charm, some loveliness of mind,
Some perfume of the soul, which will live on,
When grace of form and rainbow hues are gone,
May for a day our admiration move,—
May please our fancy, but not gain our love."

For the ornament of albums, for the boudoir, or for the drawing-room table, we can fairly say this is an elegant production.

The Husband Hunter; or, Das Schicksal. By Denis Ignatius Moriarty, Esq., author of "The Wife Hunter." 3 vols. London, 1839. Bentley.

MR. MORIARTY is a determined author, for we have not only a three-volume novel now before us, but a prefix to it announcing another. Having so much on hand, we need only note of the present production that it lays its scenes in Ireland and Germany, and is altogether a moving panorama, or rather a sketch of Chinese ombres, who pass along the busy walks of such life as the writer has chosen to represent—ladies of title, noblemen, Irish priests and peasants, German princes, and people of all sorts—who talk and act according to the fancy of their creator. There is much variety in the *dramatis personæ*; and the lady who gives the name to the work is a successful trapper of four husbands. The whole is pleasant enough, but there is little interest in the incidents, or effect in the conclusion.

ARTS AND SCIENCES.

SOCIETY OF ARTS.

MR. WILLIAMS, 'On the Ancient Agriculture of the Egyptians.' Though this was literally the subject of the last illustration, Mr. Williams touched upon the customs, manners, habits, &c., of the Egyptians. With respect to the hieroglyphical inscriptions on their monuments, nothing, in his opinion, like a satisfactory solution had yet appeared. We need not follow the lecturer through his succinct and satisfactory address, which was remarkable, not for the novelty of its points—how could it be? but for the taste and judgment with which they were arranged. Numerous drawings, taken from Rosellini's magnificent work, were referred to. One of these shewed how the Egyptians gathered the grape;—curious enough, and ludicrous,—monkeys were trained to climb the tender vine, pluck the bunches, and hand them to individuals stationed below! If we may judge from the drawing, these cunning assistants first took care of themselves, exacting tithe of each bunch as it was plucked. Amongst the Egyptian curiosities exhibited was a bird-flapper, two or three thousand years old; with such instruments the Egyptian boys, like our own in many parts of the country, went out at dawn, and by the clack of the simple instrument alluded to, they frightened the feathered depredators from the fields and fruit gardens. The lecturer gave a proof of its

excellent adaptation to the purpose intended. Specimens of Egyptian bread were likewise exhibited; several of the cakes were of great antiquity, and in shape exactly resembled those three-cornered things sold by English bakers, and called by the urchins, for whom they are more particularly furnished, "rasberry turn-overs." By the introduction of light, pleasing, and instructive anecdote, a lecture, which otherwise might have been tedious, was rendered very interesting.

GEOGRAPHICAL SOCIETY.

[Owing to the pressure of more temporary matters, we have fallen somewhat into arrears with our regular reports of this Society, which we must therefore abridge a little in bringing down to the present date.—Ed. L. G.]

APRIL 22. 'An Abstract of Mr. Russeger's Journey from Mount Sinai to Hebron and Jerusalem,' was communicated by W. I. Hamilton, Esq.—Mr. R. gives a series of barometric levels, from the shores of the Red Sea to the summit of Mount St. Catherine; which, by his measurement, rises 8168 French feet above the sea. Other levels were taken, and Bethlehem found to be 2538 feet, and Jerusalem 2479 French, or 2640 English feet, above the sea. Although the mountains between Jerusalem and the Jordan, in the valley of the Jordan itself, and those around the basin of the Dead Sea, bore unequivocal evidence of volcanic agency, yet not a trace could anywhere be discovered of volcanic or plutonic rocks, porphyry, granite, trachyte, &c., or, indeed, of any rock at all resembling them. On hanging up his barometer on the shores of the Dead Sea, Mr. R. could no longer continue his observations, for the quicksilver rose to the top of the tube; but he calculates its northern end at 1319 French feet, or 1400 English feet, nearly, below the level of the Mediterranean.—2. Mr. A. T. Holroyd read a paper 'On the Practicability of Exploring the Source of the White Nile with a Steam-vessel,' and pointed out the season and form of vessel most expedient for the purpose. The probable expense of such an expedition would not exceed 5000*l*. Volunteers also would be found gladly to serve in a cause which must excite the greatest interest in all geographers.—3. 'Some Notes on the Route from Cordova to Mendoza,' by Capt. Gosselman, of the Swedish navy, were also read.

May 13th. (Concluded from our last.)—1. 'Notes on a Journey from Constantinople, by Heraclea, to Angora, in the autumn of 1838.' By W. Ainsworth, Esq.—Quitting Constantinople on the 18th September, the party, consisting of Mr. Ainsworth, Mr. Russell, and Mr. Rassam, took the road by Izmid, Sabanjah, and across the Sangarius to Khandak, whence they turned off the high road in a N.E. direction, through forests of beech and oak, to Uakib; thence crossing over a chain of mountains, 1350 feet in height, they descended upon the shore of the Black Sea, at Akchah Shehr, and continued along the coast to the eastward to Ereklî; thence by the banks of the Lycus, in a circuitous direction, to the mouth of the Filyas; to Barten; to Amâserah; Zafra Bolî; Kastamûni; Tash Kôpri; over the Ilîk Tagh (4000 feet) to Boi-abâd; Vezîr Kûpri; Osmanjik; Churûm; Iskîlub; Kankari; Kalah-jik and Angora. Of these places, many of which have been seldom visited by Europeans, Uakib has been identified with Prusa ad Hyrium; Ereklî contains about 250 houses of Mohammedans, and 50 of Greek Christians, who have one church. Barten is built upon two low hills of cretaceous limestone, and is paved with large slabs of the same material; its population is about 3200, only 50 of which are Christians. Amâserah is picturesquely

situated on the shores of the Black Sea, and contains about 800 inhabitants. Zafran Bolı, a town almost unknown to travellers, is built at the junction of two small streams; and the united waters flow under the lofty arch of a bridge, and down deep rocky dells, to the Soghanlı Sü. The town has a tolerable market, four handsome and several smaller mosques, and one Christian church; its population is 15,000, including 1500 Christians. Kastamüni is a large town, 2350 feet above the sea, in a valley half a mile wide, which it completely fills up; and on the rocky cliff above stand the ruins of an ancient castle. Its population, from numerous inquiries, appears to be about 48,000 persons, of which 650 only are Christians; here are thirty-six mosques and one Christian church. Its principal trade is in wool; the men work largely in copper, and the women in cotton. Tash Küpri stands on the right bank of the Gök Irmak, and is approached by a bridge seventy-five yards long; the town contains 7500 inhabitants, the greater part of whom are tanners and blacksmiths. The numerous architectural remains denote an ancient site, which an inscription found here proves to have been that of Pompeiopolis. The town of Boi-abad, at an elevation of 1000 feet, is scattered over a small valley, watered by a rivulet, and filled with luxuriant gardens and fine fruit-trees overrun with vines; its population about 1800. Mr. Ainsworth's journal was illustrated by his route-map in eight sheets, on a scale of an inch to four miles; by a plan of Heraclea, with several plans of castles and other buildings, by Mr. Russell; numerous inscriptions, and a list of the names of places in the Arabic characters, with their explanation, by Mr. Rassam; and an astronomical journal, detailing the observation on which the positions of the places depend, are laid down in his map.—2. Mr. Thomson D'Abbadie then gave an account of his recent travels in Abyssinia. Quitting Jiddah, the sea-port of Mekka, Mr. D'Abbadie and his brother coasted along the Arabian shore of the Red Sea as far as Eas Widan, in 18° N. lat. nearly, taking much trouble to obtain correctly the native names for the various capes, islands, &c.; from that point they crossed to Massawah, where they landed in January 1838. This place, called Baté by the natives, is supplied with water from Harkikü (named Dokhono by its inhabitants, and Mender by the Shohú); Massawah contains about 5000 inhabitants, although stated at much less by Rüppell, Salt, &c. After a stay of two months here, the travellers proceeded to Halaï and to Ogör-zabo, where they were detained a month; and then on to Adowah or Adwa, the principal town in Tugraï, and situated about 5400 feet above the sea; while Halaï can be hardly less than 7000 feet. Mr. D'Abbadie then proceeded on to Gondar, the once beautiful capital of Eghiopta, where he resided for two months, studying the language, &c.; this town is situated on the flat summit of a hill, and is about two miles long by half a mile wide, and contains from twenty-five to thirty thousand inhabitants; the Mussulman suburb at the foot of the hill has about 500 houses. In July, Mr. D'Abbadie left his brother at Gondar, who was resolved to try and penetrate to Enárea, in about 8° N. lat. Enárea is said to be watered by the Gibe, a river larger than the Abbaï (called Blue Nile). Beyond Enárea is Kaffa, inhabited by black people not quite negroes; the neighbouring states of Waratta, Guma, Nono, &c., are inhabited by Galla tribes. Returning to the coast by the mountains of Se-

men, Mr. D'Abbadie measured a point which he states at 13,000 feet above the sea. The fissure or cleft in the mountains through which the Takazzi flows, is 2000 feet in depth; the mountains of Lamalammo are of trap formation.

GEOLOGICAL SOCIETY.

MAY 8. Rev. Dr. Buckland, President, in the chair.—Three communications were read: 1. 'On Casts or Impressions of Vermiform Bodies on thin Flag-stones, belonging to the Carboniferous Series near Half-whale, in Northumberland,' by Mr. G. C. Atkinson. The bed of sandstone is about 18 feet thick; and the surface of the layers of which it is composed present, in almost every instance, tortuous impressions or casts marked by a longitudinal furrow, and occasional transverse closely set lines. 2. 'On the London and plastic Clays of the Isle of Wight,' by Mr. Bowerbank. The object of this communication is to shew, that there is no geological distinction between the two clays; the author having found that many of the same species of testacea range through the whole series of beds in White Cliff and Alum Bays. 3. 'On the relative Ages of the tertiary Deposits, commonly called Crag, in Norfolk and Suffolk,' by Mr. Lyell. Three points of great importance relative to the crag of Norfolk and Suffolk are discussed in this memoir:—First, The direct superposition of the red to the coralline crag, as pointed out by Mr. Charlesworth, in 1835. Secondly, Whether mammalia are really imbedded in undisturbed marine strata of the crag of Norfolk? Thirdly, Whether the proportion of recent as compared to the extinct shells, is decidedly larger in the crag of Norfolk, so as to indicate a posteriority in age relatively to the Suffolk crag? With regard to the first point, Mr. Lyell states, that the red crag is clearly superimposed on the coralline at Ramsholt, Tattingstone, and Sudburn, resting at the two former localities on denuded beds of the lower deposit. He ascertained also, by the kind assistance of Mr. W. Colchester, that at Sutton, near Woodbridge, the red crag abuts against a vertical face or cliff of the coralline, and likewise overlies it. In this instance, the sand which composes the older bed, or coralline crag, had evidently acquired a certain consistency at the bottom of the sea before the red crag was deposited; for it has been perforated by numerous pholades, the tortuous holes of which descend six or eight feet below the top of the bed, and still contain the shells of the pholades, while the remainder of the cylindrical hollows has been filled with the sand of the superincumbent stratum. With regard to the second point, the occurrence of mammalia in undisturbed beds of marine crag in Norfolk, Mr. Lyell stated, that he had ascertained, by an examination of this crag near Southwold and Norwich, that it is not purely marine, but contains every where an intermixture of land, fresh-water, and sea-shells, with bones of mammalia and fishes. In this deposit near Southwold, Captain Alexander, who accompanied the author, found, some time since, the tooth of a horse within a large specimen of *Fusus striatus*; and he informed Mr. Lyell that bones of mammalia are frequently associated in the same beds with those of fishes, marine shells, and crustacea. In the neighbourhood of Norwich this deposit forms patches of variable thickness, resting on chalk, and covered by gravel. It is well exposed at Bramerton, Whitlingham, Thorpe, and Postwick; and presents beds of sand, loam, and gravel, con-

taining a mixture of marine, terrestrial, and fluviatile testacea, ichthyolites, and bones of mammalia. The chalk on which it rests was shewn by the late Mr. Woodward to have been drilled by marine animals, and the Rev. Mr. Clewes of Yarmouth presented Mr. Lyell with a specimen of chalk, containing a *pholas crispatus* in a perforation several inches deep. That this portion of the crag was slowly accumulated is evident, from Captain Alexander having found at Bramerton the tusk of an elephant with many serpents on its surface; and from this fact Mr. Lyell infers, that the bones of quadrupeds were really washed down into the sea or estuary of the Norfolk crag, and were not subsequently introduced into the deposit by diluvial action. The fresh-water shells are rare in the neighbourhood of Norwich, in comparison with the marine, and the terrestrial species are still more scarce. Mr. J. B. Wigham, however, has ascertained that the fresh-water testacea predominate in a bed at Thorpe. The same gentleman found at Postwick, in a stratum containing marine shells and fishes, a portion of the left side of an upper jaw of a mastodon, containing the second true molar and the indications in the socket of the first. This specimen Mr. Owen has been enabled to refer to the mastodon longirostris discovered at Eppelesheim. In the same bed were found the teeth and jaw of a mouse, larger than the common field species; also bones of birds, and of several species of fishes, the horns of stags, bones and teeth of the horse, pig, elephant, and other quadrupeds, have been likewise detected at Postwick, Thorpe, Bramerton, &c.; and this association of the mastodon and horse near Norwich, as well as in many other places in Europe and America, Mr. Owen considers to be a subject of interest. The third point, respecting the relative antiquity of the Norfolk and Suffolk crag, was discussed at considerable length, and the author acknowledged the great assistance afforded him by Mr. Wigham, who has nearly doubled the number of species formerly obtained from this deposit near Norwich; also the aid which he has received from Mr. Searles Wood, who submitted to Mr. Lyell's examination the whole of his magnificent collection of crag shells; and from Mr. George Sowerby, to whose extensive knowledge of recent testacea the author stated that he is indebted for a rigid determination of the existing shells found in the crag. The number of well-defined species in the Norfolk crag is 112, out of which eighteen are land and fresh-water. Compared with the Suffolk crag this number is small; but Mr. Lyell shewed from the fauna of the Baltic, that species are much less numerous in brackish than salt water, the latitude, climate, and other conditions being the same; he also shewed that, in analogous deposits in the valley of the Rhine, the amount of species is small. Of the ninety-four marine shells, seventy occur in the red crag; and, therefore, it might be inferred, that the two deposits are nearly of the same age; but in the Norfolk beds the recent species, both of fresh-water and marine testacea, amount to between fifty and sixty per cent, and are nearly all British shells, whereas in the red crag there are only thirty per cent, and in the coralline but twenty. This comparatively recent origin of the Norfolk deposit had been previously inferred by Mr. Charlesworth on the general character of the fossils. In the examination of the collections which led to the above results, the greatest care was taken to reject those shells which might have been washed out of the red crag into the Norfolk beds, or those species which

apparently did not live in the waters which deposited this division of the crag. From this numerical proportion of recent testacea, Mr. Lyell inferred that the coralline and red crag belong to his Miocene division of the tertiary series, and the Norfolk strata to his older Pliocene; he also shewed that the lacustrine beds at Grays, in Essex, and many other places, constitute another link in the geological sequence of formations, as they contain ninety per cent of recent testacea, and must consequently be referred to the newer Pliocene epoch. Lastly, a comparison of the crag with the tertiary strata of the faluns of Touraine has convinced Mr. Lyell that M. Desnoyers was right in considering the Suffolk and Touraine deposits to be of the same age, although he formerly dissented from that conclusion.

STATISTICAL SOCIETY.

MR. HEYWOOD in the chair.—Fellows were elected, and donations announced. The communication read was the abstract of the statistical report of Major Tulloch 'On the Sickness and Mortality among the Troops in the United Kingdom,' prepared by J. W. C. Lever, Esq. This valuable report is divided into two parts: the first, embracing the medical and statistical details of the dragoon guards, and dragoons; and the second, those of the foot guards only. As these troops are better lodged, and better fed, and have less onerous duties to perform than the great mass of the labouring population; and, moreover, as they are carefully selected, and, as far as can be ascertained, are subject to no physical defect at enlistment; and as their profession, during peace, involves no danger, it might be expected that sickness and mortality would be much lower among them than among those engaged in the occupations of civil life. This is not the case; the average ratio of mortality is found to be 13½ per 1000. The mortality in the Russian army, on an average of ten years, from 1821 to 1830, was 11½ per 1000 annually; but that army is entirely composed of young men, between twenty and twenty-five, whilst the British troops are, for the most part, above that age. The mortality of the French army, on an average of six years, from 1820 to 1826, amounted to 19½ per 1000 annually; but this possibly may include the deaths in corps serving in the colonies. Out of the whole of the dragoon guards, and dragoons, it was found that nearly one third were between eighteen and twenty-five; another third, between twenty-five and thirty-three; and the remaining third of various ages, between thirty-three and forty, with the exception of a few boys under eighteen. By the Carlisle tables, the number annually dying out of a thousand persons, of that age, would be about ten; and by Mr. Finlayson's observations, derived from the duration of life among the government annuitants, the number is about thirteen. We find we cannot present consecutive notes of this paper, without trenching upon our limited space; we shall, therefore, only present detached portions of interest. On the subject of suicides, it appears that the large proportion of them among this class of the military deserves particular attention. Out of a total of 686 deaths, no fewer than 35, or upwards of one in 28 of the whole, have been from this cause alone, independently of many attempts which did not prove fatal; while, among persons insured in the Equitable, the proportion of the deaths is only one in 110. It is interesting to compare the tendency to self-destruction in the army with the proportion of suicides in civil

life in different countries. M. Quetelet states, that in France there is one suicide annually to 18,000 inhabitants:

Prussia	1 suicide to 14,404 inhabitants.
Austria	1 .. 20,900 ..
Russia	1 .. 49,182 ..
New York	1 .. 7,797 ..
Boston	1 .. 12,500 ..
Baltimore	1 .. 13,534 ..
Philadelphia	1 .. 15,875 ..
Dragoon Guards and Dragoons of the United Kingdom ..	1 .. 1,274 ..

From the returns of the Metropolitan Police Force, notwithstanding all the disadvantages of frequent night-duty to which that class of men is exposed, the mortality out of an average strength of 3400, continually employed, is but thirty per annum, being under nine per thousand; in addition to which, nearly the same proportion was invalidated for bad health. The average strength of the household cavalry is 1193; the annual deaths, 17; therefore, the ratio of deaths per 1000 of the mean strength will be 14.5. The mortality is not so high by at least one half, as among the foot guards; and is lower, by a small fraction, than among the cavalry corps employed throughout the kingdom. Among the household cavalry, the annual ratio of deaths per 1000 of the mean strength, from diseases of the lungs, is 8.1; that of the foot guards being 14.1. This difference cannot arise from the foot guards being in a greater degree exposed on night duty, for among the troops of the line serving at home, and whose constitutions have been deteriorated by residence in tropical or unhealthy climates, the mortality by diseases of the lungs is much lower.

ENTOMOLOGICAL SOCIETY.

APRIL 1. The Rev. F. W. Hope, President, in the chair.—A great number of donations of scientific works presented by the Royal Society, the Royal Academy of Brussels, &c., were announced, and numerous gentlemen were elected as ordinary or corresponding members. The president exhibited a collection of insects received by him from Sierra Leone, including the rare *Chiroscelia digitatus*. Mr. Raddon exhibited various heliographic drawings of plants, &c., and pointed out the advantages which might be obtained from adopting this process for obtaining correct representations of insects. He also presented proof-engravings of W. Spence, and J. G. Children, Esqrs. The following memoirs were read:—1. 'Some Remarks on Wireworms, which seriously damaged the potato crops in Shropshire, Worcestershire, and Herefordshire,' in 1838, by the Rev. F. W. Hope.—2. 'On the Habits and Structure of the Nests of Gregarious *Hymenoptera*, particularly those of the Hornet and Hive-Bee,' by George Newport, Esq. This memoir led to a very extended discussion.—3. 'Sketch of an Arrangement of a Cabinet of Insects, illustrative of their Economy, and Structural Peculiarities,' by W. Sella, Esq.

May 6. The Rev. F. W. Hope in the chair.—Donations of entomological and other works, by Drs. Germar, Burmeister, Messrs. Hope, Haliday, Westwood, &c., were announced. Mr. Yarrell exhibited a large and very hairy caterpillar of South America, which has been observed to possess the power of communicating a powerful electric shock. The president exhibited a specimen of a foreign beetle which he had had in his cabinet for several years, from the body of which a living flaria had very recently partially protruded itself. Various heliographic drawings of insects, and of their anatomical details, were exhibited by Messrs. Shipster and

Raddon. The latter gentleman also exhibited two magnificent specimens of *Goltathus Drurii*, and *Regius*, from the coast of Africa. The same gentleman also communicated other interesting objects.—The president read an extract from a letter received from J. Strachan, Esq., stating the recent capture of the hitherto unique *Eudacilla morgani*, at Sierra Leone.—The memoirs read were:—1. 'Description, accompanied by Figures, of a minute *Strepsipterous* Insect discovered in Ireland,' by Robert Templeton, Esq.—2. 'Some Remarks upon the Entomophagous Tribes of the Australian Alps,' by Dr. John Lhotsky, containing a short notice of the Bugong moth (of which a much more detailed account has, however, been published by Mr. Bennett, in his "Wanderings in New South Wales").—3. 'Extract (from an unpublished memoir) relating to the Edible Insects of the West Coast of Africa,' by Lieut. Sayers.—The president also communicated some extracts relative to the attacks of Cock-roaches in Africa upon various articles, as well as upon persons asleep. Various other instances of the latter were given by Messrs. Raddon and Sayers.

LITERARY AND LEARNED.

UNIVERSITY INTELLIGENCE.

CAMBRIDGE, May 15.—The following degrees were conferred:—

Doctor in Medicine.—G. F. Evans, Caius College.
Bachelors in the Civil Law.—Rev. B. C. Smith, Trinity Hall; Rev. C. Osmond, Jesus College.
Masters of Arts.—O. Walford, C. J. Selwyn, F. Cusance, Trinity College; S. Bridge, Queen's College; H. Howes, Caius College; F. Barker, Jesus College.
Bachelors of Arts.—E. Moonyart, Trinity College; R. P. Baker, E. P. Luscombe, J. Rose, St. John's College; G. W. Robinson, J. H. Wise, St. Peter's College; G. W. Money, F. E. Durnford, W. Young, J. H. Browne, F. E. Long, King's College; W. B. Brett, A. Boodle, Caius College; A. Wilkin, F. A. Baines, G. J. Ansley, Christ's College; R. J. P. Broughton, C. Wood, C. G. Smith, Clare Hall; C. Ward, G. Jackson, J. Buck, Magdalene College; J. Jones, Corpus Christi College; C. Cream, Pembroke College; T. Gleadow Fearn, Catharine Hall.

At the same congregation, C. J. Belin, of Oxford, was admitted *ad eundem* of this university.

ROYAL SOCIETY OF LITERATURE.

AFTER a Council, the Lord Bishop of Winchester in the chair, when the Chevalier Bunsen and Dr. Lepsius were elected honorary members of the Society, the ordinary meeting was held. L. Hayes Pettit, Esq., presiding. Mr. Hamilton laid upon the table some interesting newspapers of Athens, in Greek, and accompanied by engravings of various antiquities recently discovered, together with Inscriptions, &c., executed in a very creditable style. A continuation of Mr. Wright's Introduction to the "Biographia Literaria Britannica" (in progress under the auspices of the Society) was read, in which the educational treatises, medical books, and other of the earliest and most curious works of our Saxon ancestors were illustrated, and many singular customs and anecdotes brought to bear upon this popular subject.

LITERARY AND SCIENTIFIC MEETINGS
FOR THE ENSUING WEEK.

Monday.—Geographical (Anniversary), 1 P.M.; British Architects, 8 P.M.
Tuesday.—Civil Engineers, 8 P.M.; Zoological, 8 P.M.
Wednesday.—Society of Arts, 7½ P.M.
Thursday.—Royal Society, 8½ P.M.; Antiquaries, 8 P.M.
Friday.—Royal Institution, 8½ P.M.

FINE ARTS.

EXHIBITION OF THE ROYAL ACADEMY.

[Third notice.]

351. *Van Amburgh and his Animals*. E. Landseer, R.A.—Wonder and curiosity are alike excited in the astounding facts which this

picture exhibits; but incredulity is forced to yield when thousands of living witnesses can attest the reality of the scene represented. In contemplating the performance and its extraordinary character, we for a while lose sight of that skill in the artist which has in every other instance, where animals were introduced, been the first object of our attention; but such powers cannot long remain unappreciated, for never were these ferocious creatures more fearfully or more truly delineated: while the spectators without the den, in their expressions of fear and astonishment, are a just comment on the powers (by whatever means obtained) which man now possesses over the hitherto untameable part of the creation.

327. *The Pillaging of a Jew's House in the Reign of Richard I.* E. Landseer, A.—When subjects like this become the choice of an artist, we may say with Zanga, in the "Revenge," that "Horrors are not displeasing" to him; for more of violence, plunder, and cruelty, under the sanction of religious zeal and bigotry, was never, we think, more powerfully, and, we must also say, more skillfully brought into view. In all the chaos of atrocity, neither the picturesque, nor any other essential quality of art, is omitted. Costumes, furniture, and character, are preserved, and all is in keeping with the destructive scene. The emotions excited by such pictures, are not pity or sympathy for the sufferers, but anger and shame that such acts should ever have disgraced the nation and outraged humanity. But let us call another subject, and where can we find one better calculated to disperse rueful thoughts than,

361. *Portrait.* D. Cowper.—Which is, in fact, the witching countenance of "Kate Kearney," with its quotation,

"Beware of her smile," &c.

Cheerfulness and roguery are the characteristics of the damsel.

394. *Othello relating his Adventures.* D. Cowper.—We have been so long accustomed to African features in all the representations of the Moor, of Venice, that we are not quite satisfied with the sort of half-caste countenance in this performance. In all other respects the scene and its personages are admirably depicted, and the expression is well suited to the different characters. There is, besides, a breadth and clearness in the execution which is entitled to great praise; and will, we feel confident, with the union of other qualities already observed in Mr. Cowper's works, give him a distinguished rank in art.

377. *Quentin Matsys, the Blacksmith of Antwerp.* R. Redgrave.—In addition to the account given in the quotation, we may say with the old ballad,

"By this you see what love can do;"

for not a vestige of the blacksmith is visible in the well-proportioned figure of the artist, shewing off his performance to the admiring old painter. Indeed, the time taken to win his mistress (judging from his picture of the Two Misers) must have been of sufficient length to have rubbed off the rust of his trade, which, together with the kind looks of the lady, evince that "Love's labour" has not been "lost."

428. *The Bride of Lammermuir.* R. S. Lauder.—At the first glance of this performance we looked eagerly in the catalogue for the name of the artist, and, somewhat to our surprise, it was new to us: we then examined past catalogues, but it was not there; yet we felt quite assured that much practice, and a true feeling of the subject, must have gone to

the production of such a work. We are bound to say, that *The Bride of Lammermuir* must place the painter high in the rank of his profession. The forlorn and desolate character of the victim bride, the stern and vindictive looks of the ambitious mother, with the dignified melancholy of the master of Ravenswood, are all in perfect keeping with the sad story and its fatal results. As a work of art in all its qualities, we have seldom seen a more perfect performance.

441. *Sweet Summer-time.* T. Creswick.—The painter could hardly have made choice of a better title to his picture: *Sweet Summer-time* is associated with every feeling of delight and pleasure.

"The pomp of groves, the garniture of fields," are brought to the mind's eye. Its illustration by the artist is simple in character, yet highly interesting in its beautifully executed foliage, whose feathery lightness is one of the distinguishing characteristics of this skillful artist's pencil. Two lovers, seated at the feet of some lofty elms, and cheerful vistas opening on the right, are the principal features of the scene.

470. *Returning from Gleaning.* T. Roods.—In some former works by this artist of Italian peasants, their habits and character, we observed much promise from the qualities elicited by his pencil. In the present instance, we think he is quite as much at home and equally successful. A clear and brilliant effect of light relieves his figure to great advantage.

469. *Le Chapeau de Brigand.* T. Uwins, R.A.—What a fertile field and resource are incidents and accidents to an artist! What are passed over as ordinary events by the greater part of mankind furnish him with subjects for his pencil, as may be seen in the present example. In this performance, we are indeed reminded of the famed *Chapeau de Paille*, but in no unfit or unworthy way of comparison; on the contrary, in point of colouring, *Le Chapeau de Brigand* is as warm and splendid, and in expression and beauty of subject, more attractive and interesting: for with us, a name in art is not every thing.

538. *A Scene from Parnell's "Hermit."* A. Fraser.—Of this picture we may observe, that in its varied, rich, and harmonious colouring, and its fluent and masterly execution, it much resembles the works of Rembrandt; but in point of feeling, character, and expression, is more tastefully and judiciously treated. All the accessories brought to bear upon the subject are calculated to display the above-named qualities in art.

519. *Columbus asking Bread and Water for his Child, &c.* W. Simson.—There is something anomalous in the dress and appearance of Columbus and his child, with the request for bread and water; but ancient hospitality was at that period like the chivalry of knight-hood: liberality was a redeeming trait in both, and travellers and strangers of every degree were accustomed to solicit food or shelter in religious asylums. The subject, however, conveys the idea of the vicissitudes of fortune occurring in the case of one of the greatest names and most imperishable characters the world ever produced. The picture is painted in the artist's usual clear and distinct style: perhaps, in the opinion of some, it may be thought to have too much of that quality.

[To be continued.]

PHOTOGENIC DRAWING.

An omission was made in the paper on Photogenic Drawing, which was inserted in the last Number of the *Literary Gazette*; for, whilst

treating of the ammonio-nitrate of silver, I forgot to mention the proportions which were found most suitable: this may seem unimportant in a paper which is not very sensitive, but, as the ease and certainty of its preparation, as well as its cheapness, exceed all other described papers, it possesses a particular claim for our notice. Twenty grains of nitrate of silver are to be dissolved in an ounce of water; then a few drops of ammonia are to be added, which at first throws down a considerable precipitate; this, by a further addition of ammonia, redissolves, and the solution becomes quite clear, when it will be ready to be applied by a sponge to the paper. The most suitable paper for this preparation of silver is the "double copy." The whole cost of photogenic paper does not exceed, by this process, one penny for a sheet equal in size to large foolscap, which, if bought of venders, would cost between one shilling and fourpence and four shillings. The cost of all other papers does not exceed twopence-half-penny the sheet, except that prepared with the bromide of potassium; which, for the same quantity, would be about one penny more expensive. The preparation of paper suitable to the use of the corrosive sublimate is still more simple, for here it is only necessary to sponge over a very thin paper with a 20 gr. solution of nitrate of silver, and expose it to the action of the light of the sun. Drawings made in this way have analogy with etchings executed on glass, covered with black varnish, but are more easily made; the white parts of the paper are, however, not so transparent as the glass. An error requiring notice has also crept into my paper; for the hyposulphates, instead of the hyposulphites, are there mentioned as stopping agents.

ALFRED SMEE.

Bank of England, May 21st, 1839.

NEW PUBLICATIONS.

The Royal Review at Windsor, on September 18th, 1838. Engraved by S. W. Reynolds, from a Drawing by F. Taylor: the Portraits by S. W. Reynolds. Boys.

ALTHOUGH the title is rather a misnomer, this large and finely executed print comprehends one of the most pleasing, picturesque, and characteristic portraits of the Queen that have yet appeared. Her majesty, in a riding habit and cap, with the star and riband of the order of the garter on her breast, and seated on a beautiful and favourite gray charger, is passing out of Windsor Castle, by George the Fourth's Gateway, on her way to the review. She is accompanied, on her right hand, by his majesty the King of the Belgians; on her left, by Lord Hill, the commander of the forces; and is immediately followed by the Duke of Wellington, Lord Palmerston (in the Windsor uniform), Colonel Freemantle, her Majesty's Aide-de-Camp, and a party of the Tenth, or Prince of Wales's regiment. The distinguishing feature of this clever composition is, that it conveys a more accurate idea than we have heretofore seen, of the queen's youthful and petite, though gracefully formed figure. The male portraits, especially those of King Leopold, and our veteran Duke, are also very like: the horses are designed with great beauty and spirit; the Round Tower "comes in" very happily in the back-ground; and the effect of the whole is magnificent, gay, and striking.

The Grand Canal, Venice. Drawn by J. D. Harding; Engraved by David Lucas. Moon. We well recollect the original drawing, as being one of the most attractive ornaments of

the Exhibition last year of the Society of Painters in Water-Colours. Of the almost innumerable views that we had seen of Venice, it struck us as being, at least, *one* of the best. The masterly manner in which the figures are introduced adds greatly to its interest and to its picturesque character. Mr. Lucas, whose talents as a mezzotinto engraver are well known, has done it ample justice: and the result is one of the most splendid prints of the present day.

Odin. Painted by Edwin Landseer, R.A.; Engraved by Thomas Landseer. Moon.

A CANINE head, as large as life; engraved, we presume, from the study for the fine picture by Mr. Edwin Landseer, now exhibiting at the Gallery of the British Institution. It is full of noble, generous, and affectionate character. Odin is evidently in profound thought. "It is this intellectuality," says a writer in the "New Monthly," "joined with their individuality—for no two dogs are alike—that makes them such admirable subjects for the gifted hand of Edwin Landseer." Mr. Thomas Landseer has preserved all the beauty and spirit of the original, in transferring it to copper.

Portrait of M. Faraday. Drawn and Engraved by C. Turner.

THIS admirable portrait will convey to the most distant parts, and to latter times, a pleasing idea of those highly intellectual lineaments which mark the features of one of the most distinguished men of our age. Standing in the attitude of demonstrating some remarkable scientific mystery, with his left hand on a chemical apparatus, the individual simplicity of character and perfect mastery of his subject in the lecturer, are finely expressed by the simplicity and ease of the figure. The eye is lighted with his own intelligence, and the whole, as a work of art, is most honourable to Mr. Turner's taste and ability—taste in the composition, and ability in transferring it to the engraving.

The Countess of Jersey, and the Lady Adela Corisanda Villiers. Drawn by A. E. Chalon, R.A.; Engraved by F. C. Lewis. Boys.

THE fine breeze which is evidently blowing, and which compels her little ladyship, wrapped as she is in a richly furred mantle, to cling closely to mamma's bosom, has given Mr. Chalon an opportunity, of which he has availed himself with his usual taste, of giving great spirit and animation to this clever whole-length portrait. It has been engraved by Mr. Lewis in his best manner.

Raphael Sketching the Virgin and Child. Painted by A. Hopfgarten; on Stone, by J. Erxleben. Houlston and Hughes.

WELL composed and designed. The attention of the various spectators, especially of one of the young coopers, is skilfully expressed.

ORIGINAL POETRY.

A REMONSTRANCE.

WHAT bard art thou so apt to grace,
With poetry's pure breath,
The scatterer of the human race!
The trafficker in death!
Are plunder'd shrine, and midnight chain—
A shrieking city's blaze—
And beauty, in pollution slain,
The themes for poet's praise?

Marengo's hero then recall!
Dethrone the crowned of earth!

Shake o'er a weeping world death's pall—
Cheer Horror's brood to birth!
While startled bones of millions rise
All ghastly as they stood
When thunderous battle mock'd the skies,
And rained down human blood!

Whilst hoary heads, all stark and gashed,
Throng shore and town remote,
As when the Gallic armies plashed
In carnage to the throat!
His meteor-sceptre pledge once more;
Napoleon, to the van!
Come, quaff the reeking cup of gore,
And shout for slaughter!—Man.

Another Austerlitz demand,
Another Jena claim;
And desolate the groaning land
To write one despot's fame!
Let e'en the pyramids afford
A verse for his renown:
But speak not of brave Sidney's sword,
That swept the invader down!

Sing not of Moscow's flaming tide—
The fiery brands which hurled
The chainer of the nations wide,
The scourger of the world,
With rout and havoc from their shore!
To Cossack hate consigned:—
Famine and frozen wastes before,
Bones and the wolf behind.

Let not Trafalgar's chief, who died,
A moment's thought beguile;
Nor land with British heart and pride
The Baltic and the Nile!
Leave Nelson's glorious flag unsung,
And Wellington unwreathed;
Their fame with which all Europe rung,
For his—who'd best ne'er breathed!

And gloze the tyrant's guilty mood,
And wail his hapless cause;
That Sylva—in his thirst for blood!
That Draco—in his laws!
Mourn him who to the conscript gave
Heart-broken France a prey;
And still could outraged nature brave
With homicidal sway!

Yes, wake the throb of sympathy—
Bid maudlin tears reveal
How much men grieve for Europe free—
How miss the tyrant's steel!
And make the conscious sea blush gore
In shame for Nelson's land;
Make Earth, revolting, lift once more
Her blood-accusing hand!

CHARLES SWAIN.

MUSIC.

*Philharmonic Concerts.**—The fifth of these concerts opened with Beethoven's fanciful *sinfonia*, in F; its first and second movements (the *Allegretto Schenoso*) were extremely well performed, but the *tempo* of the last was not taken by the conductor with spirit, and was therefore lost. Spohr's "Tears of Sorrow," sung by Phillips, was very heavy. Mr. W. S. Bennett's new pianoforte concerto, in F minor, was perhaps the most effective thing of the evening. This gentleman's instrumentation is so judicious, and his performance so perfect, that he never fails to delight his audience; but on this occasion he appeared to be more than usually felicitous, although we did not think his third

* Although a great diminution has occurred this year in the list of annual subscribers, many appear to be returning, through the medium of the single tickets, to their former haunt; and we doubt not will renew, next season, their regular attendance, especially as Laporte has failed to establish his threatened rival society.

movement of a piece with the other two: it requires manual dexterity rather than soul in its execution. By the by, we recognised the second movement as an old, and not a *new* friend. It is, however, a barcarole, and a perfect gem of its kind; the whole so masterly a production as to rank the composer with such men as Moscheles, Hummel, and Mendelssohn. If there is any vocalist who gives the most general satisfaction at concerts, it is Madame Stockhausen. She very properly selected on this occasion a classical composition, the scena from Beethoven's "Fidelio," which she sung in her usual pure and feeling manner. The overture to "Euryanthe" went wretchedly, owing to the conductor's *baton*, which seemed to be *too heavy* for the wielder. The second act began with Spohr's *sinfonia*, in E flat, which went off heavily; as also the lovely duet from the "Freyshütz," "Schelm halt fest," between Madame Stockhausen and Mlle. Bilestein. Mr. Batta, the violoncellist, from Paris, will please in a drawing-room, but not in a "grand salon de concert;" although possessing great power of execution, and some taste, his tone is so harsh, that it seems to cut its way rather than insinuate itself into the ear. A trio, from "Fidelio," between the three vocalists already named, and Winter's overture to "Calypso," concluded the entertainment.

On Monday last the sixth concert took place, and proved a most admirable one. Beethoven's "Pastoral Symphony," a work so well known and appreciated by all judges of music, that it is needless for us to make any comments upon it, stood first in the programme; and we never remember to have heard it go off better, Mr. T. Cooke leading, and Mr. Potter conducting. Donizetti's "Fra Poo" was delightfully sung by Ivanoff, but the music of this composer is hardly high classed enough for the Philharmonic. A Mademoiselle Lewig performed, for the first time in this country, a pianoforte concerto of Ries's. We cannot say we are great admirers of this master's composition; however, the second movement struck us as being capable of much effect, had it been played with taste. Mademoiselle Lewig has a perfect and brilliant execution, but not one atom of feeling. Could she obtain that, she would stand better in her profession; but at present she has little chance of producing any thing like a sensation in this country. A Mademoiselle Dorus Gras, whom the printer of the programmes thought fit to dignify with the matronly distinction of "Madame," also made her first appearance, and we may venture to assert it will not be the last. Her voice is a soprano of great compass, and although more powerful than sweet, yet of such astonishing flexibility as to be perfectly marvellous; we think, however, she is more suited to a theatre than a concert-room. Her first song was "Va, dit elle," from *Robert le Diable*. Weber's overture to *Der Freyschütz* concluded the act. The second act opened with Mozart's E flat, which went off admirably. Schubert's serenade, "Quando Avvolto," was exquisitely sung by Ivanoff; and a violin concerto of Hauman's, performed by himself, was the instrumental piece. The composition is decidedly fine, and lost nothing by his execution; his tone is immense, and although in many respects we prefer David's, M. Hauman must be admitted to be the more astonishing violinist: the union of the pizzicati, almost simultaneously with the bowing passages in the finale, produced unbounded applause; Paganini could not have wished for more. An air of Auber's was mag-

magnificently sung by Mademoiselle Dorus Gras, and Cherubini's "Anacreon" ended our evening of delight.

THE DRAMA.

Her Majesty's Theatre.—Mozart's *Nonne Figaro* has been twice played at this theatre since our last notice; the only change from the cast of last season is in the part of *Cherubino*, the page, now sustained by Mdlle. Ernesta Grisi, who assuredly is not likely to increase her fame by her execution of it.

Haymarket.—An extravaganza, by Mr. Lover, founded on the whimsical old story, "the Man's Shirt," has been most successful at this theatre. Power sustains the principal character with his usual humour; and his fun and light-heartedness contrasts well with the mock solemnity of O. Smith. The names are droll, the jokes laughable, and the whole piece half an hour long. No one that we know of could have made so much drollery, and stuffed it with so many telling points, out of so slight an anecdote. We enjoyed it much, and recommend our friends to "go and do likewise."

New Strand Theatre.—The *Cheeryble Brothers*, and *Tim Linkenwater*, well represented by Messrs. G. Cooke, Biddle, and A. Richardson, and *Brooker*, the returned convict, are the additional characters to the dramatic version of *Nicholas Nickleby*, played for the first time at this theatre on Monday last. The beggared and starving *Brooker*, spurned by *Ralph Nickleby*, whose confidential agent he was previously to the trip across the herring pond, is made the instrument to unravel the mystery of *Smike's* parentage, and to invest him with his maternal inheritance, under the trusteeship of *Cheeryble Brothers*. The professional money-lender, the *Ralph Nickleby* of "Boz," was cleverly conceived, and acted by Mr. Ray. Miss Daly, Mr. Barton, and Mr. Bennett, exerted themselves as *Smike*, *Nicholas Nickleby*, and *Newman Noggs*. The other characters were well dressed, and well sustained. Miss Pettifer is an interesting *Kate Nickleby*, and Mrs. Selby an admirable *Madame Mantlini*.

St. James's Theatre.—A novelty, called *My Lover*, has been produced here, to close the season; and Mrs. Hooper has been playing *Lucille* with great talent and effect.

Haynes Bayly.—We are happy to perceive, by a bill which has just been handed to us, that the literary and musical world are rallying together in behalf of the widow and children of poor Mr. Haynes Bayly. A benefit will shortly be given at the Theatre Royal, Drury Lane, under the patronage of her grace the Duchess of Beaufort, and several other distinguished personages; and a host of talent, both native and foreign, is enlisted for the occasion. We earnestly hope the public will respond to the call.

VARIETIES.

Caricatures.—H. B. has this week given us two novelties, Nos. 590 and 591. The first is a *Game at Whist*; the Queen and Lord Melbourne partners against Wellington and Peel: the Duke asks his Lordship to allow him "to see the last trick," which is, indeed, covered by his Lordship's hand; whilst Sir Robert, addressing the lady, says, "Pardon me, your M-j-ty has revoked." The nine of diamonds, a significant card, is just laid on the table by the Queen. This is an admirable caricature, the likenesses excellent. The other is from the *farce of the Invincibles*, and still more humor-

ous. Peel, as a grenadier, protected by Wellington, as a wooden-legged old pensioner, is driven out by the *Household troops*, commanded "forward," by the Queen in person. It is a gallant career, and the Bedchamber never turned out better.

Sketch of Society.—London and its vicinity, on Monday, presented as curious an appearance as any observer of manners could well desire to witness; sights that would have wonderfully astonished any person buried fifty years ago, were it possible to rise again to notice them. The river reeking with steam-vessels, crowded with passengers; and the bridges, instead of a pleasant air, as much covered with smoke as the roof of an engine manufactory. The streets of the metropolis, perambulated by new classes of people: Chartist, a political sect, whose aim is an entire remodelling of the famed English constitution; and Teetotallers, another sect, whose creed is entire abstinence from all sorts of intoxicating liquors. Both were accompanied by music, banners, insignia, and proselytes, in every kind of conveyance which the repositories of London could furnish forth to grace their processions. Among the prominent features in the former was the majority of very young men and mere boys which filled the ranks, so that, if the purposes were dangerous, there seemed to be little danger in the actors; in the latter, the general ugliness (for that is the only applicable term) of the females who lent their countenances to this demonstration of, at least, a harmless enthusiasm. Smoking cigars, too, by some of the men, we considered to be inconsistent with the spirit and principles of the association; since the indulgence in an intoxicating and offensive drug must be as objectionable as a draught of sound malt-liquor or a glass of generous wine. The appearance of Kennington Common, where the cavalcades assembled to address themselves to the multitude, baffles all description. Twenty or thirty orators, speaking at the same time from every sort of vehicle, and on every sort of topic, with the corresponding shouting and cheering, shewed that the idea of the confusion of Babel might be far out-done by the confusion of Kennington.

Curiosities of Literature. No. I.—J. R. advertises for page 24 of Cramer's Bible, 1541. Has he discovered the art of splitting a leaf in two, and so expects the page at half-price? [See "Gentleman's Magazine," May, 1839. Cover, p. 2.] No. II.—Among the announcements of the season is a tolerable ball, and not generally remarked, viz., the *exhibition of the invisible girl*.

India.—The last No. of the "Oriental Herald" deserves our warm praise for its very recent and important views of Indian affairs, and its speedy publication of Indian news. Among the rest, we notice a mention of a young Brahmin poet of the name of Kasiprasad, whose compositions, in choice English, are highly spoken of; and if we may judge from a single quotation, not without just cause. One couplet is enough to stamp his fame:

"Love is a rose, but woman, though the gale
To fling its sweetness in the bower of life."

Native Physicians.—One of the most interesting spectacles it has ever been our lot to witness in this country, was exhibited on Saturday at the Medical College. Five young Hindoos were publicly invested with certificates of qualification to practise medicine, after having studied at the college with surprising success for a period of about three years and a half, and passed the ordeal of a very severe examination.

—*Oriental Herald*,

Tulips.—Mr. Groom's Tulips, to be seen at Walworth, during the present month, will delight all our friends who admire the most beautiful products of floriculture.

Surrey Zoological Gardens.—The new Panoramic Exhibition at these Gardens is quite extraordinary. Volcanoes and Icebergs! We need not go to the Arctic Regions now, but merely cross the river, to these pleasant resorts, where animal nature is also seen to perfection.

LITERARY NOVELTIES.

In the Press.

Miss Emma Roberts announces "A Guide to India," with every information necessary to be known, both as regards the voyage out, and the overland route to India, with complete lists of necessaries, &c. &c.

LIST OF NEW BOOKS.

Demonstration of the Truth of the Christian Religion, by A. Keith, D.D., 5th edition, without plates, 6s.—
Supplement to the Report of the Aucterader Case, by C. Robertson, 8vo. 2s. 6d.—

TO CORRESPONDENTS.

Our Correspondent, in answer to "C.S." on the Egyptian Inscriptions, reached us too late for this week. In our next.

We cannot insert the poetical dedication to Her Majesty. Its proper place is in the work.

T. H. B.'s work has been received, and noticed. See No. 110, page 332.

ADVERTISEMENTS,

Connected with Literature and the Arts.

THE FIFTH ANNUAL EXHIBITION
of the NEW SOCIETY OF PAINTERS in WATER
COLOURS is now open at the Gallery, 31 Pall Mall West (ad-
joining the British Institution), from Nine o'Clock till dusk.
Admission, 1s.—Catalogue, 6d.
JAMES FAHEY, Hon. Sec.

ROYAL MANCHESTER INSTITUTION.—To ARTISTS, &c.—An EXHIBITION OF PICTURES in Oil and Water Colours, Specimens of Sculpture and Casts, Architectural Designs, and Proof Impressions of Modern Engravings, will take place in August next. Works of Art intended for Exhibition must be sent so as to arrive from the 16th to the 31st July, inclusive. Pictures from London may be forwarded through Messrs. Kenworthy and Sons, Carriers; and from other places by the most convenient water conveyance.

Printed Copies of the Regulations, or any further information, may be had on application to Mr. G. F. Mandley, the Secretary, at the Institution; or to Mr. A. T. Mayall, at the Gallery of the Society of British Artists, Suffolk Street, Pall Mall East; London. The following Prize is offered for competition to Exhibitors:—The Heywood Silver Medal and 20l. for the best Marine Painting in Oil, being an original Composition, in size not less than three feet by two feet.

T. W. WINSTANLEY, Honorary Secretary.

Institution, Mosley Street, 8th May, 1839.

FINDENS' ROYAL GALLERY of BRITISH ART.

The Third Part of the above Work will be published on the 30th of June, containing—

Painted by Engraved by
Interior of a Highlander E. Landseer, R.A. W. Finden.
Happy as a King W. Collins, R.A. E. Finden.
Escape of Carrara C. L. Eastlake, R.A. F. Bacon.
London: Published by the Proprietors, at 18 and 19 Southampton Street, Euston Square; sold also by F. G. Moon, 20 Threadneedle Place; N. Ackermann and Co. Strand; and by every other respectable Book and Print Seller in the Kingdom.

PALLADIUM LIFE OFFICE, 7 WATERLOO PLACE.

Chairman,
GEORGE ARBUTHNOT, Esq.

Deputy-Chairman,
Right Hon. SIR EDWARD HYDE EAST, Bart.

The Directors acquaint the Public that the SECOND SEPTENNIAL DIVISION of PROFITS has been declared, up to the 31st December, 1838, and that the total Additions which have been made to Policies in force for Fourteen Years, amount (on an average of all Ages, from 8 to 50 when assured) to Forty-three per Cent on the Premiums paid during the Fourteen Years. For example:—on Policies of 5000l. at age 10, the Additions amount to 250l.; and at age 50, to 1125l.; and other Policies in proportion.

SALES BY AUCTION.

SOUTHGATE'S ROOMS.

Fine Books and Books of Prints,

By MR. SOUTHGATE,

AT HIS ROOMS, No. 22 FLEET STREET,

IV.

The Idler in Italy.

By the Countess of Blessington.

New and cheaper edition, 3 vols. 8vo. with Portrait, 5s. bound.

V.

Mr. Urquhart's Spirit of the East.

2d edition, 3 vols. 8vo.

VI.

Capt. Spencer's Travels in Circassia.

2d and cheaper edition, 3 vols. 8vo. with new Illustrations, 20s. bound.

Also, just ready,

The Conclusion of

The Diary of the Times of George IV.

Vol. III. and IV. containing more Letters of Queen Caroline, the Princess Charlotte, &c.

Just published, Third Edition, greatly enlarged,

DR. BLOOMFIELD'S

GREEK TESTAMENT,

WITH COPIOUS ENGLISH NOTES,

Critical, Philological, and Explanatory. Third edition, in 2 very large and closely printed vols. 8vo. handsomely bound in cloth, gilt lettered, 2l.

"Much as had been done in the two preceding editions, this third is yet further enlarged, to the extent of nearly 300 pages, and very materially improved. It exhibits the results of all preceding critical editors of the New Testament, as well as of the author's own researches for more than thirty years, and may justly be regarded as the most valuable for biblical students that has issued from the press in this country."—*From the Rev. Hartwell Horne's Introduction, 1839.*

LONDON: LONGMAN, ORME, AND CO.

MR. JAMES'S NEW NOVEL.

THE GENTLEMAN of the OLD SCHOOL.

By G. P. R. JAMES, Esq.
Author of "The Gipsy," "The Rover," "The Book of the Passions," &c.
"The style is racy, the scenes graphically sketched, and the whole story so crowded with stirring incidents, that the attention is kept briskly alive to the end of the volume."—*Conservative Journal.*

London: Longman, Orme, and Co.

SONGS and BALLADS.

In 1 vol. 8vo. price 5s. cloth.
By SAMUEL JOYCE.
These popular Lyrics, including the celebrated "Superstitions of Ireland," are now for the first time collected and revised by the Author.

Chapman and Hall, 186 Strand.

MR. BENTLEY has just published the following NEW WORKS:—

I. The Naval History of the United States.

By J. S. Milmore Cooper, Esq.
Author of "The Pilot," "Homeward Bound," &c.
3 vols. 8vo. bound, with numerous Portraits.

II.

Torres Vedras;

Or, Stories of Wellington's Campaigns.

By J. G. Millingen,
Surgeon to the Forces, &c. &c. Author of "Adventures of an Irish Gentleman." 3 vols.

III.

Memoirs of the Courts of Elizabeth and James I.

By Bishop Goodman.
Comprising the History of his Own Time.

3 vols. 8vo. bound, with Portraits from original Paintings.
"A very agreeable mélange of anecdote, personal character, and court manners."—*Spectator.*

REVIEW OF NEW BOOKS.

Narrative of the Surveying Voyages of H.M.S. Adventure and Beagle, between the years 1826 and 1836, describing their Examination of the Southern Shores of South America, and the Beagle's Circumnavigation of the Globe. 3 vols. 8vo. London, 1838. Colburn.

Appendix to Vol. II. Pp. 352. Idem.

THE value of this work, in reference to navigation, geography, and to science generally, can hardly be over-rated: in reference to its reviewer, its complexion is almost the reverse. The Journal form in which the proceedings of vessels are noted, is the most untoward that could be presented for analysis or condensation. Its very prolixity, so necessary to its accuracy and utility, is a sore trial to the person who wants to extract the honey or marrow from the mass of other matter; and leave the comb or bone in their natural state. The disposition of these volumes, too, adds to our difficulties, for the first contains Captain King's proceedings in the first expedition, 1826 to 1830; the second, Captain Fitzroy's journal for 1831 to 1836; the third, Mr. Darwin's journal and remarks during the same period; and the Appendix references to the whole, though principally to the second volume.* Out of this very distinctness there is something to confuse us; and we find it no easy task to separate the parts even for such notice as our limited space permits. We shall, however, here, and for the present, confine ourselves to Captain King; and even in this we are obliged to offer only a few extracts touching the natives, as the nautical remarks, and the accounts of the hardships endured by our gallant countrymen, are altogether unsusceptible of illustration within our limits.

Of the Patagonians we are told:—"They were all wrapped in mantles, made chiefly of the skins of guanacoës, sewed together with the sinews of the same animal. These mantles were large enough to cover the whole body. Some were made of skins of the 'zorillo,' or skunk, an animal like a pole-cat, but ten times more offensive; and others, of skins of the puma. The tallest of the Indians, excepting the old man, who did not dismount, was rather less than six feet in height. All were robust in appearance, and, with respect to the head, length of body, and breadth of shoulders, of gigantic size; therefore, when on horseback, or seated in a boat, they appeared to be tall, as well as large men. In proportion to the parts above-mentioned, their extremities were very small and short, so that when standing they seemed but of a moderate size, and their want of proportion was concealed by the mantle, which enveloped the body entirely, the head and feet being the only parts exposed. When Mr. Cooke landed, he presented some medals to the oldest man, and the woman; and suspended them round their necks. A friendly feeling being established, the natives dismounted, and even permitted our men to ride their horses, without evincing the least displeasure at the free advantage taken of their good-nature."

At an after period:—"The Patagonian wo-

* A quarto Zoological Supplement is also announced; and also a volume of geological observations.

men are treated far more kindly by their husbands than the Fuegian; who are little better than slaves, subject to be beaten, and obliged to perform all the laborious offices of the family. The Patagonian females sit at home, grinding paint, drying and stretching skins, making and painting mantles. In travelling, however, they have the baggage and provisions in their charge, and, of course, their children. These women probably have employments of a more laborious nature than what we saw; but they cannot be compared with those of the Fuegians, who, excepting in the fight and chase, do every thing. They paddle the canoes, dive for shells and sea-eggs, build their wigwams, and keep up the fire; and if they neglect any of these duties, or incur the displeasure of their husbands in any way, they are struck or kicked most severely. Byron, in his narrative of the loss of the *Wager*, describes the brutal conduct of one of these Indians, who actually killed his child for a most trifling offence. The Patagonians are devotedly attached to their offspring. In infancy they are carried behind the saddle of the mother, within a sort of cradle, in which they are securely fixed. The cradle is made of wicker-work, about four feet long and one foot wide, roofed over with twigs, like the frame of a tilted wagon. The child is swaddled up in skins, with the fur inwards or outwards, according to the weather. At night, or when it rains, the cradle is covered with a skin that effectually keeps out the cold or rain. Seeing one of these cradles near a woman, I began to make a sketch of it, upon which the mother called the father, who watched me most attentively, and held the cradle in the position which I considered most advantageous for my sketch. The completion of the drawing gave them both great pleasure, and during the afternoon the father reminded me repeatedly of having painted his child ('pintado su hijo'). One circumstance deserves to be noticed, as a proof of their good feeling towards us. It will be recollected that three Indians, of the party with whom we first communicated, accompanied us as far as Cape Negro, where they landed. Upon our arrival on this occasion, I was met, on landing, by one of them, who asked for my son, to whom they had taken a great fancy. Upon my saying he was on board, the native presented me with a bunch of nine ostrich feathers, and then gave a similar present to every one in the boat. He still carried a large quantity under his arm, tied up in bunches, containing nine feathers in each; and soon afterwards, when a boat from the *Beagle* landed with Captain Stokes and others, he went to meet them; but finding strangers, he withdrew without making them any present. In the evening my son landed, when the same Indian came down to meet him, appeared delighted to see him, and presented him with a bunch of feathers, of the same size as those which he had distributed in the morning. At this, our second visit, there were about fifty Patagonian men assembled, not one of whom looked more than fifty-five years of age. They were generally between five feet ten and six feet in height: one man only exceeded six feet—whose dimensions, measured by Captain Stokes, were as follows:—

	Ft. In.
Height	6 12
Round the chest	4 12
Ditto loins	3 4

I had before remarked the disproportionate largeness of head and length of body of these people, as compared with the diminutive size of their extremities; and, on this visit, my opinion was further confirmed, for such appeared to be the general character of the whole tribe; and to this, perhaps, may be attributed the mistakes of some former navigators."

Of the inferior race of Fuegians we learn:—

"Upon Point St. Mary we noticed, for the first time, three or four huts or wigwams made by the Fuegian Indians, which had been deserted. They were not old, and merely required a slight covering of branches or skins to make them habitable. These wigwams are thus constructed: long slender branches, pointed at the end, are stuck into the ground in a circular or oval figure; their extremities are bent over, so as to form a rounded roof, and secured with ligatures of rush; leaving two apertures, one towards the sea, and the other towards the woods. The fire is made in the middle, and half fills the hut with smoke. There were no Indians in the bay when we arrived, but, on the following evening, Lieut. Sholl, in walking towards the south end of the bay, suddenly found himself close to a party which had just arrived in two canoes from the southward. Approaching them, he found there were nine individuals—three men, and the remainder women and children. One of the women was very old, and so infirm as to require to be lifted out of the canoe and carried to the fire. They seemed to have no weapons of any consequence; but, from our subsequent knowledge of their habits and disposition, the probability is they had spears, bows, and arrows concealed close at hand. The only implement found amongst them was a sort of hatchet or knife, made of a crooked piece of wood, with part of an iron hoop tied to the end. The men were very slightly clothed, having only the back protected by a seal's skin; but the females wore large guanaco mantles, like those of the Patagonian Indians, whom our pilot told us they occasionally met for the purposes of barter. Some of the party were devouring seal's flesh, and drinking the oil extracted from its blubber, which they carried in bladders. The meat they were eating was probably part of a sea lion (*Phoca jubata*); for Mr. Sholl found amongst them a portion of the neck of one of those animals, which is remarkable for the long hair, 'like a lion's mane,' growing upon it. They appeared to be a most miserable, squalid race, very inferior, in every respect, to the Patagonians. They did not evince the least uneasiness at Mr. Sholl's presence, or at our ships being close to them; neither did they interfere with him, but remained squatting round their fire while he stayed near. This seeming indifference, and total want of curiosity, gave us no favourable opinion of their character as intellectual beings; indeed, they appeared to be very little removed from brutes; but our subsequent knowledge of them has convinced us that they are not usually deficient in intellect. This party was perhaps stupefied by the unusual

size of our ships, for the vessels which frequent this strait are seldom one hundred tons in burden."

At another point where the vessels touched, "They conducted themselves very quietly during their stay on board, with the exception of one, who tried to pick my pocket of a handkerchief. The offender was ordered out of the vessel, and there was no further attempt to pilfer. They wished to go below; but this was not permitted, because the odour of their oily persons was scarcely tolerable, even in the open air. As to food, tallow candles, biscuit, beef, plum-pudding, were equally liked, and swallowed most voraciously. One of them was discovered taking the tallow out of the deep seal and eating it, although mixed with sand and dirt. Before sunset, their canoes were despatched on shore to prepare the wigwams, during which operation three of the men remained on board; and as soon as the preparations were made, they called for a canoe, and went on shore. We obtained several spears, baskets, necklaces, bows and arrows from them in barter; but they seemed to have very few skins. Perhaps those they possessed were hidden in the bushes, because they had no wish to part with them. One woman was covered with a guanaco mantle; another merely wore a seal-skin over her back and shoulders, which, while she crouched in the canoe, was sufficient to cover her person. One had a black stripe down the nose, but she was the only female among them who was so painted. Next morning the Indians visited us with a fresh assortment of bows and arrows, in the manufacture of which they had evidently passed the night, for every one was quite new; the bows were of green wood, and the arrows not even pointed. They found, however, a ready sale. One of the party was a man who had been turned out of our vessel the preceding evening, for picking my pocket; but he was daubed over with a whitish pigment to deceive us, and would probably have escaped detection, but for the unusual ugliness of his person, which was not so easily disguised. He was much disconcerted by our recognition: and our refusal to barter with him made him angry and sullen. The women had daubed their faces all over with bright red ochre,—to add to their beauty, no doubt."

A very odd story is related of a sort of Christianity found among the Patagonians, and especially preserved by a person called Maria, who seemed to have some station among them, though a native of another part of the South American continent.

"At Maria's return with a very small quantity of guanaco meat, her husband told her that I had been very inquisitive about a red baize bundle, which he told me contained 'Cristo'; upon which she said to me, 'Quiere mirar mi Cristo?' (Do you wish to see my Christ?) and then, upon my nodding assent, called around her a number of the tribe, who immediately obeyed her summons. Many of the women, however, remained to take care of their valuables. A ceremony then took place. Maria, who, by the lead she took in the proceedings, appeared to be high-priestess as well as cacique of the tribe, began by pulverising some whitish earth in the hollow of her hand, and then taking a mouthful of water, spit from time to time upon it, until she had formed a sort of pigment, which she distributed to the rest, reserving only sufficient to mark her face, eyelids, arms, and hair, with the figure of the cross. The manner in which this was done was peculiar. After rubbing the paint in her left hand smooth with

the palm of the right, she scored marks across the paint, and again others at right angles, leaving the impression of as many crosses, which she stamped upon different parts of her body, rubbing the paint, and marking the crosses afresh, after every stamp was made. The men, after having marked themselves in a similar manner (to do which some stripped to the waist, and covered all their body with impressions), proceeded to do the same to the boys, who were not permitted to perform this part of the ceremony themselves. Manuel, Maria's husband, who seemed to be her chief assistant on the occasion, then took from the folds of the sacred wrapper an awl, and with it pierced either the arms or ears of all the party; each of whom presented in turn, pinched up between the finger and thumb, that portion of flesh which was to be perforated. The object evidently was to lose blood, and those from whom the blood flowed freely shewed marks of satisfaction, while some whose wounds bled but little, underwent the operation a second time. When Manuel had finished, he gave the awl to Maria, who pierced his arm, and then, with great solemnity and care, muttering and talking to herself in Spanish (not two words of which could I catch, although I knelt down close to her, and listened with the greatest attention), she removed two or three wrappers, and exposed to our view a small figure, carved in wood, representing a dead person, stretched out. After exposing the image, to which all paid the greatest attention, and contemplating it for some moments in silence, Maria began to descant upon the virtues of her Christ, telling us it had a good heart ('buen corazon'), and that it was very fond of tobacco. 'Mucho quiere mi Cristo tabaco, da me mas,' (My Christ loves tobacco very much, give me some). Such an appeal, on such an occasion, I could not refuse; and after agreeing with her in praise of the figure, I said I would send on board for some. Having gained her point, she began to talk to herself for some minutes, during which she looked up, after repeating the words, 'Muy bueno es mi Cristo, muy bueno corazon tiene,' and slowly and solemnly packed up the figure, depositing it in the place whence it had been taken. This ceremony ended, the traffic, which had been suspended, recommenced with redoubled activity. According to my promise, I sent on board for some tobacco, and my servant brought a larger quantity than I thought necessary for the occasion, which he injudiciously exposed to view. Maria, having seen the treasure, made up her mind to have the whole, and upon my selecting three or four pounds of it, and presenting them to her, looked very much disappointed, and grumbled forth her discontent: I taxed her with greediness, and spoke rather sharply, which had a good effect, for she went away and returned with a guanaco mantle, which she presented to me. During this day's barter, we procured guanaco meat, sufficient for two days' supply of all hands, for a few pounds of tobacco. It had been killed in the morning, and was brought on horseback, cut up into large pieces, for each of which we had to bargain. Directly an animal is killed, it is skinned and cut up, or torn asunder, for the convenience of carrying. The operation is done in haste, and therefore the meat looks bad; but it is well-tasted, excellent food: and, although never fat, yields abundance of gravy, which compensates for its leanness. It improves very much by keeping, and proved to be valuable and wholesome meat."

The supplies are indeed not so high-priced as

they would be in Smithfield or Leadenhall market.

"The Adelaide (sent to purchase provisions) brought sixteen hundred pounds of meat, which, with what was first obtained, amounted to four thousand pounds weight; and cost altogether ten pounds of tobacco, forty biscuits, and six pocket-knives. At first, a biscuit was considered equivalent to forty or fifty pounds of meat; but as the demand increased, the price rose four or five hundred per cent. With the Patagonians were two of Mr. Low's crew, who had left him. They were Portuguese, in a miserable state, and appeared to be thoroughly ashamed of being the companions of such a dirty set; they could not speak English, and could give us very little information. They had not then assumed the Indian garb, although, from the state of their clothes, they would very soon be obliged to adopt it. At Pecket's Harbour, a few words of the native language were collected, which are very different from those given by Falkner, in his description of the Patagonian natives: he says himself, that the language of the northern Indians differs materially from that of the 'Yacana Cunnees.'"

And here we must conclude.

The Works of Mrs. Hemans, with a Memoir of her Life. By her Sister. Vol. I. 12mo. pp. 352. Edinburgh, 1839. Blackwood and Co. London, Cadell.

HALF a century ago, and our poetry was in a sad state. It had the true *facies Hippocratica*, was round in the belly, and had spindle-shanks; but, thanks to common sense and the Muses, a day of renovated health was at hand, and, instead of looking like Bath or Cheltenham, our bards returned to the true Hippocrene: Shakspeare, Milton, and Spenser were once more acknowledged to be the heads of the faculty, and Drs. Darwin, Hayley, and Pratt were left without a patient.

But if, during the last thirty or forty years, man has done much, "in his degree," to dignify and adorn the literature of England, woman has done not less in hers; and between the two a prodigal harvest has been set before the public. Nor have these labourers encroached upon each other. Each sex has its fields of particular action; and, with general bonds of analogy, the products have their distinctive features. If Scott has depicted the many-coloured shows of human life, so has Maria Edgeworth; and if Byron has dissected down to the moving springs of the throbbing heart, so has Joanna Baillie, and with a hand scarcely less skilful. L. E. L. (for we wish to remember her by no other appellation) threw the mantle of imagination over the aspects of common life, with an adroitness equal to that with which Wilson has re-peopled Fairy-land; while, on the other hand, Mary Mitford has painted from observation with the truth and Flemish precision of a Crabbe. There may be greater force in Southey, and greater depth in Wordsworth; but who can deny that Caroline Bowles and Mary Howitt "hold up the mirror to Nature," and show us her reflected features, in a light that never "o'ersteps her modesty?" We need only no further from this posy of fair names, since illustrations are as "thick as blackberries."

It is with Felicia Hemans that we have at present to do, and with her alone. So, in a few brief sentences, we shall say our say regarding her genius, and the additions she has made to the stores of our national literature.

One great excellence then of the genius of

Mrs. Hemans is, that the tone of her poetry is uniformly exalted; it soars on eagles' wings; yet, at the same time, it is true to nature and feeling, and free from all exaggeration. No attainment is more difficult than this. One of the prominent follies of aspiring, yet mediocre minds, is to strike a high key-note at setting out; and, in the vain endeavour to sustain the same tone, to break down by degrees, and end in complete falsetto. Others batten to a diametrically opposite course. They crawl off on all fours, like Grimaldi of yore; and occasionally do so with a humility as clever as it is amusing. Then a demivolt is attempted in the shape of a simile, which, mayhap, causes us to laugh or stare; and the exhibition closes with the counterpart of the tailor's ride to Brentford. The difference between the two kinds of performances only exists in this, that, while the former falls below our expectations, the latter exceeds them.

Free from either of these faults and follies of tone, the style of Mrs. Hemans's poetry is lofty without exaggeration, and natural without meanness. In her choice of subjects, she is severe without being fastidious; and in her handling of them she is classical, without over-laying true feeling with the artifices of composition. *Quid tibi sit ornari.* She has looked on life and nature with her own eyes; and she has invested many common and familiar objects with a beauty unknown to them before. When we gaze on the sea, we think of "The Treasures of the Deep;" to the circle around the evening hearth occurs "The Graves of a Household;" the opening snow-drop speaks to us with "The Voice of Spring;" and the falling leaves remind us of "The Hour of Death."

"Leaves have their time to fall,
And flowers to wither at the north wind's breath,
And stars to set; but all—
Thou hast all seasons for thine own, O Death!"

It is this delicacy of perception, this deep feeling of the beautiful, this love and passionate admiration of the pure, the holy, the true, the exalted, and the domestic, which renders Mrs. Hemans so peculiarly the poet of woman. In her writings, the highest imagination is chastened by the most exquisite taste. Her poetry is directed to the noblest of all ends, the purification of the affections; and hence its great charm for the wise and good. Its high merits have given it more immediate notice with contemporaries; but in this will be found its more enduring claim to popularity. Every British mother must rejoice to find such a writer as Mrs. Hemans a favourite with her children.

For these and other reasons we were pleased to see a complete and uniform edition of the works of Mrs. Hemans announced, in a style and elegance befitting their merits. The demand for such a publication shows a healthy taste in the public; and we doubt not that its acceptance with readers will be equivalent with its just deserts. It can scarcely be otherwise; for, most assuredly, Felicia Hemans is now a British classic.

The preliminary volume on our table is almost entirely occupied by a very interesting memoir of Mrs. Hemans, from the pen of her sister (Mrs. Hughes); and from this narrative we now give two or three extracts. Hitherto the biographical notices of this distinguished lady have been most desultory and conflicting; some of them are, we might say, almost purely imaginary; and, if we except the sketch written by Mr. Moir (Delta), and prefixed to the "Poetical Remains"—the materials for which were furnished by her family—the outlines of

her life have been distorted in a manner scarcely to be credited in the case of a contemporary.

Birth and early Childhood.—"Felicia Dorothea Browne was born in Liverpool, on the 25th September, 1795. Her father, a native of Ireland, was a merchant of considerable eminence. Her mother, whose family name was Wagner, and who was of mingled Italian and German descent, was the daughter of the Imperial and Tuscan consul at Liverpool. The subject of this memoir (the fifth of seven children, one of whom died an infant), was distinguished, almost from her cradle, by extreme beauty and precocious talents. Before she had attained the age of seven, her father, having suffered commercial reverses, in common with many others engaged in similar speculations at that revolutionary era, broke up his establishment at Liverpool, and removed, with his family, into Wales, where, for the next nine years, they resided at Gwrych, near Abergele, in Denbighshire, a large old mansion, close to the sea, and shut in by a picturesque range of mountains. In the calm seclusion of this romantic region, with ample range through the treasures of an extensive library, the young poetess passed a happy childhood, to which she would often fondly revert, amidst the vicissitudes of her after-life. Here she imbibed that intense love of nature, which ever afterwards 'haunted her like a passion,' and that warm attachment for the 'green land of Wales;' its affectionate true-hearted people—their traditions, their music, and all their interesting characteristics, which she cherished to the last hours of her existence. After the loss of her eldest sister, who died young, her education became the first care of a mother, whose capability for the task could only be equalled by her devotedness: whose requirements were of the highest order; and whose whole character, presenting a rare union of strong sense with primitive single-mindedness, was an exemplification of St. Paul's description of that charity which 'suffereth long and is kind,' 'seeketh not her own,' 'thinketh no evil.' Her piety was sober, steadfast, and cheerful; never displaying itself in high-wrought excitements or ostentatious professions, but silently influencing every action of her life, and shedding a perpetual sunshine over all which came within its sphere. How truly the love of this exemplary mother was returned and appreciated, may be traced in many affecting instances through the following pages, from the artless birthday effusion of the child of eight years old, to the deathbed hymn of agonised affection, in the matured years of the daughter, herself a matron and a mother. And when that love had been sealed and sanctified by death, still more fervent are the yearnings breathed forth in the passionate adjuration to 'the charmed picture' of the

"Sweet face that o'er her childhood shone;"

and last and deepest, and best of all, in the sonnet "To a Family Bible," in which the mourner, chastened yet consoled, looks back upon the days when her mother's lips were wont to breathe forth the sacred lore of those hallowed pages, and meekly and thankfully acknowledges it to have been—

"A seed not lost—for which, in darker years,
O Book of Heaven! I pour, with grateful tears,
Heart-blessings on the holy dead and thee."

"It may well be imagined how the heart of such a mother would be garnered up in a child so gifted as the bright and blooming Felicia, whose extraordinary quickness in acquiring information of every kind, was not less remarkable than the grasp of memory with which she

retained it. She could repeat pages of poetry from her favourite authors, after having read them but once over; and a scarcely less wonderful faculty was the rapidity of her reading, which even in childhood, and still more in after-life, was such, that a bystander would imagine she was only carelessly turning over the leaves of a book, when, in truth, she was taking in the whole sense as completely as others would do whilst poring over it with the closest attention. One of her earliest tastes was a passion for Shakspeare, which she read, as her choicest recreation, at six years old; and in later days she would often refer to the hours of romance she had passed in a secret haunt of her own—a seat amongst the branches of an old apple-tree—where, revelling in the treasures of the cherished volume, she would become completely absorbed in the imaginative world it revealed to her. The following lines, written at eleven years old, may be adduced as a proof of her juvenile enthusiasm:—

"Shakspeare.

I love to rove o'er history's page,
Recall the hero and the sage;
Revive the actions of the dead,
And memory of ages fled:
Yet it yields me greater pleasure
To read the poet's pleasing measure:
Led by Shakspeare, bard inspired,
The bosom's energies are fired:
We learn to shed the generous tear
O'er poor Ophelia's sacred bier;
To love the merry monastic scene,
With fairy elves in valleys green;
Or, borne on fancy's heavenly wings,
To listen while sweet Ariel sings.
How sweet the native woodnotes wild!
Of him, the Muse's favourite child!
Of him whose magic lays impart
Each various feeling to the heart!"

"At about the age of eleven, she passed a winter in London with her father and mother; and a similar sojourn was repeated in the following year, after which she never visited the metropolis. The contrast between the confinement of a town life, and the happy freedom of her own mountain home, was even then so distasteful to her, that the indulgences of plays and sights soon ceased to be cared for, and she longed to rejoin her younger brother and sister in their favourite rural haunts and amusements—the nuttery wood, the beloved apple-tree, the old arbour, with its swing, the post-office tree, in whose trunk a daily interchange of family letters was established, the pool where fairy ships were launched (generally painted and decorated by herself), and, dearest still, the fresh, free ramble on the seashore, or the mountain expedition to the Signal Station, or the Roman Encampment."

Studies, Rambles, and Predilections.—"In 1809, the family removed from Gwrych to Bronwyflla, near St. Asaph, in Flintshire. Here, though in somewhat less of seclusion than during the previous years of her life, her mind continued to develop itself, and her tastes and pursuits to embrace a progressively wider range. The study of the Spanish and Portuguese languages was added to the already acquired French and Italian. She also read German, though it was not until many years later that she entered with full appreciation into the soul and spirit of that magnificent language, and wrote of it as 'having opened to her a new world of thought and feeling, so that even the music of the "Eichenland," as Körner calls it, seemed to acquire a deeper tone, when she had gained a familiarity with its noble poetry.' The powers of her memory were so extraordinary, as to be sometimes made the subject of a wager by those who were sceptical as to the possibility of her achieving what she would, in the most undoubting simplicity, un-

dertake to perform. On one of these occasions, to satisfy the incredulity of one of her brothers, she learned by heart, having never read it before, the whole of Heber's poem of 'Europe' in one hour and twenty minutes, and repeated it without a single mistake or a moment's hesitation. The length of this poem is four hundred and twenty-four lines. She had a taste for drawing, which, with time and opportunity for its cultivation, would, doubtless, have led to excellence; but having so many other pursuits requiring her attention, she seldom attempted anything beyond slight sketches in pencil or Indian ink. Her correctness of eye, and the length and clearness of her vision, were almost as proverbial amongst her friends as her extraordinary powers of memory. She played both the harp and piano with much feeling and expression, and at this time had a good voice, but in a very few years it became weakened by the frequent recurrence of affections of the chest, and singing was consequently discontinued. Even in her most joyous days, the strains she preferred were always those of a pensive character. The most skillful combinations of abstract musical science did not interest or please her: what she loved best were national airs, whether martial or melancholy (amongst these the Welsh and Spanish were her favourites), and whatever might be called suggestive music, as awakening associations either traditional, local, or imaginary. There are ears in which certain melodies are completely identified with the recollection of her peculiarly soft and *sostenuto* touch, which gave to the piano an effect almost approaching to the swell of an organ. Amongst these may be mentioned Jomelli's 'Chaconne,' Opinsky's well-known 'Polonaise,' some of the slow movements from the ballet of 'Nina,' and a little touching air called the 'Moravian Nun,' brought from Germany by her eldest brother, who had learned it by ear. In after-life, when, like 'a reed shaken by the wind,' her frame had been shattered by sorrow and suffering, the intensity of her perceptions was such, that music became a painful excitement, and there were times when her nerves were too much overwrought to bear it. Allusions to this state of feeling are found in many of her poems; and in one of her letters, referring to a work of Richter's, she thus expresses herself:—'What a deep echo gives answer within the mind to the exclamation of the 'immortal old man' at the sound of music! 'Away! away! thou speakest of things which, throughout my endless life, I have found not, and shall not find!' All who have felt music, must, at times, I think, have felt this, making its sweetness too piercing to be sustained.' Some of the happiest days the young poetess ever passed were during occasional visits to some friends at Conway, where the charms of the scenery, combining all that is most beautiful in wood, water, and ruin, are sufficient to inspire the most prosaic temperament with a certain degree of enthusiasm; and it may therefore well be supposed, how fervently a soul, constituted like hers, would worship Nature at so fitting a shrine. With that happy versatility which was at all times a leading characteristic of her mind, she would now enter with childlike playfulness into the enjoyments of a mountain scramble, or a pic-nic water-party, the gayest of the merry band, of whom some are now, like herself, laid low, some far away in foreign lands, some changed by sorrow, and all by time; and then, in graver mood, dream away hours of pensive contemplation amidst the gray ruins of that noblest of Welsh castles, standing,

as it then did, in solitary grandeur, unapproached by bridge or causeway, flinging its broad shadow across the tributary waves which washed its regal walls. These lovely scenes never ceased to retain their hold over the imagination of her whose youthful muse had so often celebrated their praises. Her peculiar admiration of Mrs. Joanna Baillie's play of 'Echwald' was always pleasantly associated with the recollection of her having first read it amidst the ruins of Conway Castle. At Conway, too, she first made acquaintance with the lively and graphic 'Chronicles' of the chivalrous Froissart, whose inspiring pages never lost their place in her favour. Her own little poem, 'The Ruin and its Flowers,' which will be found amongst the earlier pieces in the present collection, was written on an excursion to the old fortress of Dyganwy, the remains of which are situated on a bold promontory near the entrance of the river Conway; and whose ivied walls, now fast mouldering into oblivion, once bore their part bravely in the defence of Wales; and are further endeared to the lovers of song and tradition, as having echoed the complaints of the captive Elphin, and resounded to the harp of Taliesin."

In 1808, a collection of her juvenile poems was given to the public; and in 1812 another volume, entitled "Domestic Affections," which is here reprinted, as a specimen of her style of juvenile composition. What we most admire, we imitate; and the resemblance to "The Pleasures of Hope" is too apparent. The whole composition, however, is full of promise, and many of the thoughts and images are pregnant with beauty and vigour. In the preceding year, 1811, she had married Captain Hemans—an ill-assorted union, to say the least of it;—but we have little of that gentleman in the Memoir; and, in 1818, he took his departure for good and all to Rome, where, we presume, he still resides. We hear no more of him than what the following brief passage contains:—

"In the year 1818, Captain Hemans, whose health had been long impaired by the previous vicissitudes of a military life, determined upon trying the effects of a southern climate; and, with this view, repaired to Rome, which he was afterwards induced to fix upon as his place of residence. It has been alleged, and with perfect truth, that the literary pursuits of Mrs. Hemans, and the education of her children, made it more eligible for her to remain under the maternal roof, than to accompany her husband to Italy. It is, however, unfortunately but too well known, that such were not the only reasons which led to this divided course. To dwell on this subject would be unnecessarily painful, yet it must be stated, that nothing like a permanent separation was contemplated at the time, nor did it ever amount to more than a tacit conventional arrangement, which offered no obstacle to the frequent interchange of correspondence, nor to a constant reference to their father in all things relating to the disposal of their boys. But years rolled on—seventeen years of absence, and consequently alienation—and from this time to the hour of her death, Mrs. Hemans and her husband never met again. In a position so painful, as must ever be that of a woman for whom the most sacred of ties is thus virtually broken, all outward consolations can be but of secondary value; yet much of what these could afford was granted to Mrs. Hemans, in the extending influence of her talents, the growing popularity of her writings, and the warm interest and attachment of many private friends. Amongst the most devoted of these, from an early period of their acquaint-

ance, were the family of the late Bishop of St. Asaph, the good and lamented Dr. Luxmoore. In this kind-hearted prelate, Mrs. Hemans possessed a never-failing friend and counsellor, whose advice, in the absence of nearer ties, she at all times sought with affectionate reliance, and whose approbation she valued with appreciating respect. His paternal kindness was not confined to herself, but extended with equal indulgence to her children, who were so accustomed to the interest he would take in their studies and sports, that they seemed to consider themselves as having an inherent right to his notice and favour; and would talk of 'their own bishop' in an amusing tone of appropriation. Many years afterwards, in a letter from Chiefawood, their mother thus alludes to the recollection of former days: 'I have been much at Abbotsford, where my boys run in and out as if they were children of the soil, or as if it were 'the palace.'"

[To be continued.]

Reconnoitering Voyages and Travels, with Adventures in the New Colonies of South Australia; a Particular Description of the Town of Adelaide, and Kangaroo Island; and an Account of the Present State of Sydney and Parts Adjacent; including Visits to the Nicobar and other Islands of the Indian Seas, Calcutta, the Cape of Good Hope, and St. Helena, during the Years 1836, 1837, 1838. By W. H. Leigh, Esq., late Surgeon of the Australian Company's Ship "South Australian." Embellished by numerous Engravings. 8vo. pp. 291. London, 1839. Smith, Elder, and Co.

NEARLY all the works we have met with, having titles similar to the present volume, have been but so many seductions, traps, or inducements to emigration into the particular quarters patronised by the writers. Mr. Leigh occupies the opposite ground; and his demolition of the *El Dorados* he has visited, is a warning, not only so far as they are concerned, but in all cases where we see the rose colour so lavishly applied in painting the delights which await emigrants in any portion of the globe. With this general remark, we shall not pursue his steps further than their enumeration in the title-page, but select a few examples of the nature of his statements, and leave them to the reflection of readers of sense and judgment. The following are general remarks:—

"I never could recommend thoughtless young men to come out to these young colonies, abandoning the gay dissipation of England for the gloomy wilds of Australia, where nothing but the strictest perseverance can make way. The comforts of society must be disregarded for awhile; years must elapse before you can think of enjoying the comforts of happy England. The want, not merely of luxuries, but of even the necessities of life, must often be submitted to. Even, after all your toil in preparing your foster-home, are you secure from disappointment, since the long drought to which these climes are subject may destroy all your labour, and leave the once verdant field, upon which you anchored all your hopes, a brown and withered wilderness. Forget, if it be possible, that you have lived in England; forget, at all events refrain from comparing your native with your adopted country, and then, with your wife and domestics, your little home, though rude as the huts which held our sturdy forefathers in Britain, you may have many comforts; indeed, I have spent as gay and as happy a night in a hut composed of bark and reeds, or under a log-hut, as ever I passed in

the vicinity of Turkey carpets, purple and fine linen. There is a peculiar fascination in these scenes—a freedom that exhilarates. There is no idling all the morning among the vanity shops. That delightful part of the day is spent by the women in the more substantial and beneficial occupation of the kitchen. In using the word 'kitchen,' I should explain that it does not exactly mean a receptacle for fat cooks, fat joints, and greasy scullions; but a place where one sees a fire, a pot swung *à la pique*, a bench, a bundle of wood, perhaps a dog or two lying by the fire—Miss, or Sally So-and-So occasionally cracking a faggot, which her good little brother had been labouring to cut down behind the hut—a piece of tarpauling over-head, sometimes bounded on the right by the hut, and on the left by thick bush. This is the kind of kitchen most in fashion in these parts; and, when ornamented by the hind-quarter of a kangaroo, or a young wallaba, cuts no insignificant appearance about two or three o'clock in the day, when the cloth is laid upon two boards, on trestles, just in the shade of a fine young gum-tree."

Of Kangaroo Island, we are told:—

"Capt. Flinders tells us the island abounds with kangaroos and emus, and Capt. Sutherland seconds the assertion—there was nothing to be feared. Accordingly, I purchased a splendid rifle, double-barrelled gun, single gun, pistols, powder, and shot. Now mark the interpretation of our dreams. There is not a kangaroo within twenty or thirty miles of the settlement; if you want to shoot one, you must prepare for a fortnight's march in the interminable bush; and, when shot, how is it to be got home? According to men who have lived there, there has no emu been seen these ten years; and, as it regarded the cow-jobbing business, when we landed our two goats, the manager said, 'Pray send some corn with them, for we have not a blade of grass upon the island!!!' Nor was there; for what little grass springs up is a long way from Kingscote, and is only periodical, the dry weather destroying it,—so,

'Away went the cow, and the joint was not done!

The dreamer awoke!—and the pudding was gone!"

I shall have occasion to remark, anon, on several other visionaries and their adventures; but at present we will return to the emigrants, whom we left on board with the islander, who interpreted their dreams. 'What are you all come here for?' he inquired. This was a very natural question, but it proved a poser. 'And how do you mean to live?' he added. 'Oh, why we mean to land to-morrow, and go into our houses—where are they?' 'I don't know that there are any other houses than those you see; and they are all inhabited. Perhaps you don't know the prices of provisions here?' 'No.' 'Well, then, I will tell you. We pay 9d. for Irish salt-pork, wet out of the pickle; pickled bacon from Sydney, 2s. 4d.; ham, 2s. 10d.; cheese, when there was any, 2s. 4d.; seaman's junk, *alias* salt-horse, *alias* mahogany, 6d.; with this additional advantage, that if you purchase at the stores two pounds of pork, you are obliged to purchase also six pounds of the junk, or you are not allowed to be a customer at all! You are not permitted to buy flour, unless you buy with it biscuits which are scarcely eatable. A kind of bird, purchased by the monopolising storekeeper at a 1d. each, is retailed by him at 10d.,—and none but the strongest stomachs can endure them. Salt butter, and that not of the best, is 1s. 8d. There is no fresh water to be had near the settlement: what we use is fetched across the

Bay from Point Marsden, a distance of seven miles, and we pay a penny a bucket for it. We seldom get any fresh meat, but an animal called a wallaba, and one called a bandicoot, resembling a large English rat. We have no vegetables of any description, not even a potato.' This information was productive of fervent benedictions on Squire This and Squire That, who had so grossly misrepresented the whole. The committee, it was repeatedly argued by them, had pledged their word—the bond of honourable men,—that good provisions of every description should be retailed to them at 5 per cent above the Sydney prices—that houses, such as there are in New South Wales, should be ready for their reception until, with their own and others' assistance, they erected more suitable dwellings. Upon the faith of these promises they had left their homes, and had arrived. They had come 'strangers, in a land of strangers,' after a long voyage, without a morsel of fresh meat or vegetable, and without a place to rest their heads. They were informed, that on the morrow they should be turned into a part of the wood which is to be cleared; a small tent is to be assigned to them, into which two families are to be thrust, without the prospect of any other during the rainy season, which is now about to commence. Such was the state of affairs on our arrival in the land to which, for so long a time, every thought was directed, and to attain which, hardships and peril had been encountered without a murmur. However, so it was, and all that was left for us was to make the best of a bad bargain.

"We now come to treat of some of the lesser annoyances of this country. The flea in Australia is about twice or thrice as large as the English species. I have seen fleas that were nearly half as large as a barleycorn; they appear to breed in the sand, and what so many millions of fleas feed upon I cannot imagine, as not one in a million of them can get a bite at an animal. Everybody swarms with fleas, and those persons who are habitually unclean are a moving mass. My profession called me frequently to the bedside of persons of this description, and I found that keeping a respectable distance was preferable to close quarters. Notwithstanding I gave a whole hour in the morning to ejecting these pests from my bed, I seldom have found the bill of mortality less than thirty. One plan practised with effect in the Swan River region, by the colonists, is to take the bedding, blankets, &c., and spread them near an ant-hill, the denizens of which will seize the sleeping flea and carry him off."

Let us now change the scene to Sydney:—

"I attended at the police-office on several occasions, and derived so much entertainment, that it would be selfish to deprive my reader of a share of it. Come, then, my friend, with me, and we will walk up George Street, and stroll through the market-house, which is cool and shady, and lies all in our way. This large and highly convenient building is a great ornament and credit to the town, and most articles of the colony are here exhibited for sale. Now, turning one angle of this building, we command a full view of the 'Babes in the Wood,' of whom I have often beheld as many as eight or ten at a time. Now we enter the court, which is a police-office, for the trial of minor offences;—the hall of the big-wigs being a spacious building in another situation. This room, to which we now introduce you, is not one of magnitude, but is accommodated with seats at one side, resembling pews in a church; the

magistrate is a little exalted, in a kind of pulpit; his clerk sitting just under him. Now the door opens, and in is escorted Mary Flagon, in glorious dishabille, with a fearfully black eye, and a few other interesting mementos. Now the charge on which Mary is indicted being established, the gentleman in the pulpit requests to know the date of the first appearance of Mary in these distant climes, and the proposed period of her sojourn.—Justice. I suppose the old thing over again;—drunk and disorderly, eh?—Mary. Yes, my lord.—Justice. Two months;—bread-and-water. The next candidate is another inebriate, whose feats of arms are manifest on the countenances of several who appear in the witness-box. He is sentenced to hard labour, and bread-and-water for a month, with a bonus of 300 lashes to begin with. The other cases are varied by complaints of the masters, at whose desire 200 lashes are awarded to the culprit instantly; the question, 'Do you press further punishment?' being propounded to the master. The lash is wielded smartly at this office, and the thongs of it are seldom dry from ten till three o'clock. Were it not for this method of punishing saucy, indolent, and drunken assigned servants, they could not be endured. Another advantage resulting from corporal punishment is, that the moment it is awarded, the offenders are conducted into the apartment adjoining the trial-room, and there is a man whose duty it is to give them 'the benefit of the act,' whence they return to their appointed masters. I certainly have witnessed dreadful backs, principally from flogging with the foul cat; for it is not washed after the whipping of the poor wretches, but hung up, when it dries; the blood hardens the whip-cord, and the first stroke cuts like a knife;—thus the punishment is doubled. I had a poor creature under my care who had been treated in this manner; and, whether it was from his state of body, the unusual malignity of the blood of the man who was whipped before him, or my want of skill in dressing his wounds, it is certain that he was three weeks unable to move, without breaking open a fresh gap that bled in a fearful manner. This same man,—who to my eyes looked a good sort of servant, and I believe was such,—had received in the colony 1800 lashes, and chiefly for drunken rioting."

At Paramatta.

"I left the scene early in the afternoon, joined the steamer, and at six I was just in time to see what are called the 'canary birds,' returning from labour. These were the convicts dubbed canaries, from their yellow and brown dress. They were marched into their barracks by a guard of soldiers, who also reside there; and as they passed the steamer, they cast a melancholy look towards the happy faces which presented so striking a contrast to their own. I wish the thieves and vagabonds at home could see such scenes as these; it would have a better effect than the exhibition of a poor wretch on the scaffold, and is assuredly a worse punishment. At Sydney they do not distress the feelings of the inhabitants by publicly hanging the luckless wretches doomed to die; but if any one is particularly desirous to witness the scene, and cannot get into the gaol-yard, where they are turned off, he may, by standing on a particular bank near the gaol wall, indulge his eyes with the sight of some half-dozen at a time paying the debt they owe to society. The store that supplies the ropes, &c. to Jack Ketch is, on the morning of execution, visited by that functionary, when the following dialogue ensues:—'Mornin', Mr. —; what's o'clock?'

—'Half-past seven.'—'Well, I want rope and soap for six;' the fellow thinking as little of the performance of his revolting duties as a butcher of the execution of his."

Enough of the Charms of Emigration.—

"England, with all thy faults, I love thee still;"

and I truly wish thou wert still in every sense of the word, and neither distracted by party, faction, nor fanaticism.

The Voiage and Travaile of Sir John Maundevile, Knt., &c. &c. With an Introduction, Notes, and Glossary. By J. O. Halliwell, Esq. F.S.A. F.R.A.S. 8vo. pp. 326. London, 1839. E. Lumley.

OLD Maundevile is too universally known to need a description from us. His credulity has been acknowledged for hundreds of years; and it has been argued that where he speaks directly, of his own authority, his facts are to be depended upon, though confessedly his whole work is to be taken with at least half-a-bushel of salt. Be this as it may, his prodigious popularity, and the amusing curiosity of his state-

ments, render him a writer most worthy to be re-edited; and we rejoice to see that the task has fallen into such competent hands. The Introduction and other additions of Mr. Halliwell are all that could be desired by the book-worm or general reader; and to these we refer for what the traveller was, and what has been done for his travels, and what has been thought of them, and where the original MSS. and editions, &c., are to be found, and how all is to be best understood.

This reprint is from the edition of 1725; or rather from the same MS. in the Cotton collection; and of course, contains an account of all the marvels of Syria, Jerusalem, "Inde, Prester John's Lande, and other ilands and countrys" which were illustrated by the famous pen of Sir John Maundevile. But we question much if the pencil did not contribute as much as the pen to his extraordinary popularity, and will therefore take the liberty of reviewing him more with reference to the latter than to the former. Behold us, then, with the *Soudan of Babiloyne*, with whom (and in his wars) our

countryman dwelt a long time; for he was not one of your modern hasty and hurried tourists, who can furnish you three volumes out of three months' travelling; but a conscientious and pains-taking fellow, who could make only one volume out of a journey of many years in the most remarkable parts of the world. Of him, after describing his mighty power, it is told us:—

"And the Soudan hathe 4 Wyfes, on Cristene and 3 Sarazines: of the whiche, on dwellethe at Jerusalem, and another at Damasce, and another at Ascalon. And whan hem lyst, thei remewen to other Cytees. And whan the Soudan wille, he may go visite hem. And he hathe as many Paramours, as hym lykethe. For he makethe to come before him, the fairest and the nobleste of Birthe and the gentyllest; Damesles of his Contree, and he makethe hem to ben kept and served fulle honourably, and whan he wole have on to lye withe him, he makethe hem alle to come before him; and he beholdethe in alle, whiche of hem is most to his plesance, and to hire anon he sendethe or

castethe a Ryng fro his Fyngre: And thanne anon sche schalle ben bathed and richely atyred, and anoynted with delicat thinges of swete smelle, and than lad to the Soudane's Chambre. And thus he dothe, als often as him list, when he will have any of hem."

These *beauties* put us in mind of the ludicrous caricature of one of our naval captains being complimented with the choice of a wife out of the lot belonging to some King of Ashantee or Fooloo—no wonder the soudan was envied by all the rest of mankind! In Ethiopia they do not seem to be so favoured by Nature. *Ex. gr.:*—

"Ethiopia is departed in 2 princypalle parties; and that is, in the Est partie and in the Meridionelle partie: the whiche partie meridionelle is clept *Moretana*. And the folk of that Contree ben blake y now, and more blake than in the tother partie; and thei ben clept *Mowros*. In that partie is a Welle, that in the day it is so cold, that no man may drynke there offe; and in the nyght it is so hott, that no man may suffre his hond there in. And bezonde that partie, toward the Southe, to passe by the See Oceaan, is a gret Lond and a gret Contrey: but men may not duelle there, for the fervent brennyng of the Sonne; so is it passyng hoot in that Contrey. In Ethiopia alle the Ryvers and alle the Watres ben trouble, and thei ben somdelle salte, for the gret hete that is there. And the folk of that Contree ben lyghtly dronken, and han but litille appetyt to mete: And thei han comounly the Flux of the Wombe: and thei lyven not longe. In Ethiopia ben many dyverse folk: and Ethiopia is clept *Cusia*. In that Contree been folk, that han but o foot: and thei goe so fast, that it is marvaylle: and the foot is so large, that it schadowethe alle the Body azen the Sonne, whanne thei wole lye and reste hem."

In another *His* we find "wyldes geese" with two necks, very like the Swan in Lad Lane; to which latter sign we refer for a facsimile of the likeness given of the former, while we pass to Maucy, a most delightful "contree in Inde," where "ben white hennes withouten fetheres: but thei heren white wolle, as scheep don here." They are so picturesque that we must copy them—perhaps their progenitors were the fowls whose footsteps Dr. Buckland has detected in modern geology as they ran or marched along the sands! But we have done with conjecture, and so come to an end with an undoubted truth:—

"In passyng be the Load of Cathaye, toward the highe Ynde, and toward Bacharye, men passen be a Kyngdom, that men clepen *Caldilhe*; that is a fulle fair Contree. And there growethe a maner of Fruyt, as though it weren *Gowrdes*: and whan thei ben ripe, men kuten hem a to, and men fynden with inne a lytyle Best, in *Flesche*, in Bon and Blode, as though it were a lytyle *Lomb*, with outen Wolle. And men eten bothe the Frut and the Best: and that is a gret *Marvaylle*. Of that Frute I have eten: alle thoughte it were wonderfull: but that I knowe wel, that God is marvellous in his Werkes. And natheles I tolde hem, of als gret a *Marvaylle* to hem, that is amonges us: and that wes of the *Bernakes*. For I tolde hem, that in oure Contree weren Trees, that beren a Fruyt, that becomen *Brides flesyng*: and tho that fallen in the Water, lyven; and thei that fallen on the Erthe, dyen anon: and thei ben right gode to *Mannes mete*. And here of had thei als gret

"See Pliny's 'Natural History,' lib. vii. c. 2, q. Item hominum genus, qui Monocelli vocantur, singulis crebris, sine periculis ad saltum; eodemque; Sceloporus vocari, quod in majori actu, humi jacentes respiciunt, nullo se potius protegent."

marvaylle, that sūme of hem trowed, it were an impossible thing to be."

Burns says,

"Some books are lies from end to end,
And some great lies were never penned;
But this that I am going to tell
Is just as true as —"

Sir John Maundevile.

A Genealogical and Heraldic Dictionary of the Peerage and Baronage of the British Empire. By John Burke, Esq. Sixth Edition. London, 1836. Colburn.

EVERY new edition of this work is essentially a new book, not alone from the peculiar nature of the subject-matter itself, changeable and progressive though it be beyond almost any other, but from the persevering research and industry of the author, who brings to every revision such a fresh store of information as enables him, while correcting erroneous, and clearing up disputed statements, to add greatly to the extent and importance of his labours. Thus, within a very few years, has a small duodecimo grown in size to the compass of the large volume now before us—a royal octavo of some twelve or thirteen hundred closely printed pages, a veritable dictionary in bulk as in fashion. Before we quote some passages which we have noted from the body of this leviathan of peerages, we shall extract the first paragraph of the introduction, as an accurate estimate of the precise position which the nobility of England hold within her social circle—a nobility, we do not hesitate in describing as the finest, the bravest, and the most liberal aristocratic body that ever contributed to sustain by its solid strength, and to adorn by its simple grandeur, the fabric of a free and mighty empire: and why? because, in its construction, it is essentially democratic, an adaptation of the old patriarchal system to modern refinement, the privileged chief united to the people by all the ties of feeling, interest, and affection, a democratic aristocracy upholding a republican monarchy. But hear Mr. Burke:—

"The nobility of England, like the nobles of other countries, are a privileged order; but, personally, their immunities are very unimportant, and minister much more to the pomp than the power of the possessor. In their legislative capacity, the peers of England form one of the estates of the realm—that immediately between the crown and the people; in their judicial, they constitute its highest tribunal and court of dernier appeal: their functions—legislative and judicial—are inherent and exercised without responsibility. The nobility of England bear the ensign of dominion in the minor crown; but it is merely the ensign—they wield no minor sceptre. They are clothed in the purple and ermine of royalty, but they are invested with no regal jurisdiction, and they enjoy no sovereign signiory. In no one instance can the proudest peer transgress with impunity the laws of the land; in no one instance can the haughtiest lord invade the rights of the humblest commoner; and in no one instance (in matters of moment) can a noble exercise authority which a commoner dare not assume. Thus, then, the aristocracy of the British Empire, like its other imitable institutions, exists but as a link in the great chain which connects the community at large,—a link more polished, perhaps, than any of the other—hardly more powerful."

Among the numerous expedients of modern statesmen to force bills through parliament, none, we think, at all comparable to the following:—

"Sir Edward Montagu had been speaker, at one time, of the House, and the following anecdote is related of him when filling the chair:—A bill of subsidies not passing, Mr. Speaker was sent for by the king, and thus addressed while on his knees in the royal presence: 'Ho! will they not let my bill pass?' and laying his hand on the head of Montagu, Henry continued, 'Get my bill to pass by such a time to-morrow, or else by such a time this head of yours shall be off.' The speech was brief and conclusive; for we are told that Sir Edward 'wrought so effectually, that before the time prescribed, the bill passed with the approbation of the House, and the sovereign's satisfaction.'"

In the olden, as well as in modern times, our pugnacious "hereditary bondsmen," on the other side of St. George's Channel, had a very decisive way of adjusting disputations:—

"Two near kinsmen of the noble family of the O'Connors having charged each other with sundry treasons in the late rebellion, and desiring a trial by combat, the lords justices consented to it. Whereupon all things being prepared, according to the customary laws in such cases, and the lords justices, the lords of the council, judges, &c., sitting in their places, every one according to his degree, the appellant, stripped in his shirt, was brought before the court with only his sword and target, and when he had done his reverence to the lords justices and the court, was set on a stool: the defendant was likewise brought in the same order, and with the like weapons, and placed over against the appellant. After the challenge was read, each combatant took an oath of what he averred, and that it was true, and would justify the same both with sword and blood. Then the signal, by sound of trumpet, being given them to engage, the appellant did not only disarm the defendant, but also, with the sword he took from him, cut off his head, and on the point thereof presented it to the lords, who thereupon acquitted him."

Turning from Ireland to Scotland, we find a very spirited narrative of the heroic death of the

Douglas of Otterbourne.—"This distinguished chieftain making an excursion into England, in 1368, penetrated to the gates of York; whence returning spoil-laden, his lordship had many skirmishes with the English at Newcastle, in one of which he became possessed of the pennon of Henry Percy (Hotspur), and vaunting that he should erect it on the pinnacle of his own castle, Percy retorted with an oath, 'Thou shalt never bear it out of Northumberland'; and to uphold by arms the declaration, himself and his brother, Ralph Percy, attacked Douglas in his camp at Otterbourne, 19th Aug. 1368, when a furious conflict ensued, wherein Lord Douglas fell; but the Percys eventually sustained a signal defeat. While Douglas lay wounded in the brunt of the battle, one of his knightly companions (Sindair) inquired, 'How goes it, cousin?' 'But so-so; praise be to God,' replied the sinking soldier, 'few of my ancestors have died in chambers or in beds. Avenge me, for I die. My heart faints too rapidly. Raise again my banner, and shout 'Douglas!' But tell not friend nor foe how it fares with me, for my enemies would exult, and my friends be disconsolate.'"

Another noble, Richard, sixth Earl of Anglesey, offers a broad contrast to this gallant chieftain:—

The Earl of Anglesey was not left in uninterrupted enjoyment of the honours; for soon

after his accession, a claimant arose in the person of Mr. James Annealey, who asserted that he was himself the son of Arthur, fourth Lord Altham, and a publication, entitled 'The Adventures of an Unfortunate Young Nobleman,' gave a very extraordinary and interesting narrative of his case. In that statement it was alleged, that Mr. Annealey was the true and lawful son and heir of Arthur, Lord Altham, and that he had been kidnapped and transported by his uncle Richard, to make room for his own accession to the honours and estates of the family. Mr. Annealey followed up the matter, instituted a suit at law for the recovery of the estates, and, after a trial in the Court of Exchequer in Ireland, James Annealey *versus* Richard, called Earl of Anglesey, begun 11th Nov. 1743, and continued daily, by adjournment, to the 25th of the same month, obtained a verdict. We believe, however, that he did not live long after, as the uncle, notwithstanding this decision, continued to enjoy the honours and fortune. The conduct of that person, throughout the whole course of his iniquitous career, fully sustained the presumption that he had been very capable of committing the foul crime thus laid to his charge. He is said to have married three wives, two of whom he heartlessly abandoned, and the offspring of the third was unable but partially to establish his legitimacy. The second lady, Miss Simpson, he wedded when a half-pay officer, without title or fortune, and for some years afterwards was chiefly maintained by her father and friends. After his accession to the barony of Altham, and subsequently to the earldom of Anglesey, this lady was received at the Vice-regal Court in Dublin as the consort of his lordship, and so introduced by himself. He cohabited with her for several years, during which time he had three daughters, and these, with their mother, he eventually left to starve. His third wife was a Miss Donovan, whom he espoused in the lifetime of the second, under the allegation that he had a wife living when he married Miss Simpson, and that his marriage with that unhappy lady was therefore illegal. To Juliana Donovan he appears to have been married in 1741, immediately after the decease of Anne Phrurst, the first wife, by his own chaplain, the Rev. L. Neil, at his seat, Camolin Park, County of Wexford; and by her (who married after his decease Matthew Talbot, Esq. of Castle Talbot, county of Wexford), he had one son and two daughters."

We have this origin of the Duke of Leinster's supporters:—

"Thomas Fitzgerald, Lord of Offaley, was nicknamed *Nappagh Simiacus*, or the ape, a surname thus acquired—being only nine months old when his father and grandfather fell at Callen, his attendants rushing out at the first astonishment excited by the intelligence, left the child alone in its cradle, when a baboon, kept in the family, took him up, and carried him to the top of the steeple of the Abbey of Tralee; whence, after conveying him round the battlements, and exhibiting him to the appalled spectators, he brought him down safely, and laid him in his cradle. From this tradition the supporters of the house of Leinster are said to have been adopted."

And thus the parentage of Mr. Secretary Pepys is given:—

"This Samuel Pepys (of the same family as Lord Cottenham) was of Steeple Bumpstead, in Essex. He died in 1665, and was grandfather, we presume, of Samuel Pepys, author of the 'Diary,' secretary of the admiralty, temp. Charles II. and James II. His (the

secretary's) father was John Pepys, a citizen of London, where he followed the trade of a tailor about the year 1660; he soon afterwards retired to Brompton, in Huntingdonshire, at which place he inherited a small property of 40l. a-year from an elder brother, and died there in 1680."

The singular privilege which Lord Kingsale enjoys of wearing his hat in the royal presence, is of very ancient date, and of very honourable origin. Mr. Burke thus refers to it:—

"Sir John de Courcy, earl of Ulster, continued in high favour during the remainder of the reign of his royal master, and performed prodigies of valour in Ireland; but upon the accession of King John, his splendour and rank having excited the envy of Hugh de Lacie, appointed governor of Ireland by that monarch, the Earl of Ulster was treacherously seized while performing penance unarmed and barefooted in the churchyard of Down-Patrick, on Good Friday, anno 1203, and sent over to England, where the king condemned him to perpetual imprisonment in the Tower, and granted to Lacie all the earl's possessions in Ireland. After his lordship had been in confinement about a year, a dispute happening to arise between King John and Philip-Augustus of France, concerning the Duchy of Normandy, the decision of which being referred to single combat, King John, more hasty than advised, appointed the day, against which the King of France provided his champion; but the King of England, less fortunate, could find no one of his subjects willing to take up the gauntlet, until his captive in the Tower, the gallant Earl of Ulster, was prevailed upon to accept the challenge. But when every thing was prepared for the contest, and the champions had entered the lists, in presence of the monarchs of England, France, and Spain, the opponent of the earl, seized with a sudden panic, put spurs to his horse, and fled the arena; whereupon the victory was adjudged with acclamation to the champion of England. The French king being informed, however, of the earl's powerful strength, and wishing to witness some exhibition of it, his lordship, at the desire of King John, cleft a massive helmet in twain at a single blow. The king was so well satisfied with this signal performance, that he not only restored the earl to his estates and effects, but desired him to ask any thing within his gift, and it should be granted. To which Ulster replied, that having estates and titles enough, he desired that his successors might have the privilege (their first obeisance being paid) to remain covered in the presence of his majesty, and all future kings of England, which request was immediately conceded."

We might, did space and time permit, extend our extracts to any limit, for the volume is one to be read, as well as to be referred to. The introduction of the article "Foreign Noblemen, subjects by birth of the British Crown," presents the pedigrees and arms of the Counts De Salis, De Viames, D'Alton, the Barons De Robeck, De Rothschild, Dimsdale, &c., and it includes the Prince of Waterloo, the Duke of Bronte, the Marquess of Heusden, &c. &c. These details are valuable as informing us, who and what those noble persons are, and wherefore they bear those splendid dignities and designations.

Excerpta of Wit; or, Railway Companion: being a Collection of Laconic Sentences, from a great variety of sources. 12mo. pp. 374. London, 1839. P. Richardson.

SINCE the days of the facetious Joe Miller

there have been many publications of this kind; some of them repeating the old jokes, or dressing them up anew; others preserving the mots, puns, and jests, to which modern occasion gave rise; and others still bringing the witticisms of greater antiquity, and of remote countries, into juxtaposition with the received records of their native analogues and descendants. Partaking of all these ingredients, the present little volume is an amusing collection, and well deserves its place among productions of its class; not only for the entertaining specimens of humour it contains, but for the absence of any thing approaching to indecorum or coarseness. Were it but for the last merit, we owe it the compliment of a few illustrative extracts.

"*Excuse.*—An Irishman, accused of marrying six wives, on being questioned how he could be such a hardened villain to delude so many, replied with great nonchalance, 'Why, please your worship, I was trying to GET a good one!'"

"*A Question Answered.*—A Yankee and Irishman, happening to be riding together, passed a gallows. 'Where would you be,' said Jonathan, 'if the gallows had its due?' 'Riding alone, to be sure,' said Pat."

"*Beer.*—It was told Jekyl that one of his friends, a brewer, had been drowned in his own vat. 'Ah!' he exclaimed, 'floating on his watery bier!'"

"*Sir William Gooch.*—The governor of Williamsburg, walking one day in the street, and in conversation with a friend, returned the salute of a Negro. 'Do you condescend to bow to a Negro?' asked the friend. 'Why not?' replied Sir W. G. 'I cannot permit a slave to excel me in good manners.'"

"*Yankee Pun.*—A gentleman, with a glass eye, was about to execute the right of suffrage, when he was accosted by a political opponent with, 'I say, Mister, what are you doing here?—you can't vote, you're not natural eyes'd.' The joke was taken in good part, and created some merriment."

"*J. Ketch.*
The rope broke ere the thief had died,
Which put Jack Ketch in strange disorder:
'Tis hard to hang him twice,' he cried;
'I shall be nicknamed the Re-corder.'

"*An Auctioneer's Opinion.*—When you peruse the Scriptures,' said a gentleman high in the church, to Harry Phillips, of Bond-street, 'whose virtue do you most admire?' 'Why,' said H. P., 'that is a puzzling question; but, at the present moment, I can recollect nothing superior to Lot's.'"

"*A Bon Mot.*—Some thieves met a man, and, after robbing him, bound him and laid him under a hedge. They presently after met another, whom they robbed, and also bound and laid him on the other side of the hedge. The first exclaiming, 'Oh! I'm undone! I'm undone!' the other bawled out, and desired that, if it were so, he would come and undo him."

"*Lord N's last.*—The witty peer, reading an account of the death of a Mr. Snowball who had committed suicide for love, exclaimed, 'Poor fellow! what a pity he did not wait for a thaw, for then he would have died a natural death.'"

"On a Smuggler, shot in an Affray with the Excise-officers."

Here I lies—
Killed by the xli's"

MISCELLANEOUS.

The Oxford Divines not Members of the Church of England, by T. B. Browne. Fp. 213. (London, Longman and Co.)—Its title explains the nature of this work.

which assails the new divines of Oxford, and maintains that their doctrines are irreconcilable with the orthodoxy of the Church of England. *Non nostrum.*

The Influence of the Affections upon Character, by Ed. Chapman. Pp. 85. (London, J. Green.)—A brief essay, full of good feeling and just religious sentiment.

The Nautical Steam Engine Explained, &c., by Commander R. S. Robinson, R.N. Pp. 184. (London, Saunders and Otley.)—A very useful treatise, in which the power, &c. of the Steam Engine is clearly explained, so as to be a guide to all persons intrusted with the management of steam navigation.

Rules and Exercises on the Right Use of the Latin Subjunctive Mood, &c., by the Rev. R. B. Greenlaw, M.A. &c. Pp. 86. (London, Longman and Co.)—We thought enough had been written on this said Subjunctive Mood. Mr. Greenlaw, however, gives some sensible advice respecting Latin style; and is, we observe, a bit of a controversialist against Dr. Crombie and other grammatical writers.

An Elementary Course of Civil Engineering, by D. H. Mahan, U.S. Edited by Professor Barlow, &c. 4to. pp. 211. (Glasgow, Fullarton and Co.; Edinburgh, Black; Dublin, Robertson and Co.; London, Orr and Co.)—This appears to us to be an excellent and much-wanted text book on the subject. Both civil and military engineering are embraced in it; and of both, the expositions and instructions are sound and obvious.

Animal Magnetism, &c. Pp. 82. (London, Churchill.)—Extracted from the "British and Foreign Medical Review," and a very able exposure of this nonsensical subject, temperately done, and almost entirely taken from the contradictory pretences of its own professors.

Coal Combination, &c., by W. S. Northhouse. Pp. 70. (London, Thomas.)—A pamphlet to back up the lord mayor in the coal business.

Le Répertoire Littéraire, &c., by C. J. Deille. (London, Whitaker.)—A second edition of this good selection from French authors, with some additions of equal character.

The Hand-Book for the Toilette, by the Author of "Hand-Book of Cookery," &c. Pp. 172. (London, Orr and Co.)—One of those compilations which seem pretty much all alike—the mixture differently coloured—and all nearly of the same utility.

Hand-Book of the Laundry, by a Lady. Pp. 140. (Same.)—Ditto, ditto.

Hints towards the Improvement of Female Education, by Miss Furlong. Pp. 110. (Edinburgh, Johnstone.)—Explaining and recommending (not without good grounds) the system of female education pursued by the New Edinburgh Educational Institution.

Confession of the Name of Christ in the 16th and 19th Centuries, by J. H. Merle D'Aubigné. Pp. 41. (London, Lov.)—A highly Protestant appeal from the pious President of the Theological School of Geneva.

The Hand-Book of France, Pp. 188. (London, Strange.)—A guide by Boulogne, Calais, Havre, or Dieppe, to the French capital, and containing the usual instructions to travellers.

Dr. Macleure's Praxis on the Latin Potential and Subjunctive Moods, &c. &c. Pp. 144. (London, J. Mortimer.)—Instructional Exercises on important grammatical points.

The Vegetable Cultivator, &c. &c., by John Rogers, author of "The Fruit Cultivator." Pp. 343. (London, Longman and Co.)—A very useful volume, in which the best methods of cultivating culinary vegetables are described in alphabetical order; and, in addition, the best ways of cooking them for consumption after they are grown to perfection. There is also a general account of physical herbs, and, to complete the whole, some recollections of Mr. Philip Milner, the gardener of the Apothecaries' Company. It is quite a household and housekeeper's book.

Easter Eggs and the Robin Redbreast, from the German of the Rev. C. Schmidt. The Little Lamb. The same. (Edinburgh, Clark; London, Hamilton, Adams, and Co.)—Two little children's books from the German, and in the German tone of simplicity and religion.

Description of Australia, by F. Scott. Pp. 48. (Glasgow, Campbell, &c.) *A Short Account of Prince Edward's Island*, &c. Pp. 94. (London, Madden.)—Every quarter of the earth seems to have its emigration patrons and advocates. These are two of the many productions of the press to recommend their favourite places.

The Principles and Practice of Levelling, by Edward Jones, Architect and Civil Engineer. Pp. 70. (London, Williams.)—This is not a Chartist work, but a treatise on the levelling necessary in the operations of the Engineer. It is a plain and useful tract for the student in that profession.

The Outlaw, a Drama in Five Acts, by Robert Story. Pp. 176. (London, Simpkin, Marshall, and Co.)—Some Dramas are for the Stage; others for the Closet. We fear this would do little in either.

The Wrongs of the Animal World, &c., by David Mushet. Pp. 324. (London, Hatchard.)—An earnest appeal in behalf of the brute creation. Its reclamation against the cruel use of dogs as beasts of draught, which every hour disgusts us in the streets of London, loudly demands the attention of the legislature.

A Practical Treatise on Accounts, &c., by Isaac Preston Cory, Barrister-at-Law, &c. 8vo. pp. 340. (London, Pickering.)—A valuable treatise, in which mercantile, stewards, and other accounts, are placed on a clear practical footing; and the intricacies of partnership concerns are explained in a very satisfactory manner.

Godfrey, the Little Hermit; a German Tale. Pp. 89. (London, J. Burns.)—A nice little book from the German of Canon Schmitt, inculcating strong religious principles, and a dependence upon Almighty power.

Sermons contributed in aid of the Fund for repairing the Churches at Leeds, damaged by the Hurricane of January 7. Pp. 200. (Leeds, Cross.)—A most laudable design, and supported in a spirit worthy of the occasion. We believe the public are indebted to the Rev. John Holroyd and the Rev. W. Sinclair, for these Discourses: not only worthy of the object they had in view, but the general appreciation of all moral and Christian readers.

ARTS AND SCIENCES. GEOGRAPHICAL SOCIETY.

THE eighth anniversary of this Society was held on the 27th inst., W. R. Hamilton, Esq., President, in the chair.—The annual report of the Council was read, which stated that 63 new members had been elected, and 13 vacancies had occurred during the past year; and that the Society now consists of 651 members, besides 60 foreign honorary and corresponding members: that the state of the finances continued satisfactory, as the expenditure of 1682*l.* during the past year, had been met by a corresponding increase in subscriptions, leaving the whole capital of 4800*l.* in the funds untouched. At the evening meeting, the president delivered his anniversary address, and presented the two gold medals, constituting the royal premium for the advancement of geographical science and discovery, awarded respectively to Dr. Rüppell of Frankfort, and Mr. Thomas Simpson of the Hudson's Bay Company, in the following terms:—

"Chevalier Bunsen.—It is peculiarly gratifying to me, that, as president of the Royal Geographical Society of London, it has fallen to my lot to place a gold medal, the gift of our most gracious sovereign, and awarded by the council of this Society to my much valued friend Dr. Eduard Rüppell of Frankfort, in the hands of another highly valued friend, the Chevalier Bunsen, for the purpose of its being transmitted to its deserving owner. The medal is awarded to Dr. Rüppell, in testimony of the high sense which the council feel of the services rendered by Dr. Rüppell for the advancement of physical geography. And though Dr. Rüppell, together with his habits of minute accuracy, his innate love of truth, the truly philanthropic spirit which he carried with him to the rocks of Arabia Petra, or the burning sands of Abyssinia and Kordofan; although Dr. Rüppell, besides his assiduity and exactness in using his mathematical instruments for astronomically fixing the sites of every important place he visited, was also a distinguished and indefatigable naturalist, we love to regard him chiefly as a geographer; and, as such, to proclaim, as we do, our high sense of his merits as a large benefactor to the science which we profess to cultivate. Dr. Rüppell made three journeys into Africa: his first was of short duration, for he soon left Egypt to return to Europe, where alone he could hope to attain sufficient proficiency as a practical astronomer, to travel with advantage through unknown regions. He placed himself under the tuition of the lamented Baron von Zach; he returned to Egypt, and visited Arabia, the Gulf of Akabah (which he was the first to explore geographically), Abyssinia, and Kordofan. All the produce of his travels, in the department of zoology, which absorbed a large half of the pecuniary means at his disposal, Dr. Rüppell nobly and generously made over, on his return home, to his native city. The same has been the result, and the same the sacrifice, of his second journey into the same countries: and the city of Frankfort is entirely indebted to the most illustrious of her citizens, for the high rank she holds, even in Germany, in the possession of a splendid museum of natural history, and a learned director at the head of

it. The most valuable portions of Dr. Rüppell's geographical discoveries and data are to be found in the pages of his own luminous and learned narrative, the latter part of which is now in the course of publication, or in those of the "Correspondance Astronomique," edited at Genoa by his friend Baron von Zach; and they will long continue to be the chief guides of those who may undertake hereafter to follow Dr. Rüppell's steps in the arduous and honourable route which he has laid open. Chevalier Bunsen, the Royal Geographical Society of London are highly gratified with the opportunity thus afforded to them of presenting, through the channel of one to whom all branches of literature are so highly indebted, the royal medal, awarded by the Council to Dr. Rüppell, your distinguished countryman."

To which Mr. Bunsen replied:—

"Sir,—In receiving the medal your Society has awarded to Doctor Eduard Rüppell, I beg to express the thanks of that learned countryman of mine, to whom I shall be happy to forward this honourable token of your high esteem. In expressing these thanks, and at the same time the warm interest I personally take in the distinctions decreed by you to my countryman, I know I speak also the feelings of the illustrious city to which he and his collections belong, and those of our common country Germany, which is proud of the successful efforts of one of her most meritorious sons, and will equally be so of the honour England has at this moment bestowed upon him through this Society. And, indeed, this encouraging sign of your interest and of your admiration, is well adapted to recall to the mind recollections of a particularly pleasing nature to both countries. For, when I look back to the distinguished travellers and discoverers which my native country has produced in this and in the last century, I see before me an imposing series of illustrious names, connected with this country by the ties of hospitality and friendship, and powerfully assisted in their noble endeavours by the generous zeal of your learned and patriotic societies. Allow me only to mention Forster, the natural philosopher and distinguished writer, who accompanied Captain Cook on his great voyage of discovery: and in later times, Hornemann and Burkhart, who received in this country the means of executing their bold plans, to penetrate into unknown parts of Arabia and of Africa. It has not been forgotten, sir, in my country, and will never be forgotten, that England followed with anxious interest the course of those intrepid travellers, and that it mourned over the cruel fate that put an end to their enterprise, as if they had been her own native children. Let me only add, that he, who for his admirable simplicity, and the clearness of his observations, may be called the modern Herodotus, and who, with Pococke, Alexander von Humboldt, and a few others, ranks among the most accomplished travellers of all ages;—that Niebuhr the elder, I say, found among the English in India, and in this country, the most effectual assistance, and the most encouraging interest, as he himself has recorded, and as his great son has so thankfully acknowledged in the biography of his father. As to your Society, sir, in particular, it has by its very statutes acknowledged, and by its actions invariably sanctioned, the great and elevating truth, that Science and Virtue have their home and their sanctuary in every country where these pillars of humanity are duly appreciated. I name both together, because they ought to be inseparable; and I am particularly happy to find that, in this very

instance, you have equally honoured both : for as you yourself have so feelingly remarked in your discourse, the distinction awarded to Dr. Rüppell has been equally given to the intellectual merit and efforts of the traveller, and to the noble disinterestedness and the generous patriotism of the good citizen, who, after having sacrificed his fortune for the advantage of science, offered the gift of his rich and valuable collections to his native town. It is unnecessary to enlarge further on this subject ; but it will be gratifying to you to know, that the generosity of Dr. Rüppell has not been bestowed upon a barren ground. That city, which may well be held up as a model for other rich and commercial towns, on account of the noble institutions she has raised for science and literature,—mostly monuments of the patriotism of her children,—is uniting those collections in a magnificent museum, worthy of its contents, of its founders, and of the free town that produced Goethe. As to myself I can only say, in answer to the extremely partial mention you have made of my name, that, deeply feeling how little I have done to merit such partiality, I trust I shall never be found deficient in gratitude for the kindness which has inspired it."

The President, then addressing the Deputy-Governor of the Hudson's Bay Company, said :—

"Mr. Harrison,—In the absence of Mr. Thos. Simpson, to whom the Council of the Royal Geographical Society of London have awarded this medal in testimony of the deep gratification which they feel in the success which has attended the enterprise and exertion of Mr. Simpson on the north coast of North America, and in the absence of Mr. Pelly, Governor of the Hudson's Bay Company, I am happy that you have been selected by that gentleman to accept the friendly office of receiving this medal in the name of Mr. Simpson. The services which Mr. Simpson, and his friend and senior officer, Mr. Dease, have rendered to geography, in advancing, almost to its completion, the solution of the great problem of the configuration of the northern line of the North American continent, are, in the opinion of the Council of this Society, eminently meritorious ; and Mr. Simpson and Mr. Dease, whatever may be the result of their future labours, have already earned for themselves a high place amongst those who have added to the fame and glory of British enterprise. In the summer of 1837, Messrs. Dease and Simpson, under instructions from the Hudson's Bay Company, starting from the Great Slave Lake, followed the steps of Franklin as far as the point called Franklin's Farthest, whence they traced the remainder of the coast to the eastward, to Point Barrow ; by which they completed our knowledge of this coast the whole way west of the Coppermine River, as far as Behring's Straits. During the following summer, the same adventurous gentlemen, encouraged by the generous spirit of their employers, in their attempts to brave the obstacles which a harsh and rugged Nature was interposing in the way of our further knowledge of this part of the American continent, and anxious that this palm of victory should also, with so many others, encircle the brow of Britannia, again started from their winter quarters, as early as the season would permit ; and descending the Coppermine River, they again followed Sir John Franklin's route to Cape Turnagain, his eastern extreme, in long. 109° nearly. From which point Mr. Simpson proceeded to the eastward about ninety miles. From the spot

he had then attained, and which has since received the appropriate name of Simpson's Farthest, he could descry a further line of coast about thirty miles in extent ; and he had the gratification of thence discovering a fine open sea to the north and east. His supply of provisions here obliged him to retrace his steps. The result of these two expeditions is that the northern shores of America, all the acquisition of British hardihood, perseverance, and judgment, can now be accurately laid down on our maps, from Behring's Straits to the 100th degree of longitude, forming a continuous line of coast of upwards of 60 degrees : and a fair prospect is opened, that another season may go far to complete our knowledge of the whole. Sir, I beg to place this medal in your hands, to be given to Mr. Simpson by Mr. Pelly, the Governor of your prosperous and high-spirited association ; and I beg that Mr. Simpson may be assured that this Society warmly participates in the honourable reward which Messrs. Dease and Simpson may accept in the gratitude of their country, and that we shall be happy to give them a welcome reception within these walls, on their return to England."

To which the Deputy-Governor replied :—

"Sir,—Highly gratifying as it must be to me personally to receive, on the part of Mr. Simpson, this mark of the approbation of the Royal Geographical Society of London, I cannot but regret that, owing to an unavoidable engagement, Mr. Pelly, the Governor of the Hudson's Bay Company, is prevented from being present ; as I am sure he would have been peculiarly gratified on this occasion, having taken so large a share, in conjunction with Mr. George Simpson, in planning the operations, and directing the arrangements, that have led to the successful result on the arctic shores of America. Mr. P. W. Dease and Mr. Thomas Simpson, the two officers of the Hudson's Bay Company, who have been employed on this expedition, were selected by the governor and committee as combining the vigour, zeal, and ardour of youth, with the experience, judgment, and discretion of riper years, and the result has justified the choice. The time of conferring on these gentlemen the distinction of a royal premium seems particularly happy, as it is at a moment when the parties themselves might apprehend, from not having done all they had hoped to do last summer, that their work would be considered incomplete ; but the award of this evening will prove to them that the medals of this Society are bestowed, not only for work already performed, but as an encouragement for future exertions in the cause of discovery. It is a great satisfaction that the Hudson's Bay Company, as a trading company, have thus been able to extend their discoveries not only *within*, but *beyond*, Her Majesty's dominions, and that you, sir, on the part of the Geographical Society, should have expressed your approbation that they have not limited or restricted their endeavours, in time or expense, whenever they could aid the great cause of the advancement of geographical science and discovery."

BOTANICAL SOCIETY.

FRIDAY, 17th May. Mr. J. E. Gray, President, in the chair.—Read, the continuation and conclusion of Mr. Wallis's paper 'On the Orchideæ of Essex, with Remarks on their Locality, &c.' Five species were described in the former part ; the present enumerated *Orchis maculata*, the spotted palmate orchis ; *Gymnadenis conopsea* (Orchis, Eng. Bot.), fragrant gymnadenis ; *Habenaria bifolia* (Orchis, Eng. Bot.), butterfly habenaria ; *H. viridis*, green

habenaria ; *Aceras anthropophora*, green man-orchis ; *Ophrys apifera*, bee-orchis ; *O. muscifera*, fly-orchis ; *Neottia spiralis*, ladies' tresses ; *Listera ovala*, common tway blade ; *L. nidus avis*, bird's-nest ; *Epipactis latifolia*, broad-leaved helleborine ; *E. palustris*, marsh helleborine. Nearly one-half of the whole of the British tribe are distributed in Essex ; and of the seventeen species observed and described by Mr. Wallis, there are eight genera.

LITERARY AND LEARNED.

UNIVERSITY INTELLIGENCE.

OXFORD, May 18.—The following degrees were conferred :—

Doctor in Divinity.—Rev. R. L. Cotton, Provost of Worcester College.

Masters of Arts.—Rev. G. Knight, St. Edmund Hall ; Rev. J. Fenrose, Fellow of Lincoln College ; Rev. J. Webb, et. Trinity College.

Bachelors of Arts.—J. Jones, St. Edmund Hall ; C. Morgan, E. L. Nugent, J. J. H. Humphreys, Exeter College ; C. R. Knight, Scholar, E. N. Mangin, Wadham College ; R. Hebron, Scholar of Queen's College ; J. W. Mason, Scholar, O. J. Humphreys, R. Williams, Jesus College ; J. L. Hoskyns, Demy of Magdalen College ; E. J. G. Hornby, Postmaster of Merton College ; C. Holland, University College ; H. Tripp, E. Oldfield, W. Knight, Scholars, J. W. Mence, G. E. Morris, Worcester College ; J. Crokat, Magdalen Hall ; R. Firth, New College ; T. Lowe, W. Bruce, A. J. Christy, Oriel College ; G. H. Repton, University College ; A. B. C. Starkey, Fellow, W. D. Jackson, W. E. Heygate, C. S. Holthouse, St. John's College ; G. E. Cole, St. Mary Hall ; A. Reeve, F. B. Zincke, J. W. Prout, Wadham College ; E. M. Goulburn, Scholar, J. B. Sweet, H. Pearson, S. Waldegrave, T. F. Kent, J. Glencross, Balliol College.

The Rev. Henry Clarke, M.A. of Trinity College, Dublin, was admitted *ad eundem*.

OXFORD, May 22.—The following degrees were conferred :—

Masters of Arts.—Rev. R. Eden, grand compounder ; Rev. W. H. Brandreth, Rev. A. Borsdale, Christ Church ; Rev. A. Mathews, Lincoln College ; Rev. J. Davies, Rev. E. W. Davies, H. Jones, D. Roberts, Rev. J. W. Roberts, Jesus College ; Rev. J. W. Pockle, Rev. A. Nugee, Brasenose College ; R. H. Ingram, Worcester College ; J. Wickens, Scholar of Balliol College ; Rev. S. Barney, Exeter College.

Bachelors of Arts.—E. Hill, St. Edmund Hall ; E. R. Dukes, W. Linwood, E. Clayton, Students, J. Wickens, S. B. Windsor, Christ Church ; M. J. Johnson, E. Curtis, Magdalen Hall ; T. Mayhew, Queen's College ; F. Ironmonger, Scholar of Pembroke College ; J. Marshall, Worcester College ; R. Cresswell, St. John's College ; H. W. Sullivan, Balliol College ; J. L. Sheppard, W. G. Duncan, Wadham College ; J. H. A. Harris, Trinity College ; W. H. de Marchant, Exeter College (incorporated from Trinity College, Dublin).

The Chancellor's Gold Medal for the best English Poem was adjudged to C. Sangster, of St. John's College. Subject—"Samachkharu."

The degree of Doctor in Divinity was conferred by Royal Mandate on the Rev. R. Tatham, Master of St. John's College, and the Very Rev. G. Pescock, Dean of Ely, and Fellow and Tutor of Trinity College.

Queen's College.—The following prizes were adjudged :—Latin Dissertation, Mr. John Thomas.—English Essay, Mr. Joseph Ketley.

ARCHEOLOGY.

To the Editor of the Literary Gazette.

SIR,—A correspondent of yours, signing himself "C.S.," has thought proper to put forward some ideas connected with the reading of the names of the pyramid-builders, which appear to me not quite justified according to the system of interpretation adopted universally throughout Europe by some of the most distinguished archaeologists of the present day. Among them may be enumerated Messrs. Bunsen, Rosengarten, Lepsius, Lanormant, Leemans, Rosellini, Salvolini, Wilkinson, and others, who have given their attention to the subject of Egyptian antiquities, and ultimately their adherence to the truth of the mode of interpretation discovered by Dr. Young, and worked out, with a genius in itself a second discovery, by M. Champollion. I shall not here enter into the discussion of this principle so well known to those who have investigated the hieroglyphics' text, but shall merely remark, *en passant*, that the mode of interpretation proposed by your correspondent is purely

his own, unsupported by any proof or deduction, and enunciated with all the *ex cathedra* sententiousness of an Egyptian hierophant. I consider that a person making a positive attack upon a received system ought, at least, to enter into some exposition of his views, and offer, at least, some plausible ground to shew that the Arabic is the ancient sacred dialect of the Egyptians, and that it is the language which affords a rational clue to the interpretation of names handed down by the Greek authorities; because that the Coptic and Arabic are distinct languages has been the opinion of the most eminent Coptic scholars. The next point which he is bound to establish is the correctness of the sounds proposed by him for the symbols, if his system be correct; because, without some explanation, I should search in vain for such names as *Kemran* and *Shomish*; and the mention of the village of *Boustis* in the hieroglyphics is a discovery which he has been the first to make. Good criticism and fair dealing require something more than such vague references. Were I to enter into discussion to shew that the Coptic is the debased relic of the language of the Pharaohs, and that, as yet, in the majority of instances, it is adequate to a series of interpretations which consist of a number of ingenious deductions, which, like links, when together connected, have restored the lost language of those remote symbols, which each has interpreted hitherto at his pleasure, I should require far greater space than even your kind indulgence to this most interesting branch of archaeology would allow. The proof has already been discussed by the learned Jablonski, by Young, Champollion, Rosellini, Salvolini, and the pupils of that school. A language in itself derivable from its own roots, and, when winnowed from the Grecisms and Arabicisms with which it has been corrupted, presenting an isolated *copia verborum* distinct from both, which answers to words in the ancient Greek authors,—as the *Champea* of Herodotus, as the *Hykshos* of Manetho, the lists of kings of the priest of Sebennytus, and Eratosthenes, and most of the words scattered through the pages of the Greek writers, assumes a higher position than the mere probability of being the language of the priests; while the chances of an exotic language, as of the Arabic or the Jews, diminish to a very narrow circle, and their importance actually vanishes upon the consideration that they are inadequate to the rational explanation of the texts. The *copia verborum* of the Coptic and Hebrew, and languages of that family, are distinct from each other; and, consequently, if the touchstone to which these texts have been brought is at all available, the other must be perfectly wrong. That it is so, I will merely refer to the philological contentions and struggles manifested by the proposed mode of Hebrew or Arabic interpretation; witness the *Sho-to-le-ma* for Ptolemy of Mr. Williams, and the *Zu-am* for Cheops of your correspondent; their condemnation literally comes out of their own proofs. It is scarcely credible that traces of the primitive language of a country should not be found in the spoken language of that locality, and that we should have to search for that original tongue in the spoken language of another state, distinct from it in manners and customs, whose progenitors were at the deepest enmity, rivalry, and contempt. Such a principle is repugnant to all analogy, because the Arabic hordes were never the primitive possessors of the soil, but military adventurers who occupied the territory for a short period, and were ultimately chased out by the aboriginal inhabitants of the country, who appear to

have descended from the cataracts of the Nile. The claim of the Semitic languages is therefore secondary to that of the Coptic; the probability being that the Hebrew borrowed some of its terms from the Egyptian rather than the converse; the infusion of Arabic and Hebrew terms into the language evidently pointing to a later epoch: we might as well plead for the Coptic being derived from the Greek, from the hasty inspection of the Copt books. Something more is requisite to prove that the languages have an analogy; and something still more is demanded to shew that the sacred language of Egypt was other than an archaic Coptic, more regular in its construction than the dialects of the Thebaid or Lower Egypt, and performing the same function to the inscription as the Mandarin or Kwan-hwa does to the multifarious varieties of the spoken dialects of the Chinese, viz. universally understood by the educated classes, and appearing in the same form at the mouth of the Nile as at the cataracts. Cheops, Saophis, Suphis, are mere dialectal variations of the same name, the *H* of the Memphitic dialect having been used by Herodotus, while Eratosthenes, who copied his lists from Theban sources, used the equivalent *W* of Upper Egypt: this name, as is well known from M. Rosellini's work, and the subsequent publication of the quarry-marks of Colonel Howard Vyse, is written

following the literal order *Worqor* or *Horqori*, and supposing the ultimate *Or* to be paragogic *Worqy* or *Horqy*, and as the *Π* and *Ϛ* are interchangeable *Wororqy* or *Hororqy*, *Shouf*, or *Khōof*, or *Khōep*.^{*} For the mode by which the phonetic value of these symbols is acquired, I must refer you to the "Précis du Système Hiéroglyphique," "Grammaire Egyptienne," "Letters of M. Champollion," and the "Analyse Grammaticale" of M. Salvolini; and here I may observe, that it is exceedingly probable that the "Carouche Rosellini," tom. i. fav. iii. 68, is a variant of the same, although without further evidence it would be exceedingly difficult to prove it. This is the name of the first Suphis: first of all conjectured to be so by M. Champollion; then by M. Rosellini; and finally proved to be his name by the fact of having been found on a block of stone from the quarries of Mokattam, in the interior of the first pyramid. The second name

consists of the ram and vase, phonetically *Neb*, erroneously read *Sen* by M. Rosellini,—the name of the god *Noub* or *Neb*, the *Chnouphis*, *Chneph*, *Chnemis*, *Chnoumis* of the Greeks, and *Shouf*. This has been supposed to be the *Sensaphis* or *Suphis II.*; *Sen* being a transcriptional error of the Eratosthenic texts; but it is found in the first pyramid; also among the quarry-marks on the Mokattam stone. M. M. Bunsen and Lepsius suppose this to be *Anophis*, a predecessor of the same monarch, from the name of *Nouphis* in the composition of that name; and Mr. Birch has already conjectured it to possibly be the premonen of Cheops, the *Neb* or *Noub* part being the equivalent of the *Chemmis* or *Chambes*, which he imagines to be a Greek transcription of the same premonen, but this has already been laid down in the

^{*} See M. Chev. Bunsen's paper in your Journal, No. 1163.

splendid work on the Pyramids, publishing at the expense of Col. Vyse, whose discoveries are thus placed at the disposal of the European hierologists. The third name, of Mr. Wilkinson, p. 278, called by your correspondent *Shomish* Cheops, is a predecessor of the two *Suphis*, as may be conjectured from a text lately forwarded by Mr. Perring to Col. Vyse from Egypt. It occurs in the composition of the name of a person who was functionary under the rule of *Suphis I.*, the individual being named according to the phonetic system, *Skafoasonkh*; and as names were assumed during infancy, it must be the name of a monarch anterior to the *Suphis I.*, probably his immediate predecessor. As to *Shomish* Cheops, I am at a perfect loss to know how it is obtained!—probably by some process which the world is yet unacquainted with—attal events, totally independent of the process of M. Champollion. The other name, which reads directly *Remenka*, or *Remenkaon*, and which (by a transposition of which I will immediately shew the results), gives *Menkare*, is the exact name *Menkare*, *Mencherinos*, *Moskeris*, *Moicheris*, &c., of the Greeks. This coffin has already been published by Col. Howard Vyse, in 1838 (folio), with an analysis of the hieroglyphics. "C. S." has offered no explanation as to how he arrives at the name of *Kemran* in this cartouche; and as for the latter part of the translation, "Do you traverse the skies, tread the milky way?" it rests entirely upon his *ipse dixit*. According to the system of M. Champollion, the initial part reads, "Osirian king, Menkare living for ever, born of heaven (*Tphe*) engendered of *Netpe*, flesh of —" where a lacune occurs, from the fractured state of the sarcophagus. I trust, sir, that you will excuse my taking up your journal in these so technical descriptions, but the gauntlet has been thrown down, and none has hitherto raised it, while I feel that such opinions, boldly asserted, carry with them a weight to which they are not entitled, and, although passed over in silence, are often esteemed more than equivalent to the most laborious deductions. The system of M. Champollion is not the work of a charlatan, nor are the principles he has laid down vague guesses, but a chain of beautiful deductions; at the same time it is quite fair that every one should impugn his labours if he choose, and promulgate what doctrine he may think fit, upon a subject at present imperfectly examined by the savans of Europe, and treated with that scepticism which all discoveries meet at their outset at the hands of the critic and the world. In justice to "C. S." we must state, that his principles are almost his own, bearing a considerable similarity with the Hebraic method of Mr. Williams and Dr. Loewy. The investigation is perfectly open, the discovery is now old, and the working of the detail is still a point for the student of the monuments of Egypt. As for the closing observation of your correspondent, that the sarcophagus of the Queen of Amasis Neithal, is an encyclopedia for the era of the Saite dynasty, I am perfectly at a loss to conjecture what he means. That monument, of considerable interest, presents, as usually do all sepulchral monuments, a series of litanies, or prayers for and to the deceased queen. It contains several new symbols, and less text than the sarcophagus of Amyrtæus, Egyptian Saloon, No. 10. But your correspondent's views are so entirely his own upon these subjects, that they require some further proof before they are entitled to a graver refutation. Believe me to remain, &c.,

Our correspondent "C. S." has requested us to insert, as an addition to a paragraph in his note addressed to us on the 14th ult., the following remarks regarding the fourth and last of Mr. Wilkinson's series of builders of pyramids.

Charaxus,* a scribe and priest of the altar of incense, was entombed at Apollinopolis Parva, the Shato Senhour of the ancient Egyptians, and Senhour-elmedeneh of the present day. At a subsequent period, his widow, whose name was Rhodopis, assisted by her son Wish, erected a cenotaph to the memory of her deceased husband, Charaxus, on the heights of Memphis. And this was accomplished, it would seem, by merely giving a pyramidal form to some small projecting portion of the rock composing the heights of Memphis, and casing the lower parts of the three exposed sides of the same with that sculptured masonry, which is now to be found in the saloon of the British Museum.

It is the son of Rhodopis, above named, to whom belongs the fourth oval in Mr. Wilkinson's work. In the hieroglyphics of the cenotaph, Wish is constantly styled, within an oval, "The great Cheops;" and, either subjoined to the oval or postfixed, there is written what is equivalent to P-ouri-m-oueit, a pyramid.

This Wish, the son of Rhodopis, was a priest of Shandafa (Oxyrynchus of the Delta). He lived about the times of Amasis, as may be proved by a legend belonging to a statue of Mnæa, a king of the twenty-ninth dynasty, who was of the very same part of Egypt as himself, namely, the Prosopitis of Herodotus.

It may be added, that Wish, in the Egyptian language, means *wish*, *desire*, *Cupid*; on the other hand, two other sons bear Greek names, are called, respectively, *Orion* and *Xanthus*; whilst the mother's name, Rhodopia, is plainly enough shewn, in hieroglyphics, to mean "one who holds in respect the hippopotamus." The mode of spelling Orion and Xanthus is not only curious, but instructive. Nothing to be found on the cenotaph alludes pointedly to the foreign birth of Rhodopis; nor is it stated that she was the founder of a pyramid; nor, of course, is there any allusion made to her irregularities as a female. With regard to this last point, if we advert to the respect she paid to the memory of her husband, Charaxus, and also view her surrounded by her children and grandchildren, as she is depicted on the cenotaph, we can hardly believe her conduct to have been very bad. As stated by Herodotus, her little feet, in early life, may have led her astray, and she may have been a little naughty; but she hardly could have been very naughty, unless, indeed, the matrons of Egypt, of that epoch, were people of very abandoned habits. There certainly is a degree of levity to be recognised in her sending, as a present to the temple of Delphos, a number of enormous jubilee roasting-spits; and also in her son Cupid's styling himself a "great Cheops," from his being the founder, probably, of some small pyramid, not much larger than his father's cenotaph, very many ages after the general custom of erecting such structures had ceased to prevail.

SOCIETY OF ANTIQUARIES.

MR. HUDSON GURNEY, V.P., in the chair.—Mr. Hawkins exhibited, with a descriptive note, a drawing of a small brass vessel in the possession of the Rev. J. R. Lyon, and discovered at Pulford, in Cheshire; it is supposed to be

* Herodotus has made a mistake about Charaxus, which it is not necessary here to point out.

Roman, and very ancient in form, having one side flat, and the other strongly convex, with a handle on each side, apparently to be slung by a cord across the shoulder. It would appear to have been used, after the Romans embraced Christianity, as an ampula, or some other utensil, for sacred purposes, as a cross was engraved on the convex side.—The reading of Mr. Bond's *Memoir of the Financial Transactions in the reigns of Edward I., II., and III.*, with reference to the Italian Money-lenders, was concluded.

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Entomological, 8 P.M.; United Service, 9 P.M.

Tuesday.—Linnean, 8 P.M.; Horticultural, 3 P.M.; Civil Engineers, 8 P.M.; Electrical, 7 P.M.

Wednesday.—Society of Arts, 7½ P.M.; Geological, 8½ P.M.

Thursday.—Royal Society, 8½ P.M.; Antiquaries, 8 P.M.; Zoological, 3 P.M.

Friday.—Royal Institution, 8½ P.M.; Botanical, 8 P.M.

FINE ARTS.

EXHIBITION OF THE ROYAL ACADEMY. [Fourth Notice.]

363. *Foot-ball*. T. Webster.—The animated character of this able artist's works has long secured for them public attention. He has treated the game of foot-ball with his usual skill in the representation of boyish sports and frolics; and in a manner which must forcibly remind the spectator of that happy portion of his life when loud clamour, desperate struggles, sound cuffs, and broken shins, formed a principal portion of his every day's enjoyment. The scene is an out-of-door one, and is, in every respect, admirably executed.

90. *Poor Travellers at the Door of a Capuchin Convent near Vico, Bay of Naples*; and 366. *Naples: Young Lazzaroni playing the Game of Arravoglio*. W. Collins, R.A.—We select these two examples from the travelled practice of Mr. Collins, whose works, as they are now, were always attractive in an eminent degree; nor are we at all inclined to think that any material change has taken place in his style of execution: the only difference appears in scene and subject. It was not easy to surpass, though he might vary, the beauties of his pencil.

505. *Olivia's Return to her Parents*. R. Redgrave.—There is no novel in our own, or any language, that possesses more interest or pathos in all its domestic relations; and Mr. Redgrave has chosen a passage in which the emotions and passions are exhibited in their strongest character, which, together with its careful and skilful execution, render this picture a justly distinguished performance as a work of art.

264. *Rhymes of the Ancient Mariners*. J. Severn.—The last subject, social and familiar, will find its perfect contrast in one of the most imaginative that has, perhaps, ever come under the pencil of art, and which the artist has illustrated in the true spirit of one of the most original and extraordinary poems in our language.

553. *Grace Darling and her Parents supplying Refreshments to the North Sunderland Fishermen, who were nearly lost in attempting to reach the Wreck of the Forfarshire*. H. P. Parker.—Actions like this, of humanity and heroism, are indeed worthy of record; and we are glad to see them characterised in this pictorial view, where, should the subject meet the public eye as a print, the example of such deeds will be extensively seen, and, we trust, be equally influential. Mr. Parker has given to

the scene and circumstance the spirit of a well-arranged and varied composition.

474. *Cimabue and Giotto*. E. M. Ward.—Illustrative of the ruling passion, which often, as in the case of Giotto, discovers itself early in life; nor is the circumstance of such predilections confined to any age or country. It occurred in the early development of Opie's genius, which was discovered and brought into notice by the late Dr. Wolcot, in a place where none but the most common examples of imitative art could be found, and where no incitement but the young artist's natural disposition could lead him to the practice. He, like the Italian painter, became in after-life an ornament and credit to the school of his country. In its picturesque costume and judicious arrangement, this performance is a fair sample of the artist's talents.

493. *Sterne and Maria*. H. J. Townsend.—Passages in the "Sentimental Journey," both of humour and of pathos, still continue to exercise the pencils of our artists; and this, from the latter class, exhibits both suitable expression in the characters and an able and effective style of execution.

504. *La Sorrentina*. W. Gush.—The study of a head, something between portrait and an imaginative character, rendered interesting, as well by its cheerful and lively expression, as by the skill of its treatment.

338. *Scene in Macbeth, a finished Sketch; the Banquet, Ghost of Banquo*. H. Singleton.—The spirit of this sketch, the vigour of its execution, and the character of its design, exhibit the strength and durability of this veteran artist's powers. Of his devotedness to his profession, his numerous works are a proof; and when it is understood that a cabinet-sized illustration of Shakspere's plays, containing nearly a hundred examples by his own hand, now adorns his studio, some idea may be formed of his perseverance and practice. The above sketch, also, is a very recent production.

347. *King Charles's Standard at the Battle of Worcester*. T. Woodward.—The spirit of the action, and the mingling of the combatants, are in a style that would do credit to the pencil of a Borgognone, or any other painter of battles.

569. H. O'Neil.—The subject illustrates a passage from Lord Byron's poem of "Lara" (in the Catalogue, misprinted "Zara"), which is quoted in explanation of the pictorial tragedy. The style of the painting shews that the powers of the artist are well calculated for the elevated, whether of history or of the imaginative, in art.

507. *Girl and Rabbits*. J. P. Drew.—Judging, also, from the style in which this familiar and domestic subject is painted, the artist stands fair to reach excellence; as freedom in the handling, and breadth in the chiaro scuro, are the characteristics of his pencil.

471. *St. Dunstan separating Edwin and Elgiva*. W. Dyce.—To use a very common phrase, a pictorial record like this "speaks volumes" on the imperious domination of priests and the mean submission of kings, exciting in the mind at once indignation and contempt. The artist has entered *con amore* into his subject, and the outrage is felt through the medium of art, as it would be by the most eloquent harangue.

Again, in the East Room, we shall point out others that have taken our attention.

204. *A Protestant Preacher*. H. Scheffer.—The picture represents a congregation assembled in a time of persecution—and one of more pious and heartfelt devotion can hardly be imagined. It is highly impressive, and there is scarcely a

countenance in the pew that does not proclaim the character of a martyr.

221. *Calvin on his Death-bed.* T. Horning. —Not very dissimilar in composition, though very different in character and expression. The great reformer is represented "rallying all life's energies to die." He shews the "ruling passion strong in death," for his sharp and animated features and wasted frame prove that the sword has nearly eaten through the scabbard. He is surrounded by his friends and followers, who are paying the greatest attention to his last admonitions. Several of these are portraits, and the Bible, arm-chair, and books, are imitated from those which once belonged to Calvin. (To be continued.)

NEW PUBLICATIONS.

Finden's Female Aristocracy of Great Britain. Part VI.

FEMALE beauty in this country springs up faster than artists can be found to depict it. There can be no reason, therefore, why this charming publication should not "stretch out to the crack of doom." The ornaments of the present part are, "Lady Augusta Gordon," "Lady Louisa Craven," and "The Honourable Louisa Stuart;" finely engraved by Messrs. Robinson, Mote, and Eggleton; from drawings, full of grace and elegance, by Mr. John Hayter.

The Royal Gallery of Pictures.

Part III. Bohn.

OUR favourites in the third Part of this pleasing work, are Granet's "Monks at their Devotions," engraved by Quilley; Mytens's "Charles I., Queen, and Infant," engraved by Bacon; Wouverman's "Coup de Pistolet," engraved by Greatbatch; and Sir Joshua's "Cymon and Iphigenia," engraved by Reynolds.

THE DRAMA.

Covent Garden.—Miss Rainforth, one of our most accomplished vocalists, took a benefit at this theatre on Tuesday, when we rejoiced to see a well-filled house cordially applaud and appreciate her pleasing acting and polished singing.

Haymarket.—The only novelty we have to notice at this house, is the appearance of a young American actress, Miss Maywood. On Friday she played *Bianca*, in *Fazio*; and on Thursday, *Mrs. Haller*, in the *Stranger*. We would speak favourably of a *débutante*, overlook faults, seek out and praise merits in her performances, did we but see promise of future excellence. Alas! we are compelled to say Miss Maywood is not, and never can be, a good tragic actress; her want of physical power, even supposing no other defect, is alone sufficient to warrant our opinion.

Hanover Square Rooms.—On Monday, Mr. Kollman's third Grand Concert was fully attended. The selection of music was excellent, and the execution not less so. Mr. Kollman's patent pianofortes were heard to advantage. The concert would probably have been found rather too long, but for the agreeable variation of refreshments which were liberally supplied during the evening. We would, however, suggest the propriety of a less crowded programme for the next concert, especially as we perceive it is to be held in the morning.

VARIETIES.

Cabinet Pictures.—We had not an opportunity of noticing beforehand the sale, by Mr.

H. Phillips, of a portion of the fine collection of pictures of Mr. J. Knight, of Portland Place, which took place last week, but which well deserves a mention in records of the fine arts. The twenty-six pictures sold realised no less a sum than \$950l.; including a Cyp Landscape and Figures, 1060l. 10s.; an oval pair, by Teniers, of "Dives Feasting," 350l.; and "Noli me Tangere," by Albano (a charming specimen), 375l. The whole shews that genuine and really good works of the old masters have rather increased than fallen in value: for, if we remember rightly, Mr. Phillips sold a previous portion of this collection a good many years ago, and not to so much advantage.

Botanic Society.—The general conversations of this new, but rising and valuable Society, which takes place this afternoon, will, we fancy, be rather a brilliant meeting; as it is supported by so many of the fair and fashionable in the highest ranks of life, as well as by men of eminence in every station, whether of nobility or science. Our readers are aware that the Duke of Richmond is president; and that ground in the Regent's Park is now preparing for carrying the design into effect. A botanical garden, of a character worthy of the greatest Capital in the world, ought surely to be one of the ornaments of London; and we are glad to see, in the first instance, eighteen convenient and suitable acres allotted to this purpose. Under proper direction, much good and much beauty may be derived from this source; and the rules, as far as we observed them, appear to be well calculated to render the science popular, and adorn the country with new herbal and floral varieties, both of usefulness and grace.

Earthquake in Scotland.—About two o'clock on Friday morning (last week), two shocks of earthquake were felt at Crieff, which lasted about two seconds, but were accompanied by a subterranean noise of longer duration. This part of Scotland is frequently subject to similar visitations.

Earthquake.—A slight shock of earthquake was felt at Interlaken, in Switzerland, on the 8th ult.; but it did no damage.

Musical Discords.—A fierce dispute has arisen between the celebrated Dragonetti and the Editor of the "Musical World," respecting which a printed statement has been sent to us, which contains some stringent remarks upon the latter by Mr. Vincent Novello, as the friend of the former. The "Musical World" having published some misrepresentations likely to be injurious to Dragonetti, he naturally reclaimed against them, and requested his explanation to be inserted where the original wrong appeared. With this, however, the Editor not only did not comply, but did not condescend to take the slightest notice of this or of a subsequent letter on the same subject. Messrs. Dragonetti and Novello are indignant at what they charge to be gross critical injustice, and have appealed to the public by a circular, in consequence of the great expense of advertising the case in the newspapers. It is not for us to decide on such matters, but it is a duty to notice their existence.

Criticism.—In an opinion we last week offered on Lord Brougham's work, we were both struck and pleased to find it much better expressed in a quotation from Lord Bolingbroke, in Mrs. Thomson's "Duchess of Marlborough." "In matters of history," he remarks, "we prefer, very justly, contemporary authority; and yet contemporary authors are the most liable to be warped from the straight

line of truth, in writing on subjects which have affected them strongly."

LITERARY NOVELTIES.

In the Press.

Prodromus; or, an Inquiry into the First Principles of Reasoning: including an Analysis of the Human Mind, by Sir Graves Chamney Haughton. —The Collected Works of the Rev. Sydney Smith. —The Forester, a Tale of 1688, by Miss Mary Louisa Boyle, authoress of "The State Prisoner." —Maxims, Thoughts, and Reflections, by the Countess of Blessington. —Blanche of Navarre: a Play, by G. P. R. James, Esq. —A Second Additional Supplement to his "Hortus Britannicus," with complete Index to the whole Work, including the Supplements, by Mr. Loudon. —A Descriptive Mantal of all the species of British Beetles, by J. F. Stephens, Esq., author of "Illustrations of British Insects." —An Etymological and Explanatory Dictionary of the Terms and Language of Geology, by G. Roberts, author of "The History of Lyme Regis." —A History of the Reformation on the Continent, by the Rev. George Waddington, Prebendary of Chichester, &c., author of "A History of the Church to the Reformation."

TO CORRESPONDENTS.

We are sorry that we cannot notice all the literary matters which solicit the attention of the public in every direction at this full and busy period of the London year. But it would require a host of reporters; and, when reported, could not be read. Among other things, Mr. Achille Albite's Lecture on the French language on Saturday, at Will's Rooms, invited our commendations. Lectures on the German tongue and authors, in Exeter Hall, have offered other attractions; and Mr. Carlyle has been again delighting his audiences with his striking and philosophical illustrations.

We are compelled to omit the report of the proceedings of the Anniversary of the Asiatic Society till next week.

ADVERTISEMENTS,

Connected with Literature and the Arts.

BRITISH INSTITUTION,
PAUL MALL.

The Gallery, with a Selection of Pictures by Ancient Masters of the Italian, Spanish, Flemish, Dutch, French, and English Schools, will be opened on Saturday next, June the 8th, and continue open daily, from Ten in the Morning until Six in the Evening.

Admission, 1s. Catalogue, 1s.
WILLIAM BARNARD, Keeper.

THE THIRTY-FIFTH ANNUAL
EXHIBITION OF THE SOCIETY OF PAINTERS IN
WATER COLOURS, at their Gallery, Pall Mall East, is now
open. Open each Day from Nine till Dark.

Admission, 1s.—Catalogue, 6d.
R. HILLS, Secretary.

THE FIFTH ANNUAL EXHIBITION
OF THE NEW SOCIETY OF PAINTERS IN WATER
COLOURS is now open, at their Gallery, 55 Pall Mall West (ad-
joining the British Institution), from Nine o'Clock till dark.

Admission, 1s.—Catalogue, 6d.
JAMES FAHEY, Hon. Sec.

THE MODEL of the BATTLE of WA-
TERLOO is now exhibiting at the Egyptian Hall, Picca-
dilly, by Natural Colours, at the Egyptian Hall, from Ten
o'Clock in the Morning until Nine in the Evening.

Admission, 1s. each.
In this beautiful work of art the illusion is perfect; the
spectator actually

"—stands upon the place of skulls,
The grave of France, the deadly Waterloo."

—he feels around him a sense of reality that the most accurately
drawn plan could not convey. If he be a military man, he has
the great game laid down for him on a scale that admits of his
seeing not only the moves, but the intentions that dictated them,
and the consequences by which they must be followed. If the
latter be only a civilian, he has the hitherto impossible im-
possibility of being present to the spectator of the "dead career of
a fight," without any unpleasant sensation from the proximity of
"those vile guns," but for which "he would himself have been a
soldier."—*Morning Post.*

"The model is on the scale of about nine feet to the mile, and
gives a complete and most vivid representation of the scene of
action, and of the critical and well-fought battle which has be-
stowed a universal celebrity on the plain of Waterloo. Every
village, every house and farm-yard, every knot of trees, every
undulation of surface, every field, nay, every crop of wheat, or
other produce, which the field bore at the time,—in short, every
detail is given with the closest accuracy, from a six months'
personal observation, aided by the most authentic information.
The position of all the various troops engaged at the moment
selected for representation, is marked out with the utmost ac-
curacy, and in the most graphic manner. The models of all the
buildings and natural objects, the figures of the soldiers and
horses are, in every instance, elaborately executed. The cannon
can even be taken to pieces and re-fixed, precisely as in the case
of actual fighting, though the models are necessarily exceedingly
diminutive."—*Globe.*

"We have elsewhere given an account of Lieut. Siborn's
admirable model of the Battle of Waterloo; not only the most
perfect model of any battle that has ever yet been submitted to
public inspection, but the only representation in the slightest
degree to be depended upon, of that glorious and final struggle
which has left its mark upon a whole generation of British
men, who may desire to see a faithful representation of the
greatest triumph achieved by modern arms, will do well to visit
Lieut. Siborn's exhibition."—*United Service Gazette.*

"Every one who has the soul of a patriot, the English Hall,
this extraordinary work of art, now exhibiting at the Egyptian Hall.
We hesitate not to say that it far exceeds our expec-
tation. It is a beautiful and elaborate representation of that
most glorious field, and cannot fail to attract universal attention;
and we sincerely trust that it may become (as we understand it
was originally intended to be) the property of the nation. Several
officers of distinction, who were present at the battle of Waterloo,
have visited Lieut. Siborn's exhibition, and have pronounced it
a most faithful representation of that most glorious day."—*Courier*
Journal.

"This beautiful model has cost the ingenious
contriver of many valuable years of his life, and we believe a sum
of money not very far short of five thousand pounds."—*Courier.*

PRIVATE PUPIL.—A Vacancy for a

Pupil is now open in the Family of a Clergyman of long
experience, and residing Twelve Miles from London. He can
offer the most satisfactory References to Noblemen and Gentle-
men whose Sons have been under his care. The number of his
Pupils is limited to Six.

Letters to be directed to the Rev. R. H., Post Office,
Petersham, Surrey.

MADAME GRISL.—A beautiful Portrait

of Madame Gris, engraved in the finest style by F. C.
Lewis, Esq. from a Drawing by M. Neugien, will be published in
a few days, by J. Mitchell, Bookseller and Publisher to Her Ma-
jesty, 48 Old Bond Street, at whose Library the original drawing
may now be seen. The impressions will be delivered in the
order subscribed for. Portraits of Madame Gris, Mademoiselle
Tagliani, Signor Rubini, Tamburini, and Labache, from the
admitted Drawings by A. E. Chalm, Esq. R.A., and other Theo-
retical Portraits, have been recently published at Mitchell's Li-
brary, 35 Old Bond Street.

MAPS OF THE SOCIETY for the DIF-

FUSION OF USEFUL KNOWLEDGE.—No. LXXXIX,
containing Plans of Birmingham and of Ancient Syracuse, was
published on the 15th instant.
30 Lincoln's Inn Fields, 24th May, 1839.

TO ADVERTISERS.—THE LONDON

MEDICAL GAZETTE (published every Saturday
Morning) circulates very extensively among the Members of the
Medical Profession in every department, and is to be found on
the table at almost all Public Reading Rooms. It
thus constitutes an excellent medium for the communication of
Medical Intelligence, and of Advertisements of Medical and
Scientific Works.

* * * Advertisements and Bills received up to the Thursday
Evening of each Week.
39 Paternoster Row, May 20, 1839.

MUSIC.

THE MISSES BROADHURST and

Mr. Biagrove's Grand Morning Concert will take
place at Hanover Rooms on Saturday next, June 8th, at Two
o'Clock, when Messrs. Dorris, Grant, Aristici, Albert,
Lazzari, and Balie; Signor Ivanoff, Balie, and Tamburini; Messrs.
Betts, David, Mori, Loder, Lindley, Dragonetti, Regondi, and
Biagrove; and the Misses Broadhurst, will assist. In the course
of the Concert, Masini's Quartette, for Four Violins, will be
performed for the last time this season, by Messrs. David, Mori,
Biagrove, and Loder; M. Batta will play a Solo on the Violon-
cello; and for the first time only this season, a Selection will
be performed from Mozart's newly discovered posthumous Opera
"Zaide."

Leader of the Orchestra, Mr. Loder.
Conductor, Sir George Smart.

Sermons at High Wycombe, 10th edition,
2 vols. 21s.

CAREY'S NATIONAL HISTORIES.

This day is published, price 7s. 6d. cloth, by C. Tilt, of Fleet Street,

THE HISTORY OF FRANCE,

FROM THE EARLIEST PERIOD.

By EMILE DE BONNECHOSE.

(The Two Volumes of the French Edition comprised in the One of the Translation.)

All historians must have their prejudices; and a consideration of this fact has given rise to the proposed Series. For what is a History of France by an Englishman, but another version of the History of England? Has not the success of the one been the defeat of the other? Truth must be sought for by comparing the respective Histories as written by the National Historians. It is therefore proposed to translate and publish, at such prices as will bring them within the reach of all classes, a Series of these truly National Histories.

THE HISTORY OF THE UNITED STATES OF AMERICA,

By JOHN FROST, of Philadelphia,

Is already published, and may be had done up in cloth, price 5s. 6d.

The HISTORY OF GERMANY, and others, in due course, will follow.

REVIEW OF NEW BOOKS.

A Journal written during an Excursion in Asia Minor. 1838. By Charles Fellows. 8vo. Pp. 348. London, 1839. Murray.

No country with which we are acquainted offers more to interest the observant traveller, and, through him, the public, than Asia Minor, over some of the most interesting portions of which Mr. Fellows has extended his tour; and being well qualified by previous education, intelligence, and taste, to make the best use of the opportunities afforded him, we have, in consequence, a volume which must be highly relished by every classical scholar, and by the numerous and entire class of readers, who now feel a proper sense of the value of antiquarian research leading to the right understanding of ancient history, and the state of the arts and sciences in former days, among nations of different origin and character. Entertaining a high opinion of this work, a part of which was brought under our notice at the Royal Society of Literature, we are sorry that we cannot even this week do more than introduce it, as it were, heads over heels, to the public. In his preface, however, Mr. Fellows saves us the trouble of description, by explaining himself:—

“The country through which I travelled is that small portion of Asia Minor (now known by the name of Anadhouly), which lies between lat. 42° and 36°, and long. 26° and 32°, including Lydia, Mysia, Bithynia, Phrygia, Pisidia, Pamphylia, Lycia, and Caria.

As the most interesting period of the history of this country was the time of its occupation by the Greeks, so the remains of their cities form now the chief attraction to the traveller. These cities, some of them of very remote antiquity, all had their origin prior to the conquest of the country by the Romans, in the third century before the Christian era, after which time that people were nominally the possessors of the country, and the Roman taste was visibly encroaching on the Greek in works of art. About the age of Constantine, the Christians began to produce a still greater change in the architecture of the many cities of which they had possession, including the Seven Churches of the Apocalypse, piling up buildings in a style very different from the pure Greek. Next came the Venetians, whose slight fortifications, built of the remains of ruined cities, are seen on every coast, and in every important mountain pass. The conquest by the present occupants, the Turks, succeeded in the fourteenth century. Their architectural works are few, and of a character so peculiar as to render them easily distinguishable from the earlier buildings by which they are surrounded. The descendants of the Greeks, the ancient possessors of the soil, do not, I believe, now form a tenth part of the population; their costume and even language are so lost by mixture with the Turks, that these national peculiarities are with difficulty traced. The Greeks generally wear colours not so gay as those of the Turks, frequently having the turban and Turkish trowsers of black; green they are forbidden to use, that being the peculiar colour of a privileged few among the followers of the Prophet. It will

be gathered from my journal, that at the time of my arrival in the country, I was strongly biased in favour of the Greeks, and equally prejudiced against the Turks; and it will be seen in the course of the narrative, how this unfavourable idea of the Turkish character was gradually removed by a personal intimacy with the people, generally in situations where they were remote from every restraint but those which their religion imposes.”

We must now instance some of the accounts of various stages in his course, as examples of Mr. Fellows's agreeable and entertaining style:—

In Phrygia, not far from Sohoôt, he states:—

“On quitting this forest we crossed a valley, and saw, at a distance of about four miles, under the cliffs, or ranges of mountains, the town of Oneóenoo (meaning a ‘Place of Caves’), so called from some caves in the cliffs overhanging the town. The situation appears very damp and unhealthy, and the perfectly flat valley, which is almost a swamp, seems to be the possession of plovers and wild ducks. The situation is strikingly like that of Magnesia, but the Hermus is wanted to drain the meadows in front. The ground here is so high, that it appears to receive no waters but from the heavens, a source which latterly has been very liberal. Oneóenoo is a long village, immediately under the face of the rock, and is overhung by two immense arches or caves, which, at a distance, I had no doubt were artificial, the forms of the huge arches being so perfect. This evening I ascended to them, and extremely curious they are. The whole rock is of marble, veined with red, but shivered into innumerable cracks, as if by heat. The caves are evidently natural, although, at an early age of the Turks perhaps, or in the time of the Christians, the fronts have been fortified by strong walls, parts of which still remain. The caves communicate with one another, and, from their size and dryness, as well as commanding situation, they must have been an excellent substitute for a castle. Through several small cavities or fissures in the rock of the caves, water had at a remote period filtered, forming a semi-transparent crust of stalactite. While in the cave I was surprised at hearing distinctly people talking, and dogs barking, as if close to the entrance; but on going to the front of the cave, I perceived that the sounds came from the village beneath. The effect of this immense ear, or sounding-board, was as powerful as a whispering gallery; and perhaps this peculiarity might have been an advantage in times of war or alarm. Several fragments of columns, altars, and other remains, were built into the walls of the houses in the town, but the principal material used was lava or scoria, of nearly every colour; many of the spongy holes being filled with a white crystallised substance, similar to that which I have seen in the basaltic columns at Staffa.”

A little further on, in an excursion from Cotyæum, we have a notice of the manners of the country. Mr. F. says:—

“On our return we were obliged to stop to feed the horses at the little village of Arrácooe, seven miles from Kootáya. Here we rested for

an hour and a half, and had an opportunity of noticing the simple and hospitable customs of the country. A traveller had just arrived; and as the village, consisting only of a few huts, was too small to have a governor, the inhabitants have a house for strangers, which is as good as any in the place, although without windows: one end of the room forms the stable, accommodating six horses. The traveller who had arrived before us was at prayers; but no circumstance ever disturbs Mahometans at their devotions, when they appear completely abstracted. I delayed to enter until the traveller rose, when the prayer-mat was hung up, and he gave me the usual salám. I was beginning to make my meal upon the food we had with us, when in came nine people, each bearing a dish. A large tray was raised on the rim of a corn-sieve placed on the ground, in the centre of which was put a tureen of soup, with pieces of bread around it. The stranger, my servant, and a person who seemed to be the head man of the village, sat round the tray, dipping their wooden spoons or fingers into each dish as it was placed in succession before them. Of the nine dishes I observed three were of soups. I asked why this was, and who was to pay for the repast; and was informed that it is the custom of the people, strictly enjoined by their religion, that, as soon as a stranger appears, each peasant should bring his dish; he himself remaining to partake of it, after the stranger has fed,—a sort of picnic, of which the stranger partakes without contributing. The hospitality extends to every thing he requires; his horse is fed, and wood is brought for his fire, each inhabitant feeling honoured by offering something. This custom accounts for the frequent recurrence of the same dish, as no one knows what his neighbour will contribute. Towards a Turkish guest this practice is perfectly disinterested, but from a European they may possibly have been led to expect some kind of return, although to offer payment would be an insult. The whole of the contributors afterwards sit down and eat in another part of the room.

“My inquiries,” he adds, “were for coins and relics, which were hunted for in every child's toy-place or old wall where they had been noticed. Each person produced his fancied treasure, which he had preserved because some Frank had before given money for such things. They know nothing of the value or uses of our purchases. I heard of a beautiful Greek statue being sold by them for five shillings, and two bronze vases for eight shillings; and yet they were boasting of the large sums such things produced. My servant bought thirty or forty Greek coins, some of silver, at an average of three farthings each; and I obtained at an equally cheap rate the foot of a statue and some bronze handles. I think I have not mentioned, that the light generally used in this part of the country, even in the large town of Kootáya, and the other towns through which I have passed, is a chip of the fir-tree. The people make a wound in the tree, which draws the sap to that part, and the tree is then cut for fire-wood, reserving this portion, filled with turpentine, for candles. I

Misquoting, mistating,
Misplacing, misdating :—

for example, in 1816, of Miss Landon visiting Lady Caroline Lamb, and being then eighteen years of age; in 1817 we talk of the death of Byron, and Medwin's notes upon him; and, in the same year, of Scott's receiving 6000*l.* for "Waverley," and 6000*l.* for "Guy Ranning"!!!! These are specimens of accuracy, within forty pages of Vol. I.

From the letters attributed to the Princess of Wales, we select the following :—

"Villa Caprice, the 3d of December, 1817.

"I have not only to lament an ever-beloved child, but one most warmly attached friend, and the only one I have had in England! But she is only gone before.—I have her not lost—and I now trust we shall soon meet in a much better world than the present one. For ever your truly sincere friend, C. P."

"I could have wept," says the commentator, "over this strangely-warded but heartfelt expression of the poor mother's grief, and I am anxious to receive tidings that she has not committed any rash act of despair—at which I should not be surprised; for the princess is a woman of such violent feelings, and her situation is indeed now so desolate, that it would not be astonishing if, with her disposition, she were unable to endure this overwhelming calamity."

Of this there seemed to have been small danger, for a few pages on we read :—

"December 10th.—I received the following strange reply to-day from the Princess of Wales. 'Thank you a thousand times, my dear —, your kind inquiries after my health, which has suffered as little as I could expect from my late misfortune. I cannot at this moment inform you where I shall go to; my plan depends on letters from England, about that vile money, who do always annoy me. As to my household, I hear people are meddling with it, and saying it is improper. In the first place, what would they have me do? All the fine English folk leave me. I met send them away, though, by the by, some of them not behave as civil as I would like. No matter—I would have had patience with them, but they choose to go, so I not prevent them; but I must have some one to attend me, and I make my choice of some very agreeable persons, in every way fit to be my attendants; though the jealous English beggars, such as Miss —, and one or two more of our acquaintances, dear, would have liked to have had the situation which La Comtesse Oldi now fills, to her and my great satisfaction. Her brother also is a very intelligent and gentlemanlike person. They are of a decayed noblemen's family, much better born and bred than William B—'. But I know people are very ill-mannered, and choose to abuse me for the choice I have made in my household. No matter, I not care—from henceforth I will do just as I please, that I will. Since de English neither give me de great honour of being a Princesse de Gaile, I will be Caroline—a happy merry soul; but, *simplicement*, what do you think, my dear —? just before I and Lady — parted, I hope never to meet again, I gave her very pretty coat of an antique. I should have been proud of it in my room. Well, a year or two after she broke it, *purposely* I now, and had de impudence to come and say to me, 'Oh! ma'am, dat figure your royal highness thought for a brance is only plaster;' which I reply, 'I knew that, Lady —, my well, when I gave it to you. Dat is so like de English people; dey always ask, when we make them a present, how much is cost? *our present* is worth? You are a free English,

my dear Lady —, there can be no mistake.' She laughed, but I saw she looked ashamed of herself. I cannot say I regret any one of my old household. I have been disappointed in them all, and am much happier now I have no longer *des espions* about me, such as Lady A. H., watching me into every place where it is possible for a human being to set foot. I must conclude, my dear —, wishing you well, and remain ever your sincere friend,

"C. P."

"P. S. When you have any amusing news from England, I should like to hear it if you will favour me with some."

And the addenda are quite consistent :—

"Truly, did I not know the Princess of Wales, I should be tempted to believe this letter was a forgery. It is such a strange manner of writing, immediately after her poor daughter's decease; which (not to mention the affection I believe she entertained for the Princess Charlotte as her child), selfish interest must have made her know was the greatest loss she can have sustained, and one she never can recover. Others, not acquainted with the princess, on reading the foregoing letter, would judge her as an unfeeling and light-minded person. But I know that often, when she affects the greatest jocularly and indifference to affliction, her heart is not the less sore; and it is only a wish to forget her misery that makes her talk and write in such a strain as the foregoing. It is impossible not to laugh at her encomiums on her present household, and her observations on her former one. Yet, at the same time, I feel sincere regret for her wilful blindness to her impending ruin, and the infatuation she has taken for such disreputable people as the foreigners she has now in her service. But it would be worse than useless for me to incur her displeasure by attempting to give her any advice. So God keep her, and preserve her from coming to any fearful end! is all that her best friends can say."

"I have seen (writes a visitor to Como at the same period) the Princess of Wales. To my infinite surprise her royal highness wrote, and desired me to wait upon her yesterday, which I did accordingly, and found her looking very well, but dressed in the oddest mourning I ever saw; a white gown, with bright lilac ribbons in a black crape cap!"

Another specimen of this correspondence is characteristic :—

"I received a short note from the Princess of Wales, sent by a person whom she introduced to me—a German flute-player. The letter of introduction was certainly a very novel one. It was as follows:—'Dear —, the bearer of this epistle is Monsieur R—, a fiddle-player, or a pipe-player,—I don't know which you would call him in English—no matter; he was recommended to me by a cousin of mine, whom I wish had been in de Red Sea when he sent this man to my retreat here, which I would like to keep unmolested from tiresome people. But I find dat impossible; so I must submit like a martyr on de steak, to being annoyed all my life long, and live in hopes of a reward for my patience and my virtue in another world, which cannot be worse than de present. Monsieur R— teased me to present him to you; so I beg to waste your anger upon him, and not on me. His appearance will make you laugh till you die—that, at least, he has the power to do; *en route*, he is the dullest man God ever did born, and I recommend you to have nothing to do with him; he is a grand bore. Why do you not come to Como? I would make you welcome at

my anchorite's dinner every day, if you would eat my humble fare. Neither the Comtesse Oldi nor myself are epicures; and very often we cook our own dinner! What would de English people say if dey heard dat! Oh fie! Princess of Wales. The old *beguine* Queen Charlotte is on her last legs, I hear. *Mais ça ne me fait ni froid ni chaud* now; there was a time when such intelligence might have gladdened me; but now nothing in the world do I care for, save to pass de time as quickly as I can: and death may hurry on as fast as he pleases—I am ready to die. But I weary you, my dear —; *ayez de l'indulgence pour moi* and my grumbling, and believe dat I am ever yours, C. P."

To this we will append two or three of the best anecdotes we find scattered through these pages :—

"A friend who was present at Princess Charlotte's marriage said, that when Prince Leopold repeated the words, 'with all my worldly goods I thee endow,' the royal bride was observed to laugh."

"On the last day of the {Queen's} trial, when requested to retire and take some refreshment, she peremptorily refused to do so; and on some persons offering the queen refreshments which they had brought for their own use, she declined accepting them, saying, 'I can take a chop at the King's Head if I am hungry;' alluding to the tavern bearing that sign near the House of Lords. There was much ready wit in that reply, but it was, perhaps, ill-timed, and she was never afterwards heard to make a joke, or seen to smile."

"The persons who attended the queen at the latter end of her life were faithful and attached to her, but they were not persons calculated to give her the best advice. She endeavoured, poor unhappy princess, to amuse herself, but as — informed me, she took no pleasure in any thing. She once saw Prince Leopold, and his manner was affectionate and feeling. From all I ever heard of him, he is a good-hearted man, but timid and self-interested, and he was kept in such order by the king, that the only visit he ever paid his mother-in-law was in secret, unattended, and without any witnesses, except the queen's lady. Finally, her

body was suffered to be placed in the vanit of the royal family at that city. But the crown and insignia of royalty on the coffin were taken off, and I have been told that nothing but her name, 'Caroline,' stands to record who lies within that narrow house. The candle that is taken into that royal mausoleum to shew the visitors the coffins, has always been placed on here, so that the velvet is covered with wax, and otherwise soiled. Thus do her remains, even in the grave, meet with the same disrespect she endured throughout life."

The letters assigned to the Princess Charlotte are of a superior order, and contain passages which look very like what school-girls write under the superintendence of able teachers. If the sentiments and expressions are really her own, they exhibit a degree of character not to be expected from her age, sex, and station. *Es gr.*

Extract from a Letter of Princess Charlotte, dated Weymouth, 19th August, 1815.

"I cannot close this letter without returning my best acknowledgments for your condolence with, and inquiries after me, in consequence of the fall of my glorious (as well as much-loved) uncle. I bore it as, I trust, a Christian ought, bowing to the will of the all-wise Being; but it was a grievous circum-

stance — a dreadful, an irremediable loss to me, for the great possess few real friends. In him I had a warm and constant one, allied, too, by the closest ties of blood. I loved him with the fondest affection, and am confident he returned the sentiment. His death was so glorious — so completely what he always desired for himself — that if it was decreed he should so early in life quit this world, he could not close his career more gloriously or more worthy of a hero, as he was, and of that father and that blood he descended from. Pardon me if I seem enthusiastic in my expressions; but I confess this is a topic which warms every feeling of my heart and mind. You knew him [a word illegible] impartially if I say too much in his favour. My health I do not think has suffered from this shock; but I have not been really well for some time past. [An illegible line.] I was much better for so doing last year, and trust I may derive equal benefit this; but I am still complaining, though I am not the least fanciful about my health; that is a weakness I do not allow myself to indulge in, though there are some which cannot be avoided by the wisest. I less regret than I otherwise should do your remaining abroad, for two reasons: the first is [illegible]; secondly, there is at present so little chance, I may say none indeed, of our meeting, that it would only be tantalizing. Time, which is the sweet healer of all sorrows, has mitigated and softened down my previous afflictions and distresses to a gentle mild melancholy and resignation; but the recollection of them cannot be effaced. What was at first (as you sensibly remark) the aggravation of my sorrow, is now my consolation. I trust my mother continues well, and that she has not been very much shocked by the death of her brother. I hope she has got a letter. I was permitted to write to her on the sad event, &c. (Signed) CHARLOTTE."

Another: —

"Extract from another Letter from her Royal Highness to the Same.

"Thank you, dear —, for having permitted me to peruse my mother's letter to you, though, indeed, its contents have made me feel very uncomfortable. I wish with all my heart things could be altered, or, at least, that she could be persuaded to feel more at peace, and, above all, more confidence in those who really have her interests at heart. If I could see you I would tell you why I do not write to her; but I do not think it quite prudent to write all I feel upon this, to me, very painful circumstance. I trust Dr. — will remain in the princess's service; and am also led to hope that Lady C. C. — may join my mother again. I should feel much relieved by knowing that she had some English attendants with her in a foreign country. I think some of the others might have remained with her; but I am told they were all compelled, from circumstances in their own private affairs, to return to England. I think she would do well to secure Miss M. — as a temporary attendant. She is trustworthy, I believe; but you know my mother is not easily pleased. I cannot help thinking it was unlucky she ever left England; yet I can fully enter into the motives she had for so doing, or rather the feelings which prompted her to seek change of scene. I have said too much on this subject, dear —; pray forgive me for having prosed so long. Thank you for your inquiries after my health. I am not so well as I ought to be, for indeed I have every thing to make me both perfectly well and perfectly happy; and these lesser evils sink before my greater blessings, and I hope to grow stronger as the

warm weather advances. The prince desires me to say something kind from him to you; what shall that something be? I am no very ready scholar, so I will leave it to you to compose a pretty speech for him. All I can assure you of, and that with great sincerity, is, that my cara sposo and myself are very truly yours, (Signed) C. P. S. C."

With this we conclude. The biographical sketches are, perhaps, the best portion of the work, even though we differ materially from their writer, whoever he or she may be. On the whole, the leather and prunella predominate in far too great a measure; and there are a multitude of little personalities, which, though of small consequence, shew a recklessness in the authorship, and a want of that social principle, the breach of which is but too common in the scribblers of the age, whose only object is to get money for their treacheries.

A Summer in Andalusia. 2 vols. 8vo. London, 1839. Bentley.

ONE of those agreeable tours which please us whilst we read them, without leaving any strong impression upon our minds, that they have conveyed to us either much new information or brought us acquainted with places or circumstances unknown before. In fact, Andalusia has been so frequently traversed and described by English travellers, that no more could be expected from another visit than our observant and intelligent author has here given us. Lisbon, Cadiz, Cordoba, Seville, Granada, Malaga, Gibraltar; bull-fights, religious processions, churches, Roman and Moorish antiquities, pictures; contrabandistas, posadas, theatres, dances, priests, superstitions, beggars, &c. &c., are all well ranged in these pages, from the summing up of which we shall, by way of example, extract some of the provincial features attributed to the Andalusians: —

"As pride distinguishes the Englishman, and vanity the Frenchman, so does conceit, or the union of the two, distinguish in as remarkable a degree the Spaniard of Andalusia; for the natives of each province of Spain have a distinct character. The Andalus has that mixture of pride and vanity, which, unlike either of those qualities when pure, produces a neutral effect. Had he more of either, he might, like the Briton or Frenchman, arrive at distinction, but these qualities are so nicely balanced in his mental constitution, that, when the desire of fame prompts him to exertion, pride steps in, arrests his progress, and tells him to be satisfied with himself as he is: when regard for his own consequence is his incentive, it carries him forward but a few steps, for his vanity presently interferes, and so engages him in blazoning abroad the little he has done, as to make him forget he has yet more to do."

"As their own proverbs have it, they too often 'cry wine and sell vinegar' — they produce more noise than nuts — 'much cackling, but few eggs.' Times without number have I heard them assert that to Spain alone are the nations of Europe indebted for their freedom from the yoke of Napoleon. It was Spain that conquered France, and saved England from destruction! Wellington and his army did little or nothing! To convince them of the contrary, would be next to impossible."

"One trait of character, which the Andalus possesses in common with other Spaniards, is temperance. Though wine and spirits are marvellously cheap — a bottle of the former, much superior in strength and flavour to the *vin ordinaire* of France, often costing less than a penny — they are rarely drunk to excess.

The peasantry, in fact, generally prize good water more highly than wine, for, say they,

'Mucho vale y poco cuesta.'

Intoxication is, nevertheless, said to be more frequent in Andalusia than in the other provinces: and this explains the greater number of assassinations committed, for the Andalus is constitutionally irritable in the extreme, and when excited by wine, on the least provocation, real or imaginary, he will draw his knife on the offender. To this, however, I cannot bear the testimony of an eye-witness, as I did not see a single instance of intoxication among the Andalusians.

"The foreigner in Spain meets with singular civility and hospitality — such hospitality as it is the custom of the country to display. He will rarely, perhaps never, be asked to dinner, but in a land where the pleasures of the table are so little understood as in Spain, and where meals seem to be deemed matters rather of necessity than of gratification, this should be made no charge of inhospitality. When he is first introduced to a Spanish family, he is told by the master or mistress that the house and all it contains is at his disposal, that he has but to command, and every thing is at his service; and such showers of compliments are rained upon him, that he can scarcely open his lips in reply. After this he is at liberty to enter the house whenever he pleases. Another mode of shewing hospitality to a stranger is singular enough. Never could I regale myself in a *neveria*, or ice-house, but on asking for my bill I was sure to find it already paid by some unknown friend, who had probably never seen me before. When with a party, I have often stepped out beforehand, in order to reciprocate these civilities, but in vain — the bill was already paid. Such is Spanish hospitality! In native humour and gaiety of disposition the Andalus resembles the Irishman; with this difference, however, that instead of making bulls, as Paddy, his great delight is in slaying them. The humour of the Andalus — the 'salt,' as it is called — consists in a smartness of repartee, the result of his lively imagination and turn for satire, and in bringing a host of quaint proverbs to bear on the subject-matter of his discourse."

The women are described as devoted to only one object, amorous intrigue; and our author says: —

"If ignorance, bigotry, and superstition, abound in Spain, if the people have little appetite for knowledge, if they have transferred their affections to baser objects, it is the Roman church which is to blame. More than this. It is the church that we must regard as the author, or at least the promoter, of the general dimness of morals. It is melancholy to be obliged to say this of an institution intended for the moral and religious benefit of the people; yet such is unhappily the fact, and whatever Catholicism may have done in other countries, in Spain it has undoubtedly tended more than any thing else to the social and political ruin of the nation. When the facility of obtaining absolution for crime, and the notoriously corrupt example of the clergy, are considered, is it surprising that the standard of morals should be low? The unnatural celibacy of so numerous a body of men, many of whom were dedicated to the church at an age when they could know little or nothing of the worldly pleasures they were resigning, could not fail, in so servid a climate as Spain, to produce disastrous effects. Moreover, they have sanctioned the immoralities of the laity by their own example, and by too freely granting absolution to those who

could pay for it. Guilty themselves, they have been willing to regard with lenient eyes the guilt of others, especially of the women, whose moral sense has consequently been deadened or destroyed. Where woman is corrupt, can man be virtuous?

"In Spain the clergy are now but little respected, and religious duties are neglected by nearly all but women and peasants."

As Andalusia at this period bears an important relation to the general condition and prospects of Spain, the English reader will be more inclined to give his attention to the facts and characteristics which the author places before him.

Life of the Duchess of Marlborough.
(Second notice—conclusion.)

AN influx of new publications induces us to shorten what we intended to say further of Mrs. Thomson's sterling historical work; but we trust we shall have done enough to recommend it to the consideration it merits. The prevalence of female influence and back-stairs intrigue at the court of Queen Anne, is the subject of many pages in the second volume. The picture is generally a painful one, and the consequences of these feuds exhibit the unhappiness of all concerned in them, from majesty to the inferior ranks, and the injurious effect they produced on public affairs and national interests. The quarrel between the Duchess and Lord Rochester was one of the productive sources of evil, as was afterwards her bitter dispute with Harley and Abigail Hill. Of the former, it is stated:—

"The wound was inflamed continually, and, at last, the enmity rose to open hostilities. Lord Rochester was as averse to a reconciliation with his haughty foe as the duchess herself; their influence bore the semblance of rivalry; their advice drew the compliant queen different ways; Lord Rochester guided the prejudices, the duchess governed the affections of her royal slave. Finally, female influence prevailed: for when have men adequately opposed its sway? Yet it is certain, first, that Anne long resisted the arguments of her friend; and, secondly, that the duchess would never have been completely successful, had not the violence and arrogance of her foes blazed out, and proved the most opportune and effectual aid that ever plotting woman received.

"The queen, the nervous queen, was considered as a mere property, 'which was to be engrossed, divided, or transferred, as suited best with the mercenary views of those state-brokers who had the privilege of dividing the spoil.

'Then, happy low, lie down!
Uncasy lies the head that wears a crown.'"

At length the queen shook off the domination of the favourite, overthrown by the influence of Harley and Mrs. Masham (late Hill):—

"The duchess then taunted Mrs. Masham with carrying to the queen tales against some, and petitions in favour of other members of her majesty's household. Mrs. Masham, on the other hand, defended herself by saying that she only took to her royal mistress certain petitions which came to the back-stairs, and with which she knew that the duchess did not care to be troubled. This perversion of facts did not blind the duchess to the actual state of affairs, and the conversation ended in a long and ominous silence, broken by Mrs. Masham's rising, and saying she hoped that the duchess would sometimes give her leave to inquire after her health. Notwithstanding this condescending speech, the lady in power never once deigned, nor dared, to visit the dejected and deserted favourite.

"Partly from policy, and, probably, partly from curiosity to see how matters stood, the duchess thought proper, when her cousin's marriage was publicly announced, to visit her with Lady Sunderland; purely, however, as she alleged, out of respect to the queen, and to avoid any noise or disagreeable discourse which her refusing that ordinary act of civility might occasion. Fortunately, however, for the peace of St. James's, the ungrateful bride was not at home when this undeserved honour was paid to her, by one from whom she had merited nothing but neglect. The breach, however certain, and however sure the process by which it was widened, was not, as yet, perceptible to the court. Possibly all were reluctant to open a battery of anecdote and scandal against the redoubtable Sarah, who might be restored to her long-asserted ascendancy. The duchess was not without hopes of resuming her influence. During the Christmas holidays, she went to pay her respects to the queen; but had the misery of learning from the page, before she went in, that Mrs. Masham had just been sent for. The last interview in which the least traces of friendly regard might be observed, must be told in the duchess's own words. It is evident that she had some lingering expectations that all differences might yet be healed, and that the queen's regard could be revived.

—'The moment I saw her majesty, I plainly perceived she was uneasy. She stood all the while I was with her, and looked as coldly on me as if her intention was that I should no longer doubt of my loss of her affections. Upon observing what reception I had, I said 'I was sorry I had happened to come so unseasonably.' I was making my courtesy to go away, when the queen, with a great deal of disorder in her face, and without speaking one word, took me by the hand. And when, thereupon, I stooped to kiss hers, she took me up with a very cold embrace, and then, without one kind word, let me go. So strange a treatment of me, after my long and faithful services, and after such repeated assurances from her majesty of an unalterable affection, made me think that I ought, in justice to myself, as well as in regard to my mistress's interest, to write to her in the plainest and sincerest manner possible, and expostulate with her upon her change to me, and upon the new counsels by which she seemed to be wholly governed.' The letter addressed on this occasion by the duchess to the queen, was truly characteristic of the honest mind by which it was framed. There is neither flattery nor violence, in the simple declaration of wounded feeling, expressed in the duchess's forcible language; and Queen Anne appears to have been touched by the direct appeal to her best dispositions, which it contains. For some days, indeed, no notice was taken of this remarkable epistle; but after a short time had elapsed, an answer was presented to the duchess, who found in it symptoms of a relenting spirit in her altered sovereign; and, anxious on account of others, as well as for her own comfort, to avoid an open rupture, she endeavoured once more to put on as easy an appearance as she could.

Upon a review of the circumstances which attended this notable quarrel, the character of the duchess appears in a much more favourable light than, from the many defects of her ill-governed mind, could reasonably have been expected. In the first instance, she was generous to her kinswoman, confiding, and lenient. Slow in being aroused to suspicion, her conduct was straightforward and judicious when the truth was forced upon her unwilling

conviction. She acted with sincerity, but not with address; and feelings too natural for a courtier to indulge were betrayed in the course of those altercations in which the character of Abigail is displayed in the worst colours. Artful and plausible, yet daring and insolent, according to circumstances—shameless in her ingratitude, the mean and despicable tool of others, with few advantages of education,—that abject but able woman acquired an ascendancy over the mind of Anne that was truly astonishing. The poor queen is to be pitied—we dare not say despised—for her subservieny, her little artifices, her manœuvres in closets and the back-stairs, her degrading connivance at duplicity, her thirst for flattery, or what she termed friendship. Her confidence and affection, thus extended towards an unworthy object, henceforth weakened, rather than adorned her character."

Mrs. Thomson is, we think, rather hard upon the queen for resorting to evasions and equivocations in freeing herself from the despotism of the duchess. We are not sure what strength of mind is necessary to shake off such an incubus; but we believe that tens of thousands of tolerably firm individuals go annually to their graves, never having mustered courage enough in their lives to free themselves from similar restraints and impositions. Custom is second nature, says the proverb; we believe it is often stronger than nature, and that nothing is so difficult as to emancipate yourself from its bonds, however galling and intolerable. Mrs. Masham's ascendancy became more striking than that of the duchess; so much so, that

"During the heat of Sacheverell's business, and before that notable comedy had been brought to a close, several of the privy counsellors, disgusted by Mrs. Masham's influence, consulted privately as to the expediency of moving an address for her dismissal from the royal confidence. These conferences, which were held late at night, were kept profoundly secret. They were attended by Lords Somers, Wharton, Halifax, and Sunderland, the chancellor Cowper, and the lord treasurer. Halifax and Wharton, the most violent of the party, with all duty to the queen, are said to have insisted modestly, that evil counsellors of one sex might be as well removed from the royal councils as those of another, by the advice of parliament. Somers, Godolphin, and Cowper were of a different opinion, and judged that such a remonstrance could not be made, consistently with the laws of the land. Sunderland was violent and impatient, and bitterly inveighed against the moderation of Somers, formerly his oracle, but now no longer able to control the rash spirit of his once enthusiastic votary. Marlborough, also, resisted the impetuosity of his son-in-law; and whilst he had proved himself capable of frustrating, by many determination, the arch-enemy's plans, resolved, with Somers, to wait until a favourable opportunity of annihilating her influence should occur; not, unconstitutionally, to force the queen to abandon her favourite, as Sunderland required."

The last years of the life of Marlborough and his duchess are painted in a very interesting manner by Mrs. Thomson, and many personal particulars of both, especially in regard to the offers of marriage, &c., to the latter in her widowhood; placed in a more natural light than we have hitherto seen them in the elevated pages of history. But as the principal occurrences are pretty well known, we may be excused from going more at length into these details. We cannot refrain, however, from quoting a

few brief sentences, as samples, of the author's observant qualities. Of Bolingbroke (she says) he "claimed, on his mother's side, an alliance with the ancient and noble family of Rich, earl of Warwick; from which loyal house he probably received those predilections for the Tory party which a mother could so easily implant; an influence which no nonconformist divine could readily counteract. But whilst thus he grew up, culling from different sources contrary opinions, it is probable that from his Presbyterian tutor he acquired that ardour for singular distinction which is the characteristic mark of sectarianism of every description, and by which, indeed, in conjunction often with higher motives, its ramifications are extended and maintained."

Of the final separation of the queen and duchess:—

"This correspondence appears to have had the effect only of widening the breach. It is one peculiarity of our sex, or, at any rate, of the least reflective portion, that the affections once alienated, cannot, by reasoning, by persuasion, even by concession, be restored to their accustomed channel."

Of the ducal grandchildren domesticated at Blenheim:—

"There is nothing more touching than the affection of the old for infants, nothing more consolatory than to observe how beautifully Providence renews the greatest of all pleasures, in restoring to the grandfather the tenderness, and the consequent parental joys, of the father. Those who have represented Marlborough as of a narrow spirit, and a cold, designing heart, should have beheld him gazing with delight upon his youthful granddaughters, when taking lessons in music and dancing, or performing such parts as were suited to their capacity in certain dramas, which turned often upon the exploits of the grandfather, and on the gifts and graces of the grandmother."

With an anecdote of his grace, we conclude our extracts:—

"It may appear reasonable to suppose that the Duke and Duchess of Marlborough, having now tasted of the enjoyments, or endured the annoyances, of four successive courts, would gladly retire from all such scenes, thankful to escape to the quiet possession of leisure, and to the participation of such blessings as were spared to their old age. Vast riches were superabundantly their portion. Yet even wealth, which becomes a blessing or a curse according to the quality of that nature to which it is attached, has its inconveniences; and the immense accumulation of ready money appears to have caused the duke considerable embarrassment. 'I beg pardon for troubling you with this,' he wrote about this time, to a friend, 'but I am in a very odd distress—too much ready money. I have now one hundred thousand pounds dead, and shall have fifty more next week; if you can employ it in any way, it will be a very great favour to me.' Surely so strange a dilemma as that of having a hundred and fifty thousand pounds too much for one's peace of mind, and of being able to dispense with the interest of such a sum, is of rare occurrence."

South American Expedition: Captain Fitzroy's Journal. Vol. II.

THE interest felt about the natives of the southern extremity of the earth, recommends the accounts of them as the fittest portions we can extract for the illustration of these volumes in a popular periodical; and we, therefore, select a few particulars relative to the four

Fuegians brought to England by our countrymen. One of them died of smallpox soon after landing; and the others were conveyed to Walthamstow. On their route, and of their arrival, the following incidents are related:—

"Passing Charing Cross, there was a start and exclamation of astonishment from York. 'Look!' he said, fixing his eyes on the lion upon Northumberland House, which he certainly thought alive, and walking there. I never saw him shew such sudden emotion at any other time. They were much pleased with the rooms prepared for them at Walthamstow; and the schoolmaster and his wife were equally pleased to find the future inmates of their house very well disposed, quiet, and cleanly people, instead of fierce and dirty savages. At Walthamstow they remained from December 1830 till October 1831.

"Considerable progress was made by the boy and girl; but the man was hard to teach, except mechanically. He took interest in smith's or carpenter's work, and paid attention to what he saw and heard about animals; but he reluctantly assisted in garden work, and had a great dislike to learning to read. By degrees, a good many words of their own language were collected (the boy's differed from that of the man and the girl), and some interesting information was acquired respecting their own native habits and ideas. They gave no particular trouble; were very healthy; and the two younger ones became great favourites wherever they were known."

A Mr. Matthews accompanied them on their return, to proceed among their tribes with them, and endeavour to promote their civilisation and welfare. On approaching the coast we are told:—

"Our Fuegian companions seemed to be much elated at the certainty of being so near their own country; and the boy was never tired of telling us how excellent his land was—how glad his friends would be to see him—and how well they would treat us in return for our kindness to him."

"Breathes there a man, with soul so dead,
Who never to himself hath said,
This is my own, my native land?"

Even these poor savages rejoiced in their wild, barren, and stormy rocks! As they coasted along:—

"Several natives were seen in this day's pull; but as Jemmy told us they were not his friends, and often made war upon his people, we held very little intercourse with them. York laughed heartily at the first we saw, calling them large monkeys; and Jemmy assured us they were not at all like his people, who were very good and very clean. Fuegia was shocked and ashamed; she hid herself, and would not look at them a second time. It was interesting to observe the change which three years only had made in their ideas, and to notice how completely they had forgotten the appearance and habits of their former associates; for it turned out that Jemmy's own tribe was as inferior in every way as the worst of those whom he and York called 'monkeys—dirty—fools—not men.'

"This evening we reached a cove near the Murray Narrow; and from a small party of Tekeneica natives, Jemmy's friends, whom we found there, he heard of his mother and brothers, but found that his father was dead. Poor Jemmy looked very grave and mysterious at the news, but shewed no other symptom of sorrow. He reminded Bennett of the dream (related in the previous chapter), and then

went for some green branches, which he burned, watching them with a solemn look: after which he talked and laughed as usual, never once, of his own accord, recurring to the subject of his father's decease. The language of this small party, who were the first of Jemmy's own tribe whom we met, seemed softer and less guttural than those of the 'bad men' whom we had passed near the clay cliffs; and the people themselves seemed much better disposed, though as abject and degraded in outward appearance as any Fuegians I had ever seen. There were three men and two women: when first we were seen they all ran away, but upon two of our party landing and advancing quietly, the men returned and were soon at their ease. Jemmy and York then tried to speak to them; but to our surprise, and much to my sorrow, we found that Jemmy had almost forgotten his native language, and that, of the two, York, although belonging to another tribe, was rather the best interpreter. In a few minutes the natives comprehended that we should do them no harm; and they then called back their women, who were hiding in the woods, and established themselves, very confidently, in a wigwam within a hundred yards of our tents.

"Being within a few hours' pull (row) of Jemmy's own land, which he called Woollyja, we all felt eager, though anxious, and I was much gratified by seeing that Matthews still looked at his hazardous undertaking as steadily as ever, betraying no symptom of hesitation. The attentions which York paid to his intended wife, Fuegia, afforded much amusement to our party. He had long shewn himself attached to her, and had gradually become excessively jealous of her good-will. If any one spoke to her, he watched every word; if he was not sitting by her side, he grumbled sulkily; but if he was accidentally separated, and obliged to go in a different boat, his behaviour became sullen and morose. This evening he was quizzed so much about her that he became seriously angry, and I was obliged to interpose to prevent a quarrel between him and one of his steadiest friends.

"Canoes continued to arrive; their owners hauled them ashore on the beach, sent the women and children to old wigwams at a little distance, and hastened themselves to see the strangers. While I was engaged in watching the proceedings at our encampment, and poor Jemmy was getting out of temper at the quizzing he had to endure on account of his countrymen, whom he had extolled so highly until in sight, a deep voice was heard shouting from a canoe more than a mile distant: up started Jemmy from a bag full of nails and tools which he was distributing, leaving them to be scrambled for by those nearest, and, upon a repetition of the shout, exclaimed, 'My brother!' He then told me that it was his eldest brother's voice, and perched himself on a large stone to watch the canoe, which approached slowly, being small, and loaded with several people. When it arrived, instead of an eager meeting, there was a cautious circumspection which astonished us. Jemmy walked slowly to meet the party, consisting of his mother, two sisters, and four brothers. The old woman hardly looked at him before she hastened away to secure her canoe, and hide her property, all she possessed—a basket containing tinder, fire-stone, paint, &c., and a bundle of fish. The girls ran off with her without even looking at Jemmy; and the brothers (a man and three boys) stood still, stared, walked up to Jemmy, and all round

him, without uttering a word: Animals when they meet shew far more animation and anxiety than was displayed at this meeting. Jemmy was evidently much mortified, and to add to his confusion and disappointment, as well as my own, he was unable to talk to his brothers, except by broken sentences, in which English predominated. After a few minutes had elapsed; his elder brother began to talk to him; but although Jemmy understood what was said, he could not reply. York and Fuegia were able to understand some words, but could not, or did not choose to speak. This first evening of our stay at Woollya was rather an anxious one; for although the natives seemed inclined to be quite friendly, and they all left us at sunset, according to their invariable practice, it was hard to say what mischief might not be planned by so numerous a party, fancying, as they probably would, that we were inferior to them in strength, because so few in number. Jemmy passed the evening with his mother and brothers, in their wigwam, but returned to us to sleep. York, also, and Fuegia, were going about among the natives at their wigwams, and the good effect of their intercourse and explanations, such as they were, was visible next day (24th) in the confident, familiar manner of the throng which surrounded us while we began to dig ground for gardens, as well as cut wood for large wigwams, in which Matthews and his party were to be established. Canoes still arrived, but their owners seemed as well-disposed as the rest of the natives, many of whom assisted us in carrying wood, and bringing bundles of grass or rushes to thatch the wigwams which they saw we were making, in a pleasant sheltered spot, near a brook of excellent water. One wigwam was for Matthews, another for Jemmy, and a third for York and Fuegia. York told me that Jemmy's brother was 'very much friend,' that the country was 'very good land,' and that he wished to stay with Jemmy and Matthews. A small plot of ground was selected near the wigwams, and, during our stay, dug, planted, and sowed with potatoes, carrots, turnips, beans, peas, lettuce, onions, leeks, and cabbages. Jemmy soon clothed his mother and brothers, by the assistance of his friends. For a garment which I sent the old woman, she returned me a large quantity of fish, all she had to offer; and when she was dressed, Jemmy brought her to see me. His brothers speedily became rich in old clothes, nails, and tools, and the eldest was soon known among the seamen as Tommy Button and Harry Button, but the younger ones usually staid at their wigwams, which were about a quarter of a mile distant. So quietly did affairs proceed, that the following day (25th) a few of our people went on the hills in search of guanacoes: many were seen, but they were too wild to approach. An old man arrived who was said to be Jemmy's uncle, his father's brother; and many strangers came, who seemed to belong to the Yapoo Tekeenica tribe. Jemmy did not like their visit; he said they were bad people, 'no friends.'

"During the four days in which we had so many natives about us, of course some thefts were committed, but nothing of consequence was stolen. I saw one man talking to Jemmy Button, while another picked his pocket of a knife, and even the wary York lost something, but from Fuegia they did not take a single article; on the contrary, their kindness to her was remarkable, and among the women she was quite a pet.

"In the evening, Matthews and his party

— Jemmy, York, and Fuegia — went to their abode in the three new wigwams. In that made for Matthews, Jemmy also took up his quarters at first: it was high and roomy for such a construction; the space overhead was divided by a floor of boards, brought from the ship, and there most of Matthew's stores were placed; but the most valuable articles were deposited in a box, which was hid in the ground underneath the wigwam, where *fire* could not reach. Matthews was steady, and as willing as ever; neither York nor Jemmy had the slightest doubt of their being all well-treated.

"Some natives soon appeared, and, though few in number, were inclined to give trouble. It was evident they did not know the effect of fire-arms; for if a musket were pointed at them, and threatening gestures used, they only made faces at us, and mocked whatever we did. Finding them more and more insolent and troublesome, I preferred leaving them, to risking a struggle, in which it might become necessary to fire, at the hazard of destroying life. Twelve armed men, therefore, gave way to six unarmed, naked savages, and went on to another cove, where these annoying, because ignorant, natives could not see us."

On returning, after the brief absence from the new settlement, it was found in a deplorable state:—

"Matthews gave a bad account of the prospect which he saw before him, and told me that he did not think himself safe among such a set of utter savages as he found them to be, notwithstanding Jemmy's assurances to the contrary. No violence had been committed beyond holding down his head by force, as if in contempt of his strength; but he had been harshly threatened by several men, and from the signs used by them, he felt convinced they would take his life. During the last few days, his time had been altogether occupied in watching his property. At first there were only a few quiet natives about him, who were inoffensive; but three days after our departure, several canoes full of strangers to Jemmy's family arrived, and from that time Matthews had had no peace by day, and very little rest at night. Some of them were always on the look-out for an opportunity to snatch up and run off with some tool or article of clothing, and others spent the greater part of each day in his wigwam, asking for every thing they saw, and often threatening him when he refused to comply with their wishes. More than one man went out in a rage, and returned immediately with a large stone in his hand, making signs that he would kill Matthews if he did not give him what was demanded. Sometimes a party of them gathered round Matthews, and, if he had nothing to give them, teased him by pulling the hair of his face, pushing him about, and making mouths at him. His only partisans were the women; now and then he left Jemmy to guard the hut, and went to the natives' wigwams, where the women always received him kindly, making room for him by their fire, and giving him a share of whatever food they had, without asking for any thing in return.

"York and Fuegia fared very well; they lost nothing; but Jemmy was sadly plundered, even by his own family. Our garden, upon which much labour had been bestowed, had been trampled over repeatedly, although Jemmy had done his best to explain its object and prevent people from walking there. When questioned about it, he looked very sorrowful, and, with a slow shake of the head, said, 'My

people very bad; great fool; know nothing at all; very great fool.' It was soon decided that Matthews should not remain."

After a long cruise, our vessels again visited Woollya; and Capt. F. says:—

"The wigwams in which I had left York, Jemmy, and Fuegia, were found empty, though uninjured: the garden had been trampled over, but some turnips and potatoes of moderate size were pulled up by us, and eaten at my table, a proof that they may be grown in that region. Not a living soul was visible any where; the wigwams seemed to have been deserted many months; and an anxious hour or two passed, after the ship was moored, before three canoes were seen in the offing, paddling hastily towards us, from the place now called Button Island. Looking through a glass, I saw that two of the natives in them were washing their faces, while the rest were paddling with might and main: I was then sure that some of our acquaintances were there, and in a few minutes recognised Tommy Button, Jemmy's brother. In the other canoe was a face which I knew, yet could not name. 'It must be some one I have seen before,' said I,—when his sharp eye detected me, and a sudden movement of the hand to his head (as a sailor touches his hat) at once told me it was, indeed, Jemmy Button—but how altered! I could hardly restrain my feelings; and I was not, by any means, the only one so touched by his squalid, miserable appearance. He was naked, like his companions, except a bit of skin about his loins; his hair was long and matted, just like theirs; he was wretchedly thin, and his eyes were affected by smoke. We hurried him below, clothed him immediately, and in half an hour he was sitting with me at dinner in my cabin, using his knife and fork properly, and in every way behaving as correctly as if he had never left us. He spoke as much English as ever; and, to our astonishment, his companions, his wife, his brothers and their wives, mixed broken English words in their talking with him. Jemmy recollected every one well, and was very glad to see them all, especially Mr. Bynoe and James Bennett. I thought he was ill, but he surprised me by saying that he was 'hearty, sir, never better,' that he had not been ill, even for a day, was happy and contented, and had no wish whatever to change his way of life. He said that he got 'plenty fruits,' 'plenty birdies,' 'ten guanaco in snow time,' and 'too much fish.' Besides, though he said nothing about her, I soon heard that there was a good-looking young woman in his canoe, who was said to be his wife. Directly this became known, shawls, hands, handkerchiefs, and a gold-laced cap appeared, with which she was speedily decorated; but fears had been excited for her husband's safe return to her, and no finery could stop her crying until Jemmy again shewed himself on deck. While he was below, his brother Tommy called out in a loud tone, 'Jemmy Button, canoe, come!' After some time, the three canoes went ashore, laden with presents; and their owners promised to come again early next morning. Jemmy gave a fine otter skin to me, which he had dressed and kept purposely; another he gave to Bennett. Next morning, Jemmy shamed my breakfast, and then we had a long conversation by ourselves; the result of which was, that I felt quite decided not to make a second attempt to place Matthews among the natives of Tierra del Fuego. Jemmy told me that he knew very

♦ A favourite saying of his, formerly."

† Exclamations on the bunch-truss and berries."

‡ For a Fuegian."

little of his own language; that he spoke some words of English, and some Tekeenica, when he talked to his family; and that they all understood the English words he used. York and Fuegia left him some months before our arrival, and went in a large canoe to their own country: the last act of that cunning fellow was to rob poor Jemmy of all his clothes; nearly all the tools his Tekeenica 'friends' had left him; and various other necessities. Fuegia was dressed as usual, and looking well, when they decamped: her helpmate was also well clothed, and had hardly lost any thing I left with him. Jemmy said, 'York very much jaw,' 'pick up big stones,' 'all men afraid.' Fuegia seemed to be very happy, and quite contented with her lot. Jemmy asserted that she helped to 'catch (steal) his clothes,' while he was asleep, the night before York left him naked. Not long after my departure, in February 1833, the much-dreaded Oens-men came in numbers, overland, to Woollya; obliged Jemmy's tribe to escape to the small islands, and carried off every valuable which his party had not time to remove. They had, doubtless, heard of the houses and property left there, and hastened to seize upon it—like other 'borderers.' Until this time, York had appeared to be settled, and quite at ease; but he had been employed about a suspiciously large canoe, just finished when the inroad was made. He saved this canoe, indeed escaped in it, and afterwards induced Jemmy and his family to accompany him 'to look at his land.' They went together in four canoes (York's large one and three others) as far west as Devil Island, at the junction of the north-west and south-west arms of the Beagle Channel: there they met York's brother and some others of the Alikhoolip tribe; and, while Jemmy was asleep, all the Alikhoolip party stole off, taking nearly all Jemmy's things, and leaving him in his original condition. York's fine canoe was evidently not built for transporting himself alone; neither was the meeting with his brother accidental. I am now quite sure that from the time of his changing his mind, and desiring to be placed at Woollya, with Matthews and Jemmy, he meditated taking a good opportunity of possessing himself of every thing; and that he thought, if he were left in his own country without Matthews, he would not have many good things given to him, neither would he know where he might afterwards look for and plunder poor Jemmy.

"I cannot help (concludes this story) still hoping that some benefit, however slight, may result from the intercourse of these people, Jemmy, York, and Fuegia, with other natives of Tierra del Fuego. Perhaps a shipwrecked seaman may hereafter receive help and kind treatment from Jemmy Button's children; prompted, as they can hardly fail to be, by the traditions they will have heard of men of other lands; and by an idea, however faint, of their duty to God as well as their neighbour."

MISCELLANEOUS.

A Letter from the Right Hon. Sir R.W. Horton, Bart., V.P., to Dr. Birkbeck, President, and the Members of the London Mechanics' Institution, on the Subject of the Corn Laws. Pp. 36.

"PRINTED for the benefit of the Institution," and we would truly say, if rightly understood by them, for the benefit of every individual member of it. The clear and statesman-like view of the subject, as it affects the working-classes, and is enforced by an admirable tabular

statement of the facts, is so irrefragable, that we think no man of common sense can fail to be convinced by it. The alteration of all existing values, and the vast advantage which would be cast into the scale, not only of the foreign corn-grower, but of the foreign manufacturer, in every line of production, which the change, so loudly and inconsiderately called for, would cause, it is fearful to contemplate. The ruin of England would be the consequence. Like the author's emigration plan (1837), we can only wonder that legislation does not immediately follow up principles so demonstratively propounded, and which in action are calculated to produce such vital benefits to the country. But the time must come; and the sooner the better.

Nan Darrell; or, the Gipsy Mother. By the Author of "The Heiress," "The Squire," &c. &c. 3 vols. London, 1839. T. and W. Boone.

MYSTERIOUS birth, engendering all the varieties of life between beggary and guilt, and nobility and splendour, will lead the lovers of novel-reading pleasantly through these three volumes; into the secrets or details, it would be contrary to all rule for us to enter. All we need to say is, that the fair writer has filled her canvass with many portraits; and, what with love-affairs, burglaries, and other villainies (some of them startling enough for probability), given as much incident as is required in such productions. The gipsy woman, half-crazed, and vain of her ragged finery, is drawn from nature.

History of the Campaign in France in the Year 1814. Translated from the Russian of A. Mikhailofsky-Danilefsky. 8vo. pp. 414. London, 1839. Smith, Elder, and Co.

IN this volume we have a lively account of one of the most important invasions that ever changed the face of the world and the destinies of nations. Its military details seem to us to be well given; but its chief feature is the ascription, also, of almost every political resolution of consequence to the personal determination of the Emperor Alexander.

Charles the Tenth and Louis Philippe: the Secret History of the Revolution of July 1830. 8vo. pp. 298. London, 1839. Saunders and Ooley.

THIS is a high Bourbon, not Orleans-Bourbon, production, and accuses the present king of the French of intense treachery towards the elder and reigning branch of his family. In all cases of the kind we are suspicious of strong partisan statements, and, in this instance, acknowledge ourselves too slightly acquainted with the internal politics of Paris to be able to draw the line between the strict truth and the colouring matter. The charges are heavy, and those who feel an interest in the intricacies and intrigues of French parties, will do well to take this view of them into comparison with others.

Answers to the Objections commonly brought against Vaccination, &c., by J. Robertson. (Manchester, Simms.)—This pamphlet does not erect the windmills in order to throw them down; but we really think the objections to vaccination either so visionary or prejudiced, after the experience we have had of it, that it was scarcely worth while of so able a combatant to couch a lance against them.

British Naval Biography, from Howard to Codrington. 24mo. pp. 663. (London, Scott, Webster, and Geary.)—An outline of the naval history of England is properly prefixed to these biographical sketches, which appear to be drawn from the numerous literary sources devoted to record the heroic exploits of the most glorious service that ever vindicated and adorned the high destinies of a nation.

Foreston; or, the New Lord of the Manor. Pp. 394. (London, Rickerby.)—The intention of this volume is, doubtless, good; and, we dare say, might give many useful hints to "the landed proprietors of the United Kingdom," to whom it is dedicated, always supposing them to

have time and patience enough to read it through: an effort, we must confess, beyond our powers.

Argentine, pp. 363. (London, Smith, Elder, and Co.)—A tale of considerable interest, wrought out in the, not a novel way. Wrongs and disappointments, ending in a happy marriage, et cetera tout.

ARTS AND SCIENCES.

GEOLOGICAL SOCIETY.

MAY 22. The Rev. Dr. Buckland, President, in the chair.—Three papers were read:—1. 'On the Wells in the Gravel and London Clay in Essex,' by Dr. Mitchell. The greater part of Essex consists of London clay; but the portion of the county to the north-west of a line drawn from Harlow to Ballingdon Hill, near Sudbury, and a long ridge between Purfleet and East Tilbury, are composed of chalk. The greatest thickness of the clay is not known, but it probably exceeds 400 feet; and that of the chalk has been ascertained to be considerably more than 500. Extensive districts are covered by gravel, sand, and other detritus, which are sometimes very thin; but, in Wakering Marshes and Foulness Island, they are not less than 300 feet thick. The wells formed in the gravel are supplied by land-springs, and they are often not more than ten feet deep. There is no certainty, however, in any area of the depth to which they must be sunk, owing to the irregularity of the outline of the London clay. In the districts composed of that formation, no land-springs occur; and the wells generally penetrate to the bed of sand between the clay and the chalk. That much of the rain which falls in Essex is absorbed, there can, nevertheless, be no doubt, from the small number and insignificant size of the brooks and rivers of the county. Very little water enters the Lea; and between its mouth and Purfleet, only four streams flow into the Thames. The Crouch, the Blackwater, and the Coln, though the principal rivers of Essex, are also very small, and can carry off only an inconsiderable portion of the water, which falls in about a million of statute acres. The clay is of various colours, the lower beds being sometimes red; but it is occasionally blue to the bottom. In the districts where it is thickest, it is often interstratified with two or three beds of sand; but near the site of Fairlop Fair, it was found to consist of 398 feet of solid clay. No exact details having been preserved by the well-sinkers, Dr. Mitchell has been unable to ascertain the precise thickness of the clay at the different localities visited by him; but he gives a list of nineteen wells, selected from a very large number, the total depth of the shallowest, at Upminster, near Romford, being 192 feet, and of the deepest, situated in Foulness Island, 460 feet. These variations do not depend entirely on the position of the well, with reference to the dip of the clay or the altitude above the sea, but frequently on the irregularities in the surface of the chalk. In many cases, however, the difference is equal to the rise in the physical features of the country; and the author consequently infers that those undulations were produced by denudation, and not by irregular elevation of the district. Layers of cement stone present great impediments to the well-sinkers; and there not unfrequently occurs at the bottom of the clay a large tabular mass, technically called the water-rock, because on cutting through it a powerful stream rushes up. The water sometimes holds in solution a saline substance, probably sulphate of magnesia, as it is abundant in the springs of the London clay in Surrey. Foul air is not unknown; but it has given little inconvenience to the well-sinkers, and its

nature has not been ascertained. In Hertfordshire, sulphuretted hydrogen gas has been most destructive; and, in the chalk district of Surrey, carbonic acid gas is very troublesome, and has been sometimes fatal. Artesian wells have been productive of the greatest benefit in Essex. In the vale of the Lea they have been bored easily, and the expense has been usually about 16*l*. In the district of Bulphan Fen, they yield a large supply of water; and they have proved extremely beneficial in the marshes and the flat tracts along the coast. In Foulness Island there are no natural springs, and, until lately, there was no water except that collected in ditches. In hot seasons this became putrid, yet the inhabitants and cattle continued to partake of it as long as it lasted; and it was then necessary to obtain supplies, at the distance of seven miles, from the east end of the island. The district, in consequence, was proverbially unhealthy, and labourers could be procured only at unusually high wages; now, however, Artesian wells keep the ditches constantly full of fresh and wholesome water; farmers of a superior class are beginning to reside on the island, labourers are procured at moderate wages, and the produce of the soil has increased. Wallingsea, Mersea, and other islands, have also benefited very much by Artesian wells. Great additions are annually made to the land along the coast of Essex; and extensive embankments have been thrown up within the last seven years, enclosing valuable tracts: but large areas are totally destitute of vegetable soil; and Dr. Mitchell calculates, that on one part of the coast, there are 33,000 acres which would not yield for the next 300 years, a rental of 300 pence. In 1837 a company was proposed for enclosing the district. To this paper was appended a notice of the following localities of outbursts of water from the chalk. The Bourne Mill stream near Farnham; the head of the river Mole at Merstham; a copious spring close to the Guildford Road near Leatherhead; another at the Church below Croydon; and several within a short distance of Carshalton and Orpington; the Holy Well at Kemping; a copious stream on the north side of the road to the west of Sittingbourne, Brookend, in the Isle of Thanet; the Lidden Spout between Folkstone and Dover; the Holy Well at the commencement of the cliffs of Beachy Head, a mile from Eastbourne; also the Chadwell and the Amwell, two of the principal tributaries of the New River. The notice contained, likewise, an account of the "Nail Bourns," or occasional outbursts of water, at Birchwood House, near Croydon. The last occurrence of the phenomenon was in the spring of 1837, when the water poured out in vast quantities, and continued to do so for six weeks. Later in the same season, other streams burst forth at Gatton Park, between Merstham and Ryegate, and at Nonsuch Park near Ewell.

[To be concluded in our next.]

ROYAL INSTITUTION.

FRIDAY, 31st May. — Mr. Snow Harris, 'On the Nature of Electrical Attraction.' This subject, Mr. Harris observed, is not one of popular interest; but to the philosopher it is susceptible of a very high degree. Since the discovery of Newton's glorious general law of gravity, men of scientific pursuits have been desirous to verify the same law of action in all invisible influences. They appear, however, not to have been sufficiently aware of the phenomena observable in all electrical or magnetic

attraction, to enable them to determine the general law of action for the particular force developed by these curious agents. The law of gravity, that peculiar species of force acting as the quantity of matter directly, and as the squares of the distances inversely, is not borne out in relation to the force or forces producing the phenomena of attraction in electricity and magnetism. Doubtless all the elementary laws of nature are of the simplest form, and involve no other considerations than the simple relation of cause and effect; but rigid investigation as to the quantity of the invisible influences, the distances at which they are exerted, and the visible results, or the resistance they overcome, is requisite to their interpretation. After explaining by diagrams the law of forces from a centre and in parallel lines, in reference to light, Mr. Harris proceeded experimentally to exhibit the phenomena of attraction and induction evinced by electricity and magnetism, and to discuss the probable kind of agency producing them. In examining attractive force, the body not electrified undergoes a change previously to its being attracted. This particular change is termed induction, and is a separate and particular action. Attraction, therefore, is the result of two distinct forces. Some attribute the agency to vibration, a peculiar affection of the particles of matter; others, to some subtle form of body differing from the ordinary kind of matter, associated with their particles. If vibration were the cause, one part of a body would be similarly affected with the whole. That this is not the case, was shewn by the removal of two slices from either end of a conductor. What one had lost, the other had gained; and two opposite forces were manifested: moreover, certain bodies are attracted by the one and repelled by the other. The beautiful experiment of the separation, when projected on a prepared resinous plate, of the two powders of red lead and sulphur, previously intimately mixed, supported this remark. That, therefore, the agency is due to some subtle form of matter, is probable. The particular character of induction was then enlarged upon. The inductive force is reciprocal, the neutral body operates on the charged one, and *vice versa*. It is also not affected by angular divergence, and is propagated in all directions. The law of induction upon the charged body, estimating it by the quantity of the charge displaced, is as the quantity of charge directly, and as the distance inversely; and upon the neutral body, also, as the quantity of charge directly, but as the square root of the distance inversely; the actual quantities in the opposed surface being always as the square roots of the distances inversely. In the neutral body it is the quantity of electricity disturbed. In the charged body it is the quantity disturbed, added to that already in the opposed surface. The nature of electrical measurements, and the methods of arriving at these results, were fully demonstrated. Attraction in electricity, is the immediate result of the inductive forces, which vary in the charged body with the quantity and with the distance. If both these vary together, the whole force increases as the square of the distance inversely. If either be made constant, then it varies with the other. The inductive and attractive forces are always equal. Attraction in electricity may be reduced to the conditions of the Leyden jar; and the results, experimentally arrived at by Mr. Harris, agree with those of Mr. Cavendish. The charge is, as area directly and as distance inversely. This is true of opposed bodies, whatever be

their figure, whether plates, spheres, paraboloids, or cones. The forces then inductive, and attractive, are always exerted in the phenomenon attraction, and probably in straight lines. On this supposition, the force between any two opposed surfaces can be calculated. The quantities in the opposed areas are as the square roots of the distances, or the force is as the area directly, and as the square root of the distance inversely. This result is fully and completely borne out by experiment. The delicacy of the apparatus, the accuracy of the electrical measurements, the care manifested in the quantitative processes, and every requisite in the progress of inquiry, for the establishment of truth and mathematical precision, render the results laid down by Mr. Harris highly important and valuable.

LINNEAN SOCIETY.

MR. FORSTER in the chair. — Read, 'Further Observations on the *Spongilla fluviatilis*, with some Remarks on the Nature of the *Spongilla Marina*,' by Mr. Hogg. In the latter portion of this paper, the author endeavours to demonstrate the *vegetability* of the river sponge from the following facts, which were obtained by many experiments made by him upon that substance during the last two summers. 1st. From the general resemblance of the membrane, which invests the soft portion or gelly, with the membrane or cuticle of the leaves of many plants. 2d. From this gelatinous or soft portion being so similar to the *parenchymatous* substance of the more fleshy kinds of leaves, and being, like to the latter, chiefly composed of numerous pellucid globules. 3d. From the green colouring matter or *chromule* contained in those globules, on being pressed out, giving a permanent green or yellowish green colour to white paper, as is the case with the *chromule* of leaves and plants. 4th. From strong acids having the same effects on this sponge as they are seen to have upon plants, when they are macerated. And 5th. From the mode in which numerous bubbles of gas — most probably oxygen — are disengaged from the surface of the living mass of spongilla, when exposed to the brightest solar light, being so extremely analogous to that which is known to occur with the leaves of a plant when immersed in water, and submitted to the direct action of the light of the sun. — At the anniversary meeting, a very satisfactory report was read. The Bishop of Norwich was re-elected president. The other officers stand as heretofore. — Amongst the donations was a fine portrait of Mr. Yarrell, painted by Mrs. Carpenter.

CIVIL ENGINEERS.

THE annual conversation on Saturday evening was most numerous and brilliantly attended. The spacious suite of rooms in which were to be seen many curious objects of mechanic arts were filled for several hours; and an elegant entertainment at the close testified to the zeal and liberality of the president, Mr. Walker. Amongst the things with which we were most struck were a neat machine (Cowper's) for printing small bills, cards, labels, &c., fit for private purposes; and a very ingenious invention for joining leather straps employed in machinery. The latter is wonderfully simple and convenient, can be executed in a much shorter period, and when done is far superior to the overlaying method and riveting hitherto in use. A new lamp also attracted our notice; it burns very brilliantly, in consequence of a degree of heat being applied to the commonest oils, which purifies the supply, and either makes

a deposit of or destroys the load of heterogeneous matter which would hinder the combustion.

BOTANICAL SOCIETY.

THE meeting on Saturday was a very interesting one. The Society's apartments were fitted up with flowers and shrubs, many of them rare and curious, and thronged with company. In one room were specimens of vegetable poisons and drugs; in another, sections of a hundred various woods, so as to show their texture; in a third were all Bonpland's drawings; in a fourth, imitations of flowers and fruits, including some of Mrs. Randolph's charming and natural specimens of the former, of actual feathers; and so on through the whole, there being every where objects well meriting the attention of the public. The visit made us long to see the Society in full operation in the Regent's Park.

LITERARY AND LEARNED.

UNIVERSITY INTELLIGENCE.

OXFORD, May 30. — The following degrees were conferred:—

Doctor in Divinity.—Rev. H. J. B. Nicholson, Magdalen Hall.

Masters of Arts.—Rev. C. J. D. Marden, Lincoln College; G. H. Drummond, A. Oswald, Christ Church; Rev. J. B. Phillips, All Souls' College; Rev. W. H. Braund, J. Fuge, Magdalen Hall; M. Holme, Brasenose College; Rev. A. H. Bridges, Oriel College; Rev. A. Broadley, Wadham College; Rev. J. R. Errington, Worcester College; Rev. G. W. Braikentide, University College.

Bachelors of Arts.—R. W. Eytton, grand compounder, W. C. Morland, Christ Church; J. Meyrick, Michel Scholar of Queen's College; L. E. G. Clarke, J. Hall, Exhibitioner, of Brasenose College; M. E. Buller, J. Cox, Worcester College; J. Jones, Jesus College; W. E. Allfree, Wadham College; W. R. Ogle, Trinity College.

CAMBRIDGE, May 30. — The following degrees were conferred:—

Bachelor in Divinity.—Rev. G. Atkinson, St. Peter's College.

Master of Arts.—Rev. S. Allen, Trinity College.

On Saturday the Porson prize was adjudged to Edward Meredith Cope, of Trinity College, in this University.

ROYAL ASIATIC SOCIETY.

THIS Society held its sixteenth anniversary meeting on the 11th of May, the Right Hon. Sir Gore Ouseley, Bart., in the chair. — The Annual Report of the Council was read, with the usual financial explanations; from which we gather, that recently adopted arrangements have enabled the Society to carry on its affairs without diminishing its capital stock, to which, at one time, fears were entertained they would find it necessary to have recourse. Amongst the deaths, those of the late Secretary of the Society, Capt. Harkness, and of the Librarian, Colonel Francklin, were particularly adverted to; and some account was given of the various publications of Colonel Francklin, in several branches of literature. The Report then congratulated the meeting on the prosperous working of the Committee of Agriculture and Commerce. It also noticed the condition of the Oriental Translation Fund, which the council were happy to state still continued to enjoy the support of a large number of the patrons of oriental literature, both at home and abroad; and its operations were carried on with a zeal and activity fully commensurate to its means. The council, in concluding their report, mentioned the failure of their attempts to procure from the government a house suitable for the existing position of the Society, and stated that they had transmitted to the Court of Directors of the East India Company a memorial, to the same effect as that presented to their royal patron. Sir Alexander Johnston, as chairman of the Committee of Correspondence of the Society, gave a complete and varied detail of the differ-

ent objects to which that committee had directed its researches during the past year; embracing, among other matters, the changes which are taking place in the education, manners, and feelings of the Turks; the influence exerted upon the Affghans by the Indians on one side, and the Persians on the other; the moral and political effects likely to be produced on the people of India by the introduction of inland steam navigation; and in China by our occupation of Assam; and to the measures adopted by Russia for gaining an acquaintance with the river Amur, and the sea-coast at its mouth. These matters were elucidated by the right hon. chairman with a fulness of detail which our limits prevent us from following, but which is the less to be regretted, as the observations of Sir Alexander will appear at length in the Society's proceedings. The Right Hon. Holt Mackenzie read the Report of the Committee of Commerce and Agriculture, which commenced by acknowledging the valuable services of Dr. Royle and Mr. Solly. The report then stated that an abstract of the proceedings of the committee, up to the end of 1838, had already been printed, and that another was in progress, which would show that the matters which had been investigated by the committee were highly important in relation to the trade and agriculture of India, and to the commerce and manufactures of Great Britain; and that various inquiries had been instituted, from which interesting and beneficial results might be expected. The first article to which their attention had been directed was cotton, which might be deemed a necessary of life for our manufacturers, and for which we were in a great measure dependent on rival nations. For this object, details of the various efforts that had been made by individuals to introduce into India improvement in cotton cultivation, whether successful or not, had been collected and arranged, in order to investigate the causes of success or failure; accounts of the most approved modes of culture in America had been obtained; specimens of the best cotton soils had been brought from Georgia to this house, for the purpose of being analysed; and the committee looked forward to a time when they should be able to place within the reach of the practical agriculturist such information as would enable him to grow cotton in India equal to that of any part of the world. The value and quality of the various oil-seeds grown in India had also engaged the committee's attention; and several valuable analyses had been prepared by their chemical assistant, which fully demonstrated the importance of this branch of Indian trade. The cheap cost and abundant produce of these articles would, no doubt, ensure an extensive commerce in many species, so soon as the results of the committee's inquiries should be generally known. The vegetable-tallow of Canara had also been examined; and the result had shown that it would be a valuable substitute for the animal-tallow now so largely imported from Russia. We must refer to the report itself for the other articles noticed in it; only observing that they relate to caoutchouc, kino, hemp, tea, iron, cochineal, timber, wool, silk, and minor articles, all of which, it appears to be demonstrated, are procurable, of a superior quality, and at a less price, than in other parts of the world; and for many of which Great Britain has now to depend for a supply upon foreign states. — When the report had been read, L. H. Pettit, Esq., moved a vote of thanks to the Right Hon. Holt Mackenzie, whose valuable report was a further proof of the well-

known talent of that gentleman: this vote was seconded by T. Phillips, Esq., and carried unanimously. — Mr. Mackenzie, in returning thanks, observed that the vote the meeting had passed was gratifying to him, not so much as a compliment to himself (though to such a compliment he was not insensible), as a testimony of the Society's sense of the importance of the committee of which he had the honour to be chairman. He trusted that the interest the members of the Society took in the operations of the committee would be shewn by their increased exertions in contributing to its transactions. Many of them possessed facilities for communicating information that would be highly useful, at a small expense of time and labour: a single interesting fact, or a single sample of a new variety of any useful substance, would be gladly received by the committee. It was only by labours pursued through many years that the objects of the committee could be attained: they had as yet only broken the ground; but he hoped that enough had been done to shew the importance, the value, and the practicability of what they aimed at. The right hon. gentleman then expressed his regret at the disappointment of the Society in its just expectations of the favour and support of government. He had hoped that the labours of the committee would have strengthened the already strong claims of the Society; and that, before this, they should have been able to congratulate one another on the prospect of meeting no longer within the narrow chambers of a private house, but in a hall suited to the character of the Society, and to the great public interests which it was designed and calculated to promote. Looking at the extent and nature of our Eastern empire, and to the important services which the Royal Asiatic Society could render as an interpreter between the two countries, it was with shame, indignation, and sorrow, that he contemplated the indifference with which the public of this country regarded, and the niggard spirit in which the government treated them. He did not, however, despair of better things; and trusted that the members of the Society would do all they could, each in his own sphere, to secure the just and liberal recognition of the Society's claims to public support. Before sitting down he begged to read to the meeting an extract from the "Botanical Register," edited by Dr. Lindley, in which that gentleman had spoken very highly (though, he confessed, in somewhat an exaggerated tone) of the operations of the committee; but it was the praise of literary and scientific institutions we must chiefly value. Mr. M. concluded his address by reading the extract above mentioned, which remarked, that if the committee continued their exertions with energy and discretion for only a few years, they will have done more to make India wealthy and happy than all the other devices of state policy put together. On the thanks of the Society being voted to the council for their services, the Earl of Munster returned thanks, as one of the vice-presidents, in the name of the council. His lordship regretted that he had arrived so late; but while he had been detained by some unavoidable business from coming before, he trusted that his appearance, so late, would shew the meeting that he was desirous of being amongst them, if only for a short time. S. Ware, Esq., in rising to move a vote of thanks to General Briggs, who was now about to retire from the secretaryship, regretted that that gentleman was absent, on account of ill health. He was glad to learn that General Briggs would remain in

the council; and that he would still devote his leisure to Asiatic pursuits. R. Clarke, Esq., in moving the thanks of the Society to C. Elliott, Esq., for his services as treasurer, said that that gentleman had first called the attention of the Society to the state of its finances, and had greatly aided it in effecting that reform which was so imperatively demanded. While on his legs, Mr. Clarke said that he felt honoured in their nominating him for their secretary, but he had much diffidence in following so able an officer as General Briggs: he also knew that much good might be done for the Society in the office by one possessed of greater abilities, and a more extended influence, than he himself possessed; but the Society, although they might nominate a more efficient, they could not find a more willing officer than himself. The chairman said that the council had resolved to recommend for election, as an honorary member of the Society, his Highness the Newáb Ikbal al Doulah, Bahadur, prince of Oude, whose portrait was then in the room. The admission of the prince would be an honour to the Society. He could bear testimony that his highness was deeply versed in Persian and Arabic literature; and that his manners and habits were those of a prince and a gentleman. His highness was then balloted for, and unanimously elected. The meeting then proceeded to ballot for the officers and council of the Society for the ensuing year. The following gentlemen were declared elected into the council in the place of those going out by rotation:—S. Ball, Esq., General Briggs, H. S. Graeme, Esq., Sir Joseph O'Halloran, Colonel Sykes; R. Clarke, Esq., was elected Honorary Secretary; and John Shakspeare, Esq., Librarian. On the chairman leaving the chair, it was moved, seconded, and voted unanimously, that the thanks of the meeting be given to the Right Honourable Sir Gore Ouseley, Bart., for his able services in the chair that day.

SOCIETY OF ANTIQUARIES.

MR. HUDSON GURNEY, V.P. in the chair.—Mr. Gage Rokewode exhibited a splendid Psalter, of the early part of the fourteenth century, with a descriptive essay. This MS. is a large folio; the letters near half an inch in height. Some of the psalms are accompanied by musical notes; and the illuminations very numerous and magnificent. It was written for Sir Geoffrey Luttrell; one of the paintings representing the knight on horseback, with his lady standing near, and having the superscription, "Dñs Galfridus Lowterel, me fieri fecit." In a calendar at the commencement are several entries of obits, some relating to the family of Bohun, Earls of Hereford, of the dates of 1317, 1375, and 1409, made evidently after the book was written. The book is now the property of—Weld, Esq., of Lutworth Castle. Plain and coloured engravings of several of the illuminations were hung in the room, shewing every stage in the progress of agriculture, from ploughing the land to grinding the corn, preparations for a feast, a state-coach, various games, grotesque devices, &c.

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Geographical, 9 P.M.; British Architects, 8 P.M.
Tuesday.—Civil Engineers, 8 P.M.; Zoological, 8 P.M.; Society of Arts, 8 P.M.
Wednesday.—Society of Arts, 7½ P.M.; Medico-Botanical, 8 P.M.; Graphic, 7 P.M.; Literary Fund, 3 P.M.
Thursday.—Royal Society, 8½ P.M.; Antiquaries, 8 P.M.; Royal Society of Literature, 4 P.M.
Friday.—Royal Astronomical, 8 P.M.
Saturday.—Asiatic, 3 P.M.

FINE ARTS.

THE NELSON MONUMENT.

THE renewed competition for this national monument has exhibited its claims during the week at the bazar in St. James's Street; and a number of models and designs, not in the former collection at Mr. Rainy's room, have been submitted to public judgment. As in all matters of taste, we presume there will be an abundant variety of opinions: but as the matter is expressly arranged in this way to court the general sense of the lovers of art, we shall not refrain from offering a few notes upon the objects which most particularly attracted our attention. In the first place, however, we should say, that the light for the view is bad, in consequence of the windows descending almost to the floor: if three or four feet of the lower panes were darkened, the spectator would be much better able to form a correct idea of the effects of each model, and especially of those of any size. Perhaps we might add, with reference to the declared purpose of the exhibition, as stated by the committee, viz. to enable them to gather the sentiments of the world at large as a guide to their own decision (instead of letting it come in after in the shape of dissent, as at the first trial), the opening to intelligent visitors has been too much restricted. Tickets to the amount of two hundred per day could hardly be expected from the plan adopted; and it is likely that not two thousand people will, at the end of next week, have had an opportunity of examining the Gallery. Be this as it may, there were very few present when we were there.

Taken as a whole, we are not disposed to vaunt of the genius displayed on the occasion; and there are many performances so ludicrous, that they throw an air of ridicule upon the higher class of works among which they are ranged in juxtaposition. Some of the latter, we doubt not, would be seen with much greater pleasure were they seen alone or in better company.

Of the novelties, No. 1. is at least an original design, a very sweetly moulded trident, by Piatrucci, with three graceful recumbent female figures on the base, a segment of a sphere. How this would look on a gigantic scale we cannot tell, but we fear its prongs and handle, &c., when sufficiently magnified, would lose the praise we can so readily bestow upon their very neatly executed miniature representative. We say nothing of the sufficiency of the design to fulfil the idea of a national monument to an individual hero.

Mr. W. B. Granville's triumphal column of cast iron, after the remains of the Temple of Jupiter Stator at Rome, has been freed from objections made to it in its first model, and much improved in other respects. Of the height, 217 feet 9 inches, the last 25 feet now consists of a figure typical of Great Britain, instead of a statue of Nelson, whose name alone is inscribed on the plinth of the pedestal. With regard to the employment of iron, we observe that the artist maintains his opinion of its being easily protected from oxydisation, and not liable to injury from electricity.

Messrs. Foggo, the brother artists, have each sent in drawings of considerable merit. One consists of the actual mast of a first-rate man-of-war, supported upon naval emblems, and a fitting pedestal. The other, by Mr. James Foggo, assumes the form of a light-house, and is adorned by three characteristic groups, illustrative of the greatest actions of Nelson. A porch in the base, supported by cannon, contains his statue.

Mr. Alfred Beaumont has a prodigious granite tazza, with a cube of immense dimensions as the base of the monument. At the angles are tritons and emblematical groups. Above is a socle, with bronze groups, representing the four quarters of the world; and, to crown all, a bronze gilt statue of Nelson.

Mr. Bailly has made some alterations in his former design, and sent in a second, which does not appear to us to be so beautiful as the first, either in general effect, or in the gracefulness of the allegorical figures.

Mr. E. Gavey gives us "a partially enclosed column surmounted by a statue, with a mausoleum interior, &c., 170 feet high." His description begins thus, and of which (as Sancho Panza hath it) no more need be said.

"Beneath the azure vault of Nature's vast architectrative dome, of colossean form (visible to myriads of lesser breathing mortals, scattered around o'er hill and dale), stands the sculptured representative to unborn ages of the person,—the most glorious of the greatest maritime nation's naval heroes,

NELSON.

"The statue, with naval trophies, surmounts a column, around which twirl antagonist dolphins, emblematic of sea-war.

"Beneath a gallery are embodied a series of four allegoric bassi-relievi, hypothetical of the hero's attributes,

ENTERPRISE, VALOUR, VICTORY, AND IMMORTALITY.

"Enterprise, a youth of fiery mien, with heart swollen with enthusiasm, over-caupied by the perils of stormy danger; he sees, through the vista of breaking thunder-clouds, starry rays encircling the hero's wreath of laurelled glory; emulations incentive: with eager haste to win the prize, he throws off the habiliments of inglorious inactivity, and, with heroism armed, dashes to the immortal goal, in vain withheld by the syrens, Luxury, Effeminacy, and Fear."

Mr. Bell has a fine design, both as regards column and pedestal; but we confess that, in the latter, we think he affords a strong case of imitation to shew that the second competitors may have borrowed ideas from the first exhibitors. Look at Mr. Watson's model.

Mr. W. Grove's monument differs much from the surrounding, and is charged with numbers of classical and allegorical figures and groups.

Salamis has an obelisk (*quere*, Cleopatra's Needle?), but surmounted by the ship Victory upon a globe. Nelson is represented dying, and a Victory is descending to crown him with an immortal wreath. Lions, eagles, &c. &c., are made to typify countries, enemies, conquerors or conquered.

Speaking of these, we may note that a vast superabundance of animals are made to mean anything or everything among these monuments. Had the design been in honour of Noah, who saved their progenitors in the ark, they might have been more applicable; but for Nelson, we must say, we cannot see their fitness. Their commonplace use is not their worst fault; but when it is impossible to know what they are meant to stand for without an inscription or a description, the folly of their introduction is obvious. In one design we have four abominably ugly dogs at the angles, trying to leap down to the ground—these, we fancy, must be to shadow forth the dogs of war.

With respect to Cleopatra's Needle, it is a national shame that it is not in England, and an ornament to the metropolis.

Mr. Peter Hollins has a drawing of a figure

of Britannia, of colossal size, with a medallion of Nelson suspended from her neck, whilst his most memorable achievements are recorded in three bassi-relievi upon the pedestal which supports the prominent and national figure. Is not the reduction of the principal character to a medallion a great objection?

But the last design of which we mean now to speak (for, in truth, a number of models, without catalogue, name, or arrangement, are not so well remembered since we left the room, as we imagined they would be when we were in it) is that by Mr. Laugh, which has certainly made a very strong impression upon our mind. In the former competition we thought the productions of this eminent sculptor failures; in the present instance, we think he has succeeded in embodying attributes which we have always felt should be part of a tribute to our mighty naval commander. There is a severe simplicity in the style of this design. Four subordinate figures of British sailors, as they are stripped for battle, thus affording an opportunity for a fine display of muscular form, range on the curve of the pedestal, and carry the eye to the statue of the hero at the top. They are fit and becoming associates to a Nelson monument; for it was by the aid of such that he reached the pinnacle of his fame. The statue itself is noble; and the skill with which the artist has shrouded the lost arm in a well-draped boat-cloak, is a very happy thought, admirably executed. There is no allegory. It is altogether British. Some appropriate bassi-relievi on the pedestal do not interfere with the grand effect of the whole; and there are no paltry mouldings or ornaments to mar it. We have seen no model to please us so entirely as this does.

We intend to revisit the Gallery, and enjoy a more particular inspection; and shall probably return to the subject in our next.

BRITISH INSTITUTION.

THIS Gallery, with the works of the Old Masters, opens this day to the public; and, through the liberality and kindness of the noblemen and gentlemen proprietors, a more admirable treat has never been afforded to the artists, and the lovers and amateurs of the fine arts, containing not only what is excellent in the different schools, but also many that may be termed curiosities in art. The North Room commences with an altar-piece, by Guercino; *History of Joseph*, by Francisco Ubertini; *The Abbe Scaglia*, Vandyke; *An Out-of-door Scene*, T. de Hoo; *Rembrandt's Mill*, Rembrandt; *Cattle, in a Landscape*, P. Potter; *Landscape, with Figures*, Gaspar Poussin; *The Virgin and Child, with St. John*, Raphael; *Portrait of a Spanish General in Armour*, Velasquez; *Tobit and the Angel*, Rembrandt; *The Virgin and Child*, Guido; *A Lion and Lioness, in a Landscape*; *A Larder, with Dead Peacocks*, Rembrandt; *Portrait of Mrs. Desaguliers*, Hogarth; *Head of an Old Woman*, Denner; *Portraits of Prince Rupert, Colonel Russell, Father of Lord Orford, and Colonel Murray*, Dobson; *The Vision of St. Anthony*, Murillo; *Pythagoras addressing his Pupils*, Rubens—one of the most splendid pictures of this master it has ever been our good fortune to have seen: it is an exhibition of itself. Others, by Cornelius Jansen, Gainborough, Salvator Rosa, A. del Sarto, Carlo Cignani, Frank Hals, Teniers, Watteau, Holbein, Ruysdael, Canaletti, Guardi, &c. &c., all of them specimens, the first in their class.

We here give a list of the liberal pro-

prietors who have furnished this truly pictorial treat:—

The Duke of Norfolk, K.G., the Marquess of Lansdowne, K.G., the Marquess of Westminster, Right Hon. Lord Francis Egerton, M.P., Lord Northwick, Lord Sandys, Lady Dover, the Count St. Martin d'Agile, Right Hon. Sir Robert Gordon, G.C.B., Hon. Colonel Fitzgibbon, M.P., Sir Simon H. Clarke, Bart., Sir Charles M. Burrell, Bart., M.P., Sir Thomas Baring, Bart., Sir Samuel Salt, Bart., Sir Robert Price, Bart., M.P., Sir Edmund Temple, Rev. L. Sandford, Joseph Richard, Esq., J. Barwise, Esq., Charles Bredel, Esq., Henry Broadwood, Esq., M.P., George Byng, Esq., M.P., W. R. Cartwright, Esq., M.P., Edward N. Denny, Esq., Andrew Fountaine, Esq., L. S. Harford, Esq., Lionel Harvey, Esq., Charles Heusch, Esq., R. S. Holford, Esq., H. J. Munro, Esq., N. Ogle, Esq., Samuel Rogers, Esq., and Dr. Stokoe.

EXHIBITION OF THE ROYAL ACADEMY.

[Fifth notice.]

165. *Flora Mac Ivor*. T. Phillips, R.A.—Represents this extraordinary female under the deep impression of grief on receiving the news of her brother's execution. The artist has invested the character with a dignified, though rooted sorrow, which words are not equal to convey, and which a too violent expression of features would have destroyed.

45. *Forbidden Fruit*. R. Farrier.—An excellent title. The subject it treated with the artist's usual tact; and the rustic depredators and the guardian of the tempting orchard are represented in the true spirit of their respective callings.

26. *La Recreance*. J. J. Chalon, A.—An example of tasteful elegance (if the term may be allowed) of elevated pastoral. A little more of breadth and smoothness in the costume, we think, would have added to the beauty of the performance.

237. *Le Chêne d'Allonville, Normandie*. W. Cowen.—The age of this oak, and the circumstances under which it was seen, are more than sufficient to make it a fit subject for the pencil. The artist appears to have done great justice to its character by his careful execution.

The portraits are so numerous, that our limits will not allow us to particularise them. Those by Mrs. James Robertson and Mrs. William Carpenter are eminently beautiful. There are also many admirable works in this class of art, from the pencils of Sir M. A. Shee, Messrs. Phillips, Pickersgill, Briggs, Landseer, M'Clise, Geddes, Rothwell, Grant, Reinagle, Middleton, Lilley, Say, Lucas, Partridge, Linnell, Wildman, Simpson, Faulkner, Wood, Patten, Lane, Rood, Eddie, Miss Heaphy, &c. We were especially pleased with the portraits of *The late Countess of Essex*, and *Joseph Hume, Esq. M.P.*, by Mr. G. P. A. Healy, a young American artist, of great talents and promise.

In the Landscape and View department of the Exhibition, while we lament the absence of such works as those of Sir A. W. Callcott, C. Stanfield, and D. Roberts, we have still many beautiful productions.

Those by J. M. W. Turner, of *Ancient and Modern Rome*, are in his poetical and imaginative style;—two of the finest examples from his pencil. In English pastoral and park scenery, F. R. Lee has furnished a rich supply, in addition to others by G. Arnold, H. Havel, W. Linton, T. C. Hoffand, J. Stark, J. B. Pyne, Edward Hassell, T. Creswick, W. Turner, A. B. Johns, J. Wilson, jun., &c. &c.

DRAWINGS AND MINIATURES.

So runs the catalogue, while every variety that can be found under the name of art, and every surface and substance on which it can be wrought, exhibit the mass of talent contained in this room; and its character has been the same for several exhibitions past; and, from

want of room, or the increase of professors, is like to continue the same for years to come.

In the usual way, the portrait-drawings, with their costume of fashion and their forms of grace and elegance, by A. E. Chalon, R.A., occupy a large portion of the walls, and are followed by others excellent in their several styles of tact and execution, as will be recognised in the works of F. Cruickshank, S. J. Rochard, F. Rochard, R. J. Lane, A.E., Mrs. Gent, Miss F. Corboux, Mrs. Arundale, &c.

With respect to enamels, we still wish them a better light. Those by H. P. Bone are eight in number; and in point of variety or execution have never been surpassed. One of them is an original, a *Pastoral Subject*; one portrait is enamelled from life; the rest are copies from Vandyke, Sir Joshua Reynolds, Sir Thomas Lawrence, and Madame Le Brun. There are two fine enamels by W. Essex: 691. *Portrait of Lady Mary Lambton, after an original by W. C. Ross, A.R.A.*; 695. *Portrait of Cecil Beaton, Esq., after Mr. John Hayter*.

Painting on china, it will be seen by the following examples, has made a great advance:—692. *Her Most Gracious Majesty, after a Drawing by E. T. Parris, J. Haslem*; 703. *Harvest-Home, &c., after the original by Robert, Madame Laurent*.

The miniatures take a wide and extended range; and in number and character are certainly equal to any former specimens. Even of those of a high class in this department, we may say with truth that they are too numerous to mention in detail; but among the most distinguished appear the works of W. C. Ross, A. Robertson, Sir W. J. Newton, Mrs. James Robertson, Miss M. Gillies, F. Rochard, W. Booth, S. J. Stump, S. J. Rochard, W. Egley, R. Thorburn, H. Cullen, S. Lover, &c. The last-named able artist, besides his beautiful miniature and spirited portrait sketch, has a very characteristic drawing under the title of *Women of "the Gladhagh" of Galway, Ireland, selling Fish*. With the ardent mind of the poet and the observant eye of the painter, objects like these would not fail of becoming excellent subjects for his pencil. This is a fine example of what a perfect knowledge of national characteristics and costume does for such subjects. The pencil drawings of R. J. Lane, A.E., theatrical and portrait, like those of G. Jones, R.A., afford a striking variety in character, subject, and style of execution. Though, in the works of the latter, we think the Plagues of Egypt have held their course long enough, his drawing of *Efigenia*, 762, is a beautiful example of the artist's imaginative powers. 869. *A Literal Drawing after Nature*, R. Rothwell; a sleeping infant, with more of beauty, but hardly less magnificence of character, than those of the same class in the works of Rubens, or even M. Angelo.

The room has its fair portion of landscapes, and views, and medallim impressions. Among the first, examples by W. Westall, A., G. W. Shepherd, G. Barnard, G. F. Phillips, J. Varley, are among the most distinguished in this class. In the medallim compositions, those of W. Wyon, R.A., take the lead. *Her Majesty Queen Victoria, one of a Series of Dies*, A. J. Stothard; *The Battle of Cressy, a Model*, T. Woodbridge; together with intaglios by J. Wilson, J. Parry, J. Brown, W. Bain, F. F. Cuisset, &c., well deserve attention.

(To be continued.)

ANCIENT ARCHITECTURE.

On Saturday, the 25th ult., a lecture 'On the Peculiarities and Characteristics of the Old

Mansions and Baronial Halls of England,' was delivered in Crosby Hall, Bishopsgate, by J. Britton, F.S.A. A great number of fine drawings and prints were exhibited, illustrative of the progress of domestic architecture, and more particularly of the large dining-halls, which formed such important parts of our old baronial residences. The lecturer's remarks were confined chiefly to the latter subject, which he illustrated by reference to the beautiful apartment in which the audience were assembled, and by views, descriptions, and comparisons of the halls at Westminster, Hampton Court, Eltham, &c. &c. Mr. Britton noticed the historical and poetical associations connected with Crosby Hall, and powerfully contrasted its dilapidated condition thirty years ago with the greatly improved appearance which, by the aid of a public subscription, it now presents. The audience was very numerous and attentive; and the drawings, which were much admired, remained suspended in the hall for several days.

NEW PUBLICATIONS.

Finden's Royal Gallery of British Art.
Part III.

WE admire the judgment which the proprietors of this splendid and charming publication continue to exercise in the choice of subjects. The pictures which they have hitherto selected for engraving, have been not only master-pieces of British art, but, in most instances, master-pieces in that department of art in which British artists need acknowledge no inferiority to any school, ancient or modern; namely, the representation of domestic scenes, domestic characters, domestic incidents, and domestic affections. The original works from which the three beautiful plates before us have been engraved, all received the due meed of our applause when they were exhibited (although, we believe, in different years), at Somerset House. In "The Interior of a Highlander's House," from a painting by E. Landseer, R.A., Mr. W. Finden has most happily preserved the expression of the old portman and his dogs, as well as the admirable aerial perspective of the distant part of the cottage. Nor has Mr. E. Finden been less successful in transferring to steel the boisterous merriment of the urchins in the foreground, and the exquisite landscape behind them, in "Happy as a King," by W. Collins, R.A. Last, but not least in merit, is "The Escape of Francesco Novello di Carrara, Sovereign of Padua," from a painting by C. L. Eastlake, R.A., engraved by Mr. F. Bacon, with a fine feeling of the tenderness and delicacy, yet spirit, of the original.

The Right Honourable Robert, Earl of Roden, Baron Clanbrassil, K.P. Painted by F. R. Say; Engraved by T. Lupton. Hodgson and Graves.

IN this fine half-length portrait of the noble and zealous defender of the Irish Protestant cause, we recognise some of the best qualities of Lawrence's pencil.

The Ascot Grand Stand. G. Childe, del.; J. R. Jobbins, zincograph. Tyas.

PLEASE representation of this elegant building, so useful and ornamental to Ascot, and so creditable to the talents and taste of our architect, Mr. W. M. Higgins.

MUSIC.

PHILHARMONIC CONCERT.

THE seventh concert of this Society, on Monday last, was very well attended, as it deserved

to be, for the selection of music was excellent, and the execution of it admirable. A symphony of Mozart's was the commencing piece, and was followed by an aria from the same composer's, "La Clemenza di Tito," sung by Madame Dorus Gras, with an obligato accompaniment by the unrivalled Willman. Our readers will remember in our last we doubted this lady's right to the title of Madame; the fact was, we did not know that since we heard her in Paris she has changed her state, although she still retains her maiden name: however, maid, wife, or widow, we have no hesitation in stating it as our opinion, that she is one of the most accomplished cantatrices that has appeared in this country for many years. She sang infinitely. Upon the coming forward of Dragonetti and Lindley, to perform a sonata of Corelli's, three regular peals of applause were given, doubtlessly to mark the sense of the subscribers respecting the late injudicious attack in the "Musical World" upon the former of these veterans of the bow. They both played delightfully. A Signor Mario made his first appearance with great effect; he was encoined in his song, which produced a practical pun, the title of the aria being "Venise est encor." He has a good voice, great taste—displaying the latter not the less by a judicious restraining of his power. Beethoven's Overture to Egmont concluded the first act. A symphony of Haydn's opened the second, and an aria of Auber's, sung by Madame Dorus Gras with the most wonderful execution, led to a violin fantasia of Artois's, performed by himself. If we are not greatly mistaken, this gentleman made his first appearance at the third concert of the Philharmonic in 1829, when that Society met at the Argyll Rooms; since that period he has greatly improved, and may be considered to rank now amongst the leading violinists of the day. A duet of Rossini's was exquisitely sung by Madame Dorus Gras and Signor Mario; and Mozart's magnificent Overture to "Zauberflöte" brought the whole to a conclusion at the respectable hour of eleven o'clock.

Hanover Square Rooms.—On Tuesday, an attractive programme enticed us to Mr. Salaman's morning concert, and we were much gratified by our visit. Passing, with alight mention, the number of delightful musicians who contributed greatly to the morning's amusement, and who are already favourites with the public, viz. Ivanhoff, F. Lablache, H. Phillips, David, Salaman, Albertazzi, Stockhausen, De Rivière, and Birch, we proceed to the novelties. Mr. Lidel played, in excellent style, a fantasia on the violoncello, producing tones we rarely hear from that instrument; Madame Dorus Gras made her first appearance at a public concert, and fascinated our ears and heart by her exquisite singing. Her voice is a fine soprano, her execution is wonderful, her upper notes clear and ringing, her lower tones slightly, but not unpleasantly husky; she executes passage after passage, roulade upon roulade, shake, turn, and chromatic scale, with the greatest precision and rapidity, at the same time giving full force and expression to the words; and withal, leaving her hearers far more breathless than herself. We have rarely heard anything more beautiful than her romance "Va, dit elle." We must not omit to mention two clever compositions of Mr. Salaman's, which were much applauded.

THE DRAMA.

Her Majesty's Theatre.—At last we can stay for the ballet with some degree of pleasure.

Taglioni, as graceful as ever, has returned to her post; and although she has only danced a single scene of *La Bayadère* on subscription nights, that one scene is so rich in elegant movements that we can pardon the omission of the others. By the way, we would rather see Perrot on the stage than in a box. We wonder he is not engaged; or, being engaged, does not dance where he was so great a favourite.

On Thursday, for Gris's benefit, at last, Sig. Mario made his *début* as *Gennara* in *Lucresia Borgia*. He is a fine tenor, but not of very great power. He received the honour of an encore in his best piece; and the opera was altogether well received. A new ballet, *La Gipsy*—the Gipsy, gave us something more, and in considerable variety, of Taglioni, whose last efforts were highly applauded.

Covent Garden.—Here we have *Henry V.* announced for Monday, and from what we know of the preparations and cast, and the scenic productions by Stanfield, we have no fear of raising public opinion too high, when we say that a play of Shakspeare's, so put upon the stage, has never before been seen.

Haymarket.—On Saturday, Power concluded his popular engagement* here; and on Monday, Mr. Kean commenced a course of twelve performances, previous to going to America, in the character of *Hamlet*. The house was crowded, and he was greatly applauded. On Thursday, Mr. Webster gave a further proof of his spirit and enterprise, by bringing forward Mr. Farren.

The *Olympic* and the *St. James's* closed last week; and in her address at the former, Madame Vestris intimated that she had become the lessee of *Covent Garden* for the ensuing season.

VARIETIES.

Photography.—It would seem that the old proverb is again likely to be verified. M. Bonafons, of Turin, sends the following title of a work, which he has found in a catalogue of old Italian works:—"Descrizione di un nuovo Modo di Transportare, qual si sia Figura Designata in Carta Medianti i Raggi Solari; di Antonio Cellio. Roma, 1686. In 4to. fig.—*Comptes Rendus de l'Académie.*"

H.B. Caricatures, 592, 3, and 4.—Times of political excitement are harvest weather for caricatures; and we have here an excellent crop of three. The first is "The Balance of Power," the Queen weighing two ladies against the whole Conservative party, who kick the beam, notwithstanding the weight of Wellington, Peel, Lyndhurst, &c. This figure is "proposed to displace the old one of Justice at the top of Constitution Hill." One scale is inscribed "Private Friendship"—the other, "Public Service." The next is "The Thimble Rig," admirably played and expressed by Lord Melbourne; backed by Lord J. Russell, Lord Morpeth, Lord Normanby, and Mr. S. Rice, as accomplices. The queen's half-face is just behind the premier's; Baroness Leichen is significantly whispering Lord Normanby, whilst the lady of the latter and Miss Rice, dandily dressed, are looking archly after Wellington and Peel, who are leaving the table evidently and wofully cleaned out. The last is a scene from "Don Juan." Brougham the Ghost, and Melbourne the Don. "My noble friend" was never more forcibly illustrated, even by the ex-Chancellor himself.

* Re-engaged for three nights, and Lover's most laughable *jeu d'esprit* of the *Happy Man* acted nightly, with augmented merriment and laughter.

Cambridge Philosophical Society.—A meeting of the Philosophical Society was held on the 20th ult. Dr. Clark in the chair. Mr. Whewell read a note respecting the working of his Anemometer since his memoir on that subject read May 1, 1837. The Anemometer had since that time been in action at the Society's house, and at the Cambridge Observatory; but in consequence of the instruments being several times repaired and improved, the observations were frequently interrupted. The observations for the months of July and August, 1838, were, however, represented by comparative diagrams, which were exhibited to the Society. From this comparison it appeared that the form of the line representing the course of the wind as registered by the instrument at the two places is nearly identical, thus proving the consistency of different instruments of this construction with one another. The scale of the two instruments appeared to be different, nearly in the ratio of 2 to 1; but no direct comparison of the scales had been attempted. It was stated also, that during 1837 and 1838, observations had been made with Mr. Whewell's Anemometer at Edinburgh, by Mr. Rankine, and expressed in a diagram (according to the method recommended by Mr. Whewell), in the 14th volume of the "Edinburgh Transactions." Observations with this instrument have also been made at Plymouth, and reduced by Mr. Southwood (of St. Peter's College), by whom also the diagrams for Cambridge were constructed. Mr. Whewell stated, in conclusion, that there is every reason to believe, from the results hitherto obtained, that if any person with sufficient leisure were to take up this subject, it would reward him by leading to the knowledge of important meteorological facts and laws.—*Cambridge Chronicle.*

Aberdeen College.—A new professorship of humanity has been created for Marischal College, Aberdeen; and we are glad to see that the choice of the first professor has fallen upon Mr. Blackie, the young and able translator of Faust.

Description of an Eastern Beauty, from a quotation in the "Arabian Nights."

Her gestures, graceful as the waving bough:
Her softness—'who shall speak of it, and how?
She smiled, her teeth broke dazzling on the sight,
Like sudden lightning streaming through the night;
She shook above her neck the golden hair—
Day had abashed, and thought that Night was there;
Her sleeping features kindled into thought—
Night fled in turn, and brighter day was wrought;
Her eyes, like shooting stars, flashed far and wide,
And he they lit on shivered, sunk, and died.

W. F. THOMPSON, author of a recent work on Muhammadan Philosophy.

Atio Sali.—Vy, Jim, ye're always a grumbler! ye can't take a drop o' gin without bitters!

LITERARY NOVELTIES.

In the Press.

TO CORRESPONDENTS.

Cure for Stammering.—We have already more than once expressed the measure of satisfaction we had received in the acknowledgments from parties who had been led to consult Mr. Hunt, in consequence of our notice in the *Literary Gazette*, of his extraordinary cures of stammering. The following is another instance of the same kind, from an intelligent and respected clergyman of the Established Church; and we must repeat that it is very grateful to our feelings. As before, we made it our duty to authenticate the case; and having heard the lady speak, and read English, French, and German, as before stated, we have much pleasure in giving it publicity, from the sincere desire to benefit our fellow-creatures who may be suffering from this painful affliction. When we see how readily the annoyance can be removed, by attending to a simple natural system, we cannot but be anxious for its success.—*Ed. L. G.*

"Dear Sir,—From a paragraph in the *Literary Gazette* (which I have every reason to thank you for having inserted), I was led to call upon Mr. Hunt, and to introduce to him a friend who had for many years been afflicted with stammering in a most dreadful degree, and who had previously been under several persons professing to cure this defect, and had studied every work treating on the subject, but without obtaining the smallest benefit. Mr. Hunt assured me on the first visit, that a cure could be effected; and it was evident within an hour, that the system adopted by this gentleman must be attended with the happiest results. The lady has now had eight lessons, and, from being one of the most confirmed and distressing stammerers, she is already capable of reading and speaking with the greatest fluency, and without the slightest contortion of countenance. Indeed, the system is such, that it only requires to be known, to meet with universal attention, and to obtain general approbation. It affords me great satisfaction to speak thus of Mr. Hunt's system, as a trial of his plan cannot fail to afford the most decided relief to those afflicted with this distressing complaint: I have the honour to be, dear Sir, yours faithfully,

"M. W. LUSIGNAN, Ck.

"Albion's Great, Thames Street,
June 4th, 1839."

A numerous body of new publications have, since our last, called for all our activity to scan their merits; but though we have exerted ourselves to the utmost, neither our space nor our time-admitting of doing more than we have done to bring our readers acquainted with these novelties. "Cooper's History of the American Navy." "Lord Brougham's Second Series of Characters." "Mr. Landor's Poetical Volume." "Lady Blessington's Desultory Thoughts," several works on education, and others of hardly less interest, must, of necessity, await their turn. The influx also compels us to abridge our extracts from the *Adventure and Beagle voyage*: though the third volume, Darwin's, is untouched, and one full of valuable information.

"T. F." is too long for us; and, besides, his phenomena are not all clear with his descriptions.

ADVERTISEMENTS,

Connected with Literature and the Arts.

BOOKS PUBLISHED THIS DAY.

Now publishing, by Macgregor, Polson, and Co. 10 Abbey Street,
Dublin; D. G. Sutherland, and Co., 71 York Street, Belfast;
McGowan and Co., 16 Great Windmill Street, London.

**LIVES OF ILLUSTRIOUS AND DISTIN-
GUISHED IRISHMEN,** from the earliest times to the
present period, arranged in Chronological Order, and embodying
a History of Ireland in the Lives of Irishmen.
Edited by JAMES WILKS, A.M. M.R.I.A.
Author of "Letters on the Philosophy of Unbelief," &c.
The successful execution of the Biographical Histories of
England and Scotland seems to demand the present work for
Ireland, as indispensable to the completion of this department of
our national literature. To supply the deficiency, the present
publication has been projected, in which shall be comprised
the Lives of all such Irishmen, or persons connected with Irish
History, as can for any reason be considered entitled to such
notice. The following arrangement will convey a more distinct
idea of the plan of this work:—It is to be divided into six periods,
conformable in duration to the successive changes of our history.
Of these the main divisions are the following:—

- I. From the earliest times to the Danish Invasions in the 8th century.
- II. From the Danish Invasions to the Battle of Clontarf.
- III. From the Battle of Clontarf to Queen Elizabeth's Death.
- IV. From Queen Elizabeth's Death to the Accession of George III.
- V. From the Accession of George III. to his Death.
- VI. From the Accession of George IV. to the present Period.

Each of these divisions will be found to include the succession
of a great national series of events, amounting to a revolutionary
period. In these, the plan to be pursued throughout is according
to the most convenient principles of History and Biography, and
will include all that, on the most liberal allowance, can be
looked for, as pleasing and profitable in either. According to
this standard, appropriate space will be assigned to each name as
it shall occur. Some names must be given because they will be
looked for; some because they carry on the thread of the nar-
rative; some for the occasion they afford to explain or describe
interesting events.

The Publishers, therefore, in projecting this National Work,
rest assured that it is one in which every native of Ireland will
feel interested, not only on account of its literary merits, but as
tending to supply an essential desideratum in the literature of
his country. To the Irishman who sees in this work, for the
first time, an attempt, on an extensive scale, to concentrate, in a
well-digested and comprehensive form, the virtues and honours
of his country, and faithfully to portray the individual lives of
Irishmen, who have obtained eminence in the various depart-
ments of human pursuit, little need be said to recommend it to
his favour.

Terms of Publication:—
The Work will be completed in about 50 Parts, at 2s. 6d., or
10s. 6d. 8vo. at 5s. 6d. Part I. will be published every Six
Weeks, and a Half Vol. Quarterly.
Embellished by a Series of highly finished Portraits.

LIFE OF SIR WALTER SCOTT, Vol. III.

New edition, to be completed in 10 Volumes.
Waverley Novels. 48 Vols.
Scott's Poetry. 12 Vols.
Prose Writings. 28 Vols.
All Uniform, with 100 Engravings.

DR. BRYCE ON EDUCATION IN INDIA.
In 8vo. price 2s. 6d. cloth.
**A BRIEF SKETCH OF NATIVE EDU-
CATION IN INDIA,** under the Superintendence of
the Church of Scotland; with Remarks on the Policy of the
British Government, and the Character and Condition of the
Hindus, as these bear upon the question of Conversion to
Christianity. By JAMES BRYCE, D.D.
Late Chaplain in the service of the Hon. East India Company.
London: Wm. H. Allen and Co. 7 Leadenhall Street.

In 1 vol. small 8vo. price 10s. 6d. cloth.
ARGENTINE,
an Autobiography.

"The production of genius, and needs neither herald nor apolo-
gy. Its pages overflow with the outpourings of an enthusiastic
and imaginative spirit, which throws its own rich colouring over
even the dull realities of life."—*Edinburgh*.
"This work professes to be an autobiography; but if it were
all the reality of life it could not be more strikingly interesting.
The narrative is admirably told, captivating and highly in-
structive; and the style rapid, dignified, and elegant."—*Misc.*
"His style abounds all the while in beauty, not the less charming
for the manner in which events and feelings are all toned down;
there is a placidity about even his saddest which soothes, and the
tendency of the book is, we feel, to make us better."—*Weekly*
Chronicle.
Smith, Elder, and Co., 25 Cornhill.

MR. MANTELL'S WONDERS OF GEOLOGY!!!
In 2 vols. 8vo. price 12s. in cloth, the 3d. edition of
THE "WONDERS OF GEOLOGY."
By GIDEON MANTELL, Esq. LL.D. F.R.S. &c. &c. &c.
This edition is much enlarged and improved, and illustrated
by Ten Lithographs, and nearly One Hundred additional En-
gravings, with coloured Plates and Sections.
A few Large Paper Copies are published, the size of the Bridge-
water Essays, price 35s.; to secure copies of which immediate
application should be made, as a very limited number only have
been printed.
London: Rids and Fletcher, 17 Cornhill.

Dedicated to His Grace the Duke of Rutland.
**THE NOBLE SCIENCE.—A Few
General Ideas on Fox-Hunting,** for the use of the rising
generation of Gentlemen, more especially those of the Hertford-
shire Hunt Club.
By F. F. Deane DUMBLE RADCLIFFE, Esq.,
Master of the Hertfordshire Hounds.
In a royal 8vo. volume, handsomely bound, and gilt; with
highly finished and faithful steel-plate Portraits of the cele-
brated Hugo Meynell, Esq., and C. Lonsdale Smith, Esq., and
numerous beautifully executed Illustrations on Wood, from
Original Drawings by the Rev. C. D. Radcliffe. Price 7s.
Radolph Ackermann, Sculpture Gallery,
101 Regent Street.

In super-royal 8vo. price Two Guinea and a Half, bound in half
morocco, with gilt top.
**A TREATISE ON WOOD ENGRAV-
ING,** Historical and Practical.
With upwards of Three Hundred Illustrations, engraved
on Wood.
By JOHN JACKSON.
Many of which are elaborate Facsimiles of some of the most
valuable and beautiful Works in that branch of Art, and have
occupied the attention of Mr. Jackson (a pupil of Bewick), as an
Engraver, for many years. It was Mr. Jackson's original inten-
tion that the Literary portion of the Work should have contained
only a slight Sketch of the History, with some details of the
Practice, of the Art. The Historical portion of the Work has,
however, been greatly extended, Mr. Jackson having been
fortunate in procuring the literary assistance of Mr. W. A.
Challis.
London: Charles Knight and Co. 25 Ludgate Street.

THE LANGUAGE OF FLOWERS.
The beautiful little work that has recently appeared,
entitled "The Language of Flowers," is a practical guide to the
knowledge of Floral Emblems, and will be found most useful to
those who are desirous of adopting the beautiful Eastern custom
of corresponding by means of Flowers. Lady Wortley Montagu
in her charming Letters alludes to this practice, when she
speaks of communicating thoughts and opinions "without ever
lifting your finger, no Fruit or Flower being without its signifi-
cation."

TO ARTISTS AND PATRONS OF THE FINE ARTS.
Price 2s. 6d.
THE PROBE, Part I. contains Criticisms
on the Royal Academy—Society of British Artists, Suffolk
Street—Water Colour Exhibition, Pall Mall East—and the New
Society of Painters in Water Colours, Pall Mall West—Remarks
on the Nelson Monument—The Gardens of the Royal Botanic
Society of London—The Artists' General Benevolent Institution
—The New Art, Photogenic Drawing—Reviews of New Engraving
—Illustrations on Art, &c.
J. W. Southgate, Library, 164 Strand.

In demy 8vo. with 108 Figures, price 2s. 6d. plain, 3s. coloured,
or 4s. 6d. in royal 8vo. No. XXII.
**INDEX ENTOMOLOGICUS; or a COM-
plete Illustrated Catalogue of the Lepidoptera Insects**
of Great Britain.
By W. Wood, F.R.S. and F.L.S.
Author of "Index Entomologicus," &c.

A Practical Introduction to Greek Prose Composition. In 8vo. 6s. 6d.

Printed by JAMES MOYES, of Brook Green, Hammersmith, in the County of Middlesex, Printer, at his Printing Office, Number 22 Castle Street, Leicester Square, in the said County; and published by WILLIAM ARNOLD SCRIPPS, of Number 13 South Molton Street, in the Parish of Saint George, Hanover Square, in the County aforesaid, at the LITERARY GAZETTE OFFICE, Number 7 Wellington Street, Waterloo Bridge, Strand, in the said County, on Saturday, June 8th, 1850.

REVIEW OF NEW BOOKS.

The Noble Science: a few General Ideas on Fox-hunting, for the Use of the Rising Generation of Sportsmen, &c. By F. P. Delmé Radcliffe, Esq. Large 8vo. Pp. 327. London, 1839. Ackermann.

The British Angler's Manual, or the Art of Angling in England, Scotland, Wales, and Ireland, &c. By T. C. Hoiland, Esq. Post 8vo. Pp. 410. London, 1839. Whitehead and Co.; Ackermann.

The first of these beautiful volumes is declared to be "for the use of the *Rising* generation," though it is our critical belief that another term would have been more appropriate; and if Mr. Radcliffe had addressed it to the *Falling* generation of Sportsmen, there would have been no mistake. The second is full of instruction on the art of inducing the *rising* of fish of every kind, except those who, like fox-hunters, love bottom better than top. In the former publication, the numerous illustrations from designs by the author's brother are replete with character; and, in the latter, Mr. Hoiland's own charming pictures and drawings are transferred to wood and steel in a manner to gratify not only every brother of the angle, but every admirer of the fine arts and of Nature.

With regard to the letterpress, what shall we say? Every man in this world has his hobby: it must be pleasant when it happens to be a thorough-bred one. The country is delightful, the air is balmy and healthful, the horse is the noblest of animals, motion itself is happiness; and when all these are combined with an exciting pursuit and invigorating exercise, surely the person who can command the sport is among those to be envied in his enjoyment of the "salt of the earth." To be sure there are tumbles into ditches, broken limbs, and now and then concussions of the brain, to be put into the opposite balance; but such accidents only add to excitement, and what the epigram says is true,

"They never knew pleasure
Who never knew pain."

As for the angle as compared, or rather contrasted, with the fox-chase, it is Repose versus Bustle, Silence versus Noise, Quietude versus Revelling, Quakerism versus Ranting. The mute fish require mute captors. Their line is not a line of country. Their leaps always associate with a fall. The words "well thrown" have in them opposite meanings. When they tail off it is not a tale of woe. In short, the "moving accidents by flood and field" are altogether different, and you had much better set an angler than a beggar on horseback if you wish to see in how short a time one can ride to the —. In fact, he cares nothing for the splendid animal, except for the hair in his tail; and instead of "the cock's shrill clarion and the echoing horn," his chant of triumph is the *De Profundis*.

"The Noble Science" is dedicated to the Duke of Rutland,—an accomplished master and munificent patron of it, in all its manly branches: that of the angle is inscribed to Sir F. Chantrey, a practitioner of no mean fame either with the gun or the rod.

Mr. Radcliffe seems to us to go through with

the whole subject; and we need not particularize its divisions into breeding, feeding, riding, hunting, &c. &c. &c.; on every point connected with which the treatise is very specific and complete. It ought to be read by every sportsman; that is to say, if every sportsman can read, which the writer apparently doubts, for he tells us, page 2,

"Far be it from me to desire that all sons of Nimrod should degenerate, or be at once transformed into scribblers, book-worms, or, as a huntsman of my acquaintance more aptly designated them, book-men. Heaven forefend, too, that those actively engaged in high and useful calling should not, in the joys of the chase, find legitimate relaxation from the arduous course of literary avocations!—but, as some apology for committing to paper my 'Thoughts upon Hunting,' I would impress upon those friends who may vouchsafe an attempt to read what I have written, the fact, that few, possessing the ability, have found the inclination, either for their own amusement or the benefit of others, to publish matter which must be more or less interesting to every true votary of the science, if founded only upon the solid basis of experience."

"The attempt, but not the deed," it is probable, may confound them; but, since the schoolmaster is abroad, let us hope that the "march" of education will swiftly and finally involve whippers-in as well as whippers, hunters as well as pedagogues. As for the science itself, Mr. R. protesteth as follows:—

"Convinced myself, that, for the health, the recreation, the general good, there is nothing to bear a moment's comparison with hunting, taking it relatively, or collectively; taking it as affecting the physical condition of men, or that 'noblest animal in the creation' (as he has been styled), the horse, I will only add to the motto, '*Floreat scientia*,' the heartfelt aspiration, '*Esto perpetua*!'—May it flourish till time shall be no more!"

We do not take upon us to decide what is the import of the word "collectively" in this passage—the common explanation is "all of a heap;" and in that case it would remind us of the author's quotations, which are indeed as plentiful as blackberries throughout. We must, however, offer an extract of his qualities, and we pick out a fine burst against the innovations of another science, mechanical and not noble.

"How far, or in what manner, this trebly accursed revolution of railroads may affect the breed of horses, and fox-hunting generally, it is impossible to say. The speculation on the subject is of too painful a nature; we cannot enter fully into it, without verging upon a disquisition on political economy beyond the province of a treatise on the Noble Science. It must be sufficiently obvious to the most narrow-spirited, that, unless they are objects of fresh legislation, these railroads must become the most oppressive monopoly ever inflicted upon a free country. When all the inns and road-side houses shall be tenantless, and gone to decay, their present occupants being lost in the abyss of inevitable ruin which is now opened for them; when not only posting and post-horses, but the roads on which they travelled, shall be, with the Turn-

pike Acts themselves, matter of history—the means of locomotion will be at the mercy of the most merciless of all human beings—a class actuated by cupidity, and beyond the reach of that salutary correction, that only security for the public against the abuse of private privilege,—a competition. To us, as sportsmen, the intersection of any country by canal, or railroad, furnishes food enough in itself for lamentation; we bewail the beauty of the district spoiled, and, as an obstacle to our amusement, we denounce the barrier hostile to our sport. It is not, however, in such a light only that we view the case. We willingly admit, that the diversions of one class of society are but as a feather in the balance, when weighed against the practical utility of any work tending to the advancement of the general good; that it is the duty of a government to promote, to the utmost, all feasible enterprise and undertaking proved to be conducive to the interests of the state; and we reconcile ourselves to any changes which the condition of the community to which we may belong may demand. But when we consider the magnitude of the convulsion which this mighty railroad delusion will effect, the fearful extent of its operation, the thousands of human beings thrown out of employment, the incalculable diminution in the number of horses, and the consequent deficiency in demand for agricultural produce—not to mention the enormous deduction from the revenue, consequent upon the abolition of the post-horse duties; when we think of its varied and multitudinous bearings upon the present state of society; and add to all this the fact, that in no quarter of the globe were the means of travelling established on so admirable a basis as hitherto in this country,—that, like the dog and the shadow, we are about to cast away the substance of good for the sake of catching at a change of problematical good, in the opinion of some, and fraught with positive evil in the estimation of many: when we reflect on these things, we cannot but wonder at the blindness which has countenanced the growth of a monster which will rend the vitals of those by whom it has been fostered. But let us turn from the contemplation of a gloomy prospect; let us hope that Heaven may avert from Old England—and Heaven alone can save her from sharing the fate of empires since the world began—the downfall which the refinement of luxury, and its train, entailed on Rome; the too certain consequences of that restless spirit, that proneness to discontent, inherent in the human breast, which causes men, for the sake of 'keeping moving,' to catch at any idea of improvement, however chimerical—to disregard the timidity of the wary, and, like

'Fools, rush on where angels fear'd to tread.'

We have little or nothing to do with politics; but when we utter the heartfelt sentiment, 'May fox-hunting flourish a thousand years hence!'—convinced that it is intimately connected with the internal welfare and happiness of our once merry, still happy and prosperous country—we cannot but shudder at the view of any measures calculated to drain to the source the very springs of its existence, to dry up the fountains by which it is supported, to

change our habits and pursuits, transform the rural soil into one vast gridiron, and render us literally, what Napoleon termed us, 'a mere nation of shopkeepers.' Our maxim must be that of my old favourite Horace :

'Dona presentis cape letus homo, et
Lingue severa.'

Let us be thankful that fox-hunting is such as it is in our time. We will not inquire whether it ever was better, but trust that it will remain as good."

A man mounted on Pegasus, or any of his foals, if the race be not extinct, must join in this lamentation, and admit that the mighty national gridiron alluded to would have tried the temper of St. Lawrence himself, albeit St. Lawrence was no foxhunter.

The enthusiasm of one who is, could not be exemplified in happier language than the following apostrophe, descriptive of a really excellent, and consequently favourite, hound :—

"See that old bitch how she feathers—how her stern vibrates with the quickened action of her pulses! For a moment she ploughs the earth with her nostrils, she whimpers out a half-suppressed emotion, dashes a few yards forward, stoops again, and traverses around her. 'Yoi, wind him! have at him, old darling! Yoi, touch on him! Hey, wind him, old Governor! Yoi, push him up!' A fox for a million. Onward she strikes, throws back her graceful neck, rears high her head, and, with a note of confidence, proclaims the joyful tidings of a find. Like hosts that rally round their standard, at the trumpet's call, come bounding through the brake the merry throng. The huntsman's cheer is responded to by a rapid succession of

———Throats,

With a whole gamut filled with heavenly notes."

It is a moment of intense, I had almost written of painful, interest; so nearly do extremes meet, so close is the conjunction between the most pleasurable sensations and those of an opposite character. While hope is mounting almost to delight, anxiety is bordering upon fear. The action has commenced, the huntsman's heart and soul are thrown amidst the pack, he has neither eyes nor ears for aught beside, all is right at present; but any one of a hundred probable mischances may mar the tide of fortune. A few short, sharp, and shrill notes of the horn, alternating with a cheery 'Hoic! hoic! hoic, together, hoic!' fill up the pauses in this grand overture to the approaching opera. The huntsman is, as he always should be, literally, with his hounds; the second whipper-in is in active attendance upon him, at certain distance in his rear, ready to put on any stragglers as they join, with a 'Go hark cry, go hark!' in a tone of encouragement (not of reproach, for they cannot be all *en masse* at once in strong covert); there are twenty couples thundering through the stuff. Hark to yon piercing scream across the ride. The first whipper-in has viewed him over; and, waving his hand in the direction of the fox's head, he is galloping, stealthily, to the corner by the gate-post, whence he can rely upon a view away. Heaven grant that no blundering idiot be outside! Here come the pack; they have cleared the high wood; look at them flying through the stubs; see how they fling, how quick they turn, and how maintain the cry—now one, and then another, like a chime of bells; and helter-skelter, down the muddy ride, come floundering on 'the field.'"

A hunting song is now quoted, commencing with the line,

"Cigars are thrown down in a hurry,"

which we confess, in our judgment, nearly destroys the whole illusion of the scene. "Filthy tobacco," as it is well called in "Every Man in his Humour," is offensive every where, but nowhere so offensive as where we are trying to taste the breath of heaven, and replenish the lungs with the pure air, and are disgusted with the sudden whiff, blown into our mouths and nostrils by the laden breeze, stifling every sense of pleasure, and substituting the vapour of an unwholesome weed for the freshness of nature. Away with cigars—indeed, they have no business in the chase. But we must now close the book, and we do so with some notice relating to the rearing of hounds, and a couple of anecdotes to match.

"The first litter of puppies which a bitch brings are supposed to be inferior to her second or third; but there is no rule for this. As soon as she has littered, those whelps intended to be kept should be immediately selected, and the rest put out of the way (or to wet-nurse, if desirable to preserve them all). There is some difficulty in choosing at such a time; the general opinion is in favour of the lightest, that they will grow up the best. It was an old custom to take all the whelps away, having determined what number to keep, and settle the choice on those which the bitch carried first back to the place where she had littered. Another plan was to take those which were last pupped; but all this must be matter of chance. As soon as they can see, they should have milk given them to lap; and at two months old, they should be weaned, keeping them wholly from the bitch. At three months old, they are fit to walk; and at ten months old, they should return, to commence their education in the kennel."

The Anecdotes.—"The word business may grate upon the ear of those conversant only with the pleasure, and brings to my mind the wag-gery of a story, appertaining, I believe, to Theodore Hook, in which a citizen is driven to exasperation by being told that he could not, by any possibility, have any business in his boat—his own boat—because, as is ultimately explained to him, it is his *pleasure-boat*."

"A clergyman in a country church had been, in the course of his sermon, expounding on the nature of miracles. No sooner had the service ended than one of his congregation, a bluff farmer, approached him, and begged to thank him for much that he had learned in attending to his discourse; but hoped that his reverence would pardon his asking for some further elucidation of the meaning of a *miracle*: nothing that he had then heard having tended to enlighten his ignorance of the nature of such an occurrence. The divine immediately assented, requesting the farmer to wait in the porch till the congregation had dispersed. In the porch accordingly did Giles station himself, happy in the hope of the solution of such a mystery, and was sedulously watching the departure of the last loiterers in the churchyard, when he was literally 'taken all aback,' by a tremendous salute in the rear from the well-directed and vigorously applied foot of the pastor, who, in reply to the mingled expressions of pain and wonder which burst from his disciple, mildly inquired, 'Whether what he had then received had caused him any pain?' 'Hurt me! hurt me most woundily,' rejoined the farmer. 'Then,' said the clergyman, in his most significant manner, 'all I can tell you is, that it would have been a *miracle* if it had not.'"

Now turning to Mr. Hoffman, we have to state of his volume, that it is a very complete view of the art, as practised all over Great

Britain, full of wise saws, and with much practical information in all matters pertaining to fishing, baits, rods, flies, &c., &c. It is a capital companion for every angler, no matter to what part of the country he goes to cast his line. The embellishments, as we have mentioned, are beautiful. We shall only copy two or three passages.

"When a grise has reached nine pounds weight, it becomes a salmon, and frequently grows from that to a large size, weighing from twenty to sixty pounds or more." *De hoc quare?*

A fishing yarn follows :—

"When I visited Loch Awe, in the year 1835, I met an intelligent Highlander (of course, in that district, a Campbell), who related an anecdote, connected with the weight of a salmon, that I shall repeat, and leave my reader to his own share of credence. A tall, stout, young Campbell, from Glenorchy, celebrated for his success as a salmon fisher, left his native glen for the river Awe, which runs from the Loch of that name to Loch Etive, through a narrow ravine at the foot of the mighty Ben Cruachan. The bed of this river is stony, and, in many parts, the water is rapid and turbulent, but it subsides occasionally into deep pools, which are the favourite resorts of large fish. Our experienced Highlander reached a well-known deep of this description, with a strong eighteen feet rod and an immense wooden pinn, on which was wound eighty yards of strong line, and had only cast his fly a second time when he struck a fish. The fish ran out his line with such furious rapidity, that he was obliged to follow with his utmost speed over rocks and stones, and frequently through the water also; for he soon found that he had no chance whatever of turning his fish until they should reach a broad deep pool, above a mile below him. At this haven he at length arrived, much exhausted with fatigue; not so the fish, for he seemed to be as vigorous as ever, and the angler, on finding he had room to try his skill and the strength of his tackle, soon recovered his spirits, when, as if in derision of both, the fish, after a violent plunge or two, took to the bottom, and there remained immovable, resisting every effort to rouse him. Suddenly, however, he again ran up the stream, carrying the Highlander after him through the same rugged rocks, to the imminent peril of life and limb, till he reached the pool where he was first struck. After a short struggle, in which the angler so far succeeded as to turn the fish down the stream, or, rather, submitted to be himself taken down, and that, as before, in no gentle fashion, they reached the deep pool once more, when, after a few fruitless efforts on the part of the Highlander, the fish again took to the bottom, where he lay in the most dogged sullenness, defying all the powers of his enemy to draw him from his retreat. Night was now coming on, and even our hardy angler was exhausted by his long contest; he therefore sat down between two rocks on the bank of the river, in a secure place, and determined to rest there till certain fishermen arrived, as was their custom, at break of day, from whom he might obtain assistance. He fixed his rod in security, and contrived that his pinn should give out the line freely, and then placed the line between his teeth: so that, if the fish should leave the bottom, the running of the line might awaken him. In this situation he slept soundly till three in the morning, at which time the fishermen found him—the rod and line were undisturbed, and the fish still at the bottom; but the Highlander was now awake, and, with the assistance of the

friends in question, he soon succeeded, with their nets, in capturing this doughty fish, which proved to be a fine salmon, weighing seventy-four pounds. . . . The largest salmon I have heard of, in the London market, was in the possession of Mr. Grove, of Bond Street; it weighed eighty-three pounds."

And here we conclude. The two books are well worthy of going together, and well worth the regard of the public in general, of sportsmen and anglers in particular.

The Wizard of Windshaw: a Tale of the Seventeenth Century. 3 vols. 12mo. London, 1839. Southgate.

This is the first time we have seen the publisher's name in the line of Novel Publication; and it is but fair to say that he has credit in his *début*. *The Wizard of Windshaw* belongs to the Scott school, and offers a picture of the times for some thirty years, from the year 1622 to the close of the civil wars, and, with a brief winding up, to the restoration of Charles II. Mixed up and interwoven with the national events, are the affairs of a Devonshire family of rank, pride, and antiquity, in the squirearchy; good descriptive pictures of that county; and characteristic sketches of other orders of the people, such as clergy, retainers, millers, farmers, and all the living occupants of rural locality. Among the *dramatis personæ* some are, as usual, stamped with mystery;—there are a wild, crazy, prophetic Cassandra; a dumb, secluded lady of strange manners and loveliness; a maddened fanatic, whose life is devoted to one deed of vengeance; a sort of Justice Shallow; the Wizard himself, who, in consequence of his being the Cresse of his day, and a master of electrical science, gives his name to the work; and others of peculiar fancies and habits more striking than natural, and more novel than lifelike. One of the most original is, indeed, a personage of little consequence and little heard of, viz. Mrs. Dorothy Herbert, the squire's accommodating wife, who cares for little or nothing else but feeding on dishes of laudable repulse and savour.

Of the whole, we would hint that it is rather long, and that the interest is not continuously maintained, owing to the perpetual introduction of new characters, change of scene, and being spread over several generations in the principal group. We have a vague idea, also, that portions of the story are familiar to us; but of this we cannot be certain. It is, however, sufficiently involved and well written to carry along with it the class of readers to whom it is addressed; and the first volume in particular, with its Devonshire landscapes and people, displays a talent which, with practice and experience, will achieve works less liable to the errors to which we have alluded.

We select one passage as a specimen of the author's powers. In the pursuit of a culprit charged with deer-stealing, a wrong man is arrested and brought before the fiery and vindictive old squire for adjudication: the following belongs to his interrogatory:—

"Under favour, your honour, the law is as your worship but now expounded unto us. The man cannot be arraigned under the charge of maltreating your honour's people; but waiving that matter, the statute empowereth all justices of the peace to require every man, who maketh profession of bagging, to produce before them his license, duly signed and witnessed; and, in default thereof, or in case that the said beggar shall be found out of the bounds of the said hundred, or hundreds, in which his license privilegeth him to ask alms, may be committed as

a rogue and a vagabond.' 'Gadzooks, man, thou hast it! Dost hear that, vagabond? Either pull out thy license, or prepare thee forthwith to trundle to Exeter!'"

The examinant, after searching among his vestments, "produced and offered a worn and greasy scrap of paper to the squire, who signed to Janus to receive it, 'And read in the hearing of all present, providing I may trust to thy not keeping back aught that may spoil thy pleasure at Exeter.' 'Please your worship, as I am a Christian man, it is good and true, and beareth the signature of the worshipful knight, Sir Amyas Powlett, at Hinton, before two witnesses, granting permission to one Stephen Michelson, to ask alms every where through the eastern hundreds of the shire of Somerset.' 'Oho! Somerset, I trow?' said the squire, 'I shall commit thee for being out o' bounds, thou skulking knave!' 'You must first prove that I have asked an alms beyond them,' was the sullen reply. 'Why, rascal, how canst thou live else? Unless, I faith, thou steal in the room of it.' 'How know you that I live on aught besides roots and berries? Methinks he that thrives on his neighbour's gear should be in somewhat better case than is this carcass o' mine. And I warn you, trouble not your hands with one who hath no way infringed the law, and seeketh neither you nor aught that is yours!' The perfect ease and independence of the man's language were now beginning to puzzle the whole party; and the squire, having tormented Janus Buggins to his heart's content, was much disposed to get the whole business off his hands as well as he could; he, therefore, went on to ask such questions as he thought might, by the answers, afford him the opportunity of handsomely dismissing the case. 'Where didst thou lodge yesternight, fellow?' he demanded. 'A true man cannot choose but give account of himself.' 'With the hare and the heathcock,' was the short and ready answer. 'And the night afore that?' 'In the same company.' 'And wherefore is it that thou affectest such company, rather than the dwellings of thy fellows?' 'For the reason that He, whose earth provideth a couch, and whose sky a certain for his wandering creatures, he they hunted beast, bird, or outcast, is not apt to question his lodgers touching the lining of their pouches.' 'Since when hast thou forsaken the shelter of a human roof, rascal?' asked the squire, whose ire grew with the failure of every attempt to disentangle himself from the affair. 'Ever since the day I left Bristol.' At this there was a slight but significant movement throughout the assembly; the city he had named being at that season an object of the greatest terror to the whole population along the coasts of the Channel. 'How lately wast thou there? Get thee back to the threshold, fellow!' shouted the squire, hastily. The beggar, with much consideration, retreated even beyond the prescribed spot, and planted himself on the door steps before he answered. 'Many a long year ago, after the poor man's reckoning, who telleth his time by his miseries; but by the gentle's calendar, who taketh no note of days that are all happy alike, it is scanty a se'nnight.' The squire and Master John now began to call lustily for rue, rosemary, vinegar, and all the other most approved preservatives against contagion, which Brassy himself left the hall to procure, as he said, more expeditiously. Whilst this was passing, Raymond, whose nerves alone seemed proof against the general panic, asked the stranger, 'How comest thou to leave Bristol, friend?' 'Marry! mas-

ter, by reason that Bristol left me. When every door i' the place was barred against my entry, what should I tarry for?' 'What hadst thou done, that should move them thus to drive thee out?' 'By my troth, they did but after the fashion of other brute beasts, and of the nature which teacheth the herd to fly from the wounded deer, and the pack to worry the sick hound; I, also, was sick, and they drove me out from amongst them.' 'What was thy sickness?' 'What other should it be, but the great sickness, that hath been heaping up the grave-yards in Bristol ever since the coming in of the summer heats, until the dead are as hard bestead for shelter as the living; and the leeches study less to kill their customers than to save themselves alive?' 'D—n, villain!' bellowed the squire, in a transport of mingled rage and horror at this alarming disclosure; 'how darest thou run the country thus, carrying about a foul pestilence to taint the houses of honest folk! Why didst thou not betake thyself to the pest-house?'"

The hubbub that ensues may readily be conceived; the confusion is great, and such is the dread of the plague, that, instead of being detained, the sturdy beggar is driven to flight by having the squire's gun pointed at him to hurry his departure. The miller's revenge on the would-be seducer of his daughter is another well-told incident, which, with all the rest, we would recommend to the circulating library.

A Treatise on Wood Engraving, Historical and Practical. With upwards of Three Hundred Illustrations, engraved on Wood, by John Jackson. Super-royal 8vo. Pp. 749. London, 1839. Knight and Co.

NOTWITHSTANDING the absence of any other name, the punctuation of the title-page might lead any one to suppose that Mr. Jackson had contributed nothing to this work except the cuts; and a confirmation of that notion might be afforded by the lettering on the back of the volume, viz. "Treatise on Wood Engraving," at the top, and "Illustrations by Jackson," at the bottom. Mr. Jackson, however, in his preface (for the book has two prefaces) says:—

"As my attention has been more readily directed to matters connected with my own profession than any other, it is not surprising that I should find almost a total absence of practical knowledge in all English authors who have written the early history of wood engraving. From the first occasion on which my attention was directed to the subject, to the present time, I have had frequent occasion to regret, that the early history and practice of the art were not to be found in any book in the English language. In the most expensive works of this description the process itself is not even correctly described, so that the reader—supposing him to be unacquainted with the subject—is obliged to follow the author in comparative darkness. It has not been without reason I have come to the conclusion, that if the practice, as well as the history of wood engraving, were better understood, we should not have so many speculative opinions put forth by almost all writers on the subject, taking on trust what has been previously written, without giving themselves the trouble to examine and form an opinion of their own. Both with a view to amuse and improve myself as a wood engraver, I had long been in the habit of studying such productions of the old masters as came within my reach, and could not help noting the simple mistakes that many authors made in consequence of their knowing nothing of the practice. The

further I prosecuted the inquiry, the more interesting it became; every additional piece of information strengthening my first opinion, that, 'if the practice, as well as the history of wood engraving, were better understood,' we should not have so many erroneous statements respecting both the history and capabilities of the art. At length, I determined upon engraving at my leisure hours a facsimile of any thing I thought worth preserving. For some time I continued to pursue this course, reading such English authors as have written on the origin and early history of wood engraving, and making memoranda, without proposing to myself any particular plan. It was not until I had proceeded thus far that I stopped to consider whether the information I had gleaned could not be applied to some specific purpose. My plan, at this time, was to give a short introductory history to precede the practice of the art, which I proposed should form the principal feature in the work. At this period, I was fortunate in procuring the able assistance of Mr. W. A. Chatto, with whom I have examined every work that called for the exercise of practical knowledge. This naturally anticipated much that had been reserved for the practice, and has, in some degree, extended the historical portion beyond what I had originally contemplated; although, I trust, the reader will have no occasion to regret such a deviation from the original plan, or that it has not been written by myself."

Mr. Chatto also states in his preface:—

"It is but justice to Mr. Jackson to add, that the work was commenced by him at his sole risk; that most of the subjects are of his selection; and that nearly all of them were engraved, and that a great part of the work was written, before he thought of applying to a publisher. The credit of commencing the work, and of illustrating it so profusely, regardless of expense, is unquestionably due to him."

There can be no doubt, therefore, that a considerable portion of the materials for the treatise must have been furnished by Mr. Jackson, although Mr. Chatto's knowledge of the subject, critical acumen, and literary attainments, have been most advantageously exercised in enriching the whole, and casting it into its present shape. But, in whatever way concocted, we can truly say that a more beautiful, curious, and valuable publication of its kind, or one more interesting, not only to the artist and the antiquary, but to the general reader, never issued from the press. The details, however, are so multifarious, and of such a nature, that, even with the aid of the graphic illustrations, we should find it difficult to give an adequate idea of them, within any moderate limits: without that aid, it is impossible to give any idea of them at all. We must content ourselves, therefore, with a general description of the contents of the volume; and for that purpose, we will avail ourselves of a part of Mr. Chatto's preface:—

"In the first chapter, an attempt is made to trace the principle of wood engraving from the earliest authentic period; and to prove, by a continuous series of facts, that the art, when first applied to the impression of pictorial subjects on paper, about the beginning of the fifteenth century, was not so much an original invention, as the extension of a principle which had long been known and practically applied. The second chapter contains an account of the progress of the art as exemplified in the earliest known single cuts, and in the block-books which preceded the invention of typography.

In this chapter there is also an account of the 'Speculum Salvationis,' which has been ascribed to Laurence Coster, by Hadrian Junius, Scriverius, Meerman, and others, and which has frequently been described as an early block-book, executed previous to 1440. A close examination of two Latin editions of the book has, however, convinced me that in the earliest the text is entirely printed from movable types, and that in the other—supposed by Meerman to be the earliest, and to afford proofs of the progress of Coster's invention,—those portions of the text which are printed from wood-blocks have been copied from the corresponding portions of the earlier edition with the text printed entirely from movable types. Fournier was the first who discovered that one of the Latin editions was printed partly from types and partly from wood blocks; and the credit of shewing, from certain imperfections in the cuts, that this edition was subsequent to the other with the text printed entirely from types, is due to the late Mr. Ottley. As typography, or printing from movable types, was unquestionably suggested by the earliest block-books with the text engraved on wood, the third chapter is devoted to an examination of the claims of Gutenberg and Coster to the honour of this invention. In the investigation of the evidence which has been produced in the behalf of each, the writer has endeavoured to divest his mind of all bias, and to decide according to facts, without reference to the opinions of either party. He has had no theory to support; and has neither a partiality for Mentz, nor a dislike to Harlem."

The fourth chapter contains an account of wood engraving in connexion with the press, from the establishment of typography to the latter end of the fifteenth century. The fifth chapter comprehends the period in which Albert Durer flourished,—that is, from about 1498 to 1528. The sixth contains a notice of the principal wood-cuts designed by Holbein, with an account of the extension and improvement of the art in the sixteenth century, and of its subsequent decline. In the seventh chapter the history of the art is brought down from the commencement of the eighteenth century to the present time. The eighth chapter contains an account of the practice of the art, with remarks on metallic relief engraving, and the best mode of printing wood-cuts. As no detailed account of the practice of wood engraving has hitherto been published in England, it is presumed that the information afforded by this part of the work will not only be interesting to amateurs of the art, but useful to those who are professionally connected with it."

Of Thomas Bewick, to whom the revival of wood-engraving from the languishing state into which it had for many years fallen, is principally, if not wholly attributable, there is an interesting account, from which we subjoin a few extracts:—

"This distinguished wood-engraver, whose works will be admired as long as truth and nature shall continue to charm, was born on the 10th or 11th of August, 1753, at Cherryburn, in the county of Northumberland, but on the south side of the Tyne, about twelve miles westward of Newcastle. His father rented a small land-sale colliery at Mickleybank, in the neighbourhood of his dwelling, and it is said that when a boy the future wood-engraver sometimes worked in the pit. At a proper age he was sent as a day-scholar to a school kept by the Rev. Christopher Gregson at Ovingham, on the opposite side of the Tyne.

The Parsonage House, in which Mr. Gregson lived, is pleasantly situated on the edge of a sloping bank immediately above the river; and many reminiscences of the place are to be found in Bewick's cuts; the gate at the entrance is introduced, with trifling variations, in three or four different subjects; and a person acquainted with the neighbourhood will easily recognise in his tail-pieces several other little local sketches of a similar kind. In the time of the Rev. James Birkett, Mr. Gregson's successor, Ovingham school had the character of being one of the best private schools in the county; and several gentlemen, whose talents reflect credit on their teacher, received their education there. * * * Bewick's school acquirements probably did not extend beyond English reading, writing, and arithmetic; for, though he knew a little of Latin, he does not appear to have ever received any instructions in that language. In a letter dated 18th April, 1803, addressed to Mr. Christopher Gregson, London, a son of his old master, introducing an artist of the name of Murphy,* who had painted his portrait, Bewick humorously alludes to his beauty when a boy, and to the state of his coat-sleeve, in consequence of his using it instead of a pocket-handkerchief. Bewick, it is to be observed, was very hard-featured, and much marked with the small-pox. After mentioning Mr. Murphy as 'a man of worth, and a first-rate artist in the miniature line,' he thus proceeds: 'I do not imagine, at your time of life, my dear friend, that you will be solicitous about forming new acquaintances; but it may not, perhaps, be putting you much out of the way to shew any little civilities to Mr. Murphy during his stay in London. He has, on his own account, taken my portrait, and I dare say will be desirous to shew you it the first opportunity: when you see it, you will no doubt conclude that T. B. is turning *bonnyer* and *bonnyer*† in his old days; but indeed you cannot help knowing this, and also that there were great indications of its turning out so long since. But if you have forgot our earliest youth, perhaps your brother P. may help you to remember what a *great beauty* I was at that time, when the grey coat-sleeve was *glassed* from the cuff towards the elbows.' The words printed in Italics are those that are underlined by Bewick himself. Bewick, having shewn a taste for drawing, was placed by his father as an apprentice with Mr. Ralph Beilby, an engraver, living in Newcastle, to whom on the 1st of October, 1767, he was bound for a term of seven years. Mr. Beilby was not a wood-engraver; and his business in the copper-plate line was of a kind which did not allow of much scope for the display of artistic talent. He engraved copper-plates for books, when any by chance were offered to him; and he also executed brass-plates for doors, with the names of the owners handsomely filled up, after the manner of the old 'niellos,' with black sealing-wax. He engraved crests and initials on steel and silver watch-seals; also on tea-spoons, sugar-tongs, and other articles of plate; and the engraving of numerals and ornaments, with the name of the maker, on clock-faces,—which were not then enamelled,—seems to have formed one of the chief branches of his very general business. Bewick's attention appears to have been first directed to wood-engraving in consequence of his master having been employed by the late Dr. Charles Hutton, then a schoolmaster in Newcastle, to engrave on wood the diagrams for his 'Treatise on Mensura-

* The father, we presume, of Mr. Jameson.—Ed. L. G.
† Prettier and prettier.

tion.' The printing of this work was commenced in 1768, and was completed in 1770. The engraving of the diagrams was committed to Bewick, who is said to have invented a graver with a fine groove at the point, which enabled him to cut the outlines by a single operation. * * * On the expiration of his apprenticeship he returned to his father's house at Cherry-burn, but still continued to work for Mr. Beilby. About this time he seems to have formed the resolution of applying himself exclusively in future to wood-engraving, and with this view to have executed several cuts as specimens of his ability. In 1775 he received a premium from the Society for the Encouragement of Arts and Manufactures for a cut of the Huntsman and the Old Hound, which he probably engraved when living at Cherry-burn after leaving Mr. Beilby. * * * In 1776, he went to London, where he arrived on the 1st of October. He certainly did not remain more than a twelvemonth in London, for in 1777 he returned to Newcastle, and entered into partnership with his former master, Mr. Ralph Beilby. * * * Bewick did not like London; and he always advised his former pupils and north-country friends to leave the 'province covered with houses' as soon as they could, and return to the country to there enjoy the beauties of Nature, fresh air, and content. In the letter to his old schoolfellow, Mr. Christopher Gregson, previously quoted, he thus expresses his opinion of London life. 'Ever since you paid your last visit to the north, I have often been thinking upon you, and wishing that you would lap up, and leave the metropolis, to enjoy the fruits of your hard-earned industry on the banks of the Tyne, where you are so much respected, both on your own account and on that of those who are gone. Indeed, I wonder how you can think of turmouling yourself to the end of the chapter, and let the opportunity slip of contemplating at your ease the beauties of Nature, so bountifully spread out to enlighten, to captivate, and to cheer the heart of man. For my part, I am still of the same mind that I was when in London; and that is, I would rather be herding sheep on Mickley bank top than remain in London, although for doing so I was to be made the premier of England.' Bewick was truly a country man; he felt that it was better 'to hear the lark sing than the mouse cheep;' for, though no person was capable of closer application to his art when within doors, he loved to spend his hours of relaxation in the open air, studying the character of beasts and birds in their natural state; and diligently noting those little incidents and traits of country life which give so great an interest to many of his tail-pieces. * * * He evidently improved as his talents were exercised; for the cuts in the 'Select Fables,' 1784, are generally much superior to those in 'Gay's Fables,' 1779; the animals are better drawn and engraved; the sketches of landscape in the back-grounds are more natural; and the engraving of the foliage of the trees and bushes is, not unfrequently, scarce inferior to that of his later productions. Such an attention to nature in this respect is not to be found in any woodcuts of an earlier date. In the best cuts of the time of Dürer and Holbein, the foliage is generally neglected; the artists of that period merely give general forms of trees, without ever attending to that which contributes so much to their beauty. The merit of introducing this great improvement in wood-engraving, and of depicting quadrupeds and birds in their natural

forms, and with their characteristic expression, is undoubtedly due to Bewick. Though he was not the discoverer of the 'long-lost art' of wood-engraving, he certainly was the first who applied it with success to the delineation of animals, and to the natural representation of landscape and woodland scenery. He found for himself a path which no previous wood-engraver had trodden, and in which none of his successors have gone beyond him. * * * Towards the latter end of 1785, Bewick began to engrave the cuts for his 'General History of Quadrupeds,' which was first printed in 1790. The descriptions were written by his partner, Mr. Beilby, and the cuts were all drawn and engraved by himself. The comparative excellence of those cuts, which, for the correct delineation of the animals and the natural character of the incidents, and the back-grounds, are greatly superior to any thing of the kind that had previously appeared, insured a rapid sale for the work; a second edition was published in 1791, and a third in 1792. * * * The favourable manner in which the 'History of Quadrupeds' was received, determined Bewick to commence without delay his 'History of British Birds.' He began to draw and engrave the cuts in 1791, and in 1797 the first volume of the work, containing the Land Birds, was published. Nothing of the same kind that wood-engraving has produced since the time of Bewick can for a moment bear a comparison with these cuts. They are not to be equalled till a designer and engraver shall arise possessed of Bewick's knowledge of nature, and endowed with his happy talent of expressing it. * * * Bewick's style of engraving, as displayed in the birds, is exclusively his own. He adopts no conventional mode of representing texture or producing an effect, but skilfully avails himself of the most simple and effective means which his art affords of faithfully and efficiently representing his subject. He never wastes his time in laborious trifling to display his skill in execution; he works with a higher aim, to represent nature; and, consequently, he never bestows his pains except to express a meaning. The manner in which he has represented the feathers in many of his birds, is as admirable as it is perfectly original. His feeling for his subject, and his knowledge of his art, suggest the best means of effecting his end, and the manner in which he has employed them entitle him to rank as a wood-engraver—without reference to his merits as a designer—among the very best that have practised the art. * * * Bewick's life affords a useful lesson to all who wish to attain distinction in art, and at the same time to preserve their independence. He diligently cultivated his talents, and never trusted to booksellers or designers for employment. He did not work according to the directions of others, but struck out a path for himself; and, by diligently pursuing it according to the bent of his own feelings, he acquired both a competence with respect to worldly means and an ample reward of fame. The success of his works did not render him inattentive to business; and he was never tempted by the prospect of increasing wealth to indulge in expensive pleasures, nor to live in a manner which his circumstances did not warrant. What he had honestly earned, he frugally husbanded; and, like a prudent man, made a provision for his old age. 'The hand of the diligent,' says Solomon, 'maketh rich.' This Bewick felt; and his life may be cited in exemplification of the truth of the proverb. He acquired not, indeed, great wealth, but he attained a com-

petence, and was grateful and contented. No favoured worshipper of Mammon, though possessed of millions obtained by 'watching the turn of the market,' could say more. He was extremely regular and methodical in his habits of business: until within a few years of his death, he used to come to his shop in Newcastle from his house in Gateshead at a certain hour in the morning, returning to his dinner at a certain time, and, as he used to say, *lapping up* at night, as if he were a workman employed by the day, and subject to a loss by being absent a single hour. When any of his works were in the press, the first thing he did each morning, after calling at his own shop, was to proceed to the printer's to see what progress they were making, and to give directions to the pressmen about printing the cuts. * * * He used always to work with his hat on; and when any gentleman or nobleman called upon him, he only removed it for a moment on his first entering. He used frequently to whistle when at work; and he was seldom without a large quid of tobacco in his mouth. The prominence occasioned by the quid, which he kept between his under lip and his teeth, and not in his cheek, is indicated in most of his portraits. * * * Bewick was a man of athletic make, being nearly six feet high, and proportionably stout. He possessed great personal courage, and in his younger days was not slow to repay an insult with personal chastisement. On one occasion, being assaulted by two pitmen on returning from a visit to Cherry-burn, he resolutely turned upon the aggressors, and, as he said, 'paid them both well.' Though hard-featured, and much marked with the small-pox, the expression of Bewick's countenance was manly and open, and his dark eyes sparkled with intelligence. There is a good bust of him by Bailey, in the Library of the Literary and Philosophical Society of Newcastle; and the best engraved portrait is perhaps that of Burnet, after a painting by Ramsey. * * * In the summer of 1828, Bewick visited London; but he was then evidently in a declining state of health, and he had lost much of his former energy of mind. Scarcely any thing that he saw interested him; and he longed no less than in his younger years to return to the banks of the Tyne. He had ceased to feel an interest in objects which formerly afforded him great pleasure; for when his old friend, the late Mr. William Bulmer, drove him to the Regent's Park, he declined to alight for the purpose of visiting the collection of animals in the gardens of the Zoological Society. On his return to Newcastle, he appeared for a short time to enjoy his usual health and spirits. On the Saturday preceding his death, he took the block of the 'Old Horse waiting for Death' to the printer's, and had it proved; on the following Monday, he became unwell, and, after a few days' illness, he ceased to exist. He died at his house on the Windmill Hills, Gateshead, on the 8th of November, 1828, aged seventy-five."

The only drawback from the pleasure which we experienced in the perusal of this able and admirable work, arose from the sneering tone in which the author occasionally indulges, when adverting to the errors of other writers on the subject. It is unworthy of a man of his talents.

Solomon Seesaw. By J. P. Robertson, senior author of the "Letters on Paraguay." With Illustrations by Phiz. 3 vols. 12mo. London, 1839. Saunders and Otley. We do not know in what category to place this publication. It is not so much a novel as a

biography of a supposititious individual, on whose associations and adventures are strung accounts of noted circumstances and persons, and very actual sketches of particular classes and manners, chiefly in the mercantile community of Glasgow, though partly in London. As far as its love-affairs are concerned, the story is neither probable nor interesting; and the hero is, in fact, like his name, not made to be in love with. The writer, indeed, is not at home in the sentimental, and we shall adduce but one short extract to prove it—the description of the heroine, whose health had suffered from hope deferred, on the eve of her becoming Mrs. Seesaw:—

“Bright, but transient flushes overspread the cheek of Mrs. Wynne; and the winter of her daughter's health and beauty, like the spring around them, approached every day to more glorious summer. Her cheek took the tinge of the most delicate rose—her fading complexion of the brightest lily. Her attenuated frame shot into graceful elasticity; her drooping spirits, watered by the dews of kindness and of love, shot up into the bloom of refreshing placidity, till they put forth at length the buds of contentment and of joy. Her mind was tranquil, her heart at ease; and the body, nursed by the genial heat, shed forth at once its native beauty and its native grace.”

To write *fine* worse than this seems to be impossible; it is as great a mistake as our friend Phiz's first illustration, in which he gives us a Dr. Hasty, distinctly described as always carrying a cotton umbrella under his left arm, with that incumbrance tucked under his right (see page 34 for the text, 37 for the illustration). With other *lapses* that have slipped through the author's attention, such as references to society in Edinburgh, where the party had never been, we shall not trouble ourselves nor our readers, but quote a brief sample or two of the better parts, premising that the picture of Scotch schooling, and the doings of its infancy and parentage in a remote country town, seems to be drawn from the life, though we fancy its day has gone by.

The *Story of the Old Gentleman* begins thus:—

“I had attained that period of life at which, though a married man may be classified as not an old one, a bachelor never is. The grand climacteric of this unfortunate class of society seems to be fixed, by general consent, at forty to forty-five years of age. That, with them, is the turning point of existence. They are considered, after it, to be verging into the vale of years. In a way of sport to others, but of premature death to themselves, they are designated, thenceforth,—‘Old’ Bachelors. ‘By the aid of a ruddy countenance, a well-cut coat, a clean chin, a slender and elastic figure, and a light step in a quadrille, I contrived,—as your men at Lloyd's say,—to keep upon the A 1 list, till I had seen full nine lustres. By being upon the A 1 list, I mean that I was allowed, with a few exceptions taken by invidious persons, to rank as a first-rate man. By this, again, I mean a man who with perfect propriety might have proposed marriage to a woman of two or three and twenty. None of those who had just passed their teens refused to dance with me; nor was I obliged, at fancy balls, to make my appearance in the decorous costume of a court dress. People rather speculated than pronounced upon my age; and when I had taken particular pains at my toilet, I was often told, by very discriminating mothers, ‘How well I

looked!’ ‘A few obvious wrinkles under my eyes, and some awkwardly prominent grey hairs, began, about this time, a little to disturb my tranquillity. A very slight but evidently growing corpulency rendered it, at the same time, rather a luxury to me to draw on my boots with very long boot-hooks. I felt it becoming a great convenience to have my valet to tie my shoe-strings. I fancied I could neither walk so far, nor dance so long, as I was wont. Young men of five or six and twenty, in the company of agreeable women a little under their own age, began to assume to me the forms of successful rivals. I lost, all at once, and without knowing how, my pretensions to command the conversation, or occupy, much less engross, the time of any popular or pretty woman at public places. If I did chance, at the opera, or an evening party, to engage her attention, it was but for a moment; some well-looking and well-dressed fop was sure to step in between me and felicity. He was as sure to carry off, upon the slightest approach, or offer of his arm, the lady I had been endeavouring, by the most assiduous court, and studied compliments, to win for the night. This generally unhinged and sent me an isolated wanderer about even the most crowded room.”

The opening of the Glasgow Merchants' dinner company must serve for our other *Phis-ification*:—

“Scarcely had they knocked at the door, when it was opened by a footman, while a genteel-looking butler, in black, and two more of the party-coloured tribe, essayed to take their hats. The old gentleman's was delivered up, as a matter of course, to the servant; but when he came to Solomon,—‘Thank you,’ said he, ‘I'll just put it down here myself.’ A second servant asked their names. They were given; and the third one, already half-way up stairs, called down to them, ‘This way, gentlemen, if you please.’ Upon this, Solomon said to the old gentleman, in a whisper, as they followed to the drawing-room, ‘This way, sir,’ and ‘If you please.’—They are not so impudent as they look.’ As the names of the two strangers were announced, they were startled by the dazzling display offered to their view. The first thing that arrested them, especially the old gentleman, was the great blaze of light in the apartments. The next thing that riveted their attention was the finery, the prodigious finery, of the ladies. The old gentleman thought that a whole warehouse must have been emptied to furnish it; and Solomon was sure it would have stocked every haberdasher's shop in the town of Dullborough, or Llangollen, for a month. The ladies all sat silent,—which upset the theories of the old gentleman on female loquacity; and they appeared stiff, which he accounted for, on the score of a prudential fear that too much motion might crumple their gauze dresses, or bring down a knot of ribbon from its conspicuous position on a full-mooned muslin tiara. Their gowns were so decorously long, that he could only observe one or two rather large feet, and not very slender ankles, as supporters of the female form. The gentlemen were grouped in the middle of the room, all scrupulously dressed in shoes and silk stockings. They had inexpressibles tied at the knees, exhibiting brawny calves; and their cravats made a considerable display of white muslin, tied in not a very precise fashion under their chins. But guess, if you can, the astonishment of both guests (for there was a great sympathy between the old gentleman and young Solomon), when setting

themselves to listen to the whispering hum of the conversation, they found that, with the simple substitution of Scotch accent for English dialect, they might as well have been in the midst of their ‘travelling’ companions at the George.—‘Rums is up,—Muscovados is down. Yarns is a shade higher, and calicos a bawbee lower; gingham is rather lookin' better, an' jaconnets is a little fawn—our frien' the Baillie's bandanas is a perfect drug.’ These, and such remarks as these, in succession, too quick to be copied, even by a writer of shorthand, made up the conversation of the Glasgow gentlemen. ‘Have you heard,’ said the Lord Provost, ‘o' the arrival o' the Demarara fræ Demerara wi' a cargo o' sugars? ‘Od, they say they're the bonniest sugars that's been in the market this mony a-day. I've gotten some real fine limes by her; and by our friend Douglas's first ship fræ Jamaica, I'm promised some nice auld rum. By the way, Neebor Norace, our joint speck in pullicats has turned out but a puir concern. They'll no pay cost and charges.’ Here his lordship's discourse was interrupted by the announcement that dinner was ready; and after much rustling of silks, and ceremonious advance of successive gentlemen to offer their arms to the ladies, the whole party moved in couplets out of the room, leaving Solomon and another youth to bring up the rear.”

The work is made out with episodes, the story of a Lord Beaulderk, of an author in prison, of a Mr. Ironsides, of the two recluses of Llangollen, of St. John Long, &c. &c. &c., and is altogether a strange bundle of sticks, with some striking particulars, sagacious observations, and characteristic traits of traders in prosperous and panic times.

Desultory Thoughts and Reflections. By the Countess of Blessington. 12mo. pp. 122. London, 1839. Longman and Co.

A *PRETTY* little book, full of agreeable glances of mind and instructive observations on the world and its inhabitants. Lady Blessington has seen much of society; and it can never be uninteresting to society to learn how it has been appreciated by an acute and observant participator in its various motions and customs. We like especially to see how they have appeared to a female; for, with all our boasted masculine wisdom, penetration, and knowledge, the natural skill, taste, and feeling of the other sex, gives them a prodigious superiority over us in forming an estimate of men and manners, at once rapid, accurate, and profound. The few attached quotations are fair examples of these *Desultory Thoughts and Reflections*:—

“*Minds.*—The minds of the young resemble new wine in a state of fermentation and effervescence; but the minds of the mature resemble old wine, which has lost its fiery particles, and retains only its strength and raciness.”

“*Confidences.*—Confidences are more frequently reposed in persons through a want of discretion than from excess of friendship, and are oftener betrayed through incontinency of speech than from motives of treachery.”

“*Superstition.*—Superstition is but the fear of belief: religion is the confidence.”

“*Infirmities of Genius.*—The infirmities of genius are often mistaken for its privileges.”

“*Style.*—To praise the style of an author more than his thoughts, is like commending a woman for her dress more than for her person. Style, like dress, should be appropriate, and not detract attention from what it was meant to adorn.”

“*Great Men.*—Mountains appear more

lofty, the nearer they are approached; but great men, to retain their altitude, must only be viewed from a distance."

"*Friends*.—It requires sunshine to see our friends, for they become invisible when our horizon is clouded."

"*Death*.—When we have outlived our youth, we have little to regret in the death of our old age; it is but the release of a superannuated friend, who has outlived every other."

"*Marriage*."

How many in the married state we find
Wedded in person, but divorced in mind!
Unnatural union! fraught with as much dread
As when the living chain'd were to the dead
By stern Mæcenias; yet less cruel he,
As many slaves of Hymen will agree,
For but one victim suffer'd from the chain,
While wedlock gives the two an equal pain."

There are some occasional incongruities:—we mean, that the fair Thinker has not always thought alike on the same points; or, in other instances, has rather varied the reflections. But to reconcile the annexed, for instance?—

"*Solitude*.—In solitude we retain our own faults; but in society we superadd those of others."

"*Society and Solitude*.—In society we learn to know others, but in solitude we acquire a knowledge of self."

Fellow's Asia Minor.

(Second Notice.)

THE difficulty of illustrating the antiquities and inscriptions brought to light by this interesting volume, and the amount of the previous notice which we have bestowed upon it in *Society Reports*, as well as *Review*, will, we trust, be a sufficient apology for the brevity with which we now conclude our remarks and extracts. Of the western parts of Phrygia, the following are illustrations; setting out, however, with a description of a fish, whose proportions are new to us:—

"At a house at which I stopped I saw a slice of a fish which is frequently taken in this river; it is without scales, round in form, and nearly a foot in thickness. I am told that it is generally taken weighing as much as one hundred, and sometimes one hundred and fifty pounds (fifty *okes*). It has a large mouth, of the common form, and unlike that of the sturgeon. Does the conger-eel ever attain this size? This part of the river must, allowing for its windings, be two hundred miles from the sea, and the water, of course, is always fresh."

Our next is of a more general character:—

"Up the valley, towards the south-east, stands Mount Cadmus, and I heard that at its foot, about twelve miles from Laodicea, there were considerable ruins, probably of the ancient city of Colossæ. Descending rapidly into the flat and swampy valley of the Lycus, we crossed in a diagonal line to the city of Hierapolis, six or seven miles from Laodicea. My attention had been attracted at twenty miles' distance by the singular appearance of its hill, upon which here appeared to be perfectly white streams poured down its sides; and this peculiarity may have been the attraction which first led to the city being built there. The waters, which issue in copious streams from several deep springs among the ruins, and are also to be found in small rivulets for twenty miles round, are tepid, and to appearance perfectly pure; indeed I never saw more transparent water, although I perceived, at a depth of perhaps twenty feet, a dark green hue visible between the surface and the white marble of the columns and Corinthian ornaments which lay at the bottom. Gas continually rises in

bubbles, emitting the noxious smell of hydrogen. This pure and warm water is no sooner exposed to the air, than it rapidly deposits a pearly white substance upon the channel through which it flows, and on every blade of grass in its course; and thus, after filling its bed, it flows over, leaving a substance which I can only compare to the brain-coral, a kind of crust or feeble crystallisation; again it is flooded by a fresh stream, and again is formed another perfectly white coat. The streams of water, thus leaving a deposit by which they are choked up, and over which they again flow, have raised the whole surface of the ground fifteen or twenty feet, forming masses of this shelly stone in ridges which impede the paths, as well as conceal and render it difficult to trace out the foundations of buildings. The deposit has the appearance of a salt, but it is tasteless, and to the touch is like the shell of the cuttle-fish. These streams have flowed on for ages, and the hills are coated over with their deposit of a filmy, semitransparent appearance, looking like half-melted snow suddenly frozen. The town stands upon the high cliff, over which these streams fall in cascades, commanding a fine view of the valley, and has many of the picturesque advantages which would be sought in a modern watering-place; the mountains rise up at the back, and wooded ravines offer shade for summer rambles. The ruins are crowded and extensive; and here again are some remains, unaccountable from their immense proportions: in this place they might be taken to have been baths, but I still incline to the idea that they were palaces. The theatre has been richly ornamented, and many of the cornices so much as to impair their simplicity and beauty; these, together with most of the groups of figures, bear the traces of an age more devoted to luxury than pure taste."

The tenacity of life in a vulture is wonderfully displayed in the subjoined account:—

"I have mentioned that we killed a vulture this morning at Laodicea. It was shot at about nine o'clock, and at the time was washing itself in a stream after its hearty meal upon the dead camel. It was wounded in the head and neck, and dropped immediately; but, upon taking it up, its talons closed on the hand of my servant, making him cry out with pain. He placed it on the ground, and I stood with my whole weight upon its back, pressing the breast-bone against the rock, when its eye gradually closed, its hold relaxed, and to all appearance life became extinct. It was then packed up in my leather hood, and strapped behind the saddle. The day was oppressively hot, for we trod upon our shadows as we rode across the plain. Until this evening (at eleven o'clock) the vulture remained tightly bound behind the saddle. My servant, on unpacking, threw the bundle containing it into the tent, while he prepared boiling water for cleaning and skinning it. Intending to examine this noble bird more carefully, I untied the package, and what was my surprise to see it raise its head and fix its keen eyes upon me! I immediately placed my feet upon its back, holding by the top of the tent, and leaning all my weight upon it; but with a desperate struggle it spread out its wings, which reached across the tent, and by beating them attempted to throw me off. My shouts soon brought Demetrius, who at length killed it by blows upon the head with the butt end of his gun. My ignorance of the extreme tenacity of life of this bird must exculpate me from the charge of cruelty."

We have only one paragraph to bestow upon Lydia, though all the observations are interesting:—

"Of the ancient city of Philadelphia but little remains; its walls are still standing, inclosing several hills, upon the sides of which stood the town, but they are fallen into ruins. They are built of unhewn stone, massed and cemented together with fragments of old buildings; some immense remains of buildings, huge square stone pillars, supporting brick arches, are also standing, and are called the ruins of the Christian church. All the remains which have been pointed out to me as ruins of Christian churches appear to have been vast temples, perhaps erected by imperial command, and dedicated to nominal Christianity, but shewing, in the niches and brackets for statues and architectural ornaments, traces of heathen superstition."

We need say nothing more, but repeat that this is a volume for every good library in the kingdom.

MISCELLANEOUS.

Geraldine; or, a Tale of Conscience. By E. C. A. Vol. III. London, 1839. C. Dolman.

Or this work two volumes have previously appeared, the object of which, like the present, is to represent the beauties and holiness of the Roman Catholic faith. The heroine, and some other most admirable young ladies, after various religious and worldly trials, retire from the world and take the veil—which is, consequently, held out to be a course suited to general imitation and praise. Far be it from us to pronounce upon the religious principles instilled by any *Novel*, but we cannot help remarking on the incongruities, especially at the *finale* of this piece of sanctification, in that class of writing. The whole ceremony of professing and entering a convent in Ireland is described as in a Ritual; and we fall upon the following singular typographical error: "Geraldine rising, and holding her lighted taper, sang the 'Posuit signum'; Hæ has placed his seat upon my forehead, that I should admit no other lover but Him." The English Sisters return to England, with three experienced nuns, to labour in conversion and propaganda; and we are told of the Irish Sisters, that, though sacrificing home's sweet ties "for the love of Jesus Christ, their Spouse," they might, with still more devoted feeling, &c., have sung their native strain,—

"Though the last glimpse of Erin with sorrow I see,
Yet wherever Thou art shall seem Erin to me."

Such things seem to us, in sober sadness, to be ludicrous and profane, and well calculated to turn religion into mockery and jest: to sing of our blessed Saviour, that everywhere shall seem Ireland where he is, is a sample of national drollery which cannot be laughed at, only on account of the sacredness of the subject.

Rhymes for the Nursery, by the Authors of "Original Poems." Illustrated Edition. P. 177. (London, Harvey and Darton.)—*Charlie's Discontent*; or, a Good Use for Eggs and Kears. With illustrations by T. Williams, after Designs by J. Pittman. P. 187. (The same.)—These are two very pretty books for children. The first, simple and pleasant rhymes to engage the opening mind: the last, an attractive inducement to the love of nature and natural history. We could have wished the concluding little poem in the *Nursery Rhymes* to have had some moral or remark attached to it. What would a child make of the bald story of an ungrateful and unnatural son?

Life of Scott. New edition. Vol. III. (London, Cadell.)—This volume is embellished with a portrait of Sir Walter's father; and, by way of vignette, a map of the "Country about Abbotsford," but extending from the Solway to the Forth. How much of it has his genius made classic ground!!! *Si monumentum queris circumspice.*

A Key to the Difficulties, Philological and Historical, of the First Book of Schiller's Thirty Years War, forming a Guide to German Construing, for the Use of English Students, by Adolphus Bernays, Phil. Doc. &c.—This neat little book will be found a considerable help, not only to the reader of the work to which it professes to be a key, but of any other German work which a student may undertake after he has mastered the elements of that language.

Four Lectures on the Offices and Ceremonies of Holy Week, as performed in the Papal Chapels; delivered in Rome in the Lent of 1857, by N. D. Wiseman, D.D. 8vo. pp. 184. (London, Dolman.)—A warm eulogy upon the Roman Catholic ceremonial, and maintaining their expediency in every point of view, as excellent in themselves, consistent with true religion, and impressive upon the common mind.

ARTS AND SCIENCES.

ROYAL ASTRONOMICAL SOCIETY.

[Astronomers and scholars will read the following paper with attention; its value well excuses its length.]

'ON Ptolemy's Catalogue of Stars,' by Francis Baily, Esq.—The catalogue of stars, which goes under Ptolemy's name, will always be interesting to the astronomer, as containing the first record of the state of the heavens. The precise epoch for which it was formed is not clearly ascertained. Ptolemy himself says, that it is reduced to the first year of the reign of Antoninus, which corresponds to the year A.D. 138; but there is some mistake, or confusion, on this point, which has led many persons to believe that Ptolemy himself did not actually make the observations from which the catalogue is deduced, but merely reduced, or brought up, a more ancient catalogue of Hipparchus, by means of an erroneous precession, to his own time. It is very evident that the longitudes of all the stars in Ptolemy's catalogue are above 1° too great; but, from what cause this has arisen, it is not my object here to inquire. The point to which, in the present view of the case, I am more desirous of directing attention is, how far the existing editions of that work may be considered as faithful transcripts of the catalogue as it issued from Ptolemy's hands. This important question can only be decided by a careful examination of various manuscripts, and by comparing the discordant readings with the actual positions of the stars, as determined from modern observations. Unfortunately, the public have not been in possession of much varied information on this head; the manuscripts hitherto employed having, until lately, been confined to three only; to which two others have been recently added, as I shall presently explain. But all these are, in many cases, so grossly discordant, that it would appear, at first sight, almost a hopeless task to reconcile the different readings that present themselves, or to account for the introduction of so many discrepancies in so small a portion of Ptolemy's great astronomical treatise. The five sources of information here alluded to are, 1st. the Latin translation published by Liechtenstein, at Venice, in 1515; the name of the translator is not known, nor is it stated whence the manuscript was obtained. The translation, however, bears internal evidence of having been made from an Arabic manuscript, and throws great light (as I shall presently shew) on the subsequent translations and editions from the Greek manuscripts. 2d. The Latin translation made by Trapezuntius (George of Trebizond), and published by Gauricus, also at Venice, in 1528. This translation, from which most of the subsequent editions seem to be copied, is said to have been made from a copy of a Greek manuscript which the Abbé Laurentius Bartolinus caused to be made from one in the Vatican library. 3d. The Greek edition published at Basil, in 1538, by Gryneus. It is said that he made use of a manuscript that

belonged to Regiomontanus, who had it from the Cardinal Bessarion, and deposited it in the library of Nuremberg. This, however, has been since doubted: and it is not quite certain where the manuscript above mentioned is now to be found. This is the more to be regretted, as it is the only Greek edition extant, except the recent one which I am now about to mention. It is evidently not the manuscript from which either of the preceding translations was made. The work is dedicated to our Henry VIII. 4th. The two other sources are comprised in the Greek edition (accompanied by a French translation), published at Paris, in 1813, by M. Halma. In editing that part of the volume which contains the catalogue of stars, M. Halma availed himself of two additional manuscripts which were in the public library of Paris: one of these he calls the Paris manuscript, which is made the ground-work of his publication, and the other the Florence manuscript. But some other sources must have been appealed to, as he occasionally inserts readings which are not to be found in either of these manuscripts, or in the Basil edition above mentioned. These several sources of information are all that the public press affords us in our inquiries relative to this interesting subject; but they are lamentably deficient for the purpose. And, as it is probable that the public are not fully aware either of the amount or the frequency of discordance that exists in this matter, I trust I shall not encroach too much on the patience of the meeting by stating, as briefly as possible, the result of my own investigations and researches. Having carefully compared the position of every star, as given in each of the several copies above alluded to, I have found that out of 1028 stars, of which the catalogue consists, there are about 780 (or more than three-fourths) of them that are discordant, either in longitude or latitude; and this, not merely in $10, 20$, or 30 minutes, which is no uncommon difference, but sometimes to an amount involving whole degrees. That these errors have arisen mostly from the carelessness of the copyists, and that they may be partly corrected, in some cases, by a reference to the true position of the star, I am ready to admit; but still there are numerous cases where this tentative method will not avail us, and where we are, after all, left in doubt as to the identity of the star, or the true reading of the original numbers. One source of error I have discovered to be very common, and in the correction of which I have found the translation from the Arabic to be of essential service. It is this. The Greek notation for minutes being denoted by some fractional part of the degree, and such fraction being expressed by a dash annexed to the letter which in common notation denotes the integer, frequent mistakes occur from the copyist having affixed the dash when it ought not to be inserted, and from omitting it when it ought to have been annexed. Thus, 23° is correctly denoted by $\alpha\gamma$; and $20^{\circ} 20'$ (or $20^{\circ} \frac{1}{3}$) is correctly denoted by $\alpha\gamma'$; again 34° is correctly denoted by $\lambda\delta$; and $30^{\circ} 15'$ (or $30^{\circ} \frac{1}{4}$) is correctly denoted by $\lambda\gamma$. Now it is very readily seen, that mistakes of great moment may be made by the omission or misplacing of the dash to the second letter: and here it is that the translation from the Arabic frequently comes in to our aid; for, as their notation was not liable to the same sort of confusion, we are oftentimes led to the true reading by a reference to their copies. I could point out numerous instances of this kind: one, however, will be quite sufficient to illustrate my meaning.

The star in Capricornus, the fourteenth of that constellation in Ptolemy's catalogue, whose longitude in all the above-mentioned editions, except the first, is said to be 26° , is in the translation from the Arabic stated to be in longitude $20^{\circ} \frac{1}{3}$, or $20^{\circ} 10'$; which is in fact its more correct value. And it is clear that the erroneous translation from the Greek has arisen from not affixing the dash to the second letter in the expression $\alpha\epsilon$, which ought to be $\alpha\epsilon'$. Still there remain numerous other cases where this mode of explication will not avail, and where it would be desirable that other sources of information should, if possible, be thrown open to us: and it is on this point, as I have before alluded, that I am more especially induced to make the present appeal. Now, it appears that there are several works in this country that might assist us very materially in the elucidation of this subject. In the Bodleian library at Oxford there is a Greek manuscript of Ptolemy, which was presented by Selden: and there is also, in the same library, Bernard's copy of the Basil edition of 1538, wherein he has copied out all the longitudes and latitudes of the stars in the catalogue from this same manuscript. In the library of All Souls' College, it is stated, by Fabricius, that there is the manuscript of a Latin translation from the Arabic: and I understand that there are also manuscript Latin translations from the Arabic at New College and at Magdalen College. There is also a manuscript commentary in Persian, belonging to St. John's College. In the library of the Archbishop of Canterbury, at Lambeth there is also a Greek manuscript of Ptolemy. In the library of the British Museum there is an Arabic manuscript, of the date 1218; but I have not been able to find there any Greek copy. It is evident, therefore, that we have in this country several sources of original information, of which we might avail ourselves, to render the catalogue of Ptolemy more perfect than it is: and, lest it might be supposed that this would be a useless labour at the present day, when the state of the heavens is so much better known, I would remark that it is on this very account that more accurate information is required; since we now know that many minute and gradual changes are going on, which were not suspected or thought of in former times, and which are only perceptible after a lapse of many centuries. Thus Sirius is described in all the original documents that I have seen, as *σείριος, sub-ruffus*, reddish; whereas at the present day, it is remarkable for its freedom from all colour. Now, this is a point on which Ptolemy could not well be mistaken. Again, a star of the fourth magnitude (the seventeenth in the constellation of Eridanus) is clearly laid down by Ptolemy, but cannot now be found: and there are some others, of smaller magnitude, that cannot be identified, according to the positions given in the present editions of the catalogue. But whether these bodies have vanished wholly from our sight, or have been erroneously copied from the original observations, can only be satisfactorily explained (if, indeed, they ever can be) by reference to other authorities. It is needless, however, to dwell further on so obvious a principle. I had taken the liberty of suggesting to the late Professor Rigaud (a name ever dear to the lovers of astronomy, and more especially to those engaged in historical researches in that science) the propriety of requesting the University of Oxford to print the catalogue of Ptolemy, from the Greek manuscript in their possession: a request which, I understand, was favourably received. We are

all sensible of the obligations under which we lie to the University of Oxford, for its noble and spirited conduct, on former occasions, in publishing the works of some of the best ancient authors on scientific subjects, which otherwise might never have seen the light; and certainly not in so splendid a dress. Witness the works of Euclid, Apollonius, Archimedes, &c.; and in more recent times, a continuance of the same liberal and enlightened course on various occasions, in the publication of works that reflect honour and credit on the University, and from which they can never expect to reap any pecuniary benefit. Since that application, however, was made, the information relative to the additional manuscripts above mentioned has been obtained; and it may now become a question whether it may not be presumed that a more accurate copy of Ptolemy's catalogue is more likely to be deduced from a careful collation of all the manuscripts within our reach, compared with the several original editions and translations above alluded to, than from the printing and publication of a single Greek manuscript. Should a plan of this kind be attempted, I would propose that a few copies of the Basil edition of 1538 be reprinted (for I fear that the original work is too scarce to be met with in sufficient quantity for this purpose), and distributed amongst those persons who would each undertake to collate such copy with some one or other of the manuscripts in the several archives above mentioned. This would be no great task or labour to those who feel an interest in the cause, and who are zealous in the promotion of science. Copies even might be sent abroad, to some of our foreign members, residing in places where original manuscripts are known to exist; and who might thus add to the common stock of information. But, whichever course may be adopted, I trust there is no difference of opinion as to the propriety of taking some steps relative to this matter: and I hope that what I have here stated may induce others to join in carrying so desirable an object into execution.

SOCIETY OF ARTS.

THE annual prizes this year were happily dispensed by his Royal Highness the Duke of Sussex, the president, reminding us of old times. As usual, we select the more important, not having room for the entire list of successful competitors:—

To Mr. J. T. Cooper, Polytechnic Institution, Regent Street, for his method of preparing paper for photographic drawing, the silver medal.

To Mr. R. Redman, 43 Great Wild Street, Lincoln's Inn Fields, for his method of making transfers from copperplate printing to zinc or stone, the silver Isis medal and 5*l*.

To Mr. J. Gray, 25 Old Burlington Street, for his improved instruments for extracting teeth, the silver medal.

To Mr. J. Sodo, 6 Sebright Street, Bethnal Green, 5*l*, for his share in the invention and improvement of the tube used in weaving wide silk velvet.

To Mr. Robert W. Billings, Manor House, Kentish Town, for his analysis of the great east window of Carlisle Cathedral, the Acton gold medallion. Very clever, and eliciting great praise.

Nothing could exceed the grace and condescension of his royal highness.

On Wednesday evening, the Society closed its session. The vacancy occasioned by the resignation of Mr. Aikin, will not be filled up before the Christmas holidays, in order that the members may have sufficient opportunity of ascertaining the qualifications of such candidates (and doubtless there will be many, when it is generally known that the office is open to competition) who may present themselves. The Society cannot but be aware of the importance

of electing a proper person; and it is hoped they will consider that the existence of the Institution depends, in a great measure, on the good character and ability of their secretary.

BOTANICAL SOCIETY.

FRIDAY, 7th JUNE. Mr. J. E. Gray, President, in the chair.—A specimen of *Cynomorium coccineum* from Malta, also living specimens of *Leucosium aestivum* from the Greenwich marshes, were exhibited; the latter by Mr. D. Cooper, and distributed to the members. Read a paper by Mr. W. H. White, 'On Mushrooms,' the object of which was to stimulate inquiry, during the approaching season, as to the cause of the deleterious effects some species of mushrooms have on the human frame in some countries, and not in others. In England, for example, only three species are edible,—*Agaricus campestris*, or the common mushroom; *A. pratensis*, or the fairy ring; and *A. Georgii*; whilst in Russia forty species, almost every variety, are used as articles of food, and many, as delicacies, constantly at the tables of the rich. The mushroom trade, also, is there considerable; at Moscow alone, to the amount of 200,000 roubles in the year. The peasants for some months live almost exclusively thereon. The kinds there eaten are considered here, and have been proved to be, by many fatal cases, poisonous. Mr. White believes it not to be dependent on soil or climate, but principally on the culinary process, much salt being used, and also on the care observed not to boil two species together. He thinks the inquiry hazardous, yet interesting to the public as well as to the botanist.

ROYAL INSTITUTION.

FRIDAY, 7th JUNE. Last evening meeting. Mr. Faraday, 'On Mr. Hulmandell's Mode of producing Designs and Patterns on Metallic Surfaces.' Great facility is acquired in preparing the plate for the process of biting out. Advantage is taken of the powers or forces of attraction of aggregation existing in aqueous and oily substances. A watery body (an aqueous ink composed of water, gum, and lamp-black) is put upon the metallic surface, which had been previously slightly greased. Immediately, both the substances draw up into spots, or bands, producing a peculiar, irregular, web-like surface. Varnish is then laid over the whole face of the plate thus prepared, a film of which dries over the inky and oily figure, retaining both, until put into water to soak. Then, from the attraction of the water for the watery particles of the ink, the ink retracts, and removes the film of varnish, leaving it only on the oily parts. The figure, the spots, and bands which had been occupied by the ink, are now left clean, and free to be acted upon by acid. The use of gum arabic, or gum tragacanth, in the watery body, curiously varies the web-like figure. By a variation of the process, any ground may be produced in a considerably shorter period, and at much less expense, than by mechanical ruling, by parallel lines, or by any process of hand-engraving; and upon the ground chiefly depends the shading, &c. Improved and more complicate patterns, which the great expense of engraving excluded, will in future adorn the fabrics for female dresses, &c.

UNITED SERVICE INSTITUTION.

MONDAY, 3d JUNE. Major Shadwell Clerke in the chair.—The following papers were read: 1st. 'Remarks on the Singhos and Mishmees,' by Dr. McClelland. 2d. 'An Account of the Mineral Spring on the Rocky Flat, Menoro

Downs, New South Wales,' by Dr. John Lhotsky. The spring is situated about three hundred miles from Sydney, at a distance of twelve miles from Kuma, and surrounded by extensive, waste, undulated downs, with long projecting hills. The water of the spring was limpid, and a constant eruption of gas was visible. Its temperature varied from 58° to 60°. "At six p.m. there was lightning to the E. and thunder; wind, S.S.E.; the air became cold to sensation; the spring was still 60°." The water bubbles strongly, with frequent changes in intensity; but, as far as Dr. Lhotsky could observe, without any certain succession. Its taste is that of the most valuable mineral waters, Seltzer and Cheltenham. The paper described at great length, and very interestingly, the far and near neighbourhood of the spring, their geological structure, the appearance of the Travertine Rocks, the efflorescence thereon, &c. &c. As New South Wales is becoming more and more the resort of invalids from the adjacent tropical colonies, the existence of such a spring is a valuable discovery, and may lead to a Cheltenham on the Menoro Downs.

LITERARY AND LEARNED.
UNIVERSITY INTELLIGENCE.

OXFORD, June 6.—The following degrees were conferred:—

Bachelors in Medicine, with license to Practise.—R. Jackson, Fellow of New College; W. A. Greenhill, Trinity College.

Masters of Arts.—Rev. J. Lowe, Lincoln College, J. Stewart, Worcester College, Grand Compounders; Rev. R. Pauling, Hon. A. Bagot, Christ Church; E. Meyrick, Queen's College; B. L. Watson, St. Mary Hall; Rev. J. H. Hotham, Magdalen College; A. Darcey, F. Goddard, Brasenose College; Rev. A. W. Street, Scholar of Pembroke College; Rev. G. L. Cartwright, Exeter College; Rev. J. Dix, All Souls' College; C. Bradley, Fellow of Worcester College; Rev. L. Gilbertson, Jesus College; Rev. T. A. Mathews, Trinity College; W. Fox, Rev. H. H. Mestard, W. F. Croome, Wadham College.

Bachelors of Arts.—F. J. P. Marx, Christ Church, T. Mitford, Oriel College, Grand Compounders; R. C. Price, Student, J. W. Miles, F. C. Gausson, Christ Church; E. Woodland, Magdalen Hall; W. P. Graham, Scholar, P. P. Myddelton, Queen's College; J. Lander, Pembroke College; H. Monro, H. G. M. Protyman, Oriel College; W. O. Hammond, Balliol College.

Mrs. Denyer's Theological Prizes.—The subjects for the year 1840 are—

On the Doctrine of Faith in the Holy Trinity.
On the Duties of Christianity, comprehending Personal, Family, and National.

CAMBRIDGE, June 7.—*Sir William Broome's Medals*.—Two of these medals were adjudged as follows:—

Latin Ode.—E. Balston, King's College.
Greek and Latin Epigrams.—W. S. Wood, St. John's College.

Greek Ods.—Not yet adjudged.

ROYAL ASIATIC SOCIETY.

JUNE 1.—The Right Honourable Holt Mackenzie in the chair.—Various presents to the library were laid upon the table. Beriah Botfield, Esq., Henry Baakerville, Esq., and Henry John Baxter, Esq., were elected resident members.—A memorandum was read, which had been received from the Agricultural and Horticultural Society of Bombay, in reply to a request for information respecting the breeds of cattle used in the presidency. The memorandum stated that all the sorts might be considered to arise from two only, the Dekkanee and the Gugeratee. The cattle of the Dekkan are compact animals, from three and a half to four feet in height; and are to be found in all parts of the country; the Gugeratee are much larger and handsomer, and are not found in common use out of Gugerat: in other places they are met with only in the carriages of wealthy natives. Those of the Dekkan are active, capable of enduring fatigue, and live on coarse food; and are, for these qualities, much in request; but the buffalo is preferred for the

plough, for water carrying, and for its milk. Sheep are rare in Guggur and the Korkan; those in Candeish and the Dekhan are dark-coloured, coarse in the fleece, and small, but producing excellent mutton. Experiments are now making to improve the breed; but their success is as yet uncertain. The merino from the Cape is found to answer much better than that brought from England; so that government have determined to import from the Cape only in future. It was also stated that the ryots of the presidency had admitted the superiority of the English plough over their own; but the high price of the former had precluded its introduction among the presidency peasantry, who were poor and bigoted, and to whom time and labour were of little value. — A paper by Mr. Solly, 'On some Indian Lichens,' was then read. He stated that, in consequence of the inquiries suggested by the Committee of Commerce of the Society, two communications, with a few specimens of lichens, had been received from India. These he had examined, together with a collection of Indian lichens from Dr. Royle's herbarium, with a view to ascertain their importance as dye substances. The specimens from Bombay did not appear to contain sufficient colour to render their importation desirable; but those received from Ceylon contained good colouring matter, and some of them, by comparative experiments with the lichens of commerce, yielded as good a dye as kinds worth more than 250*l.* a ton. The lichens from Dr. Royle's collection were, with a few exceptions, not at all suited to the purposes of the dyer: one of them, however, called *Chulohesera*, may be expected to yield a considerable quantity of available colouring matter, not only from Mr. Solly's experiments, but from its having been long in use in India by the native dyers. Mr. Solly remarked, that it was highly desirable that the specimens should be in larger quantities; as it was unsatisfactory to operate upon small samples. A paper 'On the Bengal Safflower,' by Mr. Solly, was also read. He stated that the best safflower, which was imported in very limited quantities from China, fetches a price as high as 30*l.* per cwt., whilst good Bengal safflower is worth, on an average, 7*l.* per cwt. This difference he was inclined to attribute to difference in the mode of cultivation and preparation. This opinion is partly borne out by the fact that bales of safflower, which when packed appeared of good quality, on their arrival here are so much deteriorated as to be worth only ninety shillings per cwt., which Mr. Solly thought was occasioned by an after-decomposition, mainly caused by defects in the preparation. From careful examination and comparison of the two kinds, he is of opinion that the China safflower is gathered in a comparatively young state; whilst that from Bengal is not gathered till the flower is far advanced, and almost in a state of decay. He considered it essential, that, besides separating the colour from the uncoloured parts of the flower, the safflower should be dried very gradually. He thought it should be dried in close chambers, with some organic substance, or, perhaps, with hot sand.

SOCIETY OF ANTIQUARIES.

MR. HUDSON GURNEY, V.P., in the chair. Mr. Long exhibited some fragments of ancient pottery from the site of a large manufactory in Holt Forest, near the road from Farnham to Petersfield. Mr. Long considered they were certainly of an earlier date than the Norman

conquest, but doubted whether they were Roman or Saxon. Mr. Rickman communicated an essay, accompanied by two lithographic views, on the remains of Abury, Silbury, and Stonehenge. He entirely differed from Dr. Stukely's opinion on those remains, and considered them not older than the third century of the Christian era. He noticed the Roman road from Canterbury through Noviomagus and London to the west of England, and that Silbury is situated immediately on that road; that the Britons, previous to the arrival of the Romans, were in a state of utter barbarism, having neither skill nor tools to construct the road leading to Silbury, or to work the stones for the temples of Silbury, Abury, and Stonehenge; and Mr. Rickman's opinion is, that they were erected after the introduction of Roman art and civilisation, and that the circles were in imitation of the Roman amphitheatres.

LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday. — Statistical, 8 P.M.; United Service Institution, 9 P.M.
Tuesday. — Linnean, 8 P.M.; Horticultural, 3 P.M.; Civil Engineers, 8 P.M.; Electrical, 7 P.M.
Thursday. — Royal Society, 8½ P.M.; Antiquaries, 8 P.M.

FINE ARTS.

THE NELSON MONUMENT.*

ON paying a second visit to the collection of models and drawings by the competitors for the execution of the Nelson Monument, we became still more forcibly impressed with the mediocrity (to use the mildest term) of a great majority of them. The contributions from artists of high and established character are very few. How is this? Does it arise from mutual jealousy, or from a fear of endangering their reputation? We know not; but we confess we think, and we know others think, that these gentlemen have failed in the duty which they owed to themselves, to the memory of the illustrious person to whom all ought to be eager to do honour, and to the country. By their apathy, they have greatly increased the difficulty of the task imposed upon the Committee of Subscribers to the Fund; and yet we are much mistaken if, whatever the decision of that Committee may be, they will not be among the least to censure it.

We proceed to add a brief notice of a few more works to those which we mentioned last week.

Messrs. Fowler and Stievier have combined their talents in the production of a model in which architecture and sculpture are united. It is a very lofty and elegant structure. The basement is plain and solid. Against the four fronts of the pedestal (the angles of which are rostrated) are colossal figures, seated, representing Britannia, Caledonia, Hibernia, and Neptune. The elevation is in compartments of gradually diminishing size, enriched with bas-relief medallions, inscriptions, &c. The upper compartment is circular, and is charged with emblematic decorations. On the summit is a statue of Nelson.

Mr. Hayden has gone still further than Messrs. Fowler and Stievier, in the union of the different branches of the fine arts, for he has added painting to architecture and sculpture. His design is exteriorly a chaste and simple edifice of the Doric order; but he pro-

poses that the interior shall be filled with statues of Nelson and other distinguished naval commanders, and with pictures, illustrative of Nelson's personal history, and of his most splendid achievements.

Mr. Patric Park has three large models, at which it is impossible not to smile, although they shew considerable talent; which talent, however, he seems to us to have wasted in endeavouring to express inexpressible things. For instance, one of his models — simply a square, unornamented block, on which is placed a statue of Nelson, with a cocked hat on his head, and holding his sword, not by the hilt, but by the blade — are attached two figures, intended to represent Manhood mourning the death of Nelson, and Honour consoled by the glory and triumphs of Nelson. To make such personifications intelligible, the old system of labels must be resorted to.

There is a simplicity in the composition of Mr. Woodington's model, which we recollect struck us forcibly when we first saw it in Mr. Rainy's room in Regent Street. On pedestals placed diagonally are four recumbent figures, with the names of Nelson's four greatest victories inscribed under them. On a more elevated pedestal stands Nelson himself, pointing to Trafalgar. We have heard it objected that the figure is too robust for that of Nelson, whose person was small and emaciated, and that Mr. Woodington has restored to him his lost arm. What soundness there is in these criticisms we will not pretend to determine.

Captain Smith, of the Royal Navy, has shewn artistical talents rarely to be met with in an unprofessional man. His model consists of a fluted pillar, springing out of a richly ornamented base, with a statue of Nelson at the top. The capital of the pillar is appropriately formed of ships' heads.

Mr. Behnes has two models, but they are only slight varieties of one idea. They both represent Nelson on a pedestal, the base of which is guarded by a sailor and a marine. Simplicity is an excellent quality in art; but, surely, it may be carried too far.

A model by Mr. Sidney Smirke is one of the most light and elegant things in the room. A cluster of three tapering pillars supports a statue of Nelson. At the base are three figures, emblematic of England, Scotland, and Ireland.

Mr. Manning has a composition which evinces much thought. The British State is represented by a column, founded on a rock. Nelson is shewn in his triumph; and in his fall: in the former, he is receiving the trident from Neptune; in the latter, he is dying in the arms of Victory. A figure of Peace crowns the column, happily illustrating the result of the hero's last glorious effort.

We were greatly pleased with the model by Mr. Hopper, of a circular temple, in the centre of which appears a statue of Nelson.

Mr. Bellamy has a fine drawing of a pillar, the base of which is a large terrace, from which a flight of steps, seen in perspective, leads to the National Gallery. The effect is very imposing.

But our limits compel us to stop. It is painful to think that, of the numerous individuals who have bestowed so much labour, and in some instances expense, on their various productions, and whose hearts are all now beating high with expectation, only one can be gratified by the result. It will be a sad preponderance of disappointment over exultation! But such is too frequently the lot of human beings. We earnestly recommend the losers in the contest to exercise their fortitude and good

* In our last, in the sketch of "Nelson Monuments," the name of Mr. Lough, the celebrated sculptor, was misprinted Lough. It was an odd typographical error, but if our opinion of the merits of his design should be confirmed by success, it will be a prophetic accident, illustrating the old proverb, that "Those laugh who weep."

temper. Our own wish is expressed in Nelson's motto—*Palmas qui meruit ferat!*

EXHIBITION OF THE ROYAL ACADEMY. [Sixth and concluding notice.]

THERE is no class of art that suffers more from being mixed up with others of a different character than the architectural; and, indeed, the disadvantage is mutual. The misarrangement in this, as well as in other instances, arises from want of room; but the absence of seats seems a matter of neglect. Our attention in this department has always been directed to subjects in which the pictorial, or rather the picturesque, is the predominant feature. Of this there can hardly be imagined a more striking example than in 1177. *View of the Alcece at the upper end of the Hall of the Two Sisters, in the Alhambra, &c.*; the *Figures, Landscape, and Furniture by L. Haghe*. O. Jones. The scene thus represented is an assemblage of all that is gorgeous in colour and splendid in ornament; its decorations and furniture convey the most complete idea of what we read of in the "Arabian Tales;" but with all its attraction, the eye at length becomes weary of the dazzling effect, and seeks for objects of greater repose. But, not to come too suddenly down to the ordinary level, we shall take a look at 1118. *View of the Suspension Bridge now erecting across the Danube, &c.*, W. T. Clark; in which strength, grandeur, and utility appear to be combined. We shall now take a more quiet scene, viz. 1110. *The Interior of the Choir of Rouen Cathedral*, H. G. Hine, which exhibits the solemn effect of a Rembrandt interior; 1101. *View of the Garden Front of Camp-Hill House, Warwickshire, the residence of John Radstock, Esq.*; and 1102. *Front Entrance of the same*, T. L. Walker; a beautiful variety in form and character, gratifying to the sight, and associated with feelings of comfort and convenience. 1147. *Design for a Public Building*, T. Hopper; 1150. *Design for the Rebuilding of the Royal Exchange*, F. Wood; 1260. *Design for the Houses of Parliament*, J. Burrell, do credit to the artists, and are every way calculated to have a good effect in their forms and character. Railroad views, and places connected with them, occupy their fair portion of room among the architectural elevations, and are embellished with as much of the picturesque as such straightforward subjects will allow. To these follow models, in the usual way, of table or chimney ornaments. From the latter we select 1268. *The Emancipated—part of a centrepiece, executed by Messrs. Green and Ward, and presented to the Marquess of Sligo by the Slave Population of Jamaica*; and 1275. *The Emancipated (as above, though different in design), presented by the Town and Neighbourhood of West Port*, E. G. Papworth. These designs do great credit to the artist, as well as to the parties from whom the grateful offerings proceeded. 1272. *Impression of the Great Seal of England*, B. Wyon. A fine specimen of Mr. Wyon's skill and taste.

SCULPTURE ROOM.

It is here that we look for the development of grace, beauty, dignity, and manly proportions; a variety also of the ideal, with the real in portrait sculpture. Of the first, examples will be found in the works of J. Gibson, R.A. and others in the same class of art. 1297. *Love cherishing the Soul while preparing to torment it*, J. Gibson, R.A. The illustration is curious, though we think somewhat far-fetched; the idea, however, may be traced to antique gems, where Cupid is frequently represented as

playing with, and sometimes tormenting, a butterfly, by holding it over the flame of an altar. The grace and beauty of the boy Cupid in Mr. Gibson's performance is an admirable example of those essential qualities. His *Venus and Cupid, a basso-relievo in marble*, 1298, is also a fine production; and 1303. *Venus Verticordia*, by the same able hand, exhibits the powers of female charms over the mind of man. 1296. *Statue, in marble, of Thomas Telford, Esq. F.R.S. &c.*, E. H. Baily, R.A. Simple, manly, and dignified in form and character; sedate, and intellectual in expression. 1300. *Group in Marble of the Children of Sir Francis Shuckburgh, Bart.*, by the same artist. Expressive of love and affection, and composed with Mr. Baily's well-known taste and skill.

1293. *Model of a Statue of the late Doctor Britton, Head-Master of the King's Grammar School, Durham, &c.*, C. Smith. We have never seen a recumbent figure composed with more grace, truth, and ease; the drapery falling in with the posture and attitude, is an example of what may be done even in modern costume. 1279. *Ajax*, J. Legrew. A finely proportioned classic figure, in which the spirit of the action answers well to the annexed quotation. 1278. *Boy and Foliage, part of a Chimney-piece executed for his late Majesty George the Fourth, H. Coffee*. The artist has here shewn his judgment and taste in the choice of his combinations; for it may be observed that nothing can be more suitable to the undulating lines of foliage than the easy flow of infantile forms. 1284. *Model of Part of a Monument to the late Lady Charlotte Stepford, &c.*, T. Campbell; 1286. *Model of Part of a Monument, &c., to the Memory of Lady Janet Grant, E. W. Physick*. Mementos of affection. Images of repose like these are the consolations of the living; and in some measure, while they perpetuate the forms of the departed, next to the consolations of religion, rob death of its terrors. 1292. *Milton's Dream*, W. F. Woodington; the light and floating character of the vision is in accordance with the "stuff which dreams are made of," and the design reminds us of Flaxman's elegant and simple forms. 1288. *Abolition of the Sulties; a Group in Bronze, for the Pedestal to a Statue of Lord William Bentinck*, Sir R. Westmacott. Nothing can be more appropriate for the base of a statue to one who has been so instrumental in the suppression of a usage so revolting to humanity. 1304. *Statue in Marble of an Orphan Flower Girl, Mary Francis*. We congratulate the fair artist on the skill she has evinced in this performance, as well in design as in execution.

1299. *Portrait-statue in Marble of a Sleeping Child*, C. Moore; 1305. *Sleeping Child, a Statue in Marble*, J. Towne.—Each of these performances exhibits the serenity of repose with the beautiful contour of childhood. 1306. *A Girl with a Goat and Tambourine*, Wolf; a joyous playful figure, in the drapery of which the artist has (very successfully, we think) imitated the texture of the cloth. 1302. *The Lady Susan Murray, a Statue in Marble*, Sir R. Westmacott, R.A. In a similar way the artist has bestowed the texture of lacework on the portion of drapery which he has given to the infant Lady Susan; but to this, or any recumbent figure, the title of effigy, rather than of statue, would be more suitable. 1366. *Chytis, J. Gott*; 1282. *Mercury*, Richardson; 1289. *Diana*, E. B. Stevens; 1301. *Hebe*, R. J. Wyatt; 1316. *Innocence*, J. H. Foley; 1300. *Thetis, &c.*, B. Piattucci; 1810. *Charity, a Group*, H. Mares; 1329. *Cupid, and*

1344. *Psyche*, W. Theod; are all full of classical elegance.

The portrait-busts, in their several ways, exhibit the skill of the respective artists. Some are, from rank, station, or celebrity, interesting to the general public; as, *Bust of Her Majesty Queen Victoria*, J. Steell; *Marble Bust of the Right Hon. Lord Mervill*, C. Moore; *Marble Bust of the Right Hon. Lord Stanley*, C. Moore; *Marble Bust of the Right Hon. Lord John Russell*, M.P., P. Hollins; *Marble Bust of Sir Walter Scott*, J. Fillans; *Small Bust of the Duke of Wellington*, S. Macarthy; *Marble Bust of Lord Roay*, G. Lough; *Bust in Marble of Samuel Lover, Esq., R.H.A.*, E. H. Foley; *Marble Bust of Charles Dickens, Esq., author of "Oliver Twist," &c.*, A. Fletcher; *A terminal Bust in Marble of Benjamin Alabale, Esq., to be placed in the Pavilion of the Marylebone Cricket Club*, E. Davis; *Marble Bust of Lord Ossington*, M.P., E. Davis, &c. &c.

Panorama of Malta.—Mr. Burford has just produced another of his splendid performances, a panorama of Malta. At any time finely adapted for a representation of this class, Malta possesses, at the present moment, a great additional interest from having been the spot where that exemplary woman and excellent queen, Adelaide, has been restored to the blessing of health. We rejoice to say that her majesty, on a visit to the panorama on Wednesday, shewed how well the original had agreed with her, both by her improved looks and by the manner in which she enjoyed a prolonged inspection of the pictures—taking that of Rome also into observation. The panorama itself is one of the artist's most successful efforts. The grand buildings which surround the harbour, and the blue wave covered with picturesque vessels in one direction, in another melting into shadow, were enough for a subject. But Mr. Burford has added prodigiously to its effect by introducing the scene of her majesty's departure, with the Hastings, seventy-four, and all the other ships of war in their gayest apparel, the yards manned, and all the stir of naval preparation and motion going on around. The water is sweetly painted, transparent, and natural; the vessels swim in the liquid element, on which they throw their shadows or extend their ripple with perfect truth and charming effect. The whole is, indeed, well deserving of admiration, and will, no doubt, prove a very attractive public spectacle.

ORIGINAL POETRY.

THE NIGHT AFTER THE BATTLE.*

He look'd upon the battle-field,
Heroes lay dead around him;
Foe and friend slept death's cold sleep,
But Victory's wreath had found him.
From bank and brake still sword or lance,
Touch'd by the watchfire, glister'd;
Anon was heard the anguish'd groan,—
He shudder'd as he listen'd.

The muffled might of many a fight,
Pile upon pile was lying;
The sullen winds full fitfully
Through Soigny's wood were sighing.
Pale spectres—memory's vision'd forms—
Swept by, all-wildly shrieking;
Clotted with gore their grey locks were,
With gore their swords were reeking.

Where was the eagle standard then,
So proud when day was breaking?
Few of the many daybreak hail'd,
May hail their bearers waking!

* Almost anonymous.—Ed. L. G.

Yet where they fell, how'er they fell,
They rest not without glory;
The voice of Fame shall speak of them
In many a battle story.

And still the victor of the day
On past events was dwelling;
The strife was done, the field was won,
And yet his heart was swelling.
He thought of Britain's sighs and tears
For those around him sleeping;
"The hero of a hundred fights,"

'Mid all his fame, stood weeping!

HENRY BRANDRETH.

June 10, 1830.

SKETCHES.

POPULAR EXHIBITIONS.

WE are glad to find, from the statement made at the meeting of the Society for Obtaining Free Admission to National Monuments, that the cause of popular exhibitions, and, through them, of mental improvement, continues to "progress." Government, in addition to what they had done, have ordered the regalia of Scotland to be shewn to the public without charge; and the further reduction of the admission-fee to the armouries of the Tower, from a shilling to sixpence, enables a much greater number of persons to see that very interesting exhibition. Till May, 1831, the visitors at two shillings entrance-fee, were only 10,000 a-year; for a year after, at one shilling, the number was four times as great. Again, in May 1838, at one shilling, the number of admissions for the month was 4528; but in May 1839, they amounted (at sixpence for admission) to 9454. At this rate, if the people continue to behave as they have hitherto done, in the most orderly manner, further facilities may and will gradually be afforded for opportunities of rational enjoyment. It is also very pleasing to observe the liberal feeling that animates the managers and proprietors of private societies. The proprietors of the Royal Institution, at Liverpool, have opened their splendid museum of natural history, without charge, to the public, monthly (children and others of the very poorest inhabitants were admitted without restraint): three thousand have on one day been thus gratified; and the committee are so satisfied with the result of their generous experiment, that they are inclined to extend the facilities. The Natural History Society of Manchester has also removed its exclusive restrictions. Admission may at all times be procured on payment of one shilling (the fee from working-folks being but sixpence), and on holidays, such as Whit-Monday, there is no charge. The late exhibition at the Manchester Mechanics' Institution, which comprised every thing curious, whether in natural history, in art, in manufactures, or in science, was visited by 123,000 persons. The charge was sixpence in general; but the members of the Lyceums, and scholars at the Sunday-schools, were admitted at threepence; and those of charity schools, the inmates of the workhouse and others, were invited to the treat free of any charge. The result is far more satisfactory than could have been anticipated, and Sheffield, Leeds, the Potteries, and Derby, have followed the example.

MUSIC.

HANOVER SQUARE ROOMS.

MR. BLAGROVE and the Misses Broadhurst gave a morning concert at the above rooms on Saturday last; and we were much pleased at the full and elegant attendance which the talent of these young and deserving artists commanded

upon the occasion. The programme presented a most judicious selection. Beethoven's overture to "Fidelio" was, to our taste, performed with peculiar accuracy,—a point essential in the execution of that great master's delightful, but always elaborate, compositions. The Misses Broadhurst played a duet upon the piano-forte; but although we feel ready to award them our approval of their performances, we cannot commend the composition. It was a rattling, unmeaning affair. Several beautiful arias, duets, trios, &c., were executed in the course of each act by Mesdames Balfe, Stockhausen, Albertazzi, and Dorus Gras (the last of whom really appears to sing more exquisitely every time we hear her), and Signors Ivanoff and Tamburini, and Mr. Balfe. One of the novelties on the occasion was the introduction of some vocal pieces from a newly discovered opera of Mozart's juvenile fancy, entitled "Zalde," which, never having been completed, has, until lately, remained in obscurity. From the specimens given, we should say it possesses all the characteristics of that composer's melodious imagination, falling short only in the profound knowledge of harmony which, in after years, he obtained in so eminent a degree. M. Batta performed a fantasia on the violoncello, of whom we have no reason for forming a different opinion than that expressed in our notice of him in our Philharmonic critique. Regondi, as usual, was exquisite upon the concertina. The great feature of the morning, however, was Maurer's violin quartett, in which David, Mori, Blagrove, and Loder, had each an opportunity of displaying their peculiar and admirable powers: we were greatly delighted with all; and we cannot, we think, pass a higher encomium upon Mr. Blagrove than to state, that we felt he was inferior to none. The rondo that he played subsequently was a very pleasing morceau of his own composition; and, of course, was not the less so from being executed by unquestionably one of the finest violinists in Europe. The whole was over by five o'clock, having commenced at two precisely.

Mr. Charles Mangold's Evening Concert on Monday night was a bumper, and deserved to be so, as much for the talent of the young *bénéficiaires*, as for the general arrangement of the entertainment. The septetto of Hummel, in D minor, realised the best expectations of the audience; could it be otherwise, with such artists as David, Dando, Lidel, Rosier, and Charles Mangold at the piano?—it received unbounded applause. Madame Stockhausen sang charmingly, and her sweet duet with her niece, Mdlle. Bilstein, "The Lake of Leman," received a deserved encore. Cherubini's terzetto ("Faniska") was changed for a duet, which was exquisitely sung by Stockhausen and Ivanoff. Why do not our singers imitate the simplicity and clear enunciation of this charming Swiss lady? Ivanoff also sang, with his usual care and sweetness, his old, and, indeed, our favourite, "O cara imagine," and the everlasting "barcarole." Herr Kroff, Miss Flower, H. Gear, and Mdlle. Koenig, gave their powerful assistance, and received their due meed of approbation. Herr David's fantasia on the violin was given with much force and expression, but we think he wants the sustaining power and sweetness of De Beriot, and more particularly of the great master, Paganini; who, although he possessed all the rushing of the torrent, had also the sweetness of the most delicious stream. Mr. Wright's grand march, on the harp; Mr. Clinton's fantasia, on the flute; and Master Case's "Fantasia Concertina," were admirably

done, and each deserved the encore, which the latter very talented young gentleman almost received.

Mr. Eliason's Concert.—Few persons have recommended themselves more strongly to the respect and admiration of the musical world than Mr. Eliason; and we are glad to state, that his concert on Friday was not only one of the finest of the season, but one of the best attended. His own "Adagio e rondo spiritoso," on the violin, was beautifully given, and much applauded. Among other charming features of the entertainment, we can only mention Mad. Dorus Gras's air from "Le Cheval de Bronze," and "Le Serment" (Philharmonic); Persiani's "Ma la sola, ohimè" ("Beatrice di Tenda"), Haumann's fantasia on the violin, and a grand pianoforte concertante, by Moscheles, Benedict, Schulz, and Rosenhain. A Mlle. Rudersdorff made her first appearance, and sang a barcarole of Schubert's very delightfully.

Queen's Concert Room.—The sixth and last of the Societa Armonica concerts was as fully and fashionably attended as the previous ones. Madame Persiani and Madame Grisi were encored in favourite airs; and Mr. Haumann, on the violin, warmly applauded. We regretted to lose Signor Lablache's promised song—and the more as indisposition prevented his appearing. Signor Tamburini was, however, an excellent substitute.

THE DRAMA.

Covent Garden.—On Monday, *Henry V.* was produced here, in the style anticipated in our last; that is to say, sweetly and appropriately in music, splendidly and accurately in costume, admirably in scenery, excellently in action, and according to the text of the immortal Shakspeare. For the music, we are indebted to the taste of T. Cooke; for the scenery, to the unrivalled pencil of Stanfield; and for all the rest, to the judicious cast of parts—the individual, histrionic, and genius, and the liberal spirit and sound judgment of Macready. The play itself is a historical dialogue, dependent upon no plot and independent of female interest. The course of events is regularly followed, and embassies, conspiracies, levies, voyages, sieges, battles, treaties, rejoicings, are enacted and described as the chronicler would record them—the prominent attractions arising simply out of the situations of the parties engaged in these transactions. To render such matters effective on the stage, the bard had recourse to the old Greek chorus; and an interlocutor, at the commencement of each act, relates to the audience retrospectively and prospectively what has taken or is about to take place; apologises for the insufficiency of the dramatic art, and means to do justice to such illustrious personages and swelling themes; and utters such patriotic and exulting sentiments as befit the occasion. Mr. Macready, a ripe scholar, and conversant with the Greek drama, has made the most successful application of these ingredients.

The Chorus embodied as Time, and extremely well sustained by Mr. Vandenhoff, delivered the noble language of Shakspeare with great impressiveness; but the triumph was completed by a succession of matchless pictures illustrating the text, and painted by Stanfield. The silver landscapes of Claude, and the stormy battlepieces of Bourgonone, on the large scale adapted for a theatre, and sometimes combined with moving machinery so as to give us the perfect idea of sea voyage; the progress of siege, and the pageantry of procession, produced illusions not to be imagined without being seen. The view of Southampton, its river, and

the passage to Harfleur; the night-piece of the French and English, previous to the fight of Agincourt; the lord mayor's and citizens' jubilee to meet the victorious king on London Bridge; the cathedral where the ceremonies of reconciliation take place; and, above all, the glorious composition of the assault upon Harfleur, exalt the talent of the artist above aught that can be conceived. When we saw the London Bridge pageant, we could not help wishing that our splendid painter, to whom every kind of subject seems equally facile, and who has thus shewn himself a master over them all, had remembered the lines of honest John Lydgate, the monk of Bury, in his poem on the return of Henry from *Asincours*. What a picture he would have made of them! the giant would have been immortal.

"To London Brygge than rood our Kyng,
The Processions there they mette hym ryght;
'Ave Rex Anglorum,' thei 'gan synge;
'Flores Mundi,' thei seide, 'Goddys Knight.'
To London Brygge when he com, right
Vp on the gate there stod on hy
A Gyaunt, that was full grym of myght,
To teche the Frenshe men curtesy,
Wot se right well that thus it was."

From these adjuncts we proceed to say a few words on the performance of the play. *Henry V.* is one of Macready's best characters. His assumed careless mirth to animate his army, and the splendid snatch of prayer contrasted with it, at the most momentous crisis when he beseeches Heaven not to visit on them the blood of Richard; his stirring address upon St. Crispin's day; and his rough and hearty, but still kingly and winning courtship, are scenes not to be forgotten by admirers of dramatic excellence. But his port and bearing throughout realise the English hero, and tend much to that general approach to realisation which marks the getting up of the whole play. A critic in one of our most popular and powerful journals seems to object to this, in our opinion, the most important step ever taken in the effort to put dramas as they ought to be before the spectator. He seems to think that it leaves too little to their imagination; but surely the same might be urged against every attempt at correct costume and natural and appropriate scenery. If we are to be left to our fancies, why not return to laced clothes, and wigs and buckles, in *Macbeth*; and the good barn-play-acting maxim, "the more unlike the better?" Do what we may, imitate, or, if possible, go beyond what Macready has done in *Richard*, *Lea*, *The Tempest*, and, above all, in *Henry V.*; and yet there will still be enough left for imagination to eke out—enough to warrant the excuses put by Shakspeare into the mouth of his *Chorus*. It is true that the poet tells us the leaguer of Harfleur is but mocked to two or three ragged foils, &c. &c.; but this was because, in his days, theatres had no superior accessories, nor greater conveniences for scenic aid. Had he lived now, would not his enlightened mind have eagerly grasped at such congenial assistance as tended to give actuality to those precepts which he has laid down as the soul and end of the drama, to shew the very time its form and pressure? Surely he would, and would have rejoiced in a Stanfield to give the creations of the poet a local habitation and a name in the bright illustrations of the pictorial art. We have already paid the tribute of applause justly due to the costume and appearance of the *dramatis personæ*, among whom even the personators of the soldiery, as well as their chiefs and leaders, have been drilled into likely movement and action. Those who have any thing to say or do, deserve yet more praise. Mr. Elton as the *Duke of Exeter*, Mr. Searle

as *Archbishop of Canterbury*, Mr. Bartley as *Sir Thomas Erpingham*, Mr. Anderson as *Capt. Gower*, Mr. Warde as *Williams*, Mr. G. Bennett as *Charles VI.*, and Mr. Vining as the *Dauphin*, did every thing their parts admitted. Miss Vandenhoff made a very pretty *Katharine*. The remains of Falstaff's men, *Nym*, *Bardolph*, and *Pistol*, were entertaining in the hands of Ayliffe, Bedford, and Harley; the last having the burden of their fun upon himself, and swaggering the braggart to the life. The very little Miss P. Horton had to do as their attendant boy, was naïve and droll; and Mrs. C. Jones, in the *Hostess*, was a wife worthy of *Pistol*. We have reserved for the conclusion Meadows's *Fluellen*, a well-studied and very cleverly acted part. His Welsh splutter is delightful, and the more it is heard the better it will be understood, and consequently the more relished. The play was received from first to last with unanimous cheers, and on the closing of the curtain (a new and fitting one, with the arms, &c., of the combatants) Macready was called forward, amid shouts of applause and waving of handkerchiefs, to meet the meed so highly deserved by his noble exertions. He has produced the drama in a manner unequalled upon the English or any other stage; he has been faithful to Shakspeare; and he has lavished all this cost and labour within six weeks of the termination of his management! This we consider to be a crowning act, and worthy of the career he has pursued. To the public he has more than kept his word; to the stage and its professors he has most liberally and honourably discharged that duty which his position asked; and he has established an epoch for the drama and dramatic authors, from which, come what may, it seems impossible that they can again, at least for many years, recede into the contempt and baseness from which he has rescued them. If the members of the profession are only true to their own respectability and interests, they will not fall back into the depths of degradation, not to mention the more selfish concerns of uncertainty and loss, from which Covent Garden Theatre has for two seasons been their main refuge. We look forward.

Haymarket Theatre.—Kean has played *Richard* after his *Hamlet* to full houses; and Farren, in the *Clandestine Marriage* (ably cast), has afforded one of the few opportunities the public now enjoy of seeing well-acted comedy. The theatre, as it merits from its spirit and enterprise, is going on most successfully.

New Strand Theatre.—A *Family Likeness* has been added to the popular entertainments here, in which Mr. Hammond enacts the parts of a couple of very laughable dromios. *The Fairy Lake*, with Mrs. Waylett's charming ballads, and *Nicholas Nickleby*, with Miss Daly's pathetic *Smiles*, continue to attract good houses.

VARIETIES.

The Literary Fund.—Our readers are aware that, for a number of years, it has been the custom of the friends and supporters of this Institution to make for themselves, and in furtherance of the good cause in which they take an interest, a pleasurable and sociable midsummer holiday somewhere in the environs of the metropolis, after the anniversary meeting has brought towards a close the important business of the year. The late Sir Benjamin Hobhouse, and, subsequently, Lord Torrington, both zealous and never-to-be-forgotten contributors to the prosperity of the Society, were

wont to preside on these occasions, till death removed them from the benevolent office. At the last few meetings, Mr. A. Spottiswoode, Mr. E. Tennent, and other gentlemen connected with, and warm upholders of, the Fund, have taken the chair; and much benefit has been derived from their maintenance of its humane spirit and prompt ministrings, whilst cultivating those kindly dispositions which such intercourse is calculated to bring together and promote. On Saturday next, we are glad to perceive, the meeting is appointed for Richmond, with Mr. W. Tooke as chairman. It should be understood that it is open to all well-wishers to the Institution, who should, however, previously signify their purpose of attending, in order that proper provision should be made for their entertainment, and return to town, where unprovided with carriages. Attached to the Parent Society there is also a Monthly Club, which assembles to promote its objects during the season, and has long been found to be the most prolific origin of its patronage and productive source of its subscriptions, the members of which have signified their intention of joining the approaching festival. We may, therefore, we trust, anticipate a gratifying attendance at the Star and Garter, where, though there are no appeals to the purse, as at the general anniversary, the best interests of this excellent Association are not less efficiently served by enlisting new friends on its behalf, and binding more harmoniously together those old ones who have long enjoyed the heartfelt satisfaction of belonging to and cherishing it.

Conservation of the Thames.—We are glad to find that the association formed to preserve the fish in the Thames from the exterminating poaching which has been so long carried on with close nets, is actively and successfully employed; using swift boats and steady men to sweep the river at all hours. In a little sketch of Southwark, by Mr. R. Lindsay, we observe a curious notice applicable to this subject. It states that, in 1231, there was a lawsuit between the monks of Westminster (formerly Thorney Island) and the minister of Rotherhithe, for the tithe of the salmon caught in his parish; the plea of the monks being, that St. Peter had given them the tithe of all the salmon caught in the Thames, at the time he had consecrated the church.

Mr. Cotton's Library.—The approaching sale of the Rev. Ordinary of Newgate's library will exhibit many curious articles. We have barely had time to run over a catalogue of no fewer than 1474 lots; and *œries*, if ever murders were brought to light, some of these are the things that will do it. Autographs are, also, numerous and interesting,—in short, the whole is a very singular *mélange*.

Booksellers' Provident Institution.—The second anniversary of this excellent institution was observed at Lovegrove's West India Dock Tavern, Blackwall, on Thursday; Andrew Spottiswoode, Esq., an honorary vice-president, in the chair. About 150 sat down to dinner, including a number of the principal paper-makers, stationers, printers, and booksellers, in the metropolis. The report of the treasurer (Mr. Brown, of the house of Longman and Co.) gave a gratifying account of the flourishing state of the fund, which has already reached above 8000*l.*, and will, no doubt, speedily amount to the 10,000*l.* contemplated as the foundation for its proposed operations. Mr. Spottiswoode proposed the various toasts in the happiest manner; and a number of songs and glees, extremely well sung, kept the com-

pany in excellent humour till near 11 o'clock, when the distance from town admonished to an unwilling break-up.

Benefit of Mrs. Bayly.—We rejoice to be able to say that the net produce to the widow of Mr. Haynes Bayly from the performances on Friday is likely to amount to about 500l.

Antiquities of Asia Minor.—It is stated in the newspapers, that government has despatched a vessel to bring from Asia Minor the collection of antiquities made in that country by Mr. Fellows.

Mori.—We regret to mention the very sudden death of Mori, the celebrated violinist and leader at the Opera. We believe his illness was not of longer duration than two days.

A type-founder of Clermont, named Colson, has obtained a patent for a new material for printing types, which is harder, capable of more resistance, and yet less expensive than the ordinary composition of lead and antimony. It is well known, that types cast from the latter soon become worn, especially since the introduction of machine printing. Colson asserts that the material is so hard that the types themselves will serve for punches in striking matrices, and that it will last ten years, without being more worn than the usual composition is in one year. If experience should prove the new material to possess the quality claimed for it by the inventor, it must be of the utmost importance to printing in general, and to newspaper printing in particular.

Foreign Monthly Review.

The same periodical, at the close of an account of M. Daguerre's photogenic labours, and other continental experiments, says:—"At the last solemn Annual Meeting of the Five Academies of the Institute, held at the beginning of the month of April, M. Lemercler, a veteran poet of the Académie Française, ventured on a Pegasus flight in honour of M. Daguerre and his perennial photogenic labours! This worthy gentleman read to the Academy a long allegorical poem on this subject, in which he introduced the Photogenist, his compatriot, as an ideal personage, into a sort of fanciful Olympus, gave him an ethereal mistress, called Lampella, the daughter of the Sun, feigned that she was beloved and besought by Daguerre; that she was touched by his prayer; that she descended from her celestial abode, and gave herself up with all her charms to her earthly lover. At this, a sister of Lampella, the Goddess of Fire, light Pyrophisa, conceived 'inextinguishable wrath,' as Homer would say, and jealousy; she darted, therefore, through the skies one of her inflamed beams, hit the Diorama, and burnt out her sister's lover, pots and pans, pictures, lamps, and all. Their mutual father, Helios (the sun), winds up the poem by sitting in judgment on his two daughters, condemns Pyrophisa to the place that lies below Milton's lowest, and promises eternal protection and glory to Lampella, Daguerre, and the *Daguerotype*! Poor Madame Daguerre is said to have looked on this poem as a *fort mauvaise plaisanterie*, and has since given her husband a good curtain lecture for what she considers to have been real *bona fide* infidelities!"

Oxford Society for Promoting the Study of Gothic Architecture.—At the general meeting of this Society, an interesting paper on Saxon architecture, communicated by M. H. Bloxam, Esq., of Rugby, was read by the Rev. W. J. Copeland, of Trinity College. A short account of the Saxon tower of Northleigh Church, Oxfordshire, was read by F. Courtenay, Esq., of

Exeter College, illustrated by sketches of the belfry windows in the belfry. An account of the very fine and interesting church of St. Sernin, at Toulouse, was read by J. Harrison, Esq., of Christ Church, illustrated by several sketches of this and other churches in the south of France, and of the Romanesque? Saxon? or Norman? character. Some sketches of Anglo-Saxon architecture, from the celebrated manuscript of Cædmon, in the Bodleian Library, well known to be not later than the tenth century, were also handed round, together with several engravings illustrative of the subject.—*Oxford Herald*.

LITERARY NOVELTIES.

In the Press.

Ten, its Medicinal and Moral Effects, by G. G. Sigmond, M.D.

LIST OF NEW BOOKS.

Elements of the Practice of Medicine, by R. Bright, M.D., and T. Addison, M.D., Vol. 1, 8vo. 16s. 6d.—*Tears in Heaven*, and other Poems, by W. J. CHARLES HENRY ADAMS.

TO CORRESPONDENTS.

To our correspondent's question touching Scott's lines—

"I deem'd such nooks the sweetest shade
The sun in all its round survey'd"

we cannot think the image objectionable; for the sun, as well as the eye, might be figuratively and poetically said to survey a shade, though it did not penetrate it. A more critical hint is, perhaps, in the nooks being plural, and shade singular.

* We regret to be obliged to postpone a review of "Woman's Mission," an admirable little volume, in which the highest attributes of the sex are vindicated, and the true maternal foundation of all normal schools is placed in a clear and beautiful light.

ADVERTISEMENTS,

Connected with Literature and the Arts.
